observed Mrs. Grenville, 'and for many years lived under the same roof; I shall always, therefore, take a warm interest in Frances; she is just one of those unfortunate persons, who, by want of self-control and self-discipline, discover to all the world the infirm parts of their character, and thus contrive to be less valued than they really deserve.' 'How did it all happen?' inquired Constance; 'what evil genius presided over her destiny, and wrought the ill?' 'Her evil genius was early independence,' replied Mrs. Grenville. 'Those who have only themselves to please, and all appliances and means to boot, generally manage the matter remarkably ill. Frances expected and exacted too much. If she formed an intimacy, she was not satisfied with affectionate attention—she required exclusive preference—she must reign alone, and supreme, and, like Caesar, be first, or nothing; she made no allowance for the infinite variety of dispositions—the endless shades of character which society presents; she expected demonstration from the reserved, and ardour from the cold; she was not content to be welcomed and approved—she must be distinguished and paramount. Co-intimates and companions were with her competitors and rivals; she was disposed to overwhelm her favourites with attentions, and then to wonder and feel angry that they were not returned fourfold. From these mistakes, her intimacies, instead of ripening into friendships, after a few agree fits, generally passed from alienation to estrangement. With a warm heart and a good understanding, she has contrived to multiply enemies and distance friends; mortification has embittered her life; disappointment soured a temper originally uncertain; and now, instead of looking on the sunny side of events and characters, she sees every thing in shade; she runs away from society, not choosing to pay the current coin of little civilities and sacrifices required—shuts herself up with her own prejudices, by her own fire-side, and then complains of being left alone.'

We have now only to repeat our warm commendations. If that book be valuable, which, while it cultivates the taste, confirms the principles, these volumes deserve that best of praise; and we especially consider *Private Life* to be an acquisition to the library of our juvenile readers.

The Horse in all his Varieties and Uses; his Breeding, Rearing, and Management. By John Lawrence, author of a "Philosophical and Practical Treatise on Horses," &c. 12mo. pp. 315. London, 1829. M. Arnold.

Biographical Sketches and Authentic Anecdotes of Dogs. By Capt. Thomas Brown, F.R.S.E. 12mo. pp. 570. Edinburgh, 1829. Oliver and Boyd; London, Simpkin and Marshall.

THE horse and dog come so familiarly together, and are so prone to friendship with each other, that we cannot find it in our hearts to separate them in criticism. The first of the two on our list is, *The Horse in all his Varieties and Uses*, by the veteran John Lawrence; and although chiefly selected from matter already before the public, yet is a very convenient condensation of all that is valuable on the subject, and forms a volume well adapted for reference or consultation; and if not a few of our youthful cavaliers would, ere they venture on a purchase, in lieu of their own exalted opinions, acquire from such sources a little knowledge of what this noble animal in the pride of perfection should be, we are sure they would neither so frequently become dupes to their own ignorance,

nor our tribunals teem with such disgraceful exhibitions of impudent fraud and unblushing perjury. The following guide to purchasers is admirable :—

“ Now for the accustomed ceremonial of examining a horse in order to purchase. Having already been made acquainted with the terms, and that the nag is quiet to approach, giving him some gentle warning with your voice, you go up to him in his stall on the near (left) side, and laying your hand on his forehead (touching his height), you proceed from thence to examine his eyes, mouth, and countenance; still holding his head, and turning your own to the right about, you have a view of the curve of his neck, the height of his forehead, the position of his shoulder, and the substance of his forearm. Returning to his forehead, you descend to his legs and feet, minutely examining with your fingers every part, from above, below, withinside, and without. You will not forget the virgin integrity of the knees, so much and so justly in request: so difficult is this to repair, either by nature or art, when once violated, that I am almost tempted to add it as a fifth to the four irrevocable things—*tempus, juvenus, verbum dictum, et virginitas*. Being satisfied respecting his forehead, your eye and hand will glance over his back, girthing-place, carcass, and loins; thence proceeding to his hinder-quarter and the setting on of his tail. You will judge how far he agrees in each and every respect with those rules of proportion laid down. The hinder legs and feet will demand a share of attention full as minute as the fore ones; and I must once again repeat my advice, that the inside or hollow of the hock be not passed without due notice, as is commonly the case; since it often happens that the injuries of hard labour are most apparent in those parts. A survey of the other side of the horse concludes the stable examination. Suffer no person belonging to the seller to be with you in the stall (unless you know and are well satisfied with the dealer's character) during your inspection, that the horse may not be rendered unquiet, either designedly or at the mere presence of a habitual tormentor. A short time since I had occasion to examine a horse, for a friend, at the stable of a considerable dealer: it was a very beautiful and well-shaped nag, but, as is commonly the hard fate of such, he appeared to have done too much work. The attendant, from a superabundant share of regard to my safety, must needs hold the horse's head whilst I examined his legs, still assuring me he was perfectly quiet; nevertheless every time I attempted to feel below his knees, the horse started and flew about the stall in a strange manner, to the no small risk of my toes and shins. Whilst I stood musing and wondering what beside the devil could possibly all the animal, I discovered a short whip under the arm of the jockey, with which he had, no doubt, tickled the neck and chest of the horse whenever I stooped down with the intent of handling his legs. I wished this adept good morning.”

The *Biographical Sketches and Anecdotes of Dogs* is, in truth, an entertaining volume; and the compiler, Capt. Brown, is not only entitled to the gratitude of the canine race, but has likewise secured to himself the approbation of every friend to humanity; for there can be no doubt that this mass of anecdote, so forcibly describing their intelligence, fidelity, and attachment, must greatly conduce to their kinder treatment, and considerably exalt them in the scale of consideration. The natural

history of the dog, diversified as that animal is in form, size, sagacity, and properties, is skillfully developed, and affords much important and curious information, and may be very advantageously placed in the hands of the youth of both sexes: all technicalities are judiciously avoided, and instruction and amusement go hand in hand together.

The chapters on the breeding and training of dogs are so plain in their directions, as to be capable of practice by the most inexperienced; while the different remedies and prescriptions for the treatment and cure of diseases are so explicit and so simple, as to teach even the most timid to “throw physic to the dogs.” Among the contributors of anecdotes we find the names of Sir Walter Scott, and others not unknown to fame. We select the following one for our illustration :—

“ Mr. McIntyre, patent-mangle manufacturer, Regent Bridge, Edinburgh, has a dog of the Newfoundland breed, crossed with some other, named Dandie, whose sagacious qualifications are truly astonishing, and almost incredible. As the animal continues daily to give the most striking proofs of his powers, he is well known in the neighbourhood; and any person may satisfy himself of the reality of those feats, many of which the writer has himself had the pleasure to witness. When Mr. M. is in company, how numerous soever it may be, if he but say to the dog, ‘Dandie, bring me my hat,’ he immediately picks out the hat from all the others, and puts it in his master's hand. Should every gentleman in company throw a penknife on the floor, the dog, when commanded, will select his master's knife from the heap, and bring it to him. A pack of cards being scattered in the room, if his master has previously selected one of them, the dog will find it out and bring it to him. A comb was hid on the top of a mantel-piece in the room, and the dog required to bring it, which he almost immediately did, although in the search he found a number of articles also belonging to his master, purposely strewed around, all which he passed over, and brought the identical comb which he was required to find; fully proving that he is not guided by the sense of smell, but that he perfectly understands whatever is spoken to him. One evening, some gentlemen being in company, one of them accidentally dropped a shilling on the floor, which, after the most careful search, could not be found. Mr. M. seeing his dog sitting in a corner, and looking as if quite unconscious of what was passing, said to him, ‘Dandie, find us the shilling, and you shall have a biscuit.’ The dog immediately jumped upon the table, and laid down the shilling, which he had previously picked up without having been perceived. One time, having been left in a room in the house of Mrs. Thomas, High Street, he remained quiet for a considerable time; but as no one opened the door, he became impatient, and rang the bell; and when the servant opened the door, she was surprised to find the dog pulling the bell-rope. Since that period, which was the first time he was observed to do it, he pulls the bell whenever he is desired; and what appears still more remarkable, if there is no bell-rope in the room, he will examine the table, and if he finds a hand-bell, he takes it in his mouth and rings it. Mr. M. having one evening supped with a friend, on his return home, as it was rather late, he found all the family in bed. He could not find his boot-jack in the place where it usually lay, nor could he find it any where in the room after the strictest search. He then

said to his dog, ‘Dandie, I cannot find my boot-jack,—search for it.’ The faithful animal, quite sensible of what had been said to him, scratched at the room-door, which his master opened. Dandie proceeded to a very distant part of the house, and soon returned, carrying in his mouth the boot-jack, which Mr. M. now recollected to have left that morning under a sofa. A number of gentlemen, well acquainted with Dandie, are daily in the habit of giving him a penny, which he takes to a baker's shop, and purchases bread for himself. One of these gentlemen, who lives in James's Square, when passing some time ago, was accosted by Dandie, in expectation of his usual present. Mr. T. then said to him, ‘I have not a penny with me to-day, but I have one at home.’ Having returned to his house some time after, he heard a noise at the door, which was opened by the servant, when in sprang Dandie to receive his penny. In a frolic Mr. T. gave him a bad one, which he, as usual, carried to the baker, but was refused his bread, as the money was bad. He immediately returned to Mr. T.'s, knocked at the door, and when the servant opened it, laid the penny down at her feet, and walked off, seemingly with the greatest contempt. Although Dandie, in general, makes an immediate purchase of bread with the money which he receives, yet the following circumstance clearly demonstrates that he possesses more prudent foresight than many who are reckoned rational beings. One Sunday, when it was very unlikely that he could have received a present of money, Dandie was observed to bring home a loaf. Mr. M. being somewhat surprised at this, desired the servant to search the room, to see if any money could be found. While she was engaged in this task, the dog seemed quite unconcerned, till she approached the bed, when he ran to her, and gently drew her back from it. Mr. M. then secured the dog, which kept struggling and growling while the servant went under the bed, where she found 7½d. under a bit of cloth; but from that time he never could endure the girl, and was frequently observed to hide his money in a corner of a saw-pit, under the dust. When Mr. M. has company, if he desire the dog to see any one of the gentlemen home, it will walk with him till he reach his home, and then return to his master, how great soever the distance may be. A brother of Mr. M.'s and another gentleman went one day to Newhaven, and took Dandie along with them. After having bathed, they entered a garden in the town; and having taken some refreshment in one of the arbours, they took a walk around the garden, the gentleman leaving his hat and gloves in the place. In the mean time, some strangers came into the garden, and went into the arbour which the others had left. Dandie immediately, without being ordered, ran to the place, and brought off the hat and gloves, which he presented to the owner. One of the gloves, however, had been left; but it was no sooner mentioned to the dog, than he rushed to the place, jumped again into the midst of the astonished company, and brought off the glove in triumph. A gentleman living with Mr. M., going out to supper one evening, locked the garden-gate behind him, and laid the key on the top of the wall, which is about seven feet high. When he returned, expecting to let himself in the same way, to his great surprise the key could not be found, and he was obliged to go round to the front door, which was a considerable distance about. The next morning strict search was made for the key; but still no trace of it could be discovered. At last,

perceiving that the dog followed him wherever he went, he said to him, 'Dandie, you have the key—go fetch it.' Dandie immediately went into the garden, and scratched away the earth from the root of a cabbage, and produced the key, which he himself had undoubtedly hid in that place. If his master place him on a chair, and request him to sing, he will instantly commence a howling, which he gives high or low as signs are made to him with the finger. About three years ago, a mangle was sent by a cart from the warehouse, Regent Bridge, to Portobello, at which time the dog was not present. Afterwards Mr. M. went to his own house, North Back of the Canongate, and took Dandie with him, to have the mangle delivered. When he had proceeded a little way, the dog ran off, and he lost sight of him. He still walked forward, and in a little time he found the cart in which the mangle was, turned towards Edinburgh, with Dandie holding fast by the reins, and the carter in the greatest perplexity, who now stated that the dog had overtaken him, jumped on his cart, and examined the mangle, and then had seized the reins of the horse and turned him fairly round, and would not let go his hold, although he had beaten him with a stick. On Mr. M.'s arrival, however, the dog quietly allowed the carter to proceed to his place of destination."

Simplicity of Health: exemplified by Hortator. Second Edition. 12mo. pp. 264. London, 1829. E. Wilson.

WHETHER "simplicity" (a delicate term for absurdity) or "health" be the leading characteristic of this choice volume, we leave to our readers to determine; and we can assure them that, having their interest at heart, we shall forthwith proceed to extract some of the new and valuable opinions set forth in these pages. We find the sackcloth of former days is not, in reality, the penance we have been accustomed to think it, but rather constitutional.

"It requires only a little consideration to shew that very fine linen next the skin must be injurious. The closer and finer the texture, the nearer it approaches to the nature of parchment or goldbeater's leaf. All the perspiration lies on the surface, and is again absorbed into the body; for, having no substance itself, it cannot imbibe the moisture. Those whose situation in life requires them to be very exact as to appearance, should wear next the skin a small shirt of the very coarsest linen. Over that they can then have as fine as they please; and with this advantage, that if they are in a heat, the moisture will not spoil the frill or plaits, whatever may be the fashion; and they can go into the most particular company without the inconvenience of changing. This would generally be found as good as flannel, and certainly more agreeable." We doubt the agreeableness.

"Our present fashion of trousers is a valuable exchange for the tight breeches of our fathers, buttoned and buckled at the knee. It is, besides, no little saving in the article of hose, short stockings being, all things considered, only a sixth of the expense of long ones."

Speaking of drunkenness to his female readers, the author very properly warns them as follows: "But, for her who gets intoxicated, there is no doubt or qualification: she is irrecoverably lost. Men are often reclaimed from inebriety; but a woman is hopeless, and the very worst consequences follow. It is not safe for a virtuous female to drink, at any time, so as to produce the slightest elevation. The most in-

flexible reserve is necessary to secure her character from reproach, and her innocence from danger."

The ensuing advice we quote for the comfort of our married readers.

"In examining the lives of those who reached a hundred and upwards, we generally find that they were married, three, four, and sometimes five times, and had numerous children. This shews that marriage is conducive to our health. * * * That bachelors should not be as fair subjects for longevity as the married, does not appear to me to be difficult of solution. To be unsettled on so important a point as marriage, which seems so decidedly marked out as our natural state in civil society, must affect that serenity of mind which is necessary for maintaining the equilibrium of our constitution. *"

* * * There are but few circumstanced like Sir Isaac Newton. He early announced that his studies so much occupied his mind, that he could not devote the requisite attention to a family; and he remained, as it were by compulsion, single, without experiencing any unpleasant observations. After all the jokes and sarcasms at the expense of married men, those upon old bachelors are far more poignant. They are, indeed, constantly reminded of their inferiority in the scale of society; for, let us attempt to disguise it as we may, the good opinion of the sex is one of our highest gratifications. In this view the married have evidently the advantage. A widower of fifty stands higher in their estimation than a bachelor of forty, and he will sooner get a young wife."

The annexed are other choice bits of simplicity.

"Since I am on the subject of rest, I wish again to recommend attention to sleep without dreams. * * * Dreaming is no proof of sensibility, judgment, or strong understanding, because we find the foolish and the weak-minded very subject to it."

"The custom of putting pins in the mouth is very common. But though we may do it many thousand times with safety, it should be avoided, as some distressing and fatal consequences have thereby occurred. By keeping this in mind, we should soon acquire a habit of laying the pins down, or sticking them in the sleeve or elsewhere while using, and it would be found to be as convenient and expeditious as putting them in the mouth."

"To gentlemen who wish for a regular indoor exercise before breakfast, I recommend that they polish their boots and shoes, after being hard-brushed by the servant. There is nothing like a kind of task; and they would find this serviceable to the chest and arms, to expectoration, and to general warmth. This would be turning Warren's jet to a new account, unthought of by the ingenious inventor himself—health debtor to polishing."

"Curtains to beds are injurious, as excluding the free circulation of air. In the married state they are, however, become, I may say, indispensable, from the decorum necessary to be preserved in the better walks of civilised life. But they might surely not be closed until morning, when the domestics or any of the family may have occasion to enter, which would answer every purpose of delicacy or appearance!"

We cannot help smiling at the polite opinion of this work expressed by Mr. Abernethy: we think we see him bowing as he returned the M.S., little dreaming how his civility would be advertised. We conclude with his words: "Your suggestions and advice are, in general,

judicious; and would, if acted upon, greatly contribute to the preservation of health."

Mémoire sur le Séjour, &c. Memoir of the Residence of Lewis, Dauphin of Viennois (afterwards King of France, under the title of Lewis XI.), in the Netherlands, from the year 1456 to 1461. By the Baron de Reiffenberg. Brussels, 1829.

DID we stand in need of a notorious example of the subserviency to temporal interests which swayed the papal councils in by-gone ages, we could not estreat a fitter proof to our purpose than the shameful prostitution of language in which Pius II. indulged when he saluted Lewis XI. by the title of the "most Christian" of Christian majesties! For this Lewis, says the honest Comines, "was lowly in speech and attire; he was by nature a friend to persons of the middling class; he was loose in speaking of others, save and except those of whom he stood in fear; for he was naturally of a sufficiently timid disposition." It was his inclination to be avaricious, and his policy to be prodigal; he despised all the conventional decencies of social life; and, mistaking cunning for capacity, he preferred artifice to all the better endowments of our nature, and regarded it not as the means, but the main object of human endeavour. Though he had less aptitude in foreseeing peril than in finding his way out of it, his worst enemies have acknowledged him to have been possessed of no mean talents as a statesman: indeed, it is a singular fact, that whilst his habits, his character, and the doings of the whole outward man, tended to debase the kingly authority, he left it, at the close of a two-and-twenty-years' career, far more potent, and infinitely better consolidated, than he had found it. He was a man also of a ready wit, and wanted no apologist at his elbow, even on occasions when his whole court were in arms at his forgetfulness of the punctilios attached to his station. "Do you not know," said he, "that when pride takes the lead, shame and vexation tread upon its heels?" Withal, he was so jealous of his authority, that he would take advice of none; and it was his common observation, "that he carried his privy-council in his head." But we must not further pursue our sketch of a character, which the great novelist of Europe has familiarised, from Archangel to the Pillars of Hercules, in his beautiful tale of Quentin Durward; nor detain the reader from a peep into the hitherto veiled scene of his earlier career, from which our learned and intelligent friend, Professor de Reiffenberg, has grouped his present amusing picture of individual character and aristocratic manners.

The scandalous conduct of Agnès Sorel towards Lewis's mother, the neglected consort of Charles VII., is generally assigned as the cause of those quarrels between the French monarch and his son, which impelled the latter to take refuge with his uncle, the Duke of Burgundy, at the age of three and thirty years. At this period of his life, "flattery and state expediency had not given the finishing stroke to a character, the ribald license and gaiety of which afterwards yielded to gloomy and reckless suspicion, and to a brutal and hypocritical libertinism. Prompt in his repartees, simple in his manners, a wooer of pleasure, without being nice as to its quality, he was esteemed a merry companion, a jovial guest, and by some a bold cavalier, though he felt no great relish for lance or sword thrusts, which he deemed mere feats of parade, wherein there was danger without a useful end."

It was in 1456 that Louis, terrified at his father's menaces, fled precipitately into Burgundy with a few dependents, and arrived at Louvain, whither the Duke's heir, the Count de Charolais, and other nobles, were despatched to bid him welcome. The duke himself being absent at the siege of Deventer, there were none to receive him when he reached Brussels but the Duchess-consort Isabella, and her daughter-in-law, Madame de Charolais.

"As soon as these princesses were informed of his approach, they descended to the gate of the palace and awaited his arrival, standing. When he drew near, he alighted and kissed my lady the duchess, my lady de Charolais, and my lady de Ravestein (Beatrice of Portugal), who knelt before him; and then he went round and kissed the other ladies and maidens of the court. After this gallant ceremony, he took my lady the duchess by the arm, and wished to place her on his right; but of this circumstance a sharp debate arose. 'Sir,' said the duchess, 'it would seem you are desirous I should be laughed at, for you put me to do that which does not belong to me.' The dauphin assured her it was quite otherwise, and that it was his province to do honour to Madame of Burgundy, for he was the poorest vassal of the kingdom of France, and knew not where to find an asylum, excepting under the wing of his fair uncle Philip and herself. This discussion having lasted above half an hour, the dauphin was obliged to yield; though even when giving the duchess his left, he took her by the right arm; which, however, she would not suffer, protesting that nothing on earth should induce her to walk arm in hand with him or along the same parallel: still she was under the necessity of yielding in her turn, the which circumstance occasioned vehement exchange of words among the by-standers. On taking leave, she again knelt down to the very ground, as well as the other princesses, ladies, and maidens."

Philip, fearful of giving outward offence to the French king, found an excuse for not coming to Brussels, "though he was sensible that by having the person of the heir to the crown in his power, he should render himself more formidable to France; whilst the office of a protector did not flatter his pride less than his generosity."

On the occasion of the duke's subsequent arrival at Brussels, we have another amusing sample of the rigid etiquette of the fifteenth century. "The duchess and her daughter-in-law descended to the middle of the court to welcome him; and when this was told the dauphin, he quitted his chamber, placed himself by madame's side, and there awaited Duke Philip, standing. In vain did the duchess represent to him that etiquette was grievously wounded by his conduct, and that he ought to return to his apartments: she found him deaf to her reproaches. When the duke was informed that the dauphin was waiting for him in the middle of the court, he dismounted at the palace-gate, and on catching a distant glimpse of the prince, he knelt down upon the ground. The dauphin was desirous of advancing towards him, but the duchess held him back by the arm, which afforded time to Philip to make a second obeisance before the dauphin could stir from the spot; and when the latter came forwards, the duke again fell upon his knees. Lewis stooped down very low, put his arm within that of his uncle, and in this wise both ascended the staircase together..... These testimonials of respect appear strange in the present day. But Philip, himself a French

prince, considered nothing so exalted as the French crown..... It is, however, to be observed, that at the very moment when he was making his genuflections, and calling the king and his sons his *redoubtable lords*, the Duke of Burgundy knew how to enforce respect for his authority, and surrendered none of his solid advantages."

The dauphin having related the motives of his flight, Philip bade him heartily welcome, adding, "be ye well assured that I would spend my body and estates for you against all the princes in the world, saving always my potent master, your father, towards whom nothing could impel me to undertake aught which should occasion his displeasure. * * * Jousts and tournaments were not spared; and in order to give greater weight to his proffers of service, Philip assigned the castle of Genappe to the dauphin for his residence, together with a stipend of 36,000 francs (nearly £1500!), which was an enormous sum in those days. * * * Lewis abode there five years, amusing himself with hunting, reading, and gastric recreations. * * * A reciprocity of tastes, and the similarity of their stations, produced a sort of intimacy between the dauphin and the Count de Charolais (Philip's eldest son), despite of the diversity of their characters, and the subsequent quarrels which ensued between them."

The studies of the Fleming turned upon light and romantic subjects, but Lewis's predilections were of a more sober cast. "He was not without some smattering of classical learning, and, either to gain favour with a corporation which had acquired a certain degree of influence, or with a view to remove all grounds of suspicion as to his conduct, or else to gratify his thirst for knowledge, he registered himself as a student in the University of Louvain. It was in this school, which afterwards attained such great celebrity, that he undoubtedly acquired his known attachment to the philosophy of Aristotle. * * * But no subjects possessed so great a charm in his eyes as the facetious tales in which the infidelities of the fair sex were unceremoniously bared to view. Licentious narratives were his favourite pastime; for, observes P. Mathieu, 'it was against his inclination that the soul should be in the clouds, whilst the body was at table.' An idea of the tone which prevailed at his board may be formed from a perusal of the Hundred New Tales (*Cent Nouvelles Nouvelles*); a work which recalls Boccaccio's style, and shews that the French language had then acquired a degree of grace, freedom, and precision, to which it had been hitherto a stranger, excepting in the prose of Froissart and Chastelain. These tales are put in the mouths of the dauphin, the Duke of Burgundy, and the nobles and other parties who were admitted to familiar intercourse with them."

Of Lewis's superstitious faith in astrology, a weakness which the author of *Quentin Durward* has dramatised with so much ingenuity and effect, mention is made in the following terms: "Peter Mathieu, the historian, relates, that during the period of the dauphin's sojourn in the Netherlands, he constantly visited those who professed the art of reading the stars; and he learned from John Coleman to scan the great almanac, 'which is,' as Naudé observes, 'at least as much as to know the use of charts and maps;' for which, however, the Emperor Charles V. was held in high esteem."

Though he wished it to appear that he took no interest in the affairs of the country in which he was a resident, "he was too fond of

intrigue to be content with playing an entirely passive part, and he employed those moments which he could not devote to the execution of great undertakings, in acquiring adherents. He sought out people of low estate as well as great lords, preferring the former to the latter, because he found them apter instruments, and could crush them with far less noise, after he had obtained all he wished from them, or was weary of their company. Where (says Olivier de la Marche) he could scent gentry of renown, he bought them for their weight in gold, and was yet a gainer." No wonder the stipend he enjoyed was, under such circumstances, insufficient to keep him out of debt. "Olivier le Dain, his barber, who was born at Thielt in Flanders, could not, however, have proved an expensive purchase: it was probably at this period that he took him into his service, though his conversion into a species of minister and ambassador was of later date."

Never was hospitality repaid by blacker ingratitude; Lewis's own parent is said to have predicted from the first, that "Philip would nourish a wolf in his bosom, who would devour all his chickens." Burgundy was the rich prize for which the dauphin yearned; and his intrigues at length succeeded in creating an irreconcilable schism between the heir to the Burgundian crown and the family "des Croy," which was the most potent amongst its vassals. From this time, the duke kept the royal prediction in mind, though his disposition was too generous and manly to allow of his driving the traitor from his door. It was probably for the purpose of interrupting the thread of his intrigues that he took Lewis with him on a tour through Flanders. "Never had Lewis beheld a wealthier, more numerous, or more flourishing race of people. Though the Flemings mistrusted him, they paid him great honour, because it was the duke's will, whilst it enabled them to do homage to their sovereign in the person of his guest. The clergy, magistracy, and common people, in their holiday apparel, came forth to welcome them from all parts; mysteries were enacted, and allegorical scenes represented. He proceeded first of all to Audenarde and Courtrai, and thence to Bruges, (a city, which in that quarter of Europe, occupied the same rank as Venice in regard to Italy). 'Into the which town of Bruges,' says Du Clercq, in his *Mémoires*, 'before they had entered, the several nations which abided at Bruges came out to meet them; each nation clad in diverse colours, all dressed in garments of silk or velvet, and the citizens the same; and there were of them, as was said, full eight hundred men, all attired in silk, and otherwise richly habited, without mention of the populace, who issued forth from the city to behold the said Monsieur le Dauphin; and of a surety Monsieur le Dauphin had never cast eyes on so mighty a concourse of people, which went out from the city.' Such a scene as this was well calculated to inspire him with a still more ardent longing to unite this noble territory to his crown on a later occasion."

In the same year (1458) Lewis was married at Namur to Charlotte, daughter of the Duke of Savoy; a match which, De la Marche says, was one of the conditions upon which Philip permitted him to reside in his dominions. Within a twelvemonth the dauphiness gave birth to a son, at the château de Genappe. "The duke, who was residing at Brussels, made a present of a thousand gold lions to Josselin Dubois, the bearer of this news, and ordered great rejoicings to be made in every

quarter. On the 5th of August the child was baptised in the parish church of Genappe, at the font which was said to have been used for the baptism of Godefroid de Bouillon, king of Jerusalem. The sponsors were Philip and Mad. de Charolais. Antony, lord of Croy, first chamberlain, held the child with Madame de Ravestein (Beatrice of Portugal), and the duke carried it in his arms. The presents he made were of a most magnificent description; he gave the child costly tapestries, and a vessel of gold and silver of enormous value. The lord of Croy was not backward; he presented a ship of silver gilt, the bottom of which was of crystal, weighing sixty marks silver, of eight ounces to the mark. When the christening was over, the dauphin thanked the duke, and uncovered his head entirely; which Philip observing, he dropped on one knee, and refused to rise until the dauphin had placed his "chapel" upon his head again. Though flint-hearted enough in all conscience, the dauphin being now a parent, and finding himself treated with such abundant marks of generosity, suffered himself to be moved. "My dearest unele," he said, with much warmth, "I thank you for all the kindness and honour you render me; I neither have deserved, nor shall be able to deserve it, for that is an impossibility; excepting that in the absence of all other return, I give you my body, the body of my wife, and that of my child." At these expressions, the sincerity of which was warranted by the circumstances of the moment, the eyes of the courtiers were moist with tears; etiquette itself was not sufficient to repress them. In spite of man, however, the child died; and was replaced two years afterwards by a daughter; on which occasion "the duke demanded an aid, treble of that which was customary, from the states of Artois; but the states who" (like a certain house nearer home,) "delighted in picking a quarrel with the ways and means, did not grant him more than a moiety of his demand."

"The negotiations did not flag between the courts of France and Burgundy; and the duke's last despatch represented that 'he had not seduced nor invited Monsieur Lewis to come and reside with him, but that he had come, under guarantee and safeguard, because he doubted the king his father; the which Monsieur Lewis he had received for the honour of the king, and had maintained him, and bestowed upon him of his own estate, according to the best of his ability, and not by the measure of his desires, or as belonged of right to Monsieur Lewis; and he was anxious every one should know, that so long as it pleased the said Monsieur Lewis to remain within his territory, he should never come to want, but as long as he had a penny himself, he should enjoy half of it with him; neither did he prevent him from returning to the king his father; moreover he was ready, whensoever it should so please Monsieur Lewis, to send him back with his son; or, if need were, he himself would go with him, bringing such a train in his company as should leave him nothing to fear.' It is impossible not to admire the grace with which Philip bore his burthen: one might liken him to the brave knight who never quails under his emprise until it be accomplished."

The death of Charles the VIIIth was the signal of the dauphin's return; and Philip had the honour of placing the crown on his brow. The author of the "Annals of Aquitaine" does not hesitate to bear testimony, that 'Lewis had acquired no bad habits from the Hainauters and Flemings, who are quick of temper and

easy to be moved.' "Would to Heaven!" pertinently adds the author, as he closes his narrative, "that the virtues of our forefathers had corrected his execrable disposition; but he quitted their threshold, and smote them with the very sceptre which they were the means of placing in his hand."

SIGHTS OF BOOKS.

A Bibliographical, Antiquarian, and Pictorial Tour in France and Germany. By the Rev. T. Frognall Dibdin, D.D., &c. Second edition. 3 vols. 8vo. London, 1829. R. Jennings, and John Major.

OUR earlier readers will, we hope, remember our review of the three costly *supra royal octavos*,* of which these three more modest volumes are a neat reprint. We encountered, at that period, some of the wrath of the author, in consequence of our animadversions on the bibliomaniacal dandyism, affectation, and other faults which his work exhibited in its ten-guinea form; but we at the same time did justice to its amusing qualities and more sterling merits. Now that it is before us in a popular shape, we are more inclined to abate our censures and augment our praises. The Tour is, indeed, very generally entertaining, and possesses much information to recommend it to every tolerable library in the kingdom. We have only to add, that though some expensive ornaments have of necessity been retrenched, it is still prettily illustrated; and that Mr. Dibdin, in a preface and notes, "shews fight" against Messrs. Crapet, Licquet, and other foreign critics, who attacked the first edition. As our former Nos. contained copious extracts, we forbear from further exemplification of a composition somewhat faulty, but, on the whole, well worth the favour of the public.

Natural Theology; or, Essays on the Existence of the Deity and of Providence, on the Immortality of the Soul and a Future State. By the Rev. Alexander Crombie, LL.D., F.R.S., and M.R.S.L. 2 vols. 8vo. London, 1829. R. Hunter; T. Hookham.

THE worthy author of this worthy work is so well known to a wide circle of attached friends, that to mention his name is to circulate a tolerable edition of his book. But, independently of this circumstance, though we cannot enter into detail of its plan and merits, we are bound to say, that it is in itself highly deserving of the attention of the religious world. Indebted to preceding and sterling writers, Dr. Crombie has treated his vitally-essential subjects with much ability; and his metaphysics, as well as his theology, are of the soundest nature. Altogether, this is a production that does honour to the ripened years of a man whose whole life has been devoted to usefulness.

The Quarterly Journal of Agriculture and the Prize Essays and Transactions of the Highland Society of Scotland. No. VI. Edinburgh, 1829. Blackwood.

IT is not much our custom to notice our contemporaries in the periodical way,—and for several reasons: we cannot commend all, and we think it out of our place to make distinctions,—we have not room to quote from many, and we deem it most fair to decline quoting from any (this is almost a rhyme as well as a reason). But the importance to agriculturists of this northern Quarterly Journal appears to justify a slight departure from our general rule;

* In the *Literary Gazette*, No. 227, May 26th, 1821, page 221; and continued in subsequent Nos., at pages 342, 376, and 522.

and we venture to mention the work as one peculiarly deserving of attention. It is replete with information of the best kind, and is well calculated to guide to improvements in the valuable branches of industry to which it is devoted.

The London Miscellany; a Repertorium of useful Information, &c. Published by the Proprietors, at the Office of "The London Miscellany." 1829.

THIS is a most amusing and excellent little work: its pages are devoted to revivals of the olden time; and curious customs, anecdotes but little known, interesting extracts from authors somewhat forgotten, old ballads, &c. fill up a miscellany as various as it is entertaining. It is amazing what a mass of information has been collected: it resembles an old cabinet filled with all sorts of curiosities and antiquities.

Principles of Self-Knowledge; or an Attempt to demonstrate the Truth of Christianity, &c. against the Cavils of the Infidel, &c. By the late Stephen Drew, Esq. Barrister-at-Law, Jamaica. 2 vols. 8vo. London, 1829. Longman and Co.

A SENSIBLE exposition of the leading doctrines of the Christian faith, and the chief arguments of the fathers of our church—called forth by the trials of Carille and others for blasphemy. Those not well read in the old divines will find much of their matter here; though there is (indeed could be) little original or very striking.

The Apocrypha of the Book of Daniel, &c. Translated from the Vulgate Latin. By Luke Howard, F.R.S., &c. pp. 32. London, 1829. J. and A. Arch.

MR. HOWARD denounces the apostates who exclude from their Bibles the stories of Susanna and the Elders, Bel and the Dragon, and other (considered) apocryphal writings; and deems the church of England to be utterly lost, in consequence of such scandalous infidelity. If they are given up, he rejects communion with that church, and says, "let me and mine be dissenters for ever!" Having always thought the tale of Susanna a very pretty tale of its kind, we are not astonished by Mr. Luke Howard's rage at its exclusion, though certainly vented a little after the fashion of Saint Luke's. He has here given his version with notes, dated "27th of" sixth month, 1829.

Some Account of the Life of Reginald Heber, D.D., Bishop of Calcutta. 18mo. pp. 239. London, 1829. Simpkin and Marshall.

A COMPILATION from sources so recent and so universally known as to possess no character of novelty; and still more censurable as an attempt to forestall (though in a pitiful degree) the Life of Bishop Heber, from authentic data, announced by his widow. It is but justice to add, much as we disapprove of the publication, that there is nothing in it inconsistent with propriety: on the contrary, it is a pleasing little work.

Waverley Novels (new edition). Guy Mannerling, Vol. II., and 4th of the Series. Edinburgh, 1829, Cadell and Co.; London, Simpkin and Marshall.

WE have just received this volume, with a most Burke-looking vignette, by Cooper, representing Dirk Hatteraick throttling Glossin.* It

* Ably engraved by J. C. Edwards, and very spirited in itself, though we cannot make out the anatomy of Glossin's left arm. The frontispiece is the characteristic picture of High Jinks, by W. Kidd, and well transferred to the plate by J. Mitchell.

affords us nothing new to observe; and we have only to look forward for its successor, the first of the Antiquary, to which, we understand, is prefixed a curious introduction.

ARTS AND SCIENCES.

Improvements in Glass for Astronomical Instruments.

SOMETIME ago we mentioned the persevering efforts made in Germany to bring to perfection that great desideratum in astronomical science, the manufacture of glass for instruments, free from those defects which have hitherto impeded the accurate observation of the heavenly bodies; and we could not but lament that our own country was somewhat behind-hand in this honourable as well as profitable race. We subsequently stated that Mr. Faraday (certainly one of the ablest chemists of whom Europe can boast) had turned his talents to this matter, and had succeeded in effecting much improvement in the making of glass; but still a good deal remained to be accomplished before the experimenter could be satisfied with his difficult task. It now, however, affords us high and unfeigned pleasure to say, that Mr. Faraday has at length been completely successful. He can now form lenses of a foot in diameter, nay, two feet if requisite, of such equal and perfect transparency, as to answer every purpose that can be desired by the most anxious astronomer, and afford results which must conduce to extraordinary discoveries in the celestial system. We congratulate the lovers of this most sublime study on the event; and, though sinking in the climax, we congratulate also the friends of our commercial prosperity on the addition to our exports of a very important commodity.

SURVEY OF THE WESTERN COAST OF AFRICA.

ACCOUNTS have been received from Captain Boteler, of his Majesty's ship *Hecla*, which we regret to learn are of an extremely unfavourable nature, and afford another sad proof of the insalubrity of the African climate. That officer had reached Sierra Leone in his survey of the coast. Two very fine and promising young officers, Messrs. Chaproniere and Bradley, midshipmen of the *Hecla*, and Doctor Burn, the surgeon of His Majesty's ship *Eden*, had fallen victims to the fever. Lieutenant Badgeley, the acting commander of the *Eden*, was lying in a dangerous state, and not expected to survive; and Lieutenant Tambe, of the *Hecla*, had been obliged to get the *Eden* under weigh from Sierra Leone, and take her out to sea for the recovery of her crew. An English merchant-ship, called the *Lochiel*, was found with the whole of her crew lying dead on board, and in that state was towed out of the river Nunes, near the Bijooga islands, by the boats of a man-of-war engaged in looking after slave-vessels.

SCIENTIFIC EXPEDITION.

HIS MAJESTY'S ship *Blossom*, commanded by Captain Richard Owen, was to have left Woolwich yesterday for Spithead, where Captain Owen is to receive his final orders. This officer has been directed by the Admiralty to complete the surveys of the different parts of the West Indies which have been left undone by the Spaniards, and the late Admiralty surveyor in that quarter, Mr. De Mayne. Captain Owen, it is understood, will be principally employed among the Bahamas, and the coasts between Carthage and Yucatan, more particularly to examine the dangerous shores of the latter place; and to ascertain correctly the

meridian distances between the principal points in the West Indies chronometrically. He has received for this purpose a supply of the very finest instruments; and no pains have been spared in the equipment of the *Blossom*. Captain Owen, we are informed, has been particularly directed to report on the qualities of the star quadrant,—a late improvement of the quadrant, in which the glasses are considerably enlarged, for the purpose of gaining as much light as possible in observing the altitudes of stars with the sea horizon.

It is expected that the *Blossom* will proceed first to Barbadoes, for the purpose of measuring the meridian distance between that island and Madeira.

ZOOLOGICAL SOCIETY.

SINCE the anniversary meeting on the 29th of April, upwards of 100 fellows have been elected into the Society; many important accessions have been made to the several collections; and various improvements effected in the arrangement of the Gardens, &c. In addition to purchases made to a considerable extent, the collections have been enriched by a great number of valuable donations from liberal and scientific contributors. The principal works completed at the grounds since the period above mentioned, consist of cages for foxes, &c., pond and enclosure for otters, dens for large quadrupeds, cage for macaws, extensive iron enclosure for monkeys, shed and enclosure for deer, &c. &c.: several others are in progress. Those acquisitions and improvements (as we noticed in several instances, when we happened to witness the scene) have attracted, during the season, a great increase of visitors,—the number admitted in one month only being 34,000. By the occupation of the land on the north side of the road in the Regent's Park, it is presumed the entire collection may be safely and conveniently exhibited during the ensuing winter to the fellows of the Society and their friends.

ANCIENT AND MODERN EGYPT.*

Eleventh Letter of M. Champollion.

El Mellissah, (between Syene and Omboe), February 10th, 1829.

WE are unfortunate: we left Syene on the 8th, and are yet far from Omboe, the passage to which place from Assuan is generally accomplished in nine hours; but a violent north wind has blown for these last three days. With great difficulty we have moored our vessel near Mellissah, where there is a quarry of freestone. However, we are in perfect health, preparing to examine Thebes thoroughly, if it is not too much for our means. I shall write after having thoroughly examined Egypt and Nubia. I can say beforehand, that our Egyptians will henceforth make a better figure in the history of the arts than they have hitherto done. I shall bring back with me a series of grand designs, which will convert the most obstinate.

My last letter is from Ypsamboul. I must, therefore, resume my itinerary from that fine monument, which we have exhausted, at the risk of being ourselves worn out by the difficulties of studying it.

We left it on the 16th of January; and early on the 19th we landed at the foot of the rock of Ibrim, the Primis of the Greek geographers, to visit some excavations near the foot of that enormous mass of freestone.

* We are at length enabled to present this letter to our readers; and we trust that our Journal will be found to throw a great light on this almost new branch of inquiry—the interpretation of the ancient records and monuments of Egypt—which we are not surprised to find becoming so general a theme of public interest.—Ed.

These speos (I give this name to the excavations in the rock which are not tombs) are four in number, and of different epochs; but all of the times of the Pharaohs. The most ancient is of the reign of Thoutmosis I. The bottom of this excavation, which, like all the rest, is of a square form, is occupied by four figures (one-third the size of life) in a sitting posture, and representing twice over that Pharaoh seated between the lord god of Ibrim (Prim.); that is to say, one of the forms of the god Thoth, with the head of a sparrow-hawk, and the goddess Saté, lady of Elephantina and Nubia. This speos was a chapel, or oratory, consecrated to these two divinities: the side walls were never sculptured or painted.

As for the second speos, it belongs to the reign of Meris, whose statue, sitting between those of the lord god of Ibrim and the goddess Saté (Juno), lady of Nubia, fills the niche at the back. This chapel to the gods of the country was formed by the care of a prince named Nahi, a great personage, who bears in all the legends the title of governor of the southern countries, which comprehend Nubia between the two cataracts. The remains of a large sculptured tablet, on the right-hand wall, represents this prince standing before the king, seated on a throne, and accompanied by several other public functionaries, presenting to the sovereign, according to the hieroglyphic inscription (which is unhappily very short) annexed to the tablet, the revenues in gold, silver, corn, &c., the produce of the southern countries, of which he was governor. On the door of the speos is inscribed the dedication which the prince made of the monument.

The third speos of Ibrim is of the following reign, of the time of Amenophis II., successor of Meris, under whom the countries of the south were governed by another prince, named Osorsaté. On the right wall King Amenophis II. is represented sitting; and two princes, of whom Osorsaté occupies the first rank, present to Pharaoh the tribute of the southern countries, and their natural productions, including lions, greyhounds, and live jackals, as stated in the inscription engraved over the tablet, which specifies the number of each thing offered; for instance, forty greyhounds and ten live jackals; but the text is in such a deplorable state of decay, that I could only collect the general facts. At the back of the speos the statue of King Amenophis is seated between the gods of Ibrim.

The most recent of these speos is the fourth, also a monument of the time of Sesostris. It was likewise made by a governor of Nubia, in honour of the gods of Ibrim, Hermes, with the sparrow-hawk's head, and the goddess Saté, to the glory of Pharaoh, whose statue is seated between the two local divinities at the back of the speos. But at this time the southern countries were governed by an Ethiopian prince, whose monument I have found at Ypsamboul and Ghirsche. This personage is represented in the speos of Ibrim paying his respects to Sesostris, and at the head of all the public functionaries of his government. Among them are two hierogrammates; also, the grammate of the troops and the grammate of the land, the intendant of the royal estates, and other scribes, who are not more particularly designated.

It is to be remarked, to the honour of Egyptian gallantry, that the wife of the Ethiopian prince Satnou presented herself before Sesostris immediately after her husband, and before the other functionaries. This, as well as a thousand other similar facts, shews how essentially the civilisation of Egypt differed from that of the

rest of the East, and resembled ours; for we may estimate the civilisation of a people according as the situation of the women is more or less tolerable in the system of society.

On the evening of the 17th of January we reached Derri, or Deir, the present capital of Nubia. Entering into conversation with a *Bervabre* of the country, I asked him if he knew the name of the sultan who had built the temple at Derri: he answered immediately, that he was too young to know that, but that the old men of the country appeared to him to be all agreed that this *birbi* had been built about 300,000 years before Islamism; but that all these old men were uncertain respecting one point; namely, whether it was the French, the English, or the Russians, who had executed this great work. So they write history in Nubia! The monument of Derri, although modern in comparison to the date assigned to it by the learned Nubian, is, however, a work of Sesostris. We remained here the whole of the 18th, and did not leave it till pretty late, having copied the most remarkable bas-reliefs, and drawn up a detailed account of all those of which we did not take copies. There I found a list of the sons and daughters of Sesostris, according to their ages, which will enable me to complete that of Ypsamboul. We also copied some fragments of historical bas-reliefs, most of which are effaced or destroyed. It was here that I was able to form my opinion on a very curious fact—I mean the lion which, in the tablets of Ypsamboul and Derri, always accompanies the Egyptian conqueror. The question to be determined was, whether this animal was placed symbolically to express the strength and valour of Sesostris, or whether that king, like the Capitan Pasha Hassan, and the Pasha of Egypt, kept a tame lion, his faithful companion in his military expeditions. Derri decided the question. I read there, over the lion assailing the barbarians attacked by Sesostris, the following inscription:—"The lion, servant of his majesty, tearing in pieces his enemies." This seems to me to shew, that the lion really existed, and accompanied Rhameses in his battles. This temple is a spece excavated in the rock of freestone, but on a very large scale: it is dedicated by Sesostris to Amon-Ra, the supreme god, and to Phre, the spirit of the sun, who was invoked there under the name of Rhameses, and was the patron of the conqueror and of his whole race.

This circumstance explains why we find on the monuments at Ypsamboul, Ghirscha, Derri, Seboua, &c., the King Rhameses presenting offerings or adorations to a god bearing the same name as himself. It would be a mistake to suppose that this sovereign was paying his worship to himself. Rhameses was merely one of the thousand names of the god Phre (the sun); and these bas-reliefs prove, at the most, a piece of priestly flattery towards the reigning king,—that of giving to the god of the temple that one of his numerous names which the king had adopted, and sometimes even the features of the king and queen, the founders of the temple. We see the same thing at Philé, in that part of the great temple of Isis which was built by Ptolemy Philadelphus. All the figures of Isis in the temple are the portraits of the queen Arsinoë, whose head is decidedly Greek; but the circumstance is much more striking on the most ancient monuments (those of the Pharaohs), where the pictures of the sovereigns are real portraits.

On the 18th, in the evening, we landed at Amada, where we remained till the afternoon of the 20th. There I had the pleasure of

studying at my ease—and without being interrupted by idle curiosity, as we were in the midst of a desert—a temple of the good period. This monument, which is choked up with a very great deal of sand, consists, first, of a kind of pronaoe, a hall supported by twelve square pillars covered with sculpture, and by four columns—to which no better name can be given than that of *proto-Doric*, or *Dorique prototype*,—for they are evidently the type of the Greek-Doric column;—and a circumstance worthy of remark is, that we find them employed only in the most ancient Egyptian monuments; that is to say, in the hypogeums of Beni-hassan, at Amada, at Karnac, and at Betoualli, where the most modern are those of the reign of Sesostris, or rather of his father.

The temple of Amada was founded by Thoutmoësis III. (Mœris), as is proved by most of the bas-reliefs of the sanctuary, and particularly by the dedication, sculptured on two jambs of the inner doors,—of which I here subjoin a literal translation, to give some idea of the dedications of the other temples, which I have collected with care.

"The beneficent god, lord of the world, the King, the son of the Sun (Thoutmoësis III.), moderator of justice, has performed his devotions to his father, the god Phre, the god of the two celestial mountains, and has raised to him this temple of hard stone; he has done it to be vivified for ever."

Mœris died during the building of this temple; and his successor, Amenophis II., continued the work which he had commenced, and sculptured the four halls to the right and left of the sanctuary, as well as the part which precedes them. The works of the king are detailed in an enormous stela, bearing an inscription of twenty lines, which I have copied with immense labour, at the bottom of the sanctuary.

His successor, Thoutmoësis IV., completed the temple, adding to it the pronaoe and the pillars; all their architraves are covered with these dedications, or laudatory inscriptions. One of them struck me by its singularity: the following is a translation:—

"Hear what the god Thoth says,—the Lord of divine words,—to the other gods residing in Thyrî. Come and behold the great and pure offerings made for the construction of this temple by the King Thoutmoësis (IV.) to his father the god Phre, the great god manifested in the firmament."

The sculpture of the temple of Amada, belonging to the best period of Egyptian art, is far preferable to that of Derri, and even to the religious picture of Ypsamboul.

On the 20th, in the afternoon, our labours at Amada being terminated, we set out and descended the Nile as far as Korosko, a Nubian village, of which I shall preserve the remembrance, because we met there the excellent Lord Prudhoe and Major Felix, who were carrying into execution their plan to ascend the Nile as far as Sennaar, and thence to go to India by way of Abyssinia, Arabia, and Persia. Our little squadron stopped, and we spent part of the night in talking over our past labours and our future projects: I at last bade adieu to these courageous travellers, and quitted them with much regret, for they go up the river in a very late season.

On the 21st, we arrived at Ouadi-Eseboua (the valley of lions), which received this name from an avenue of sphinxes placed on the dromos of its temple, which is a hemi-speos; i. e. an edifice half built of hewn stone, and half excavated in the rock. This is indisputably the worst work of the time of Rhameses the Great:

the stones are irregularly cut, the intervals are filled with cement, on which the ornamental sculptures are continued, and which are very indifferently executed. This temple was dedicated by Sesostris to the god Phre, and the god Phtha, the lord of justice: four colossal figures, representing Sesostris standing, occupy the beginning and the end of two rows of sphinxes, which form the avenue: two historical tablets, representing the Pharaoh defeating the people of the north and the south, cover the external face of the two walls of the pylones; but most of the sculptures are unintelligible, because the stucco or cement on which great part of them were delineated has fallen down, and leaves a number of breaks in the stone, and particularly in the inscriptions. This temple is almost wholly buried by the sands, which press upon it on all sides.

We lost the whole of the 22d in consequence of a violent high north wind, which obliged us to lie-to till sunset. We profited by the calm to reach Maharrakah, the temple of which we saw as we went up the river: it is not sculptured, and consequently uninteresting to me, who look only for the *hadjar-maktoub*, (the written stones), as our Arabs say.

At sunrise on the 23d, we were at Dakkeh, the ancient Pselcis. I hastened to the temple, and the first hieroglyphic inscription that caught my eye, informed me that I was in a holy place dedicated to Thoth, the lord of Pselk: thus I enriched my map of Nubia with the new hieroglyphic name of a town, and I could now publish a map of Nubia with the names in sacred characters.

The monument of Dakkeh is doubly interesting: in a mythological view, it affords materials of infinite value to enable us to comprehend the nature and the attributes of the Divine Being, whom the Egyptians worshipped under the name of Thoth (the twice great Hermes): a series of bas-reliefs had afforded me, in some degree, all the *transformations* of this god. I found him first (as he ought to be) in connexion with Har-hat, the great Hermes Trismegistus, his primordial form, and of which he, Thoth, is only the *last transformation*; that is to say, his incarnation on earth after Amon-Ra and Mouth, incarnate in Osiris and Isis. Thoth reascends to the celestial Hermes (Har-hat), the divine wisdom, the spirit of God, and passes through these forms:—1st, that of Pahinoufi (he whose heart is good); 2dly, that of Arihoenoufi or Arioenoufi (he who produces harmonious sounds); 3dly, that of Meui (of thought or reason): under each of his names Thoth has a particular form and insignia, and the images of these various transformations of the second Hermes cover the walls of the temple of Dakkeh. I forgot to say that I found here Thoth (the Egyptian Mercury) with the caduceus, i. e. the ordinary sceptre of the gods, entwined with two serpents, and also a scorpion.

With reference to history, I have found that the most ancient part of this temple (the last hall but one), was built and sculptured by the most celebrated of the Ethiopian kings, Ergamenes (Erkamen), who, according to the account of Diodorus Siculus, delivered Ethiopia from the theocratic government, by an atrocious means it is true, namely, by massacring all the priests of the country: undoubtedly he did not do the same in Nubia, since he built the temple there, and this monument seems to prove that Nubia ceased to be subject to Egypt upon the fall of the twenty-sixth dynasty, that of the Saïtes, dethroned by Cambyases. This country remained under the yoke of the Ethi-

ophans, till the time of the conquests of Ptolemy Evergetes I. who again united it to Egypt. Accordingly the temple of Dakkeh, commenced by the Ethiopian Ergamenes, was continued by Evergetes I., by his son Philopeter, and his grandson Evergetes II. It was the Emperor Augustus who began, but did not finish, the sculptures in the inside of the temple.

Near the pylone of Dakkeh, I discovered the ruins of an edifice; some large blocks of stone still preserve a portion of a dedication: it is a temple of Thoth, built by the Pharaoh Meris. This is another fact, which proves that the Ptolemies, and the Ethiopian Ergamenes himself, only rebuilt temples where they had already stood in the times of the Pharaohs, and to the same divinities as had always been worshipped there. This was a very important point to establish, in order to demonstrate that the last monuments raised by the Egyptians contained no new form of divinity. The religious system of this people was such a complete whole, so connected in all its parts, and fixed from time immemorial, in so absolute and precise a manner, that the dominion of the Greeks and of the Romans did not produce any innovation: the Ptolemies and the Cæsars only restored in Nubia, as in Egypt, what the Persians had destroyed, and rebuilt temples where they had formerly stood, and dedicated them to the same Gods.

(To be continued.)

LITERARY AND LEARNED.

ROYAL SOCIETY AND BRITISH MUSEUM.

WE rejoice to hear that an arrangement has just been made between the Royal Society and the British Museum, which promises to be essentially serviceable to both these valuable Institutions, as well as highly beneficial to the cause of science and literature, and to the general interests of the public. It has, we are informed, been agreed to interchange, on the part of the Royal Society, a quantity of its treasures illustrative of various sciences,—geology, mineralogy, natural history, &c. &c., too long hidden in obscure repositories, for, on the part of the British Museum, duplicate copies of such works as are calculated to enrich the library, and complete the books necessary for reference to such a body as the Royal Society. In the first instance, we believe the value of the articles given will be far in favour of the latter; but, with that liberality which becomes the character of literary and scientific intercourse, it has consented to make a debit of the amount as against the Museum, to be diminished and extinguished as occasion offers, by the transfer of such things as are eligible to be received. The accession thus about to be made to the stores of the British Museum must greatly enhance the consideration of that already noble collection, and render it still more deserving of being viewed with pride as a national establishment. And, while alluding to it, we cannot help expressing our earnest wish that the munificence of the legislature would enable it to be exalted still higher in the scale. It is a painful matter to behold even third-rate foreign countries outstripping Great Britain in the accumulation of those objects which enlighten the most interesting fields for inquiry to enlightened man. But such is truly the case. Bavaria acquired the only remains of architectural antiquities which could vie with our Elgin marbles; and a private individual, Mr. Soane, carried away from the Museum itself one of the finest specimens of the ancient Egyptian sarcophagi in exist-

ence. Even at this hour, when France is shewing so honourable an example in the investigation of all that is left of that extraordinary people, and the recovery of their hieroglyphical records of the remotest era,—we—the English people by their rulers—are so beggarly and so poor, where learning and the sciences are concerned, that we cannot afford to purchase the admirable collection made by our own countryman, Mr. Salt,* but must leave it to be competed for between the Museums of Paris and Vienna! To us, this appears to be no less than a national disgrace; and we deeply lament that mercenary and petty minds should be placed where they can have any influence on such decisions.

KING'S COLLEGE.

HIS Majesty's grant of a charter to this Institution has, we understand, been received by the council within the last few days; and declares, in the preamble, that the College is founded with the intent, that "instruction in the duties and doctrines of Christianity, as taught by the United Church of England and Ireland, shall be for ever combined with instruction in the various branches of literature and science."

The charter appoints the Lord Chancellor and eight others, in virtue of their office, as perpetual governors:—the Archbishop of Canterbury as visitor; 8 life governors; 1 treasurer; 24 members of council; and three auditors: the whole of whom must be members of the Established Protestant Church, or otherwise become incompetent to act.

The corporation is designated, "The Governors and Proprietors of King's College, London."

Every preliminary arrangement having been matured, and the council having received proposals from various parties for the erection of the College, finally contracted for the completion of the buildings at a sum of 63,947*l.* independently of the fittings. Under this contract, we are told, that the magnificent front of Somerset House towards the river is to be finished.

The public access to the College will be through a gateway, at present occupied by the two houses 159 and 160 in the Strand; and to the High School, through an entrance to be formed on the site of two houses at the northern end of Strand-lane. The purchase of these properties has long since been effected; and no time will now be lost in carrying into effect the admirable purposes, for which the public munificence has already provided a sum of nearly 130,000*l.*

FINE ARTS.

DUKE OF YORK'S MONUMENT.

THE subscribers to this national testimonial will regret to learn, that the Committee to whom were intrusted the giving effect to their intentions, have suspended any decision upon the designs with which they have been furnished. Several of these appear to us to display considerable taste in composition, and to have the further merit of being appropriate in their application. The columns commemorative of Trajan and Antoninus seem to have been the models generally followed by the artists on this occasion; and, in our opinion, the columnar form is, of all others, the best

* The last and most mature selections of this experienced and, as consul, powerful collector; valued, as we have heard, at some five or six thousand pounds, which the British Museum trustees might have, if allowed, to sell a parcel of their useless duplicate books!

adapted for testimonials of this nature, which have a singleness of purpose. The insulated column, of lofty and noble proportions, the abacus, crowned with the majestic and well-known figure of the lamented prince, the pedestal enriched with appropriate sculpture—would be an object at once embraced by the eye, and, from being alone and unconnected with any other structure, would arrest and command undivided attention: and if there be any difficulty in procuring a proper foundation on the parade in St. James's Park, we venture to suggest the placing it on the site of Carlton House, and on the very spot where Mr. Nash has the pretty intention of constructing a *jet d'eau*, and charitably covering it with a Roman temple—to preserve the water from the rain! The column, thus placed, would well connect the two sides of the square, and would be a noble termination, as viewed from the County Fire Office. It would seem, however, that this work is not to be left to a straightforward way of proceeding; but, as in most of our public structures, that active, busy demon, *yooped* bad taste, must here also interfere, and with such a suggestion that we can scarcely credit that any men of taste have paused to entertain it. This notable scheme is, to tack the testimonial on to the Whitehall front of that quarry of insignificance, the Horse Guards, in the form of a triumphal gateway or entrance, which, from its very nature, will require considerable ornament and embellishments; and thus to make it subservient to a mass that has scarcely an architectural feature. This we take to be the *ne plus ultra* of absurdity; and though at present content with this brief notice, should the plan be persisted in, we shall again advert to it, and use our utmost endeavours to prevent the perpetration of so gross a folly.

NEW PUBLICATIONS.

Great Britain Illustrated. From Drawings by William Westall, A.R.A.; engraved by E. Finden. With Descriptions by Thomas Moule. Nos. 7, 8, 9, 10, 11, and 12. *TIT.* THERE is no falling-off in this pleasing little publication (the moderate price of which renders it accessible to all ranks), from the ability which its earlier Nos. manifested: indeed we think that "Rochester," "Hastings," "Glen-maire Bridge," "Nottingham Castle," and several others, are among the best plates that have appeared.

Outlines from the Ancients. Etched by F. C. Lewis; with an Introductory Essay and Descriptions by George Cumberland, Esq. Part IV. Prowett.

THE outlines in this, the fourth and concluding Part of Mr. Cumberland's tasteful work, indicate "The Expression of Grief," "Heroic Action," and "Dignity." There is also an Appendix, with four compositions (one of them, "Venus counselling Cupid," remarkably beautiful) by the author, outlined by Blake; and exemplifying the author's principle—"that of lines flowing towards lines, so as to produce a harmony by confining the eye to the object." Upon the whole, we think Mr. Cumberland perfectly justified in characterising his elegant publication as "a work to form the taste of the gentleman, and at the same time to serve as a guide to the young artist who aims at superior excellence."

Lady Sophia Catherine Greyley.—engraved by Thomson from a miniature by W. S. Newton,—forms the fifty-seventh portrait of the series of our female nobility, for the next *Belle*

Assemblée, and is an extremely sweet specimen both of native loveliness and of graceful art. The expression is interesting, the painting delightfully simple, and the engraving delicately appropriate.

ORIGINAL POETRY.

THE FIRST GRAVE.

[We are indebted for the following pathetic little poem to the circumstance of the first grave being formed in the churchyard of the new church at Brompton: the place was recently a garden, and some of the flowers yet show themselves among the grass, where this one tenant, the forerunner of its population, has taken up his last abode.]

A single grave!—the only one
In this unbroken ground,
Where yet the garden leaf and flower
Are lingering around.
A single grave!—my heart has felt
How utterly alone
In crowded halls, where breathed for time
Not one familiar tone;

The shade where forest-trees shut out
All but the distant sky;—
I've felt the loneliness of night
When the dark winds past by;
My pulse has quickened with its awe,
My lip has gasped for breath;
But what were they to such as this—
The solitude of death!

A single grave!—we fall forget
How sunder human ties;
When round the silent place of rest
A gathered kindred lies.

We stand beneath the haunted yew,
And watch each quiet tomb;
And in the ancient churchyard feel
Solemnity, not gloom:

The place is purified with hope,
The hope that is of prayer;
And human love, and heavenward thought,
And pious faith, are there.

The wild flowers spring amid the grass;
And many a stone appears,
Carved by affection's memory,
Wet with affection's tears.

The golden chord which binds us all
Is loosed, not rent in twain;
And love, and hope, and fear unite
To bring the past again.

But *this* grave is so desolate,
With no remembering stone,
No fellow-graves for sympathy—
'Tis utterly alone.

I do not know who sleeps beneath,
His history or name—
Whether if, lonely in his life,
He is in death the same:

Whether he died unloved, unmourned,
The last leaf on the bough;
Or if some desolated hearth
Is weeping for him now.

Perhaps this is too fanciful:—
Though single be his sod,
Yet not the less it has around
The presence of his God.

It may be weakness of the heart,
But yet its kindest, best:
Better if in our selfish world
It could be less repressed.

Those gentler charities which draw
Man closer with his kind—
Those sweet humanities which make
The music which they find.

How many a bitter word 'twould hush—
How many a pang 'twould save,
If life more precious held those ties
Which sanctify the grave!

L. E. L.

BIOGRAPHY.

WILLIAM WADD, ESQ.

It is with great regret we have to record the unfortunate and violent death of Mr. Wadd, Surgeon Extraordinary to His Majesty, and well known to the public as the author of some volumes of medical pleasantries.

Mr. Wadd's family had been settled for many generations at Hampstead, in the vicinity of the metropolis; and its most distinguished member was Sir William Wadd, Governor of the Tower in the time of James I., during the Gunpowder Plot. The father of Mr. Wadd was a most respectable apothecary in the city, who died a few years since, at an advanced period of life: to him he served an apprenticeship as an apothecary, and a subsequent one, as a surgeon, to the late eminent Sir James Earle, whose pupil and dresser he was at St. Bartholomew's Hospital. Of this noble institution Mr. Wadd was elected surgeon, after a severe contest, in opposition to the present Mr. Vincent, when the revival of an illiberal by-law, which precludes the appointment of any one to the situation who had been an apothecary, disannulled his election. Mr. Wadd then commenced business as a consulting surgeon at the west end of the town, where his practice was chiefly among the higher circles. For the last six or seven years he was one of the Council of the College of Surgeons; and, during the present month, was appointed to succeed Mr. Abernethy as a member of the Court of Examiners.

Between 1807 and 1815, Mr. Wadd published several esteemed professional works of much practical utility, besides contributing largely to the *Medical Journal*; and during his leisure hours employed himself in etching numerous anatomical plates, which remain unpublished. Since 1815 various works of an anecdotal nature, connected with medicine and surgery, have appeared from his pen; the last of which was his *Essay on Corpulency*, at present, we believe, in the third edition.

The quaint and pleasant style in which his latter productions were written, procured for Mr. Wadd generally the appellation of "the facetious,"—a term which his manners and conversation in society were highly calculated to support. The most perfect good humour, with a certain drollery of expression, were his characteristics; but where difficulty or danger presented themselves, his professional career was marked by promptness and energy. Few medical men had so little of quackery about them as Mr. Wadd: with his patients he was candid; but his candour was that of a gentleman and a friend.

The melancholy account of Mr. Wadd's death reached town on Saturday last. He was making a short tour in the south of Ireland, in company with Mr. Tegart, of Pall-Mall; and, after spending a few days at Killarney, was proceeding in a post-chaise to Mitchelstown, the seat of the Earl of Kingston, about a mile and a half from Killarney. The horses, through some neglect of the driver, took head, when Mr. Wadd opened the chaise-door, and threw himself on the ground. Mr. Tegart remained in the carriage; and after being carried two miles, got safely out of it, the horses having been checked by a park-wall. On Mr. Tegart's returning to the spot where Mr. Wadd had

thrown himself out, he found that unfortunate gentleman quite dead, although he had imagined that he saw him on his feet after the fall.

Poor Wadd—the sportive and humorous—the Yorick of his profession—the man whose pleasantries have only within these few months so agreeably diversified our miscellaneous page! It is a melancholy thing to fill a slight but sad portion of them with the notice of his melancholy end. Alas! where be his jests now—his facetious "*Nugæ*"—his whimsical "*Mémoires*"—his laughter-moving "*Comments*?"—All gone to the silent dust; whence, like my lady's beauty, they may preach the gloomy lessons of mortality.

Mr. Wadd was a man of cheerful disposition and of high talents, and one much beloved and respected by all who knew him. Full of anecdote, he was a most entertaining companion, but at the same time intellectual and instructive; so that while you laughed with the wit, you never ceased to regard the man of information and science. He had the misfortune, not long ago, to lose his (we believe) only son; and the natural rebound of the mind from grief had perhaps some influence in leading to the publications we have noticed in the note below. His labours are now o'er, and he has learnt what we must all learn—that

Death—a necessary end—
Will come when it will come.

SKETCHES OF SOCIETY.

TURKEY.

THE present Padishah, or Grand Sultan of the Ottoman empire, is Mahmud II., who was born on the 20th July, 1785, and ascended the throne 28th July, 1803. He is of the eighteenth generation from Osman I., who founded the dynasty, and the thirtieth sovereign of that dynasty. The hereditary prince is his eldest son, Abdul Mehid, who was born on the 20th April, 1824. And, besides whom, he has one other son, two years old, and four daughters.

The extent of the Ottoman dominions is estimated at 47,444 square miles, of which 10,000 are in Europe: but its European population has been variously computed; Balbi assuming it at 9,500,000; Hassel at 10,183,000; and other writers at 10,600,000. Of these, there are not more than 2,271,000 Turks; the remainder being composed of a motley mass of Pagans, Jews, and Christians. Amongst the latter are 3,000,000 Greeks, 300,000 Jews, and 80,000 Armenians. The whole population of the empire, in Europe, Asia, and Africa, is 23,650,000.

The *revenues* of this empire are about 2,900,000*l.* annually; but the expenditure disbursed by the state does not exceed 275,200*l.* The national debt is between seven and eight millions sterling. The revenue, or *miri*, just mentioned, belongs to the Turkish public treasury; but there is another branch of income, derived from presents, inheritances, imperial domains, and especially confiscations, which appertains to the "*ilsh hane*" or "*khasneh*," imperial treasury. The accumulations of this fund are said to be enormous, as every sultan is bound to set apart a given sum, according to the length of his reign.

Of its *military* force it is impossible to speak

* See *Literary Gazette*, for reviews of these playful and diverting performances; No. 530, for review of "*Nugæ Canore*;" No. 534, of "*Nugæ Chirurgicæ*;" No. 553, of "*Mémoires, Maxims, and Memoirs*;" and No. 621, of "*Comments on Corpulency*," &c.; and we take some merit to ourselves, for having, in great measure, instigated the later publications, by drawing the first out of the oblivion of a still-birth, and obtaining for it that popularity which it deserved, and which induced its author to pursue his playful course.

with precision since the destruction of the corps of janizaries; but before that period its regular troops were 30,000 cavalry, and 124,000 infantry; and its feudal militia, 120,000, the greater part of which were horsemen. Its naval force in 1826 consisted of 21 sail of the line, 31 frigates, 8 corvettes, and 30 gun-boats, carrying altogether 2990 cannon, and 5300 seamen; but this arm of its power was amputated by the "untoward" fight of Navarino.

European Turkey has one city containing above 500,000 inhabitants, five above 50,000, eleven above 20,000, and twenty above 10,000. Amongst the imperial towns are—

	Souls.	Houses.
Constantinople, containing	597,600	88,000
Cairo	400,000	
Aleppo	300,000	
Damascus	150,000	
Philippopolis (Filibe)	120,000	30,000
Adrianople	100,000	16,000
Salonica	70,000	4,000
Boma Seral	65,000	
Bucharest	60,000	
Schumla or Shumla	18,000	4000

The order of the crescent was instituted by Selim III. in the year 1797, and consists of three classes: and the present sovereign's title runs as follows: "We, the Sultan, son of a Sultan Chakan, son of a Chakan Sultan, Mahmud II., Chan, son of the victorious Sultan Abdul Hamid, by the infinite grace of the Creator of the world and eternal God, and by the mediation and miraculous act of Mohammed Mustapha, the chief of prophets, whom the blessing of God preserve, servant and lord of the cities of Mecca, Medina, and Kuda, towards which the whole globe turns its eye when prayer is made, Padishah of the great cities of Istanbul, Edrene, and Bursa, which all princes behold with envy," &c.

DRAMA.

COVENT GARDEN.

OBSTINACY and hate seem to be plunging this unfortunate theatre into the gulf of utter ruin. Meetings are held, where nothing but bad passions are displayed; and common sense, as well as liberal feelings, are sacrificed on the altar of private sordidness and petty malignity. How the matter will end, cannot be foreseen; but it is easy to perceive that every one concerned in the struggle (except the lawyers) will pay dearly for the exhibition of uncompromising tempers and odious resentments.

ENGLISH OPERA.

ON Tuesday, *Der Vampyr*, a grand romantic opera, was produced at this theatre, and repeated on Thursday and yesterday, with unanimous and merited applause. It has been adapted to our stage by one of our ablest of adapters, as well as most successful dramatists, Mr. Planché; and, considering the difficulties which beset such productions, and the little fame which usually attends them, displays his talents to very great advantage. The plot hinges on the notorious superstition respecting vampirism; and the scene is happily laid in the native soil of that horrible mystery, Transylvania and Wallachia,—which affords scope for fine scenery and picturesque costume. The first act is an introduction, in which *Ebbs*, the Prince of Evil (Mr. O. Smith), grants the Vampire (Mr. H. Phillips) a farther term of existence, on the condition of his sacrificing a virgin bride to him within a month; and the monster is killed in an attempt to perform this by the murder of *Iantha* (Miss Cawse), a Greek girl, whose affections he has gained. He is restored by the aid of *Alexis* (Sapio), a friend, who drags his body into the moon-

beams, and from whom he extorts an oath of secrecy for the space of one month—the period of his trial. The opera then commences, and we find in the Vampire the rival of his preserver for the hand of *Henrika* (Miss Betts), and favoured by her father, *Baron Kassova* (Thorne), who appoints the nuptial ceremony to take place at midnight, the latest date of the Vampire's allowance. He, therefore, to make assurance more sure, assails the life of *Liska* (Miss H. Cawse), a peasant about to be united to *Wenzel* (J. Bland), the Baron's Heiduk; but is once more slain by the bridegroom, and left to his last hope, the marriage to *Henrika* before the time expires. This ultimately fails, the devil claims his own, and the human lovers are blessed with each other. Such is the outline of this drama, "freely translated from the German of Wilhelm Aug. Wohlbrück," the music by Henrich Marschner, and produced under the skilful superintendence of Mr. Hawes. The composer is evidently of the school of Weber; but though we trace a marked resemblance, we have nothing of servile imitation. The concerted pieces and choruses are almost all of them admirable performances, and the recitatives and airs of a masterly and pleasing character. We cannot, however, help thinking that the orchestral accompaniments were throughout too loud: we know how fond the Germans are of instrumental music, and to how high a pitch of science they have carried these combinations; but to English ears, we are sure that more of the human voice divine, and less of the woods and winds, would be infinitely preferable. We know not when we have listened to more expressive compositions, whether given to the diabolical and despairing strains of the Vampire, or to the lighter emotions of humanity, the merry drinking song, or the tender plaint. And though on the first night the singers appeared to be somewhat exhausted by frequent and long rehearsals of this laborious music, they collectively and individually did justice to its beauties. Phillips's rich bass is finely suited to the Vampire's various changes; and Sapio, Thorne, and Bland, executed their parts in a very meritorious manner. Miss Betts also evinced great powers in the difficult pieces allotted to *Henrika*; while Miss H. Cawse made quite a hit in the playful notes of *Liska*. Her *arrietta* in the second act was delightful, and so was her portion of the trio which followed. Altogether, we are of opinion that the oftener this opera is heard, the better will it be understood, and the more will it be liked; for it possesses much genuine harmony. Nor ought we to close our account of it without noticing, that in the peasantry and minor characters, J. Russell, Penson, Salter, Minton, and Mrs. C. Jones, perform most cleverly, and contribute much to the general effect. Combined with the humours of *The Spring Lock*, the English (German) opera need look for no farther attractions, should its season last till midsummer, which we are sorry it does not.

As the poetry is much above the usual level of such productions, we add an example, in justice to the writer.

"Day upon the Krapaks shakes his golden tresses,
Morning's sweetest flowers are laughing through their
tears;
Yes, 'e'en a look of life the sandy steppe wears,
Seen through the joy that now my bosom blesses!
The yellow maize in billows waving,
The mighty Maros onwards raving,
Of mountain peaks the snowy chain,
Like silver tents that gird the plain,
All brighter shew—more fair appear!
Gallops swiftly ye lingering hours:
'Ere noon shall blaze on Lipka's bowers,
My own Alexis will be here.

O! bliss almost too much to bear!
So fondly sigh'd for—sought so long—
For this fulfilment of thy pray'r,
Wake, happy soul, thy grateful song!—
Ave! Ave!—Star of ocean!
Thou to whom, in deep devotion,
Daily have I knelt and sued!
Voice! hearts thy shrine adorning,
Tapers burning night and morning,
Shall attest my gratitude!"

"From the ruin's topmost tower,
I have gazed a weary hour,
Wenzel to discover;
In the sun's descending beam,
Mountain glow'd and glitter'd stream,
But they bore no lover.
Trooping came the guests so gay,
But no bridegroom!—father, say—
Should not that my brow shade over?"

Evening sinks on hill and dale,
And the sobbing nightingale
Mourns one perjured lover;
From her cloudy slumber, soon
She will wake the silver moon,
And to pity move her.
Night is on its starry way,
Yet no bridegroom!—father, say—
Should not that my brow shade over!"

The Vampire's scena, in which he dares Alexis to betray him.

"Say'st thou!—Ha!—About it then!—
Yet before thy vow thou break'st—
Ere the awful cast thou mak'st—
Madman!—To thy mortal ken,
I will mercifully show
What thou stakest on the throw!
Foolish wren!—Betray me!—Fly!—
Lead thy soul with perjury;
And in triumph to thy tower
Lead Hungaria's fairest flower.
Happy bridegroom!—Joy yet higher!—
Of a seraph-race the sire!
But the hour that tolls for all
Will anon for thee be knelling;
For the last, dark, narrow dwelling,
Thou must leave thy lordly hall.
Trembling!—then recall thy vow—
Mark ye—I repeat it now—
'This reveal'd, by speech or sign,
May thy wretched fate be mine!
The oath is recorded!—and granted the prayer!
A prayer, remember, of thine own addition—
A free, uncall'd for, earnest petition—
Canst thou to look on the picture bear?
Thy frame forbidden in dust to perish!
With human blood thou art doom'd to cherish!
Thy nearest, thy dearest, must suffer first,
Thy fury to slake thy horrible thirst!
And one by one as thy darlings decline,
Their pangs shall add to the anguish of thine!
She that was fairest amongst the fair,
A beautiful cherub with golden hair,
Uplifting her poor little clasped hands,
Her innocent heart with agony riven,
Shall falter—'Father! be merciful,
And I will pray for thee to Heaven!
Thy soul shall be torn 'twixt affection and pain—
To fly thou shalt struggle, and struggle in vain!
Thy fate shall compel thee—thy thirst shall consume—
Thou canst not alter thy dreadful doom!
A Vampire!—Till Eblis claims his own!
Then, chain'd at the foot of his burning throne,
Thou shalt feel, that even the devils there,
Compared to thyself, are as angels fair!
Back shall they start in horror from thee—
Thou 'midst the cuned account shall be!
Thou starrest!—Thou standest as statue pale!
Ha! ha!—'Tis my lot I am painting now!
To share such a fate doth the hero quell?
Hence! begone! and break thy vow!"

VARIETIES.

Madder, Silk-Worms, &c.—M. Bourdillat has introduced into the department of Tarn and Garonne the cultivation of madder upon his own land; which is so prepared, that it may be used immediately. He has also occupied himself in rearing silk-worms, in cultivating teasles to full cloth, woad, flax, and hemp; but with the last four plants he has not been successful.

Typography and Calligraphy of Germany.—In this region of study and incubation, it has been calculated that, out of a population of forty-two millions, there are 12,500 writers, or one learned penman in every 3,200 souls. The number of sheets printed has been es-

timated at 187,000,000 per annum; which gives forty-seven sheets per head. Periodical works are not comprised in this calculation, though they form a mass of no trivial ponderosity. It would be superfluous to add, that if there be no country in Europe which can match the Teutonic in scribes, there is none which it does not distance in readers.

Shakespeare.—"The most *soverling* pre-scription in Galen is but empiric," says a French journal, meaning to quote Shakespeare.

Thunder—a Cure for Paralysis.—A vessel, whilst lately crossing the Atlantic, was repeatedly struck by lightning, and the persons on board of her were strongly electrified. Among the passengers was one whose extremities had been afflicted with paralysis for more than three years: this individual was lying in bed when the electric shock burst upon the ship; but, to the utter astonishment of the bystanders, he jumped up from his couch and ran upon deck, where he continued to walk about with as much readiness as any one of his shipmates. Nor was his cure of a merely temporary character—for he has continued ever since to enjoy the perfect use of his limbs. This event bears an analogy to the well-known efficacy of galvanism as a remedy for nervous affections and paralysis.

Butter-Churn.—An agriculturist of the department of Jura has invented a butter-churn, by means of which an increase of butter may be obtained, and in a shorter time, than by the usual churn. Although it is in appearance similar to some churns now in use, it differs in many essential points. The inventor has had two years' proof of its advantage—the butter which he has obtained being good and very well made: the expense of this new churn is not much.—*Annal. de la Soc. Linn. de Paris.*

To preserve Butter.—M. Thénard recommends the method used by the Tartars: it consists in melting the butter in *balneo marie*, or in a heat which does not exceed 82 degrees, and keeping it in that state until the cheesy matter is deposited, and the liquid is transparent. It is then decanted, or strained through a piece of linen, and frozen in a mixture of pounded ice and salt, or by means of cold well-water. Without this precaution, it becomes a crystalline mass, and cannot so well resist the action of the air. In a well-closed vessel, and in a cold place, it will keep for six months, or even more, almost as good as the first day, especially if care be taken to remove the upper part. If, at the time of using, a sixth of its weight of cheese is beaten up with it, it will have the appearance of fresh butter. The taste of rancid butter, according to M. Thénard, may in a great degree be removed by means of melting it as above mentioned.

Preservation of Corn.—The following method of preserving corn is adopted in Russia. The corn is dried in small ovens, or chambers, which communicate with a larger chamber or oven by small tubes, that enter the smaller chambers at the top. The oven is then filled with straw, closely pressed, which is lighted, and left to consume during the night. Next morning the corn is taken from the smaller chambers, the smoke from the ovens having passed into them, and perfectly dried it. This practice has several advantages: the corn is lighter to move, and is kept much easier, without requiring to be constantly turned, being preserved from vermin by the smoky taste communicated to it by the straw, which does not quit it until it has passed through the mill. The corn intended to be kept for any length of time is put into pits, in shape like a bottle,

sufficiently high for a man to stand erect in, which are dug in elevated places with a clayey soil. When they are dug, a fire is lighted for four-and-twenty hours, which forms a hard crust round the pit. The interior is lined with the bark of the birch-tree, fastened with wooden nails. Some straw is then put at the bottom, upon which the corn is placed, and more straw at the top, the mouth of the pit being then closed with a wisp of straw, in the form of a cone. Each pit contains from twenty-five to one hundred tchetverts, and the grain in them will keep for twenty years without being injured.—*Biblioth. Univ. de Genève.*

Human Life.—The result of researches in different parts of France, England, the Netherlands, Switzerland, and Russia, has been to shew, that out of a hundred men in those countries, only about twenty-five arrive at the age of sixty years. Mountainous countries, whatever may be their latitude, are those in which life is of the greatest duration.

Pulmonary Consumption.—*Le Globe* states that a student of medicine, twenty-six years of age, attacked by a malady which one of the commissioners appointed by the Académie des Sciences recognised to be pulmonary consumption, had been completely cured by the administration of chlore.

The Hiccough.—Keep a dog fasting for eight or ten hours, then lay it on its back, and pour some cold water on its stomach; the hiccough will immediately be produced. The same will occur with other animals.

Pigeons.—A pigeon has been known to live above two days after having been deprived of its brain and the upper part of the spinal marrow.

The Mole.—M. Flourens, a French naturalist, has lately made some inquiries into the organisation of the mole, and has found that if it is not exclusively, it is at least essentially carnivorous. It dies very soon if it be kept only upon vegetables; and though it is known to destroy roots of all sorts, it is not for the purpose of eating them, but to seek for worms and insects, and particularly for the eggs of insects. If kept upon any animal substance, it will live a long while. Ten or twelve hours is the maximum of the time which it can live without nourishment; and, like all animals which exist upon blood and flesh, it always drinks with great avidity.

German Oils.—MM. Schnebler and Beutsch have made some researches into the properties of oils obtained in Germany, and have found that the species of oleaginous seeds give the quantity of oil as follows:—Filberts, 60 per cent; garden cresses, 56 to 58; olives, 50; walnuts, 50; popples, 47 to 50; almonds, 46; colza, 39; white mustard, 36; tobacco-seed, 32 to 36; kernels of plums, 33; winter turnips, 33; summer turnips, 30; wood, 30; hemp-seed, 25; fir, 24; linseed, 22; black mustard, 18; heliotrope, 15; beech mast, 12 to 16; grape stones, 10 to 11.—*Allgem. Handl. Zeitung.*

China.—A museum, to be called "The British Museum in China," it is stated in the Canton Register, is about to be established among the British residents in that city.

Tokay Wine.—This nectar of German epicures is not the produce of Tokay itself, but of its environs, particularly Tarcal. The worst kind is grown close to the town; but the vineyards are scattered along a mountainous ridge, extending a distance of more than twenty miles. The yearly produce amounts on an average to 110,000 aulms; and the finest quality goes by the name of *essences*.

LITERARY NOVELTIES.

ANNUALS.—In our last No. we mentioned the attractions held out by one or two of our promised Annuals for next Christmas; and even-handed justice induces us to give equal publicity to the claims of others. The plates of the *Souvenir* are nearly ready; and such of them as we have seen are not only well etched, but extremely well chosen, and of great public interest. The Editor's talents and experience are sufficient guarantee for the literary portion of this popular volume.

In addition to those with which our readers are already acquainted, we have before us the announcement of "a new Annual, of a decidedly religious character, to be entitled *Emmanuel*;" and we are told that the distinguishing feature of this publication will be its endeavour to diffuse and maintain, in various compositions of prose and verse, sound principles of religion and virtue; its governing rule being that which pervades the doctrines of the Established Church. The Editor is the Rev. W. Shepherd, author of "Clouds and Sunshine," &c. &c.; and the publisher Mr. Maunier, of Newgate Street,—himself a person of no inconsiderable literary talent.

The Offering, another novelty in this way, is also announced: similar to its predecessors, as consisting of contributions in prose and verse, from the pens of eminent writers; and especially designed to establish and illustrate the connexion between polite literature and religion. The embellishments are to be selected principally from Scriptural subjects, by the most celebrated ancient and modern painters; and the work to be edited by the Rev. Thomas Dale, M.A.: S. Low, Lamb's Conduit Street, and Hurst, Chance, and Co., are the publishers.

Among other literary novelties, we have before us the prospectus of a new monthly periodical, about to appear under the title of "The London University Magazine." It will owe its principal contents to the students of this University, and will be strictly a literary and scientific miscellany; containing "Reviews of new Publications, Characters of Science, Critical and other Essays, Sketches of Character, Satires on Men and Manners, Literary and Scientific Intelligence, occasional Reports of the Professors' Lectures, a Monthly Summary of the Proceedings at the University, and Miscellaneous Intelligence connected with it—allowing, besides, a voluminous *et cetera* for subjects which may not be included under any of these heads."

LIST OF NEW BOOKS.

Edmonton.

CHARLES H. ADAMS.

TO CORRESPONDENTS.

Miss Landon requests us to state that her name is erroneously inserted in our list of contributors to the *Keepsake* last week.

We do not think it necessary to go further into discussion respecting M. Chabert's poison and fire-proof operations. On the 23d he repeated his phosphorus dose of forty grains, his hot-oil swallowing, and his baking—the latter for six minutes, in an apparent temperature of 500° of Fahrenheit, which raised his pulse from 110 at entering, to 160 at coming out. A medical friend states to us that Chabert is also exhibiting at private parties, and is not in perfect health. It is also said that negotiations are on foot for purchasing his secret.

Our monthly astronomical article having no reference earlier than September 5th, the pressure of more temporary matter has induced us to postpone it till that date.—The eleventh letter of Champollion is also of necessity divided: contributing much to elucidate the most interesting subject which at present occupies the literary world, we are happy to say that it will supply two farther papers, of equal extent, to our two next Nos. We have also just received the twelfth letter, which is full of very important details, and will appear in due order.—The appalling accounts which have reached us of the dreadful wreck at Anticosti shall appear in our next.

We cannot find space in the *London Literary Gazette* for "Sylvan Shades;"—nor, in our modern times, for "lines on the Mummy." We are obliged to decline W. G. H., as well as "E. C., Brighton,"—and can only thank M. L. Q.

It is an easy matter to forget the name of a fool.

ADVERTISEMENTS

Connected with Literature and the Arts.

UNIVERSITY OF LONDON. The

Notice of the various Courses of Lectures to be delivered during the next Session, and of the Days, Hours, and Fees, fixed for the Attendance of each, may be had at the Office of the University, and at Mr. Taylor's, 20, Upper Corner Street.

The Medical Classes will commence on the 1st of October, and the general Classes on the 3d of November.

MAPS. Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

There are already so many collections of Maps published in this country under the denomination of Atlases, and of such various sizes and merits, that it may at first appear unnecessary to provide for the public any additional work of this description. But in pursuing the objects for which they were originally associated, the Society for the Diffusion of Useful Knowledge find that geographical students and readers of history want an intermediate size between the large and expensive maps fit only for the library, and that smaller sort usually adopted in schools. The inequality in the compilation of most of these collections is another consideration of importance; but above all, the high price which maps when tolerably executed have hitherto borne, seems to require more than common exertion on the part of the Society to remove so serious an obstruction to the progress of popular education.

With these views, as well as for the purpose of illustrating the historical and geographical treasures which form part of the Library of Useful Knowledge, it has been determined to publish a series of modern and accurate maps, on similar scales, moderate in size, yet capable of distinctly showing every place of interest; of unexampled cheapness, yet finished in the best manner; and the accuracy of which may safely be relied upon, from the arrangements made for their composition and execution. They will be engraved on steel. The size will be about 11 inches by 14, and two of them will be delivered in a wrapper for one shilling, or with the outlines coloured, for one shilling and sixpence. The series will consist of at least fifty plates, and a number will appear at intervals of two months, or more frequently, if they can be more speedily completed.

The first Number will be published September the 1st, and will consist of

1. The Southern Part of Greece Modern.
 2. Ditto Ancient.
- London: Baldwin and Cradock, Paternoster Row.

Palestine.

Just published, on a very large sheet, 24 inches by 36, dedicated (by permission) to His Grace the Archbishop of York, price 18s. coloured, or 11s. 6s. mounted on a roller and varnished.

A NEW MAP OF PALESTINE and the ADJACENT COUNTRIES, constructed from original Authorities, showing their Ancient and Modern Geography, with the Routes of various Travellers.

By RICHARD PALMER.
London: Published by Baldwin and Cradock, Paternoster Row; and by A. Barclay, York.
Of whom may also be had.

The Bible Atlas; or, Sacred Geography delineated, in a complete Series of Scriptural Maps, from the latest and best Authorities. By the same. On 36 small 4s. Plates, price 16s. coloured, or 12s. plain, neatly half-bound.

Fisher's Illustrations and History of Devonshire and Cornwall.

Just published, in 12s. 6s. containing 70 brilliant Engravings, price 1s. 1s. Proof, on India paper, 2s.

BOOKS PUBLISHED THIS DAY.

Second edition, considerably enlarged, with Plates, 12s.
SALMONIA; or, Days of Fly-fishing. In a Series of Conversations.

By an ANGLER.

John Murray, Albemarle Street.
"One of the most delightful labours of leisure ever seen; not a few of the most beautiful phenomena of nature are here lucidly explained, yet the page has none of the varnish of philosophical unbelief, or false reasoning."--*Biography of Sir H. Davy, Gentlemen's Magazine*, August.

Latest published, 2d edition, 8vo. 12s.

IRELAND; its Evils, and their Remedies.

By MICHAEL THOMAS SADLER, M.P.
"Dwell in the land, and verily thou shalt be fed."
"This book, with respect both to the magnitude of its topics, and the mode in which they are treated, we do not hesitate to place far above any work that has for a long time appeared upon any branch of national economy."--*Morning Journal*.
John Murray, Albemarle Street.

Lately published by Mr. Murray, Albemarle Street. COLLOQUIES on the PROGRESS and PROSPECTS of SOCIETY.

By ROBERT SOUTHBY.

2 vols. 8vo. with Engravings, 2s.

"These volumes will supply considerable entertainment to every reader who likes to have their faculties called into exercise by power and accomplishments of no common description, however singularly exhibited. To a fine display of copious and commanding eloquence, supported by much felicity of expression, and adorned by most of the graces which attend on successful composition, is superadded a judicious and allusion, which a reader's experience of Dr. Southby's could alone supply. His books are worth reading, and should be read accordingly."--*Westminster Review*, No. XXI.

"This is a beautiful book, full of wisdom and devotion--of power and feeling; conceived altogether in the spirit of other times, such as the wise men of our day may find at, but such as Evelyn, or Isaac Walton, or Herbert, would have delighted to honour."--*Quarterly Review*.

2. All for Love, or the Pilgrim of Compostella.

By Robert Southby. Footslog 8vo. 7s. 6d.

"In the case of its structure and verification, and the straightforward simplicity of its narrative, it claims with the Ministerial Ballad. We thank Mr. Southby for giving to the friends of the public a trifle originally intended for his own; and glad we are that after so long a course of classical and literary labour he still retains the life and elasticity of his youthful heart, and the merry versatility of his boyish fancy."--*Blackwood's Magazine*.

Footslog 8vo. 7s. 6d.

FOREST SCENES and INCIDENTS in the WILDS of NORTH AMERICA.

By GEORGE HEAD, Esq.

John Murray, Albemarle Street.
"The author's buoyancy of spirits, his perpetual activity, and never-fading resources, in his pen, are in the best, during the severity of a Canadian winter, form an interesting feature of the volume."--*New Monthly Magazine*.

"In the company of Mr. Head we have skated on Lake Simcoe, and glided down the rapids of the St. Lawrence, with the same sense of reality and zest which we lately gathered over the Pampas with his shrewd and indefatigable brother Capt. Head.

"The work before us, a very sensible and entertaining, yet wholly unpretending production."--*United Service Journal*.

Just published, price 51s. boards.

GREEK SEPTUAGINT, with the Apocrypha, from the Oxford edition of Bos and Holmes.

This edition is handsomely printed in 1 vol. 8vo. bound in leather. For use in Churches and Chapels, as well as the Library.

"This elegantly executed volume is very correctly printed, and (which cannot but recommend it to students in preference to the incorrect Cambridge and Amsterdam reprints of the Vatican text), its price is remarkably low, and within the reach of almost every one."--*Horne's Introduction to the Bible*.

Mr. Valpy has printed this second edition in an economical form, to suit the use of the upper classes of schools, and whose hands many tutors are desirous of placing it.

Sold by Longman, Baldwin, Whittaker, Harding, Rivington, J. Richardson, and all other Booksellers.

Also, 3 vols. 8vo. 21s. 5s. boards.

Greek Testament, with English Notes.

Second edition. Containing copious Critical, Philological, and Explanatory Notes; with Parallel Passages, &c. from the Classics, and with References to Virgins for Idioms, and See for Ellipses. To which is prefixed, a short Treatise on the Doctrines of the Greek Article, according to Bishop Middleton, Mr. Granville Sharpe, &c. briefly and compendiously explained, as applicable to the Criticism of the New Testament. The various Readings are recorded under the Text. Greek and English Indexes are added. Two Plates are added, one illustrative of the "Travels of the Apostles," and the other, a "Map of Judea, and a Plan of the City and Temple of Jerusalem." By the Rev. E. Valpy, B.D.

This Work is intended for the Use of Students in Divinity, as well as for the Library.

"After a minute examination, the author of the present manual considers this edition of the Greek Testament as the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish to purchase only one edition of the 'Greek Testament.'"--*Horne's Introduction to the Bible*.

3. The Septuagint and Testament may be had uniformly bound in Four handsome Volumes.

For the Use of Schools, Private Tutors, &c.

In 1 thick vol. 18mo. price 5s. 6d. neatly bound in green, the 2d edition, considerably improved and enlarged, of

A COMPREHENSIVE GRAMMAR of MODERN GEOGRAPHY and HISTORY.

By W. PINNOCK,

Author of the "Catechism," &c.

Embellished with numerous Plates, illustrative of the Costumes, Manners, Customs, and Climate of the different Nations of the Globe, and Seven Maps, engraved on Steel by Sidney Hall.

"It is well conceived, well arranged, diligently edited, and beautifully got up, at a very moderate cost."--*Literary Gazette*.

"The astronomical portion of Mr. Pinnock's book is really excellent, and the historical and geographical details follow the account of each country, are highly interesting, and tend to enliven the study of geography, while they furnish a fund of instruction to the learner."--*Courier*.

London: Printed for Poole and Edwards, late Sotheby and Letterson, 18, Ave Maria Lane.

Nearly ready, by the same Author,

An English Grammar, with Exercises, completed in 1 vol. 18mo.

Published by particular request, and inscribed, by permission, to His Grace the Lord Archbishop of Canterbury,

THE RESURRECTION and the LIFE;

a Discourse preached in the Parish Church of Stoke Newington, upon occasion of the Decade of the Rev. George Gaskin, D.D. Prebendary of Ely, and Rector of Stoke Newington, St. Bennett's, Gracechurch Street, and for many years sole Secretary to the Society for Promoting Christian Knowledge.

By the Rev. AUGUSTUS CLISSOLD, M.A.
Curate of Stoke Newington.
Sold by Messrs. Baldwin, Whittaker, Harding, Rivington, and Waterloo Place, Pall Mall.

In 2 large vols. 8vo. price 18s. THE HISTORY of the HEBREW COMMONWEALTH, from the earliest times to the Destruction of Jerusalem, A.D. 70. Translated from the German of JOHN JAHN, D.D., with a Continuation to the time of Adolph.

By CALVIN E. STOWE.
"This very able work of Professor Jahn, one of the most learned of Continental Biblical scholars, has long been a desideratum in the English language. In presenting, therefore, the excellent work of Dr. Jahn to the English reader, Mr. Stowe has performed a very acceptable service, and deserves great credit for his understanding and laboured task; and for the judicious manner in which he has executed it. No Biblical student should be without it; and it may be read with interest and profit by the general inquirer."--*Monthly Review*, June 1839.
London: Printed for Hurst, Chance, and Co. St. Paul's Churchyard.

LAW. Practical Suggestions to Young Attorneys and Attorneys' Clerks, on the numerous most important points to them, and the Management of Practice in the various Departments. Interspersed with Observations tending to guard young Practitioners against errors into which they may easily fall. Written from actual Experience, the result of many years practice.

By G. TOMPSON, Attorney.

This book has met with decided approbation from the profession: it is entirely original, and contains a great variety of practical information not to be found in any other publication, and acquired only by experienced men. Though not adduced to them, yet the more it may serve them much trouble, by means of the practical instruction afforded to their Clerk. Price 18s.

W. Walker, 18, Strand.

Miss Mangnall's Historical and Miscellaneous Questions, &c. 4s. 6d. new and improved edition.

In 12mo. price 5s. boards.

HISTORICAL and MISCELLANEOUS QUESTIONS, for the Use of Young People; with a Selection of British and General Biography, &c.

By RICHARD MANGNALL.

The design of this work is to supply teachers and young persons with a compendium of useful and important information. It comprises, in a series of suitable questions and answers, a comprehensive abstract of classical, Scripture, and general history; a more detailed account of the British Isles, with a sketch of the English constitution; a select biography of eminent persons; a brief view of classical mythology; a short treatise on the elements of astronomy; besides a great variety of curious and useful miscellaneous matters, relating chiefly to subjects of natural history connected with the domestic arts. The work has been prepared with a scrupulous attention to the value and utility of the materials, to clearness and simplicity in the order of their arrangement; to strict accuracy in the statement and detail of facts; to purity and perspicuity of style. The present edition has been carefully revised, and may be recommended as a safe, pleasing, and important assistant to parents, and to private and public instructors.

By the same Author,

A Compendium of Geography, 7s. 6d. bound.

Printed for Longman, Nees, Orme, Brown, and Green.

For the Use of Schools.

In 12mo. price 7s. 6d. bound, the 2d edition, revised and corrected, of

 "It should find a place in every drawing-room in England."—*Atlas*.
 "He enjoyed opportunities of seeing more than any writer upon that city with whom we are acquainted."—*Literary Gazette*.
 "It contains infinitely more intelligence with respect to the Russian capital, than has yet been imparted to the English reader."—*John Bull*.
 "His picture of St. Petersburg contains the most copious and detailed description of the gigantic edifices of this extraordinary city, which has hitherto been laid before the public."—*Quarterly Review*.
 Printed for Henry Colburn, 8, New Burlington Street.

Important Works lately published by Henry Colburn, 8, New Burlington Street.
BURCKHARDT'S TRAVELS IN ARABIA, comprehending an Account of those Territories which the Arabs regard as sacred. 3d edition, in 2 vols. 8vo. with Maps and Plans, 5s.

2. **Buckingham's Travels in Assyria, Media, and Persia**. In 1 vol. 4to. illustrated by Maps and numerous Engravings.
 This volume concludes the series of the author's journeys in the East, which present the reader not only with the present condition of the interesting countries described, but with the results of personal investigation as to their antiquities, which enable the author to throw light upon ancient history, and also upon the inspired writings.

3. **Letters from the Ægean**, by James Emerson, Esq. one of the Authors of a "Picture of Greece." Containing, among other interesting Narratives, the singular History of Oravello, the Pirate, the Original of Lord Byron's Corsair. In 2 vols. post 8vo. 18s.

4. **Memoirs of Lady Fanshawe, Wife of the Right Hon. Sir Richard Fanshawe, Bart. Ambassador from Charles II. to the Court of Madrid**. Written by herself. New first published from the original MS., with Notes and Extracts from the Correspondence of Sir Richard Fanshawe. Handsomely printed in 1 vol. 8vo. with a Portrait, 14s.

5. **The Loves of the Poets**, by the Author of the "Diary of an Ennuyé." In 2 vols. post 8vo. 21s.

6. **The Empress Josephine's Memoirs**, the third and concluding Volume, comprising her private Correspondence with Napoleon. 8vo. 10s. 6d.; French, 8s.

7. **The Ellis Correspondence**. Letters addressed to John Ellis, Esq. Secretary to the Commissioners of His Majesty's Revenue in Ireland, during the Years 1686, 1687, and 1688, comprising many particulars of the Revolution, and Anecdotes illustrative of the History and Manners of those Times. New first published from the original MS., with Notes and a Preface. By the Hon. George Agar Ellis. In 2 vols. 8vo. 38s.

8. **Nollekens and his Times**, by J. T. Smith, Esq. of the British Museum. Second edition, in 2 vols. 8vo. with a fine Portrait, from a Drawing by Jackson; price 24s.

9. **The Living and the Dead**, Second Series, in post 8vo. 18s. 6d.

10. **A Second Judgment of Babylon** the Great, or, More Men and Things in the British Capital. In 2 vols. post 8vo. 21s.

11. **Memoirs of Scipio de Ricci, Minister of the late Grand Duke Leopold of Tuscany**. Edited by Thomas Becket, Esq. In 2 vols. 8vo. with Portrait, 21s.

The leading feature of this important work is its close application to the great question now at issue between our Protestant and Catholic fellow-subjects. It holds forth a most impressive and instructive lesson to both parties, and contains a fund of curious anecdote and information.

For Invalids.
 In 1 vol. small 8vo. 5s. 6d.
DR. HARWOOD ON THE CURATIVE INFLUENCE OF THE SOUTHERN COAST OF ENGLAND, more especially that of Hastings, with Observations on Diseases in which a Residence on the Coast is most beneficial. Printed for Henry Colburn, 8, New Burlington Street.

Of whom may also be had, lately published,
 1. **An Essay on Bathing**. Comprising Remarks on Warm, Cold, Vapour, Sea Bathing, &c. By Sir Arthur Clarke, M.D. &c. The 4th edition, improved, 5s. 6d.
 "This work may be found to contain more useful instruction, and more valuable practical remarks, than any that has appeared on the subject."—*Gazette of Health*, No. 29.

Also, by the same Author,
 2. **Sir Arthur Clarke's Manual for the Preservation of Health**, &c. 6d.

3. **Sir Arthur Clarke's Essay on Diseases of the Skin**, &c. 6d.

SCHOOL AND COLLEGE GREEK CLASSICS, with English Notes, Questions, &c.
 The following are already published:
Euripides, Hecuba. By the Rev. J. R. Major, Master of Walsingham School, and of Trin. Col. Cam. 5s.
Medea. By the same. 5s.
Phœnissæ. By the same. 5s.
 (Will be published in September.)
Sophocles, Œdipus Tyrannus. By the Rev. J. Brasse, D.D. late Fellow of Trin. Col. Cam. 5s.
Œdipus Coloneus. By the same.

price 5s.
 "This is, beyond all comparison, the best student's edition of a Greek play ever published. The whole of the text is the original edition of Porson, which forms the ground-work of the present, is, after all, a book more adapted to the finished scholar and classical critic, than to those who are only pursuing the studies which are to render them worthy of a station within the envied pale."—*Literary Chronicle*, Jan. 1837.

Thucydides, Herodotus, Xenophon, Demosthenes, &c. will be published during the present year.
 At the express desire of many eminent Schoolmasters, Mr. Valpy has commenced the publication of a Series of such of the Greek Authors as are chiefly read in the upper Classes of Schools and in Colleges. The best Texts are adopted, and the Critical and Explanatory Notes are presented, in a more inviting and accessible form than those of Latin Commentators, by avoiding that profusion of annotations which frequently antici- pates rather than promotes the improvement of the pupil. Examination Questions, adapted to the points discussed in the Notes, and indices, are also added; and the Series, it is hoped, will constitute a convenient Introduction to the poetical and elegancies of Greek Literature, and to the perusal of that portion of the relics of antiquity which is best calculated to interest a youthful mind.

Each Play may be had separately, and it is intended that all shall be published in cheap durable form.
 Sold by Baldwin, Longman, Whitaker, and all other Booksellers.

Standard School Books.
 Just published, by A. J. Valpy, M.A. Red Lion Court, Fleet Street, London; and may be had of all Booksellers.
GREEK GRADUS; or, Greek, Latin, and English Prosodial Lexicon, containing the Interpretation, in Latin and English, of all Words which occur in the Greek Poets, from the earliest period to the time of Pindarus, Philodellus, and also the Quantities of each Syllable; thus combining the advantages of a Lexicon of the Greek Poets, and a Greek Gradus. For the Use of Schools and Colleges.
 By Rev. J. BRASSE, D.D.

Late Fellow of Trin. Col. Cam. 84s. boards.
 "The indefatigable application required in the compilation of the Greek Gradus is manifest; and we heartily recommend the work as supplying a desideratum in our school books, and likely to be advantageously used to a very wide extent."—*Literary Chronicle*.

"Mr. Brasse has certainly conferred by this publication a lasting benefit on all classical students, and deserves the highest praise for taste, learning, and indefatigable industry."—*London Weekly Review*.

 London: Printed for Baldwin and Cradock.
 Of whom may be had, by the same Author, price 8s. boards, **Elements of Political Economy**, 3d edition.
 And, by the same Author, just published, in 2 vols. 8vo. price 18s. boards, **An Analysis of the Phenomena of the Human Mind**.

In foolscap, with a beautiful Frontispiece, price 6s.
TALES, Characteristic, Descriptive, and Allegorical.
 By the Author of an "Antidote to the Miseries of Human Life," &c.
 London: Printed for Baldwin and Cradock.
 * * * The Contents of this interesting work are under the following heads:—Learned Ladies—the Old Testament—Principle—Good Humour—Village Incidents—Publicity—the Travellers—Inducement—the Spectre.

Just published, Family Library, No. V. being
THE HISTORY OF THE JEWS. Vol. I. (to be completed in 3 vols.), illustrated with original Maps and Woodcuts. 5s.
 "The character and execution of this interesting and delightful little volume cannot fail to make a valuable addition to the already well-established reputation of its accomplished and very estimable author. We consider it a valuable acquisition to our literary stores, and peculiarly adapted to give clear and correct views of the leading characters and more important events which figure in the records of the Old Testament. We are acquainted with no volume which we can more heartily recommend to our readers; to the younger part of them especially, we are sure it will prove a most acceptable present."—*Literary Gazette*.

"The volume before us is written by Mr. Milman, and treats of the history of the Jews, from the patriarch Abraham down to the death of the prophet Jeremiah. The narrative of the various and highly interesting events in that period flows on in a chaste style; and a thorough knowledge of his subject is evident in every page. Many points of Sacred History are obscure to us from the little knowledge we possess of eastern customs, particularly in those remote periods. These are cleared up in the present work, without, however, in the least interrupting the narrative, or being ostentatiously put forward to shew the erudition of the author."—*Brighton Gazette*.
 "The volume is, on the whole, clear, spirited, well arranged, and full of information, and of a wise and well-cultivated religious spirit."—*Athenæum*.
 John Murray, Albemarle Street.

Just published, in 2 vols. foolscap, price 18s.
SKETCHES OF IRISH CHARACTER. By Mrs. S. C. HALL.
 "This is a very interesting work for all persons who are curious about the faithful delineation of character."—*New Monthly Magazine*.
 "Few recent publications are more deserving attention."—*Edinburgh Literary Gazette*.
 London: Printed for Frederick Westley and A. H. Davis, 10, Stationers' Hall Court.

Pulley's Etymological Compendium.
 In 1 large vol. duodecimo, price 6s. boards.

 The 14th edition, carefully revised and corrected throughout, by ALTHUR AIKIN, Esq. F.L.S. &c. and with some additional Pieces by the Authors.
 London: Printed for Baldwin and Cradock; R. Hunter; Longman and Co.; Hamilton and Adams; Simpkin and Marshall; J. Booker; and Harvey and Darton.

By whom also are published,
Lessons for Children. By Mrs. Barbauld. In 4 Parts, price 9d. each.
Hymns in Prose for Children. By Mrs. Barbauld. Price 1s.
 The same in a very large type. Price 1s. 6d.
 The same elegantly printed, with Embellishments. Price 2s. half-bound.

REpublication of the
ENCYCLOPEDIA METROPOLITANA.
More than One-Half of this great work being now printed, the Proprietors have the satisfaction of being able to announce what is justly desired by many,—a republication in perfect Volumes. To those persons who have not become Subscribers to this Encyclopedia, nor made themselves acquainted with its peculiar and original plan, it may be necessary to state, that it will ultimately form Four Grand Divisions, viz. 1. Pure Science, 2. Mixed and Applied Sciences, 3 vols. 3. Historical and Biographical, 8 vols. 4. Miscellaneous and Lexicographical, 8 vols. In every Part, as hitherto published, a Portion of each of these Divisions has been given, and the Reader has had the advantage of enjoying, in every new Fasciculus presented to him, all the distinct features of the work. Still, however satisfactory this plan has been to many, others have been desirous of having perfect volumes; and this wish is now attainable by the completion of the following volumes, viz.:

Vol. I. of Pure Sciences, containing General Introduction, by S. S. Coleridge, Esq. Grammar, by Sir John Stoddart, LL.D. &c. Logic, by the Rev. R. Whateley, D.D. &c. Rhetoric, by the same. Geometry, by Peter Barlow, Esq. F.R.S. &c. Arithmetic, by the Rev. George Peacock, M.A. &c. Algebra, by the Rev. D. Lardner, LL.D. &c. Geometrical Analysis, by the same. Theory of Numbers, by Peter Barlow, Esq. F.R.S. Trigonometry, by G. B. Airy, Esq. M.A. &c. Analytical Geometry, by the Rev. H. P. Hamilton, M.A. &c. Conic Sections, by the same. Differential Calculus, by A. Levy, Esq. M.A. &c. Integral Calculus, by the same.

Vol. II. of Mixed and Applied Sciences, containing Mechanics, Pneumatics, Optics, Hydraulics, and Astronomy, by Peter Barlow, Esq. F.R.S. &c. Astronomy (Nautical), by Captain Farquhar, F.R.S. &c. Astronomy (Physical), by J. F. W. Herschel, Esq. M.A. &c. Magnetism, by Peter Barlow, Esq. F.R.S. &c.

Vol. III. Historical and Biographical, comprising The Period from the Death of Hannibal, including, amongst those of other distinguished Writers, the Contributions of the following:—Rev. Dr. Arnold, Bishop Blomfield, Rev. W. H. Hale, Rev. Archdeacon Lyle, Rev. J. H. B. Mountain, Rev. J. B. Ouley, Rev. G. C. Renouard, Rev. Archdeacon Russell, Sir John Stoddart, T. N. Talfourd, Esq. and the Rev. W. Whewell.

It is intended to continue this plan of publication at intervals of three months, by volumes of each of the grand divisions in turn.

The Subscribers to the work in volumes, will eventually pay exactly the same as those who take it in Parts; but as the volumes vary considerably in expense, some containing necessarily many more Plates than others, each will be charged according to its actual cost.

It is intended also to give double title-pages to the volumes, so that persons desirous of possessing any one of the three great divisions, and not wishing for the others, may, by binding it up with its appropriate titles only, have a perfect work without purchasing the whole of the Encyclopedia.

London: Printed for Baldwin and Cradock; C. J. G., and F. Rivington; J. Duncan, E. Fellowes, R. Fox, and S. Galt; R. Hodgkin; J. D. Hodges; H. T. Hodgkin; G. Lawford; Laycock and Son; J. Fraser; and for J. Parker, Oxford; and J. and J. Deighton, Cambridge. Sold also by every Bookseller in the United Kingdom.

Mr. Faber's New Work on the Prophecies.
In 3 vols. 8vo. price 1l. 10s. boards.
THE SACRED CALENDAR OF PROPHECY.

By GEORGE STANLEY FABER, B.D.
Rector of Long Newton.
* * * The object of this work is to combine together the various Prophecies both of the Old and of the New Testament, which treat of the great double Period of Seven Times; a period, coinciding with those times of the Gentiles, which, evolving in strict chronological succession, are thence justly styled by Meade the Sacred Calendar of Prophecy. In the present both much more extensive and much more complete work, the author has been enabled at once to rectify various errors in his preceding publications, and to give a better arrangement (extending down to the present day) of that part of the prophetic volume which he believes to have been already unfolded.

Printed for C. J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had,
All Mr. Faber's other Works.

Works on Natural History.
THE JOURNAL of a NATURALIST.

Second edition, fols. 8vo. with Plates, 15s.
2. Salmonia; or, Days of Fly-fishing. By an Angler. A new edition, corrected and enlarged, and illustrated with numerous new Engravings and Woodcuts. Small 8vo. 15s.

3. The Botanical Miscellany. No. I. By Professor Hooker. Royal 8vo. Twenty-four Plates, 10s. 6d.

4. Illustrations of the Geology of Yorkshire; or, a Dissertation on the Strata and Organic Remains of the Yorkshire Coast. 4to. with a Geological Map, Sections, and Plates of Fossil Plants and Animals. By John Phillips, F.G.S. 1l. 11s. 6d.

5. The Zoology of North America, Part I. containing the Quadrupeds. By John Richardson, M.D. Surgeon of the late Expedition under Captain Franklin. Illustrated by Twenty-eight spirited Engravings, by Thomas Landseer. 4to. 1l. 11s. 6d.

* * * Published under the Authority and Patronage of His Majesty's Government.

6. Outlines of Geology; being the Substance of a Course of Lectures delivered at the Royal Institution. By W. T. Brande, F.R.S. 8vo. 7s. 6d.
John Murray, Albemarle Street.

Handsome printed in 2 large vols. 8vo. with a Portrait beautifully engraved by Dean, price 1l. 8s. boards.

THE LIFE and TIMES of WILLIAM LAUD, D.D. Lord Archbishop of Canterbury.

By JOHN PARKER LAWSON, M.A.

THE FOREIGN REVIEW,
No. VII.

London: Black, Young, and Young, 3, Tavistock Street, Covent Garden; and Bessange, Barthès, and Lowell, Great Marlborough Street.

"The Seventh Number of the Foreign Review, which has just appeared, contains a series of articles, written as usual with great ability, and displaying at once good judgment and extensive information. We are particularly pleased with the articles on Philosophy in France, the Life and Writings of the Spanish Patriot Jovellanos, and mystical yet splendid aspirations of Novalis, in whose character and writings is presented a valuable illustration of German Philosophy. Biographies of the French Bar has points of interest, more especially for students of the law, in relation to Matrimonial Romances of Sir Tristram introduce some curious specimens of an ancient English Prophetic Poem."—Morning Post.

No. VIII. will appear in September.

Homeric Illas, cum Notis Argolis.

No. 659.

SATURDAY, SEPTEMBER 5, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

PHRENOLOGY.

[A considerable number of criminals having been executed for remarkable crimes during the current session, we have looked for the usual demonstrations of phrenological science upon these occasions; but as no such expositions have met our eye, we are led to the conclusion that this new branch of philosophy—a branch so facile, that its whole scope of knowledge could be attained in an hour—has had its day, and is now declining into the oblivion of all fanciful theories. Nevertheless, though heartily tired of these brain-mappers, as we have several publications on the subject before us, we will take this opportunity of clearing our table of the works which relate to them.]

1. *Travels of Phrenologastio*. By Gio. Battista Balzucchio. Translated from the Italian. 8vo. pp. 217. London, 1829. Saunders and Otley.
2. *Anti-Phrenology; or, Observations to prove the Fallacy of a Modern Doctrine of the Human Mind called Phrenology*. By John Wayte, M.D. Pp. 97. London, Baldwin and Craddock.
3. *An Essay on the Phrenology of the Hindoos and Negroes*. By James Montgomery, Esq. Pp. 62. London, E. Lloyd and Co.
4. *Observations on the Phrenological Development of Burke, Hare, &c.* By Thom. Stone, Esq., President of the Royal Medical Society. Pp. 75. Edinburgh, R. Buchanan; London, Underwood.
5. *Answer (to the foregoing)*. By George Coombe. Pp. 16. Edinburgh, J. Anderson, Jun.; London, Simpkin and Marshall.
- And *Rejoinder*, by Mr. Stone. Pp. 21. Same Publishers as the "Observations."
6. *The Head-Piece and Helmet*. By James the Less (our copy mislaid—a little book to prove phrenology inconsistent with Revelation 1!).

PHRENOLOGY may be described as the folly of many for the gain of a few; an art which has enabled the feelers of bumps to drink bumpers of claret, and a striking manifestation in its professors of the possession of the organs of acquisitiveness (No. 8), secretiveness (No. 7), and marvellousness (No. 18)! Their claims and pamphlets have led to the grand display of combativeness (No. 5) partly illustrated by the works at the head of this paper; and it may truly be said of them, in the language of the immortal Shakespeare, that they have set their all "upon a cast."

What, however, has puzzled us most in regard to phrenology seems not to have attracted the attention of any of the writers for or against that capital subject—we allude to its origin. Here was Adam, a perfect creature from the hands of his Maker, and Eve (gallantry forgive us for saying) almost as perfect—only wanting, what the majority of her sex still continue to want, No. 12, the organ of cautiousness:—now, how came Adam to have No. 1, the bump of amativeness so super-large as to sink him from his paradisaical estate?—how came Eve to be so deficient in No. 15, firmness?—and, above all, how came Cain to have No. 6, the organ of destructiveness, so terribly developed as to lead him to assassinate his own brother Abel? We

confess that we cannot understand and explain these things during the earlier period of phrenological causality (No. 35). That different faculties should have distinct divisions of the brain set apart for their use, we certainly, *a priori*, see no greater difficulty in supposing, than in believing that all the faculties should be acted upon or act promiscuously through the medium of the whole mass of brain; but when we are told that only a nice and invisible line separates the organs (Nos. 6 and 9) of the opposites destructiveness and constructiveness, we can but laugh at the ingenious speculators who try to foist such absurdity upon the credulous, under the title of a science. And, indeed, this ridiculous fallacy is demonstrated both by Dr. Wayte and Mr. Stone, who shew that, as the celebrated Blumenbach declared of it,

What is true is not new,
And what is new is not true.

Dr. Wayte points out the inconsistencies between the classification of organs which exist among phrenologists themselves, and particularly between the systems of their leaders, Gall and Spurzheim;—Gall denying *Hope*, Spurzheim insisting strongly upon it; and, *vice versa*, Gall asserting *Tenacity of life*, *Self-preservation*, *Memory*, &c. &c., all of which Spurzheim peremptorily disclaims! But as we do not purpose to argue the question at length, we shall merely state, of Dr. Wayte's pamphlet, that, in an anatomical light, it utterly annihilates many of the most prominent doctrines of phrenology. We add one quotation as a proof of the logical force and ability of the writer.

"It will probably excite the surprise of my readers to hear that phrenologists do not always consider the organ of destructiveness contributory to the perpetration of murder, at least they do not always look for its being large, but, according to circumstances, they bring others in as accessory, even those of a superior order. 'If I am told (says Dr. Spurzheim) that an individual has committed murder during his insanity, do you suppose that in every case I should look for a large organ of destructiveness? I would inquire as to the motive; and if I found that a person had despatched another in order to save him eternally, having sent him away that he should sin no more, I should rather look for the organ of conscientiousness to be large than that of destructiveness.' Upon this principle, the organs of veneration and benevolence may be similarly affected and equally implicated in the praiseworthy deed of saving sinners eternally, by despatching them, and in this most singular way be still instruments of good: so that three of the most humane and exalted faculties of our nature, may by phrenological reasoning be made indirectly conducive to a most horrid act; three organs whose excellent functions have obtained the title of controlling powers, inasmuch as they are said to counteract the evil tendency of those that are base, bad, and inferior. Immediately the doctor admitted the presence of insanity, he should have disregarded every species of organic development, whether small or

large. Can we for one moment calculate upon what actions a madman will commit, or when and how he will commit them? Certainly not. Consequently no dependence can or ought to be placed on the motives which he himself assigns for those actions; and hence it must be esteemed no great mark of wisdom to be inquiring after them."

Dr. W. also points out very forcibly the evil consequences that must result to society, were the principles of phrenologists to be adopted—principles which tend to generate universal suspicion and mistrust, and, still more, to throw off the yoke of moral responsibility. He concludes by strongly animadverting on the almost insane absurdity of attempting to apply this visionary theory to the (1) propagation and (2) education of children: but we believe that even Dr. Wayte was not aware of the ludicrous extent to which this last branch of the farce was carried. [We omit the (1), as being rather *recherché* for our columns.] We have in our possession some of the original (and now very rare) documents, promulgated by the phrenologists in support of this education scheme; and we cannot do better than reprint them for the entertainment of the public. Our first paper is entitled—

Phrenology applied to Education.

Under a strong impression that immense benefit will accrue to society by examining the heads of children phrenologically, previous to fixing upon the course of study they are to pursue, John Isaac Hawkins has turned his serious attention to various methods of taking measurements of the head, and has succeeded in inventing a very accurate apparatus for the purpose. He has also acquired considerable facility in judging of the development of the organs of the brain, and therefore announces, that he intends to devote a portion of his time to the measurement of the heads of children, and giving advice to parents, guardians, tutors, &c. upon the kinds of learning most suitable to the mental capacity of each child; and he has no doubt of being able, generally, to point out the best mode of education, for harmoniously strengthening and enlarging the moral, reflective, and perceptive faculties, and for keeping the animal propensities in due subordination, and thus avoid over-straining the weaker faculties by application to studies beyond their power, or suffering the stronger faculties to gain too much ascendancy by over-indulgence: both extremes having a tendency to lay the foundation of future insanity. Mr. H. entirely coincides with the best-informed phrenologists, in the opinion, that the judicious and general application of phrenology to the purposes of education, would render three-fourths of the mad-houses useless in one or two generations. The outlines of the heads of ladies and gentlemen will also be taken, in order to prove the growth of the head after the person has arrived to maturity; and the outlines of a head will be shewn, which increased more than half an inch in height, between the ages of thirty and fifty-four years.

Terms.—For measuring and laying on paper thirteen different outlines, exhibiting at one view the development of nearly all of the thirty-five organs of the brain, and giving a fair copy of the same, with some general observations on the mode of education proper to be adopted, *one guinea*. For ditto, with the addition of a more critical study of the development, and furnishing a written guide to the preceptor for the best management of the child, *two guineas*.

Applications, personally or by letter, to Mr. Hawkins, Chase Cottage, Hampstead Road, facing Chalk Farm, will be attended to, and an appointment made as soon afterwards as previous engagements will permit.

N.B. Chase Cottage is the second from Mr. Money's nursery garden.

August 10th, 1826.

Money's Nursery Garden seems to have been as happily chosen for a neighbourhood to this notable pursuit as any that could have been

mentioned. We do not know how Mr. John Isaac Hawkins succeeded. He has had a rival in one Mr. Crook, who announces that his "fee for a phrenological estimate of the natural character and capacity, with a written note of the development, is two guineas. If given verbally, and at his own residence, one guinea." And Mr. Wayte justly observes: "So long as we have the facts before us of persons committing actions directly contradictory to what their cranial developments would lead us to expect, as in the case of infanticide by the woman whose organ of destructiveness was small, and philoprogenitiveness very large; and of the two murderers who were lately dissected at Bury St. Edmunds, neither of whom were phrenologically destructive—further, so long as it is proclaimed that some of the most exalted faculties of our nature, such as veneration, conscientiousness, and others, may be indirectly conducive to acts which are diametrically opposed to their own kind and good functions,—and, lastly, so long as the most erudite phrenologists differ materially concerning the nature of organs, it would be extreme folly to repose any faith in the doctrine, and worse than folly to lay down a system of education for our children deduced from its principles; principles which are inconsistent with each other, and in a variety of instances contradicted by nature."

Perceiving, after these quotations, that our further remarks are likely to extend this notice to too great a length, we shall take the liberty of dividing it into two, and for the present conclude with another laughable programme, viz. the

"Object and Constitution of the Phrenological Society, established in London 1823."

"The object of the Society is to study the faculties of the mind, and to determine the correspondence which exists between their manifestations and the cerebral organization."

"*Constitution of the Society.*—1. The Council shall not exceed eleven in number.—2. Its members shall be permanent.—4. No person shall be admissible into the Council unless he be thoroughly acquainted with phrenology, and his cerebral organization be good."

"*Ordinary Members.*—2. On admission each ordinary member shall sign a declaration of his anxiety for truth, and his determination to search for it without prejudice,—to communicate it freely for the benefit of others,—and to promote to the utmost the best interests of the Society.—3. On admission each ordinary member shall present to the Society a cast of his head."

This nonsensical constitution was, *bona fide*, the first foundation of the Phrenological Society! *Risum tenetis?*

Scriptorium Veterum Nova Collectio à Vaticanis Codicibus, edita ab Angelo Mai, Biblioth. Vatic. Pref. Vol. III, 4to. Romæ, 1828. Typis Vaticanis.

THIS is not the least precious of the varied treasures with which the library of the Vatican has enriched the republic of letters. By labours such as those to which we are indebted for this splendid addition to our classical lore, has the zealous and indefatigable Abbate Mai continued to enhance his claim upon the gratitude of his contemporaries, and the veneration of posterity, from the first day of his auspicious appointment, some ten years back, to the custody of the pontifical collection. The present constitutes the third volume of the series he has promised us of inedited classics; and, within a space of eight hundred pages, comprises a strikingly multifarious assemblage of works, both in Greek and Latin, prose and verse; sometimes sacred, and sometimes profane.

The preface is followed by a Greek chronicle, or "Annals of the Lives of the Cæsars" down

to Michael Paleologus, in which the only hiatus that occurs is the first leaf of the codex, which briefly recorded the reigns of Julius, Augustus, and Tiberius; it opens, therefore, with the annals of Caius Caligula, and closes with the retaking of Constantinople by the Greeks, anno 1258. The subsequent enumeration of the patriarchs of that capital gives a total of two-and-forty, which corresponds precisely with the number of the Cæsars. This chronicle is contained in above ten thousand flowing iambics, and is written with considerable perspicuity by one Ephremios, of the thirteenth century, who is not the only poetic historian of his class: witness the esteemed versions of chronology rhythmatised by the Byzantine Pisiola and Manasses. For the use of such as are unacquainted with Greek, the editor has translated this valuable chronicle verse by verse. He has acted the same useful part by the succeeding Greek treatise, in which the author (a Methodist monk), on occasion of the schism in the eastern church in the reign of Michael VIII. Paleologus, demonstrates the care with which the ancient bishops endeavoured to avert all causes of variance.

The two works we have just mentioned extend to 264 pages, and introduce us to the second part, which contains the commentary of C. Mar. Vittorinus on St. Paul's Epistles to the Galatians, Philippians, and Ephesians. He was of African origin, taught in Rome under Constantine, the son of Constantine the Great, where he probably wrote the edited Comment on Cicero's "Rhetoric;" and, after his conversion to Christianity in the last years of that emperor's reign, evinced so firm an adherence to the new faith he had adopted, as to induce St. Jerome to observe of him, "that he deserved a statue in Trajan's forum." His work acquires additional value, from his having been in the prime of life when the first Nicene Council was held, and the divinity of our Saviour solemnly recognised. The style of these commentaries, like that of his other writings, possesses no pretensions to elegance; a defect, as Mai justly remarks, which is amply atoned for by the intrinsic value of his reasonings and annotations, and their deep importance towards forming a correct estimate of Christian dogmas. Independently of the three codices in the Vatican, whence this work is derived, Mai has availed himself of a fourth, which has remained equally inedited to the present day; and in which Vittorinus refutes the arguments adduced by natural philosophers in opposition to the Mosaic and Christian dispensations. In the notes to this author, the editor includes an ancient opusculum "contra Hæriolos;" and in some of the subsequent tracts affords us fragments of the chorographies of Julius Tizianus and Hilarius, bishop of Arles.

We now come to a notice of the codices he examined in the monasteries of Monte Cassino and della Cava, near Salerno; and to this notice he adds a complete catalogue of works, (of inestimable value in a religious point of view), which the illustrious A. J. Simon had prepared for the press, but which were unfortunately destroyed by a fire that occurred in his apartments at the Vatican in 1768.

The next subject in order is a valuable treatise, of seventeen pages, by Ferrandus, (deacon of Carthage, a disciple and bosom friend of St. Fulgentius), in which he combats the Arian doctrine, and of which nothing, beyond a mutilated fragment, has been hitherto known. This work Mai received from Ottavio Frangipane, the learned superintendent of the archives of Cassino; to whom the public is

already indebted for several additional discourses of St. Augustine.

The celebrated monastery of Bobbio has enriched this volume with some Roman and Milanese palimpsests, which afford specimens of the earliest Latin calligraphy, and supply abundant materials towards a comment on St. Luke's gospel. A still larger space is devoted to dogmatical tracts, and to two treatises, which appear to be fragments of some apocryphal books of the Old Testament. To refute these emanations, of a period when Arianism predominated, Mai has subjoined a host of pertinent annotations, the subjects of which he has derived from an extensive spoliation of the fathers, particularly of the Latin school. These portions are precursors of certain remains of ancient homilies, and several liturgical fragments of very early writing; of an anonymous diatribe against Arianism; and an inedited preface to a version of the Psalms by St. Isidore. None of these are more deserving of attention than a long inedited letter of Master Florus, deacon of Lyons, a celebrated scholar of the ninth century, on the subject of amending the Psalms. He here affirms that he had diligently collated the Hebrew, Septuagint, and Latin versions, noting their discrepancies with asterisks; and then adduces a considerable number of discordant passages in various Psalms, and offers suggestions for a complete and critical edition of the whole.

The canons of sacred criticism will be enriched by a new version or comment of the gospel of St. Matthew, derived from a very ancient codex in the Vatican, which is inserted in the present volume; it was found at Clermont in France; and having attracted the notice of several inquirers, was bought by Pius VI. for three hundred scudi, and placed in the Vatican. This codex contains the four gospels; but none besides the version of St. Matthew is anterior to the received text of St. Jerome; the remaining three agree entirely with his.

The third part of the volume opens with two inedited epitomes of Valerius Maximus; the one by Julius Paride, with a prefatory epistle from him, of which a fac-simile is given; and the other, which stops short at the 3d chapter of the 3d book, by Januarius Neposianus, containing emendations and additions to Paride's work, though not so ancient in date, nor so elegant in diction, as the last mentioned. From the same ancient codex, the editor has given the epitome of St. Augustine's six books on music, reduced to one and twenty chapters by some anonymous compiler. The same source has supplied him with four old homilies, from an unknown hand, of the age of Pope Gregory; of whom, as well as of Orosius, mention is made. Independently of the perspicuous style in which they are written, they contain several valuable notices, which Mai designates in his prefatory remarks. The name of Master Thomas, who, upon turning monk, adopted the surname of Theodulos, or servant of God, is illustrious in the literature of Greece during the middle ages. His "Atticisms" were printed at Rome in 1817; and to these are now added, for the first time, two long political essays, addressed by him to Andronicus II., a son of Michael VIII., the founder of the dynasty of the Paleologi: the first, treating of the sovereign's duty towards his subjects; and the second, of the subjects' duty towards their sovereign. The editor has inserted, in the margin, summaries of the contents of the various chapters, and mentioned the existence of thirteen other discourses by

the same writer, which he may be probably inclined to publish hereafter.

The whole closes with four Greek sibylline books in verse, which form an important addendum to the isolated eight books at present extant in print. Servius, after diligent investigation, informs us, that there were about one hundred sibylline books. Of these Mai discovered the fourteenth at Milan, as well as in the Vatican, and has appended it to the eleventh, twelfth, and thirteenth, from the same collection; supplying the whole with various readings. Inasmuch as they are now ascertained to be the production of the first ages of the church, and not, as was formerly conceived, of an earlier date, they shed an inestimable light on ecclesiastical history and antiquities. The Vatican books are of an historical character; the eleventh treats of the annals of the world from the deluge to the times of Julius Cæsar; the twelfth ranges from Augustus to beyond the reign of Severus; the thirteenth comes down to the age of Gal. Menus; but the contents of the fourteenth are so various and enigmatical, that it is not easy to describe them. The whole four contain eleven hundred and fifty-five Greek hexameters.

Such are the valuable contents of this third volume of the Vatican Collection, to which Mai has prefixed a dissertation, engraved in ancient characters, and a preface of thirty pages, independently of copious comments, appositely interspersed throughout the remaining portions of his publication.

The Freebooter's Bride; or the Black Pirate of the Mediterranean; including the Mystery of the Moriscos. 5 vols. 12mo. London, 1829. A. K. Newman and Co.

A ROMANCE in five volumes is a fearful thing now-a-days—as critics, the cold damp overpowers our natural temperament at the sight of such a production; and we joyfully cede it to those amiable readers whose fresh youth is yet delighted with cavern adventures, hair-breadth 'escapes, true loves (only known to that early period of life), and perfect happiness (which is known to no period). Of the present work we shall say little. It looks like a first attempt; and has adopted a groundwork susceptible of very interesting development, had the execution been equal to the conception, which we regret to state is far from being the case. Unable, therefore, to illustrate the romance itself, we shall make our extract from the preface, which explains the author's design, and strikes us as curious.

“Among the various popular superstitions abounding in Spain (more particularly marked by this characteristic than any other Catholic country), is one, which, strange to say, though generally unnoticed and unknown, is not less peculiar and important than that entertained in Portugal, with regard to the coming of San Sebastian. This is the belief, that the race of Abroudoulraham, the ancient Moorish kings of 'Valencia,' still preserve their existence, in some subterranean recess beneath the city, notwithstanding that so many centuries have elapsed since their visible and historical extinction; and that they prolong this secret dynasty, with the view of one day achieving the repossession of their old domains, by the assistance of the Turkish and Barbary governments. This fact was originally communicated to me by a Spanish gentleman, of literary attainments, with whom I accidentally became acquainted at the Library of the

British Museum; and I have since heard it verified by an Englishman, who has visited and resided on the spot in question. As I had long entertained a wish (among others less innocent, and even less useful) to write a romantic story, but had been deterred from the attempt, for the want of sufficient materials, it struck me, that the above subject, (however unworthy the honour of an historical inquiry) would afford me a foundation both novel and interesting: but in order to colour the fact with the greater probability, I deemed it expedient to throw the period of my narrative back to the era of Charles the Fifth, and to connect it in some measure with the history of the times. Still, as additions were wanting, when my foundation was laid for the rearing of the superstructure, the character of my heroine, and a train of circumstances, was introduced; though I must here apologise for the very great liberty I have taken, in making this lady nearly three centuries old, since I have every reason to believe that she is alive at this moment, and that her adventures are familiar to half the people in Spain. The character and the history of the Donna Concha are fact, and were made known to me three or four years since, through the medium of a public print; being a very extraordinary fact, however, in the present highly rational and sober-minded age, it was eminently adapted to the purpose I required; and I really think that its probability is improved by the removal; for characters in romance are not unfrequently like the portraits of some painters—they only appear natural when viewed at a distance. That the existence of such subterraneous passages and apartments, as form, in some degree, the groundwork of the romantic part of this publication, (and that many such are to be met with both in Portugal and Spain at the present moment), and that they give rise to many of the superstitions still prevalent in both kingdoms, may be fully credited by the following relation, furnished the author by a very intelligent gentleman, who resided many years in the town of Leira, Portugal, situate about twenty leagues from Lisbon, and two leagues from the sea-side. Above this town, on a commanding eminence, stands an old Moorish castle, which was the last of the 'seven' that was stormed by Alfonso Enrique, first king of Portugal; and since that period has been suffered to moulder in rugged ruin, as a visible memento of the fallen fortunes of its primitive possessors. This castle abounded with subterraneous recesses and passages, into which the gentleman above alluded to has penetrated to some considerable extent; and the current tradition is, that when the storming of the castle took place, nearly all the men had been put to the sword; but the females effected their escape to these unknown subterraneous, where, down to the present day, they are living in seclusion and security, and, at certain periods, may be heard singing and laughing together in their darksome dwellings; and the poor people are very zealous in endeavouring to convert strangers to the belief of it, in despite of all the stumbling-blocks of common sense and chronology. They relate the story of a peasant girl, which they themselves firmly believe, who, at a distant period, as handed down among them, was in the habit of going to milk her goats near this castle: one morning she met a beautiful Moorish lady, who promised, that if she would bring a basin of milk to the castle daily, for a twelvemonth, she should be endowed with great riches, and placed above her present

situation: but if, on the contrary, she neglected this, or betrayed the confidence reposed in her, she should not only lose all such advantages, but be subjected to some signal punishment. The girl was overjoyed at the prospect of the promised reward, and for many months she implicitly complied with all the terms of the agreement; but in so doing was obliged to pilfer from the property of her employer; and the loss, however trifling, was at length detected; for being watched, she was surprised in the act of conveying to her incognita the precious basin of milk. On being questioned as to her intention, she equivocated in great dread; but her employer would not suffer her to depart till he was satisfied; and then fearing she might disappoint the lady by her delay, she was induced to inform him, on his promising to let her go immediately to fulfil her morning duty. He was greatly surprised, as may be supposed, at her story; but to confirm his belief, she referred him to a deal box she had at home, which contained many valuable presents she had received, from time to time, from the Moorish lady, (who was always splendidly dressed), such as bracelets, ear-rings, chains, &c. &c. He then permitted her to depart, but never witnessed her return; and it is supposed, that on meeting with the Moslem lady, she was seized for betraying the secret, and immured in a wall, since her sighs and groans are to be heard to this day, as distinctly as the laugh of the fair infidel and her companions. On going to the trunk, strange to say, her employer and friends, on searching it, found all the valuables she had described, turned to ashes. One of the apertures to these unsearched recesses is in the wall of the town churchyard, which had formerly belonged to the gardens of the castle; and the Portuguese, while they apply their ears and listen to the joyous and melancholy sounds which proceed from within, have either too much reverence for the antiquity of the inhabitants, or fear of their necromantic power, to attempt a revelation of the mysterious abodes by ocular evidence, which, indeed, they are also forbidden by their priests to attempt exploring; and at this moment implicit credit is given to the above account, as handed down from parents to children, and is as much believed by most ranks of people, as is the advent of San Sebastian among almost all classes and degrees of Portuguese, to the present day.”

This story is very good; but the indifferent style in which it is related is a fair prelude to that of the novel.

RUSSIAN LITERATURE.

Steklovenia Ivana Koslova. Ivan Koslov's Poems. 8vo. pp. 142. Petersburg, 1823.

WE have been often enough perplexed by poets in our native language; but notwithstanding all the trouble the tribe have given us, it is only justice to them to acknowledge that we have been still more puzzled by this one little volume. It was, however, kindly lent to us as a literary curiosity by Thomas Moore, and we could not do less than our best to make out its contents. Yet these Russian letters are queer-looking things: we protest that Coptic is more readable; and though, after having turned the volume upside down, sideways, backwards, and forwards, we have come to some understanding of them, we are afraid that our account must be a very lame one. Nor will our readers wonder at this when we present to them, by way of specimens, the names of Moore, Byron, and

Scott, as they appear in this volume, in the Russian character.

Муръ Муръ
Байронъ Байронъ
Скоттъ Скоттъ

The first column gives the names in the written, the last in the printed character; and the only alteration we have made in the fac-simile is that of putting a final expletive letter instead of the genitive *a*,—a termination which, with the preposition preceding each of these names, indicates that the translation of the poems referred to is from one or other of these authors.

But to return to Kozlov: his poem of the "Chernetz," or Monk, which may be regarded as a species of *rifacimento* of Byron's Giaour, obtained for the author a considerable degree of reputation among his countrymen. He has since published a translation of the Bride of Abydos; but has not produced any original work of importance. The present collection consists merely of short fugitive pieces, several of which we had previously met with in various literary annuals, and of translations from English, French, and Italian poets. Among the latter, those from the English are the most numerous, and to us the most interesting, since we can better judge of the fidelity and spirit of the Russian version. The very first piece in the volume is the magnificent address to the sea, from the fourth canto of Childe Harold, commencing with the stanza "There is a pleasure in the pathless woods." Kozlov has adhered to the original metre as far as regards the number of lines in the stanza, but has deviated from the arrangement of the rhymes, as here there is only one triple rhyme, namely, of the second, fourth, and fifth lines, which certainly is no improvement. As to the translation itself, it is perhaps as close as the difference of the two languages would permit; every idea being retained, except those which depend upon particular epithets. Thus, for "pathless woods," we find "the gloom of dense forests;" while "yeast of waves" becomes "foam of waves." We do not produce these instances to prove any deficiency of ability on the part of the translator, for he has certainly preserved as much of the spirit of the original as could be expected, and we should be glad to learn that he had undertaken to execute the whole four cantos—we merely mention them to shew the impossibility of transferring into another idiom all the beauties of a poet, especially of one like Byron. The next piece from the same author is from the first canto of Lara, beginning at the line "It was the night, and Lara's glassy stream," &c.; to which succeed the spirit's song in Manfred—"When the moon is on the wave," "My native land, good night!" "Stanzas to Thyrsa," and the Hebrew Melody beginning "Sun of the sleepless," with one or two other pieces. From Moore we meet with translations of "The minstrel boy to the war is gone," and a few more of the Irish melodies; and from Scott one of the ballads in Rokeby—"Brigall banks are wild and fair;" besides which there is a version of Wolfe's popular stanzas on the death of Sir John Moore. The other translations are from Tasso, Chénier, Ducis, &c.

We have already said that, of the original

pieces here collected, several had appeared in print before: of those which are new to us we have been most struck by the address to Italy, and the stanzas on the Caucasus—

"Where, throned on ice, tiara'd high with snows,
Stern winter reigns upon its rifted peaks;
Beneath, the ruddy vintage smiling glows,
The crag overhanging; while yet lower, reeks
The foaming cloud the thundering cataract flings,
As down the abyss its headlong light it wings."

From the specimens here given we are satisfied that the author is capable of doing justice to our poetry; and if, therefore, he should continue to apply himself to translation, in preference to original composition, we hope that he will undertake some entire work—such a one as shall prove a valuable acquisition to his native literature. In order to afford a notion of Kozlov's general style, we have made a prose translation of one of his original pieces entitled "Kiev," and which appears at page 24.

"Kiev! where life and true religion dawned within our land; where the bright cross gleams upon the cupola of Petchersk, like a star in the blue heavens; where verdure and golden plenty crown thy fields, and the waves of the Dnieper foam and beat against thy antique walls!

"How oft does my soul fly towards thee, bright city! How oft in fancy is my sight enraptured by thy sacred beauty! Forgetting the world, I oftentimes linger by the convent-walls, or wander in the dead of night along the Dnieper's banks: all is Russian, beautiful, grand, holy.

"The moon has risen; the golden domes of Petchersk glitter in the waves of the river; her ruins call back ages to the memory; holy martyrs sleep within her vaults; the shade of Vladimir hovers over her; her battlements speak of glory. Fancy dwells around me, and the spirit of antiquity hallows all.

"In those fields has many a gallant hero fought; within these towers have high-born damsels dwelt, young, beautiful, and timid, and the minstrel sang to them of battles, feeding the secret ardour of their hearts. But the midnight bell tolls! the sound dies upon the air—another day has joined the past.

"Where are the bold who fought, whose sharp swords gleamed like lightning? Where are the beautiful, whose mild glance charmed and captivated all? Where the bard, whose minstrelsy enchanted? Alas! that midnight bell has answered all! Thy waves alone, O Dnieper, still beat against the sacred towers!"

It is, indeed, far better that translations like this or like Kozlov's should be made by writers acquainted with their originals, and not merely through the aid of French versions. Incredible as it may appear, it was thus that Serebrenikov, archbishop of Ekaterinoslav, actually undertook to introduce Paradise Lost to his countrymen. How well he must have known Milton, judging of him merely from his Gallic masquerade dress, it is unnecessary to say. The resemblance must have been nearly the same as that which the friar of a Parisian petit-maitre of the old regime bore to the "hyacinthine locks" of our great progenitor Adam.

Grammaire Raisonnée de la Langue Russe, &c.
Par Nic. Gretsck. Translated into French
by Ch. Ph. Reiff. Petersburg, 1828.

On the subject of Russian literature, we shall proceed to make a sort of miscellany of this Review; and if we are grave in our criticisms on poetry and grammar, make amends by a light addendum from recent works on Russia.

With regard to the grammar whose title we have just quoted, we have read the first volume of it with much attention and satisfaction: both the author and the translator deserve the

thanks and the praise of the literati. In our opinion, they have gone a good way in lessening the great difficulties which every instant impede the foreigner who wishes to acquire the Russian language. The curious linguist will also admire the short history of the origin and progress of the language with which the work commences, the methodical and clear grounds of the Russian alphabet, and the interesting enumeration of the best Russian grammarians. But as we are accustomed to speak the truth, we must say that we cannot entirely approve of all the parts of this useful work. We admit that much has been done, but there is still more to do. We have found many assertions and several rules which demand a clearer explanation. We differ from the author in the classification of the branches which form the great tree of the Russian language. Mr. Gretsck has laboured to shew that the Russian original words are derived from the Eastern and Western languages; and his remarks are very judicious, but not new—as, long before him, Lomonosoff had done the same. We find also that the system which Mr. Gretsck adopts in the division of the Russian verbs is too complicated for any student, and, perhaps, for many professors; and we truly wish that the author or the translator would simplify this part of the Grammar, since, as it stands at present, it must be a great obstacle to the progress of the learner. The celebrated Mexzofanti, who is certainly a great authority on such a subject, for he writes and speaks fifty-six dead and living languages, has said that, until the Russian grammar was simplified in the declensions and in the conjugations, it would always be, not only for foreigners but for the natives themselves, an inextricable puzzle. Many rules also, which regard the adverbs and the prepositions, ought to be rendered easier. Still, however, notwithstanding these objections, the present grammar is by far the best of the Russian language which has yet been published; and the translator has added to the original work many just remarks, though some of them are quite unnecessary. He has also shewn himself careful in avoiding many difficulties; but, *In vitium ducit culpas fuga, si caret arte.**

A Brief Account of Microscopical Observations made in June, July, and August, 1827, on the Particles contained in the Pollen of Plants, and on the General Existence of Active Molecules in Organic and Inorganic Bodies. By Robert Brown, F.R.S. V.P.L.S. &c. &c. Not published.

THIS, though a pamphlet of only sixteen pages, develops one of the most striking and extraordinary theories which has been produced in the age in which we live. The very high rank which the writer holds in the scientific world would entitle it to the most careful and respectful attention, even were it not intrinsically possessed of so remarkable and important a character; but the combination of both affords us as great satisfaction as we perform the office of

* We are quite surprised that no mention at all has been made of Catharine, the celebrated Russian casaria, to whose extraordinary character and abilities the Russian nation and literature are so much indebted.

* Russian literature seems to be beginning to excite the due share of the regard of other countries, and, among the rest, of our own. The Foreign Review, which has bestowed more attention on this subject than any other English periodical, has from time to time given notices of Russian publications; and in the Number which is just published, we observe a short article on a poem by Prokofievsky, entitled the Deer and the Pearl, accompanied by some translated extracts. We understand that the writer of the article is Mr. W. H. Leeds, from whose pen there has also appeared a paper on the literature and poetry of Russia, in the fourth Number of the same journal.

making this recent discovery (which has caused much wonder and discussion among our leading men of science) known to the general world.

That the three kingdoms of nature are far more intimately blended than has hitherto been imagined; that the ephemeral insect of the hour, and the sphinx of antiquity—that the ashes of the paper on which this notice is written, and the muscular fibre of him who pens it, differ but in name,—are only part of this arcana of microscopical discovery. What shall the winged fancy of the poet invent superior to the realities of existence as expounded here?—

This is a block of granite,
And this a gauzy fly,
And this a mass of iron,
And this the bud of a rose,
And these the ashes of a burnt paper kite,
And these of the heart of Alexander the Great,

without a distinguishing characteristic in either, all identically the same!!!

Pursuing certain inquiries into the structure of the pollen, and its mode of action on the pistillum in phanogamous plants, Mr. Brown immersed some large particles or granules (taken from anthers full-grown, but before bursting, of the *Clavikia pulchella*) in water; and while examining their forms, he says:—

“I observed many of them very evidently in motion; their motion consisting not only of a change of place in the fluid, manifested by alterations in their relative positions, but also not unfrequently of a change of form in the particle itself; a contraction or curvature taking place repeatedly about the middle of one side, accompanied by a corresponding swelling or convexity on the opposite side of the particle. In a few instances the particle was seen to turn on its longer axis. These motions were such as to satisfy me, after frequently repeated observation, that they arose neither from currents in the fluid, nor from its gradual evaporation, but belonged to the particle itself.”

Similar observations extended to other plants have strengthened this opinion; and Mr. Brown says:—

“Having found motion in the particles of the pollen of all the living plants which I had examined, I was led next to inquire whether this property continued after the death of the plant, and for what length of time it was retained. In plants, either dried or immersed in spirit for a few days only, the particles of pollen of both kinds were found in motion equally evident with that observed in the living plant; specimens of several plants, some of which had been dried and preserved in an herbarium for upwards of twenty years, and others not less than a century, still exhibited the molecules or smaller spherical particles in considerable numbers, and in evident motion, along with a few of the larger particles, whose motions were much less manifest, and in some cases not observable.

The very unexpected fact of seeming vitality retained by these minute particles so long after the death of the plant, would not perhaps have materially lessened my confidence in the supposed peculiarity. But I at the same time observed, that on bruising the ovula or seeds of equisetum, which at first happened accidentally, I so greatly increased the number of moving particles, that the source of the added quantity could not be doubted. I found also, on bruising first the floral leaves of mosses, and then all other parts of those plants, that I readily obtained similar particles; not in equal quantity indeed, but equally in motion. My supposed test of the male organ was therefore

necessarily abandoned. Reflecting on all the facts with which I had now become acquainted, I was disposed to believe that the minute spherical particles or molecules of apparently uniform size, first seen in the advanced state of the pollen of *Onagraris*, and most other phanogamous plants,—then in the anthers of mosses and on the surface of the bodies regarded as the stamina of equisetum,—and lastly, in bruised portions of other parts of the same plants, were in reality the supposed constituent or elementary molecules of organic bodies, first so considered by Buffon and Needham, then by Wrisberg with greater precision, soon after and still more particularly by Müller, and very recently by Dr. Milne Edwards, who has revived the doctrine, and supported it with much interesting detail. I now, therefore, expected to find these molecules in all organic bodies; and accordingly, on examining the various animal and vegetable tissues, whether living or dead, they were always found to exist; and merely by bruising these substances in water, I never failed to disengage the molecules in sufficient numbers to ascertain their apparent identity in size, form, and motion, with the smaller particles of the grains of pollen. I examined also various products of organic bodies, particularly the gum resins, and substances of vegetable origin, extending my inquiry even to pit-coal; and in all these bodies molecules were found in abundance. I remark here, also, partly as a caution to those who may hereafter engage in the same inquiry, that the dust or soot deposited on all bodies in such quantity, especially in London, is entirely composed of these molecules. One of the substances examined was a specimen of fossil wood, found in Wiltshire oolite, in a state to burn with flame; and as I found these molecules abundantly, and in motion in this specimen, I supposed that their existence, though in smaller quantity, might be ascertained in mineralised vegetable remains. With this view, a minute portion of silicified wood, which exhibited the structure of *Coniferae*, was bruised, and spherical particles, or molecules in all respects like those so frequently mentioned, were readily obtained from it; in such quantity, however, that the whole substance of the petrification seemed to be formed of them. But hence I inferred that these molecules were not limited to organic bodies, nor even to their products. To establish the correctness of the inference, and to ascertain to what extent the molecules existed in mineral bodies, became the next object of inquiry. The first substance examined was a minute fragment of window-glass, from which, when merely bruised on the stage of the microscope, I readily and copiously obtained molecules agreeing in size, form, and motion, with those which I had already seen. I then proceeded to examine, and with similar results, such minerals as I either had at hand or could readily obtain, including several of the simple earths and metals, with many of their combinations. Rocks of all ages, including those in which organic remains have never been found, yielded the molecules in abundance. Their existence was ascertained in each of the constituent minerals of granite, a fragment of the Sphinx being one of the specimens examined. To mention all the mineral substances in which I have found these molecules, would be tedious; and I shall confine myself in this summary to an enumeration of a few of the most remarkable. These were both of aqueous and igneous origin, as travertine, stalactites, lava, obsidian, pumice, volcanic ashes, and meteorites from various localities. Of

metals, I may mention manganese, nickel, plumbago, bismuth, antimony, and arsenic. In a word, in every mineral which I could reduce to a powder sufficiently fine to be temporarily suspended in water, I found these molecules more or less copiously; and in some cases, more particularly in siliceous crystals, the whole body submitted to examination appeared to be composed of them.”

Mr. Brown enumerates other substances, and proceeds:

“There are three points of great importance which I was anxious to ascertain respecting these molecules; namely, their form, whether they are of uniform size, and their absolute magnitude. I am not, however, entirely satisfied with what I have been able to determine on any of these points. As to form, I have stated the molecule to be spherical; and this I have done with some confidence: the apparent exceptions which occurred admitting, as it seems to me, of being explained by supposing such particles to be compounds. This supposition in some of the cases is, indeed, hardly reconcilable with their apparent size, and requires for its support the further admission, that, in combination, the figure of the molecule may be altered. In the particles formerly considered as primary combinations of molecules, a certain change of form must also be allowed; and even the simple molecule itself has sometimes appeared to me when in motion to have been slightly modified in this respect. My manner of estimating the absolute magnitude and uniformity in size of the molecules found in the various bodies submitted to examination, was by placing them on a micrometer divided to five thousandths of an inch, the lines of which were very distinct; or more rarely on one divided to ten thousandths, with fainter lines, not readily visible without the application of plumbago, as employed by Dr. Wollaston, but which in my subject was inadmissible. The results so obtained can only be regarded as approximations, on which perhaps, for an obvious reason, much reliance will not be placed. From the number and degree of accordance of my observations, however, I am, upon the whole, disposed to believe the simple molecule to be of uniform size, though as existing in various substances, and examined in circumstances more or less favourable, it is necessary to state that its diameter appeared to vary from $\frac{1}{1000}$ to $\frac{1}{5000}$ of an inch.”

Such are the remarkable phenomena described by Mr. Brown, and which have excited much discussion both at home and abroad. By some philosophical inquirers they have been almost laughed at as visionary—the appearances being ascribed to motion in the liquid in which the substances were examined; but others have considered them to be of great importance to science. *Non nostrum tantas componere lites*; but the subject is certainly well worth being more generally known; and it is the part of such a publication as ours to make it so.

In conclusion, we have to notice another microscopical publication* by Dr. Goring and Mr. Pritchard, which, though devoted to objects of natural history, may readily be connected with the foregoing. It is a curious and interesting account of various larvae, &c. as seen by the aid of powerful glasses; and we recommend it to the attention of the public.

A little book, too, called *Microscopic Amusements*, by T. Ballard, is worthy of our notice,

* No. 1. of the Natural History of several new, popular, and diverting living Objects for the Microscope, &c. &c. London, 1839. A. Pritchard and Hensley.

as a pleasing initiation into this interesting pursuit, and especially for young persons.

The French Librarian; or, Literary Guide.
By L. T. Ventouillac. 8vo. pp. 536. London, 1839. Treuttel and Co.

THE object of this useful and agreeable work is, to point out the principal writers of France, with critical opinions, anecdotes, and biographical notices; and the plan, in itself most commendable, has been executed by M. Ventouillac with manifest judgment and ability. Not only for reference, but for amusing miscellaneous reading, we have found it to be a pleasant lounge's book, as well as a good guide. The following particularly neatly turned notices of Fenelon (from Butler's works) and of Fontaine will serve to illustrate the spirit of the whole.

"Fenelon soon after his consecration published his celebrated *Explication*, &c.—the immediate cause of all his we. It is certain that, before it was printed, it was examined with the most severe and scrupulous attention by the Cardinal de Noailles and M. Tronson, and by M. Pirot, a theologian of great eminence in his day, attached to Bossuet. It is, however, certain that immediately on its appearance it was distinctly and loudly condemned by the public voice. After the Cardinal de Noailles, the Bishop of Chartres, and Bossuet, had published their condemnation of the *Maxims of the Saints*, the two former almost quitted the war, and left the field to Bossuet and Fenelon. 'Then,' to use the words of the Chancellor d'Aguesseau, 'were seen to enter the lists two combatants rather equal than alike. One of them, of consummate skill, covered with the laurels which he had gained in his combats for the church, an indefatigable warrior, his age and repeated victories might have dispensed him from further service; but his mind, still vigorous and superior to the weight of years, preserved in his old age a great portion of his early fire. The other, in the full strength of youth, not yet much known by his writings, but enjoying the highest reputation for his eloquence and the loftiness of his genius,—long exercised in the subject of discussion, a perfect master of its language, nothing in it was above his comprehension, nothing in it which he could not explain, and every thing explained appearing plausible.' In composing his *Relation of Quietism* (Paris, 8vo. 1822*), Bossuet availed himself of some secret and confidential writings which he had received from Madame de Guyon, of private letters written to him by Fenelon during their early intimacy, and of a letter which, under the seal of friendship, Fenelon had written to Madame de Maintenon, and which she unfeelingly communicated to Bossuet. The substance of these different pieces Bossuet connected with so much art, interwove in them the mention of so many curious facts, so entertaining an account of Madame de Guyon's visions and pretensions to inspiration, and so many interesting anecdotes of the conduct of Louis XIV. and Madame de Maintenon during the controversy: he occasionally inserted in it so much dignified and truly episcopal eloquence, and set it off by such brilliancy of thought and expression, as excited universal admiration and attracted universal favour to its author. A letter of Madame de Maintenon shews the eagerness with which the extraordinary performance of Bossuet was read:—'They talk here of nothing else; they

lend it, they snatch it from one another, they devour it.' Nothing could exceed the consternation which this raised among the friends of Fenelon at Rome and at Paris. His first intention was not to answer it; but the Abbé de Chanterac informed him that the impression which it made against him at Rome was so strong, that a full refutation of it was necessary: he therefore determined to reply. Bossuet's *Relation* appeared in the middle of June; Fenelon's reply was published on the 3d of August. A nobler effusion of the indignation of insulted virtue and genius, eloquence has never produced. In the first lines of it Fenelon placed himself above his antagonist, and to the last preserved his elevation. * * *

"La Fontaine was possessed of singular naïveté. A curious anecdote is related of his enthusiasm for the apocryphal book of Baruch. He was one day with Racine, who being occupied for the moment, lent him a Bible which contained the Apocrypha to look over until he should be at liberty. The good man opened by chance on a chapter in Baruch which contained the prayer and supplication of the people: after perusing it with strong feelings of admiration, he suddenly addressed Racine—'Who is this Baruch? what a fine genius!' For some days he was so full of the subject, that every one he met was accosted with—'Have you read Baruch? What a fine genius!' For the last two years of his life La Fontaine acted the part of a contrite spirit, and practised some of the severest austerities of monastic worship. At his death it was discovered that he wore a hair shirt. Louis Racine wrote the following lines on the subject:—

Vrai dans tous ses écrits, vrai dans tous ses discours,
Vrai dans sa pénitence à la fin de ses jours,
Du maître qui s'approche il prévient la justice,
Et l'auteur de *Jocunde* est couvert d'un cilice.

Rabelais was passionately admired by La Fontaine. He would allow no author, ancient or modern, sacred or profane, a place on the same shelf. He was one day at the house of Despréaux in company of Racine, the Doctor Boileau, and some others: one of the party was speaking of St. Augustine: he listened for some time abstractedly; at length, rousing himself as from a dream, he asked the doctor with the most serious air, if he thought that St. Augustine had more wit (*esprit*) than Rabelais? The doctor, glancing at him from head to foot, merely replied—'Prenez-garde, Monsieur La Fontaine—one of your stockings is wrong side outwards.' Many anecdotes are related of La Fontaine's absence of mind."

We cannot do better than recommend this valuable work: it is like a *coup d'aile* over French literature, which will enable every reader to select at a glance what is best suited to his tastes or pursuits—thus enabling him to devote that time to acquirement which would otherwise have been wasted in selection: both plan and execution, we repeat, are a high credit to M. Ventouillac.

The History and Antiquities of the Parish of Lambeth, and the Archiepiscopal Palace in the County of Surrey, &c. &c. By Thomas Allen. 8vo. pp. 468. London, 1829, J. Allen, and Nichols.

THIS is indeed a very ordinary compilation of materials which have not even the labour of research to recommend them. The book is chiefly made up from "Pennant's London," "Brayley's Lambeth," Lyson's works, and other well-known publications; combined with a profusion of local anecdotes and parish tales,

collected from a variety of sources, amounting probably to the population of Lambeth and its environs; but its merits as a literary or antiquarian production are of a commonplace order.

The increase of buildings in the parish of Lambeth during little more than a century is worthy of remark. In 1719 the number of houses was 1400; in 1823, 14,000.

As a specimen of the style and gossip, we extract the following:

"On repairing the *Three Mariners*, in 1752, in it was found a remarkably high-elbowed chair, covered with purple cloth, and ornamented with gilt nails. An old fisherman told Mr. Buckmaster, that he heard his grandfather say, that King Charles the Second, disguised, used, on his water tours with his ladies, to frequent the above tavern to play at chess, &c. and that the chair found was the same as the king sat in. The chair was repaired and kept as a curiosity, by the late John Dawson, Esq., but by neglect was, at the pulling down his dwelling at Vauxhall, in 1777, destroyed. Mr. Buckmaster sat in the chair many times, but his feet would not touch the ground. King Charles was very tall."

Lambeth Palace, which is in a most deplorable state, is thus qualified:

"In point of architecture, the present palace of Lambeth exhibits a motley appearance, convenience and accommodation having been studied in its various alterations and improvements, rather than uniformity of style: taken as a whole, however, its effect is highly venerable and imposing, particularly when viewed from the opposite bank of the Thames, or the adjacent bridge of Westminster, where the ancient parts are principally conspicuous."

Now we cannot help thinking that, so far from convenience and accommodation having been studied, the only study has been how to avoid making the necessary repairs. So obvious, indeed, is this feeling, that, seeing it is intended to apply to Parliament for leave to build a new bridge across the river, in the immediate vicinity of the palace, we should not be surprised if the site of this ancient structure, hallowed as it is by so many recollections connected with the history of our religion, were, ere long, advertised "to be let on building leases."

Mr. Blore is now, and has been for some time, employed in making great alterations in and restoring this ancient edifice. The same gentleman, we understand, is to build the Pitt Library, at Cambridge. Lord Farnborough, and some others of the trustees, who have sanctioned this excellent application of the surplus subscription for a monument to the memory of that patriot minister, had appointed about the present time to lay the foundation stone, with appropriate ceremonies. We have not yet heard, however, of its being done.

SIGHTS OF BOOKS.

A Letter to the Publisher of the Quarterly Review, &c. &c. 8vo. pp. 52. Saunders and Otley.

SIR RUFANE DONKIN, feeling himself aggrieved by the review of his Dissertation on the Course and probable Termination of the Niger, which appeared in the last Quarterly Review, has here taken up the cudgels against his reviewer, whom he accuses of suppression, perversion, and a want of taste bordering on vulgarity. As we have not only given our own opinion of the gallant general's book, but admitted an explanatory letter from him into our columns, we do not

* This date must be an error of the press, as Bossuet was born in 1627, and died in 1704.—Ed. L. G.

think ourselves called upon to go farther into this dispute than merely to say, that Sir Rufus has produced a strong and able pamphlet in defence of his hypothesis. We are sorry to add, that he has also, under the mask of an ironical justification of an individual to whom he states the authorship of the review is by common consent attributed, belaboured a gentleman of distinguished literature and of high official station. We dislike the tone of irony; for if it was unfit for, and gave offence in, the reviewer, it was equally unsuited to the gallant general, from whom plain straight-forward remarks would have come with better grace than these *Barrow-metrical* observations.

Sketches of Buenos Ayres and Chile. By Samuel Haigh. 8vo. pp. 316. London, 1829. Carpenter.

THE exaltation of his own ideas, combined with the persuasion of friends, have probably been the causes that induced Mr. Haigh to step aside from his laudable commercial pursuits, and publish the volume before us. However this may be, we must beg leave to tell him, in his own mercantile phraseology, that his cargo is stale, consisting at best but of small ware, the market already overstocked, and the venture very unlikely either to be profitable to himself or his consignee, the public. What he offers under the above title is little more than a commonplace narrative of a journey from Buenos Ayres across the Cordilleras to Valparaiso, undertaken for commercial purposes, so long ago as the year 1817. We can find nothing of sufficient novelty or general interest to venture at an extract.* There is much mention of persons and names of no interest at all; and on the subject of trade, where we expected to find the redeeming portion, the volume is equally deficient. It may be said, however, to have the negative praise of containing nothing offensive; and its merits may be summed up in the homely words of being neither good nor bad, but altogether indifferent.

An Analysis of Bishop Burnet's Exposition of the Thirty-Nine Articles, with Notes. By T. Newland, A.B., of Trinity Coll. Dublin. 12mo. pp. 643. Dublin, 1829. W. Curry; London, Hurst and Co.

THIS is a very laudable attempt to arrange Burnet's valuable theological matter in a more perspicuous form—it is an excellent volume for the student of divinity or young divine.

Diary of Occurrences on a Journey through a part of Belgium, Holland, and up the Rhine to Mayence, &c. Pp. 112. London, 1829. J. Ridgway.

THERE could be little of novelty in this now so common tour: the author however gives the track, and notices the matters which struck him most in pursuing it. Extracts from preceding publications are introduced, at apposite places, to vary the dry journal.

Batter's Companion to the Lakes of Cumberland, &c. London, 1829. Hurst and Co.

WITH a good map prefixed, this book contains all that is necessary for the information of the tourist, who (with fine weather) may spend a month or six weeks most delightfully in visiting these sylvan beauties of England. And,

* Except, perhaps, the following: "A friend of mine, who was very curious in these matters, assured me that through a microscope, he had discovered that the fleas in the Pampas were black and white, and streaked like a zebra. I cannot speak to this, as whenever I caught one, I despatched it, without giving it the benefit of a single examination."

though there is some superfluous matter introduced, the Companion really deserves its name, for it is an amusing miscellany, and contains many things to interest the reader, or while away the duller hours that occur on every party of pleasure.

A Descriptive Road-Book of France, &c. By M. Reichard. New edition. S. Leigh. GREAT improvements have been made in this useful road-book; which, like all Mr. Leigh's similar publications, is a very correct and excellent guide to the traveller.

ORIGINAL CORRESPONDENCE.

Paris, Sept. 1st.

AMONG the periodical works of the day which are the subjects of conversation, and promise to be beneficial to the public, is "Annales d'Hygiène Publique, et de Médecine Légale;" the subjects discussed in the first two Numbers of which are particularly interesting; there is also a very curious article on the influence of tobacco on the working classes, and another on the rate of mortality in prisons. If such works are protected, what will become of the doctorhood?—"Histoire de France depuis la Restauration, par M. Charles Lacretelle," is considered as the most impartial and, consequently, the most faithful that has appeared: the first two volumes treat of events until the year 1820; and the other volumes are to contain the history from that period until the present day. Ladies' pens are prolific in romances; of which "L'Elève de Saint Denis" is one of the most popular. I understand Madame de Genlis is again about to publish a religious novel, as her *last* ext. But she has so often taken her leave of the literary world, and reappeared notwithstanding, that it is probable she will never decide on a lasting farewell until death seals the promise of silence with which she has so often threatened her readers.

An Italian, who is a connoisseur in sauces, pies, and pasties, has just built, for the convenience of the public, *une cuisine ambulante*. This kitchen is about the size of an omnibus, and pretty much on the same construction: it is to be put into action on the 12th of next month; and all those who wish to associate exercise and eating may accomplish their desire for the moderate sum of fifteen sous.

This summer forms quite an era in Parisian constitutions and characters; for we are now as splenetical and vapourish as the Londoners during November fogs. In vain female wit essays to discover a new pleasure; all equally turns out to be "vanity and vexation of spirit;" and ennui exhausts itself in Oh's! Ah's! and yawning. A lady of an uncertain age, by way of varying her *soi-disant* intellectual entertainments, gave, a few evenings ago, a *magnetical soirée* to her friends—*c'est à dire*, her countess-ship was to be *somnambulated*. For this purpose, an azure-blue sofa was placed in the middle of a well-illuminated *salon*, on which Madame reclined, or rather lay stretched, in a corpse-like position, but still so as to display a pretty foot and ankle. When all was in readiness, and the young and old beaux had paid their tribute of compliments on the beauty of the lady's form, and her statuary proportions, a little black man, who might safely pass himself for a minion of Beelzebub, stepped forward, and with a mysterious air waved his hand backwards and forwards, at the same time uttering some unintelligible jargon, which neither he nor those present understood. He then proceeded to part Madame's curls—an operation which

made her start (for *wigs* are peculiarly sensitive): this done, he gently passed his fingers along the countess's temples, and thence downwards to her heart, until a *delicate snore* announced that she was in a deep sleep, or pretended to be so. The magnetiser then desired the lady to transport herself to Lisbon to her husband's lodging, and to say what were his occupations. In about ten minutes she made the voyage, and had the joyful pleasure of finding her *caro sposo* saying his prayers *vis-à-vis* the *portrait* of a beautiful Magdalene. This reply called forth much merriment and *badinage*. But the gravity of the magnetiser silenced laughter and innuendos. The next question was more difficult to solve: one of the company wrote on a sheet of paper some lines from Lord Byron, in English, and afterwards covered them with a piece of silk. The sleeper was desired to read them: at first she refused, saying it would strain her eyes; but on the magnetiser urging her to repeat merely the first line, she acquiesced; and although she pronounced the words badly, she did not commit the slightest error. Great was the admiration and wonder testified by those present at this miracle; but all agreed that it would be totally against the interests of society to encourage the science of magnetism; since it would be equally dangerous in its consequences with the "palace of truth," particularly as few wives could hope to find their husbands kneeling to *portraits*.

Madlle. Sontag performs to-morrow night in the rôle of *Semiramis*; and M. Inchindi makes his *début* in the character of *Assur*. Every place has been taken *aux Italiens*, this week past:—such is the attraction of novelty!

The Muses are increasing and multiplying: three lady-poets, *inconnues*, have given a volume of their inspiration to the public. Reviewers speak highly of its merits; but whether their praises proceed from pity, gallantry, or admiration, it would be difficult to decide; for French critics are not always swayed by strict justice, when authors belong to the gentle, and sometimes ungente, sex.

A lady managed to poison her husband the other day, by means of warming soup in a saucepan covered with verdigris. However, she cannot be called to account for the action, as she pretends it was a mistake. What mistakes will not now be committed? There will be a matrimonial saucepan in every kitchen in Paris, set apart for *le pauvre mari*.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR SEPTEMBER.

22d day, 20 hrs. 17 min. — the autumnal equinox; the sun being vertical to the equator, the boundary of light and darkness passes through each pole, and the days and nights are consequently equal in every region of the globe. After this day, the arch described by the sun above the horizon will be observed sensibly to diminish, and darkness gradually to extend its reign. The emblems of the dying year will present themselves in rapid and melancholy succession: the sickly tinted foliage of the wood, the grove, and the garden — the leaf borne from the bough at the feeblest breath, and flitting to the ground in many circles — the pensive strain of the robin warbling forth a farewell to the parting season — and the moaning gale heralding the icy car of Winter: but above these scenes of change and desolation, the brilliant constellations of winter re-appear and pursue their unwearied and unerring courses, shining forth from their depths of immensity

with unfading splendour, to cheer the gloomy nights of the northern world.

Solar Eclipse.—28th day, 2 hrs. 2 min. 15 sec.—an annular eclipse of the sun; the breadth of the luminous ring surrounding the opaque body of the moon $1' 17''$. This beautiful phenomenon will be visible to the inhabitants of Kamchatka, the Aleutian and Japan islands, and China, in which empire it will doubtless be observed with all the extravagant ceremonies with which this singular people have from very distant ages distinguished these celestial appearances. As soon as the obscuration commences, the inhabitants of the chief cities fall prostrate to the earth, uttering loud exclamations, amidst the horrid noise of drums and cymbals, which continues till the termination of the eclipse. This custom arose from a superstitious notion that the clamour prevented the luminary from being devoured by the celestial dragon; and though this absurd idea has yielded to a correct acquaintance with the cause of the phenomenon, the ceremonial is still preserved, from an attachment to ancient custom. The Chinese astronomers, for some time preceding eclipses, are required to furnish the emperor and the principal officers of government with explanatory types, which are carefully compared with the actual occurrence by persons appointed for that purpose. In the year 1310 before the Christian era, Ho and Hi, two celebrated Chinese astronomers, were punished with death, for having omitted to predict an eclipse that happened in that year.

Lunar Eclipse.—13th day—an eclipse of the moon, which will commence a short time before it sets, consequently a small portion only of the obscuration will be visible at Greenwich, namely, $1^{\circ} 19' 22''$: in Ireland and the western ocean it will be more considerable; and to the inhabitants of North and South America, its whole duration will be visible.

	H.	M.
Beginning of the eclipse	17	25
Moon's upper limb sets	17	38
Ecliptic opposition	18	29
Middle	18	37
End of the eclipse	19	49

Digits eclipsed $6^{\circ} 5'$ on the moon's southern limb, or from the northern side of the earth's shadow.

The moon will be in conjunction with

	D.	H.	M.
Jupiter in Scorpio	5	7	0
Saturn in Cancer	23	8	15
Mars in Leo	26	9	15
Mercury in Virgo	29	19	0
Venus in Libra	30	18	45

The planets Mercury, Mars, and Saturn, are too near the sun for satisfactory observation. Jupiter and Venus are evening stars. The following will be the only visible eclipses of the satellites of Jupiter:—

	D.	H.	M.
First Satellite, emersion	5	7	23
Second Satellite, emersion	26	6	44

Uranus passes the meridian at the following times respectively:—

Occultation of Aldebaran and other Stars in Taurus, August 21st day (see Nos. 649 and 654). The circumstances attending the occultation of these stars (70, 75, and α Tauri, 160 Mayer and Aldebaran) were peculiarly inauspicious; and, with the exception of the emersion of the latter, the detail will be interesting only as affording an opportunity of comparing the state of the atmosphere with that of other observatories. Aug. 21st day, 10 hrs. 47 min.—the moon was observed clear of the horizon, and γ Tauri to the west of the southern cusp. 11 hrs. 45 min.—a veil of mist enveloped the

moon, through which it was dimly seen. 12 hrs. 15 min.—70 Tauri very close to the moon's bright limb: at the predicted time of immersion of this star, dense clouds intercepted the view. To the misty vapour succeeded a dappled sky, through which, at intervals, an opportunity offered of following α Tauri to the verge of the lunar disc, or within a minute or two of its occultation, when darker clouds interposed for four minutes, on the withdrawing of which the star was invisible. 15 hrs. 30 min.—the whole hemisphere generally obscured, so that none of the emersions of those behind the disc were seen. 15 hrs. 48 min.—observed 160 Mayer to the west of the moon. 17 hrs. 30 min.—Aldebaran distinctly seen approaching the bright limb, and visible till within twelve minutes of its expected immersion, when thick clouds concealed both the star and the moon. 18 hrs. 15 min.—the sky became comparatively clear, and continued sufficiently favourable to afford as satisfactory a view of the emersion as, from the presence of the sun, could be expected. At 19 hrs. 1 min. 30 sec. Aldebaran instantaneously re-appeared, without any diminution of its light (when compared with its appearance at 17 hrs. 30 min.), alteration of colour, or sensible variation in its rate of motion. The dark limb of the moon was not visible.

Dexford.

J. T. B.

ANCIENT AND MODERN EGYPT.

M. Champollion's Eleventh Letter—continued.

DAKKEH is the most southern point where I have discovered work executed under the Ptolemies and the emperors. I am convinced that the Greek or Roman dominion never extended, at the most, beyond Ibrim. Accordingly, I have found from Dakkeh to Thebes a nearly uninterrupted series of edifices built in these two epochs: the Pharaonic monuments are rare, and those of the times of the Ptolemies and the Cæsars are numerous, and almost all unfinished. I inferred from this, that the destruction of the Pharaonic temples originally existing between Thebes and Dakkeh in Nubia, is to be ascribed to the Persians, who must have followed the valley of the Nile to about Seboua; where, to go to Ethiopia, as well as to return from it, they took the road through the desert, which is infinitely shorter than that by the river, which is also impassable by an army, on account of the numerous cataraacts: the road through the desert is to this day chosen by most of the caravans, the armies, and individual travellers. This march of the Persians saved the monument of Amada, which might easily have been destroyed, because it is of small extent. From Dakkeh to Thebes we find only the *second editions* of the temples.

We must except the monument of Ghirache, and that of Bet-ouali, which the Persians could not destroy, because it would have been necessary to overturn the mountains in which they are excavated. But these speos, and especially the first, were desolated as much as the nature of the place permitted.

We arrived at Ghirache-bussan, or Ghir-houssein, on the 25th of January. This, like Ypsamboul, Derri, and Seboua, is a real Rhamesseion, or Rhamesion; that is to say, a monument due to the munificence of Rhameses the Great. It is consecrated to the god Phtha, a personage of whom we find a faint imitation in the Hephestus of the Greeks, and the Vulcan of the Latins. Phtha was the god of Ghirache, which in the Egyptian language bore the name of Phatheh, or Thyphthah, the abode of Phtha. Thus this Nubian village formerly bore the same sacred name as Memphis; and it seems

that these pompous names were in fashion in Nubia, since the hieroglyphic inscriptions inform me, for instance, that Derri had the same name as the celebrated Heliopolis of Egypt, *the abode of the sun*; and that the miserable village now known by the name of Seboua, and the monument of which is so poor, dignified itself with the name of Ammon- α i, which is the same as that of Thebes with the hundred gates.

The portion of the hemi-speos of Ghirache built of stone is almost entirely destroyed, and the part excavated in the rock—an immense work—has been ravaged with a kind of studied zeal. I have, however, been able to make out the subject of all the bas-reliefs, and a great portion of the legends. The great hall is supported by six enormous pillars, in which six colossal figures are hewn, presenting the singular contrast of barbarous workmanship close to bas-reliefs, the execution of which is very fine. On the side walls eight square niches contain each three seated figures, sculptured in high relief; the personage occupying the centre of these niches is always the god Sun Rhameses, the patron of Sesostris, invoked under the name of Great God, and as residing in Phthaei, Amonei, and Thyri; that is to say, Ghirache, Seboua, and Derri, where there exist, in fact, Rhamesseions dedicated to the god Sun Rhameses, the same who is adored at Ghirache, as the son of Phtha and Hathor, the great divinities of that temple. The study of the religious pictures of Ghirache throws much light on the mythology of those three personages.

The 26th was partly devoted to the little temple of Dandour. Here we come back to modern times; it is an unfinished work of the temple of the emperor Augustus; but though not important for its extent, this monument interested me very much, because it relates entirely to the incarnation of Osiris in a human form upon the earth. The evening of the 25th had been enlivened by a magnificent echo opposite Dandour: it repeats, very distinctly and loudly, as many as eleven syllables.

The temple of Kalabachi employed us on the 27th: it is here that I discovered a new generation of gods, which completes the circle of the forms of Ammon, the commencement and point of union of all the divine essences. Ammon-Ra, the supreme and primordial existence, being his own father, is called the husband of his mother (the goddess Mouth).—his feminine portion contained in his own essence both male and female. All the other Egyptian gods are only forms of these two constituent principles, considered under different relations, taken singly; they are only pure abstractions of the Great Being. These secondary, tertiary, &c. forms constitute an unbroken chain, which descends from the heavens, and is materialised in incarnations under a human form. The last of these incarnations is that of Horus, and this extreme link of the divine chain, forms, under the name of Hor-ammon, the Omega of the gods of whom Ammon Horus (the great Ammon, the acting and regenerating spirit,) is the Alpha. The commencement of the Egyptian mythology is a triad, formed of the three parts of Ammon, namely Ammon (the male and the father) Mouth (the female and the mother), and Khous, (the infant son). This triad having manifested itself upon earth, is resolved into Osiris, Isis, and Horus. But the parity is not complete, because Osiris and Isis are brother and sister. It was at Kalabachi that I at length found the final triad, the three members of which are exactly resolved into the three members of the initial triad; Horus there, in fact, bears the title of husband of the mother;

and his son by his mother Isis, who is called Malouli (the Mandouli of the Greek Proscynema), the principal god of Kalabschi, and fifty bas-reliefs give us his genealogy. Thus the final triad was composed of Horus, of his mother Isis, and their son Malouli, personages which exactly correspond with the initial triad, Ammon, Month, and Khous; accordingly, Malouli was worshipped at Kalabschi under a form like that of Khous, in the same costume and the same insignia; only the young god bears here, in addition, the title of Lord of Talmis, that is to say, of Kalabschi, which the Greek geographers, in fact, call Talmis, a name likewise met with in the inscriptions of the temples. I have also acquired certain proof, that there had existed at Talmis three editions of the temple of Malouli, one under the Pharaohs and under Amenophis II., successor of Mœris; one of the time of the Ptolemies; and the last, the temple now standing, which was never finished, under Augustus, Cæsar Caligula, and Trajan; and the legend of the god Malouli, on a fragment of a bas-relief of the first temple, employed in the building of the third, differs in no respect from the most recent legends. Thus, then, the local worship of all the towns and villages of Nubia and Egypt never underwent any modification, no innovation was made, and the ancient gods still reigned on the day when their temples were closed by Christianity. These gods had, besides, in some manner, shared Egypt and Nubia among them, thus constituting a kind of feudal division. Every town had its patron: Chnouphis and Saté reigned in the island of Elephantina, at Syene, and at Beghe, and their jurisdiction extended over the whole of Nubia; Phre at Ypsamboul, at Derri, and at Amada; Phtha at Ghirsche; Anouké at Maschak; Thoth, the superintendent of Chnouphis, over all Nubia, had his principal fiefs at Gibal-addeh and at Dakkeh; Osiris was lord of Dandour; Isis queen at Phile; Hathor at Ypsamboul; and lastly, Malouli at Kabatschi. But Ammon-Ra reigns every where, and occupies the right of the sanctuaries. It was the same in Egypt; and we can easily conceive that this partial worship could not change, because it was attached to the country by all the powers of religious belief. Besides this worship, which was in a manner exclusive in each place, did not produce any hatred in the neighbouring towns, since each of them received into its temple, in a judicious spirit of courtesy, the divinities adored in the adjacent districts. Thus I found at Kalabschi the gods of Ghirsche, and of Dakkeh to the south, and those of Deboud to the north, occupying a distinguished place; at Deboud the gods of Dakkeh and Phile; at Phile those of Deboud and Dakkeh to the south, and those of Beghe, Elephantina, and Syene, to the north; lastly, at Syene the gods of Phile and of Ombos. It was also at Kalabschi that I observed for the first time the violet colour employed in the painted bas-reliefs. I have at length discovered that this colour proceeded from the pigment or mixture applied to the parts of these pictures which were to be gilded; thus the sanctuary of Kalabschi and the hall before it were gilded as well as the sanctuary of Dakkeh.

Near Kalabschi is the interesting monument of Bet-Onally, which employed us the 28th, 29th, 30th, and 31st of January, till noon. There my eyes were refreshed, after the barbarous sculptures of the temple of Kalabschi, which were made rich because they did not know how to make them beautiful,—by viewing the historical bas-reliefs, in a very good style, which

decorate this spot, and of which we have complete copies. These pictures relate to the campaigns against the Arabs and the African nations, the Kouschi (the Ethiopians), and the Schari, who are probably the Bischari of this day;—campaigns made by Sesostris in his youth and during his father's life-time, as is expressly stated by Diodorus Siculus, who at this time makes him, in fact, subdue the Arabs and almost all Libya.

King Rhamses, the father of Sesostris, is seated on his throne in the naos, and his son, in the costume of a prince, presenting to him a group of Arab Asiatic prisoners. Farther on, the Pharaoh is represented as a conqueror, striking himself a man of this nation, at the same time that the prince (Sesostris) presents to him the military chiefs and a great number of prisoners. The king in his chariot pursues the Arabs, and his son strikes with his axe the gates of a besieged town: the king tramples under foot the vanquished Arabs, a long line of whom is led away captive by the prince his son. Such are the historical bas-reliefs adorning the left wall of what was the principal hall of the monument, supposing that this portion of the speos was ever covered.

The right wall represents the details of the campaign against the Ethiopians, the Bischari, and the Negroes. In the first picture, which is of great extent, we see the barbarians completely routed, taking refuge in the forests, the mountains, or the marshes. The second picture, which covers the rest of this wall, represents the king seated in a naos, and welcoming, by a sign of his hand, his eldest son, Sesostris, who presents to him, 1st, an Ethiopian prince named Amenemoph, son of Poeri, supported by two of his children, one of whom presents him a cap, as if to give him strength to reach the throne of the father of his conqueror; 2dly, some Egyptian military chiefs; 3dly, tables covered with gold chains and panthers' skins, bags containing gold dust, thrones of ebony, elephants' teeth, ostrich feathers, bundles of bows and arrows, rich furniture, and all sorts of spoil, taken from the enemy or exacted by the conqueror; 4th, after these riches follow some captive Bischari, both men and women: one of the latter with two children on her shoulder in a kind of basket. Then come persons bringing to the king the most curious live animals of the interior of Africa—the lion, panthers, the ostrich, monkeys, the giraffe, perfectly well drawn, &c. &c. This I hope will be recognised as the campaign of Sesostris against the Ethiopians, whom he compelled, according to Diodorus Siculus, to pay to Egypt an annual tribute in gold, ebony, and elephants' teeth: the other sculptures of the speos are all religious. This monument was dedicated to the great god Ammon-Ra, and to his secondary form Chnouphis. The first of these gods declares several times in his legends that he has given all the seas and all the lands that exist to his dear son the lord of the world (the Sun, the guardian of justice) Rhamses (II). In the sanctuary this Pharaoh is represented sucking the milk of the goddesses Anouké and Isis. "I who am thy mother, the lady of Elephantina," says the first, "take thee on my knees and offer thee my breast, that thou mayest take thy nourishment, O Rhamses!" and "I, thy mother, Isis," says the other, the lady of Nubia, "grant thee the periods of the Panegyries (those of thirty years), that thou mayest suck well my milk, and which will pass away in a pure life." I have had these two pictures copied, as well as several others, among which are two bas-reliefs re-

presenting the Pharaoh, conqueror of the people of the south and the people of the north. It must not be forgotten, that the Egyptians gave the name of northern nations to the Syrians, the Assyrians, the Ionians, and the Greeks. I took leave of this monument at Bet-Onally with some pain; for it was the last of the good period and of good sculpture which I was to meet with between Kalabschi and Thebes.

On the 31st, at sunset, we were at Kardási, or Kortha, where I went to visit the remains of a little temple of Isis, without sculpture, except a bas-relief on the shaft of a column. I had seen, two hours before, the temples of Tafah (the ancient Taphis), also without sculptures or hieroglyphical inscriptions; but it is easy to perceive, by the style of their architecture, that they belong to the time of the Roman domination.

[Feb. 1st, M. Acerbi, Austrian consul-general in Egypt, passed them on his way to go up to the second cataract.]

About two in the afternoon we were at Deboud, or Diboudé. On going to the temple, and passing under the three little propylons, without sculpture, I found that it had been built in a great measure by an Ethiopian king named Atharramon, and who must be the predecessor, or the immediate successor, of the Ergamenes of Dakkeh. The temple, dedicated to Ammon-Ra, lord of Tebot (Deboud), and to Hathor, and also to Osiris and Isis, was continued, but not completed, under Augustus and Tiberius. In the sanctuary, which is also without sculpture, are the fragments of a bad monolithic naos, of rose-coloured granite, of the time of the Ptolemies.

Our labours being concluded, we hastened on to re-enter Egypt, and bid adieu to Nubia, the dryness of which had already wearied all my fellow-travellers. At nine in the evening we landed at the isle of Phile, thanking the ancient divinities Osiris, Isis, and Horus, that we had not perished of hunger between the two cataracts.

We remained on the island till the 7th of February, finishing the work which we had begun in September, and collecting all the mythological pictures relative to the history of Isis and Osiris, the principal gods of Phile, and bas-reliefs, which are very numerous there. I content myself with stating here the dates of the chief monuments of the island.

The little temple to the south was dedicated to Hathor, and built by the Pharaoh Nectanebo, the last of the Egyptian race of kings, de-throned by the second invasion of the Persians. The great gallery, or covered portico, which leads from this pretty little edifice to the great temple, is of the time of the emperors; the sculptures are of the reigns of Augustus, Tiberius, and Claudius.

The first pylon is of the time of Ptolemy Philometor, who has encased in this pylon a propylon dedicated to Isis by the Pharaoh Nectanebo; and the existence of this propylon proves that before the present great temple of Isis, there existed another on the same site, which must have been destroyed by the Persians under Darius Ochus: this accounts for the fragments of more ancient sculpture employed in the construction of the existing pronaos of the great temple.

It was Ptolemy Philadelphus who built the sanctuary and the adjacent halls of this monument. The pronaos is of the time of Evergetes II., and the second pylon of Ptolemy Philometor. The sculptures and the external bas-reliefs of the whole edifice were executed under Augustus and Tiberius.

Between the two pylons of the great temple of Isis there are on the right and left two beautiful edifices of a particular kind. That on the left is a peripteral temple, dedicated to Hathor and to the deliverance of Isis, who had just brought Horus into the world. The most ancient part of this temple is of Ptolemy Epiphanes, or of his son Evergetes II. The external bas-reliefs are of the reign of Augustus and Tiberius. Evergetes II. ascribes to himself the honour of building this temple, in the long dedications on the columnal frieze.

The same king has also ascribed to himself by a similar inscription the edifice on the right hand, which is almost entirely of his brother Philometor, with the exception of the hall sculptured under Tiberius.

LITERARY AND LEARNED.

Recherches Philosophiques sur la Langue Ouolofe. Par M. Le Baron Roger, Ex-Commandant et Administrateur du Sénégal. Paris, 1829. Dondéy-Dupré. In-8vo. de 176 pages.

[Abridged from the *Revue Encyclopédique*.]

AMONG the perfection of our arts, the pride of our civilisation, and the riches of our literature, we never entertain the slightest suspicion that a black people, without laws, without universities, without academies, without sciences, incapable even of representing the sounds which they utter, may, nevertheless, have created a language, which, by its beautiful and profound combinations, unites the harmony of ancient with the precision of modern tongues. Pre-occupied by the study of our own language, or of others which ascend to a common origin, we never imagine it to be possible to introduce such qualities into an idiom destitute of numbers, genders, and cases, in nouns; and of moods and tenses in verbs. Such is, nevertheless, the phenomenon exhibited in the language of the Ghiolofs. Certain affixes* have been sufficient with them to express all the modifications of European and Asiatic languages; to none of which is their new system inferior. In M. Roger's work the characteristics of this language are detailed: we will give a slight sketch of them.

The Ouolof substantives have but one gender. In the few instances in which it becomes necessary to distinguish the sex, a word suffices, as when we say, *a male hawk, a female hawk*. They have no number; the plural is indicated by the vowel *i*, generally placed before the substantive, but capable of transposition. They have no cases: as with us, prepositions supply the deficiency.

As for the verbs, that part of speech, usually so complicated, so rich in various forms, is with the Ghiolofs invariable; but the persons are easily expressed by the addition of personal pronouns; the tenses and moods by affixes;—*don* for the imperfect, *on* for the preterit, *de* for the future, *de kon* for the conditional. These words can be rendered in French [or in English] only by periphrases. The two words *de kon* correspond to the Greek particle *av*, which, as is well known, gives to the indicative the sense of the conditional.

Other adverbs, uniting with the pronouns, and with the form of the infinitive, produce voices, or new verbs; by which, abstinence from, or the cessation of an action, is indicated. Lastly, by changing their final syllable, the

Ouolof verbs form many derivatives, both verbs and substantives.

That, however, which distinguishes the language of the Ghiolofs from all others, is the constant use which those people make of signs of place. The three vowels, *i*, *ou*, and *e*, modified by consonants which influence the euphony, and following a very remarkable law, indicate the presence, the proximity, or the remoteness of the object spoken of. These signs extend to every thing; they are continually occurring in speech; they constitute, in some respects, the principal characteristic of the language; and, by a very refined analogy, not at all to be expected from savages, applied to the infinitive of the verbs, they express—*bi*, the present; *bou*, the future, constantly approaching; *be*, the past, constantly receding.

For further information we refer our readers to M. Roger's work.

FINE ARTS.

NEW PUBLICATIONS.

A Series of Subjects, from the Works of the late R. P. Bonington. Drawn on Stone by J. D. Harding. Part I. Carpenter and Son.

In No. 655 of the *Literary Gazette* we noticed, with the praise which was its due, the print of "Charles V. visiting Francis I. after the Battle of Pavia," which is one of the five embellishments of this, the first Part of Messrs. Carpenter's intended publication. The other four are—"Study of a Female Head, from Nature;" "Maternal Solitude, a Sketch;" "A View of the Place du Molard, Geneva;" and "A View of the Church of St. Sauveur, at Caen." They are all replete with true painter's feeling; and we look forward with great pleasure to the continuation of a work which promises to be so highly interesting.

Portraits and Memoirs of the most Illustrious Personages of British History. By Edmund Lodge, Esq. Nos. VIII. and IX. (Published monthly.) Harding and Lepard.

The various new editions of this interesting publication are steadily proceeding, and continue to exhibit the excellence which has so frequently called forth our warmest approbation.

Eagle. Drawn from Nature and on Stone, by S. M. Smith. Smith and Son.

We would give something to have a shot at such a magnificent fellow, within what Acres calls "a good gentlemanly distance." Mr. Smith is entitled to great commendation for the fine character which he has imparted to the royal bird; and for the combined depth, delicacy, spirit, and softness, of his lithographic execution.

BRITISH SCULPTURE.

A COLOSSAL head of the Duke of Wellington has lately been modelled by Mr. George Clark, of Charles Street, Covent Garden,—the first sight of which irresistibly drew from us the exclamation—"prodigious!" We are far, however, from meaning by this expression to disparage the work; which, on the contrary, does great credit to the youthful artist, who, we understand, is a native of Warwickshire, has hitherto had but few opportunities of study, and has been in London only about four months. He is commissioned to execute a statue, in marble, of Colonel Pepper, who fell in the Burmese war; the design for which is one of great simplicity, although it would, perhaps, be as suitable to the statesman as to the soldier. Among the busts in Mr. Clark's studio are

those of the late Dr. Parr and Dr. Milner; Miss Stanfield the artist, Mr. Macready, Mr. Brummell, &c.; all evincing talents, which, under auspicious circumstances, will no doubt raise their possessor to a distinguished rank in his profession.

HAYDON'S PICTURES.

WE are glad to state, that Mr. Haydon has finished his fine picture of Buckle—for the possession of which a *raffle* has been projected; and the subscription (nearly, if not entirely) filled. This very clever artist's *Punch*, or *Life in London at Noon-day*, is also fast proceeding towards completion; and bids fair to rival the *Mock Election*. Both these pictures are to be exhibited together, and will excellently illustrate the painter's powers in the classic and comic of art.*

ORIGINAL POETRY.

IMPROMPTU: TO THE OCEAN.

O PRACID Ocean; scene of my delight!
How oft on thee I've gazed in night serene,
Charmed with the lustre of the evening light;
When twilight lingers in the space between
The sky and sea; or when the moon is seen
And her attendant stars that march on high,
Fit maids of honour for night's lovely queen;
—Then would my soul; great Lord, in rapture fly
To thee, and wish thy name to glorify.

But when the raging tempest roars on high,
And deaf'ning thunder strikes upon the ear;
When lightnings shoot impetuous through the sky,
And on the water's waste midre bright appear,
When mountain waves their horrid breasts
uprear,
And burst upon the shore?—O, who can tell
How much I do such scenes admire and
fear?
Thou, Lord, art great in might, and Thou
canst quell
This elemental strife, and all its gloom dispel.

A BROKEN CHAIN RETURNED.

Take hence the chain! for the shade of many sorrowful
twined in its links.

WHY hast thou brought again,
Once more to bind,
As erst it bound, the linked chain,
Spirit and mind?

Was fancy's pinion all too free,
And life too light?
That thou dost fling once more o'er me
In forceful might,

That slow corroding life and heart,
All dark and chill;
The deep, deep pining of the heart,
That naught may still?

Dreams of the pale and joyless past,
And hopes unblessed,
That share the sleepers' calm — their last
And dreamless rest.

Sad thoughts, that lie while brightly shines
The lips' calm breath;
As Etna's steep, where smiling vents
Hide fires beneath.

M. T.

* When we are mentioning a *raffle* for a picture, we ought to notice that the celebrated painting of the "Death of Lord Nelson," by West, is also to be disposed of in the same way. The picture is valued at £3000, and Miss West, the grand-daughter of the late president, is having three hundred tickets at five guineas each; which, as soon as the subscription is full, are to be drawn, and the fortunate owner of the prize decided.

* By the word "affixes" is meant a letter or a syllable added, either to the commencement or to the termination of a word, to determine its relation to the rest of the sentence.

SKETCHES OF SOCIETY.

DREADFUL SHIPWRECK.

In our last *Gazette* we alluded to accounts of a dreadful case of shipwreck and starvation which had reached us from an officer on the station near Anticosti, where this sad catastrophe took place. Of this calamity, hardly equalled by that of Admiral Byron's time, or the more recent destruction of the *Medusa*, it is almost painful to print the particulars; but, as a record of human suffering, it seems that the fearful interest it excites may excuse the horrible nature of these details; an imperfect version of which has already appeared in the *Atlantic Recorder* (American Journal), and been copied into the *London Times* and other English newspapers. Speaking of Anticosti and this appalling incident, our correspondent says—

"This villainous island is only fit for bears to live on, and that is the reason, no doubt, that there are so many of them on it: it is a pity they should ever be disturbed. It is more than 300 miles round, and yet there is only one place where a vessel can anchor, and there, if the wind came on suddenly and violently in the night, it is more than probable she would be driven on shore.

"Last November, the crew of a deserted ship, which is supposed to have become water-logged in a gale in the Gulf, landed on Anticosti; and this spring not one of them remained alive to tell the tale of their extreme misery. The story is almost too horrid to relate. A boat from the Magdalen Islands, on a sealing excursion, landed near the east end of Anticosti, and proceeded to a hut which they observed near the shore. On entering it they were struck speechless with horror at the scene which presented itself. The floor of the hut was strewn with skeletons of men, women, and several children of different ages, the latter doubtless passengers in the lost vessel. One dead man was hanging in his hammock as he had died. There was a kettle in the fire-place, as it had been left, with human flesh in it, in a state of putridity. In an adjoining out-house, several bodies were thrown across a line, like carcasses in a slaughter-house, and the flesh had evidently been cut from the corpses as required for the horrid and revolting repasts to which the last extremity of human misery had driven the survivors. Articles of female and children's apparel were found, which indicated that the sufferers were of a respectable rank in life; many valuable articles, such as watches, and a considerable sum of money were also found, as well as papers belonging to several persons, which will shew what vessel it was; but that point had not transpired for certain when I left Quebec."

We annex the story as it appeared in the *Times* about a fortnight ago.

Pictou, June 12.

"Dear Sir,—I take the liberty of sending you the enclosed affidavit for publication, shewing the melancholy fate of a number of human beings (supposed to be 16 or 18 in all). I have just returned from the Magdalen Islands, where I saw a number of articles belonging to the unfortunate sufferers; but not one of the ship's papers, or any thing to shew distinctly what she was, or where she was owned. By publishing the annexed marks, which appear on some of the articles, the parties concerned will be able to ascertain what vessel she was.

"I cannot close this account without noticing the circumstance of the occupiers of the port of Anticosti being absent. I have been

informed that this and two other posts have been kept up for a number of years, during the winter, by the government of Lower Canada, for the purpose of affording aid in the many cases of shipwreck which happen on the island; and they also posted up, at a certain distance along the coast, signal posts, with suitable labels, directing the reader in what direction the houses were, the distance, &c. It remains to be shewn for what reason these houses were abandoned by their keepers, without notice being given publicly; and I trust it will point out most forcibly the necessity of having them in future well supplied and attended. I am, &c.

JAMES DAWSON, Lloyd's Agent.

"Marks on a part of the property.—A tablecloth, A. B. S.; a pair of stockings, R. M.; a cotton shirt, J. N.; a lady's pocket, A. B.; a trunk made by M. A. Broxholm, Soho, London; a pair of stockings, J. H. F.; some silver tea-spoons, J. S.; two Quebec papers, latest date 23d October, *Gazette*; a shirt, P. Vaughan; one ditto, William Nash, No. 8, Sept. 17, 1827; a finger-ring, engraved inside, 'Married J. S. to A. S. 16th of April, 1822'; on a blank leaf in Blank's American Coasting Pilot, was written 'J. Strickney, Esq., J. S. Campbell, Esq., Quebec'; on another leaf of the same book was written, 'Ship Granicus, Cook.' On the African Coasting Pilot, and two other nautical books, appears—'Robert Martin, Barnmouth by Ayton, near Berwick, N. B.' Below two lines of poetry in the *Seaman's Daily Assistant*, 'Adam Willis.'

"On a small piece of paper found with some money, was written in pencil, 'Sir, you will find 48 sovereigns in a belt in my hammock; send them home to Mary Harrington, Barrack-street, Cove,' as they are the property of her son."

Copy of an Affidavit.—To all whom it may concern: be it known, that Jacques Bourgois, Joseph Boudroit, Joseph Bourgois, and John Chesson, all of the *Shallon Victory*, of the Magdalen Islands, have personally appeared before me, P. F. Colbeck, Esq., one of his Majesty's Justices of the Peace for the district of Gaspé, and made oath that on Tuesday, the 12th May instant, they landed on the north side of the Island of Anticosti, about six leagues from the east point, and visited a fur station there, which they had previously known; that they found the door of the house shut, and tied inside with a rope; that, on forcing the door, they perceived the carcasses of four human beings, with the heads, legs, and arms cut off, and the bowels extracted, hanging by the thighs in the room, and two others on the floor cut up in the same manner; that they found a human body in a hammock, which appeared to have died there; the body was habited like a sailor, and there were two trunks in the room with human flesh in them, cut up into small pieces. There was also a pot with human flesh in it; round the house pieces of human flesh and bones strewn about; there was no appearance of bread, flour, or animal food, in the house. Two brands of fire were in the fire-place, and some ashes; in the house were two axes and an adze; on the shore was a jolly-boat, but the name was defaced. From the clothing there appeared to have been both women and children of the party. The Frenchmen interred the bodies.

In testimony whereof, &c.

* We have no doubt this is the Cove of Cork.—Ed. L. G.

GEORGE THE FOURTH, DESCENDED FROM A BURGER OF NORDEN.*

THE principality of East Friesland, as our readers will recollect, was incorporated with the kingdom of Hanover in the year 1815; and it is worthy of remark, that on his mother's side, George the Fourth, who has added this gem to his German inheritance, is descended from a race of stout Frisian burghers. We do not mean to insinuate that he forfeits, but that he enhances, by this circumstance, his claim to the loyalty of "a nation of shopkeepers;" besides which, a knowledge of the precedent may serve to warm the imaginations of the traders of the present day, with a vision of the regal glories in which their posterity may bask—some six hundred years hence!

But to the point. The first scion of the princely house of East Friesland, whose name appears in its national annals, was Cirk, an affluent citizen of the town of Norden, in the thirteenth century. His son Edzard Cirksema in the year 1269 joined the crusaders under Lewis the Ninth of France, shone as a leading personage in their sacred host, and was not only dubbed a knight by the French sovereign, but, in testimony of his noble bearing, enjoyed the high distinction of being permitted to wear a "golden lily" midst the plumes of his helmet. On his return from the Holy Land he became Häuptling of Gretsiel, a station of the highest rank among the Frisian nobles; and his posterity continued to enjoy it, from father to son, until the year 1453, when Ulrich Cirksema was chosen "Lord Paramount" of East Friesland, by the assembled states, and, the year succeeding, was raised to the dignity of a Count of the empire, by Conrad the Fourth. This individual was, in fact, the founder of the dynasty of the Cirksemas, from which sprung the subsequent counts and princes of East Friesland. The male branch of this sovereign family became extinct in the person of Charles Edzard, who died in 1599; but its female branch has given monarchs and princes to many an European people, as will appear in tracing the maternal descent of our present sovereign.

Edzard's daughter Maria (1579—1616) married Julius Ernest, Duke of Brunswick-Lüneburg, in 1614, and two years afterwards gave birth to Maria-Catharine, who was espoused to Adolphus-Frederic I. duke of Mecklenburg-Schwerin, in 1635. Their son Adolphus-Frederic II., and grandson Adolphus-Frederic III., inherited, successively, the dukedom of Mecklenburg-Strelitz; but leaving no male issue, Gustava Carolina, a daughter of the first of these two, brought her husband and cousin, Christian Lewis, duke of Mecklenburg-Grabow, the inheritance of the dukedom of Mecklenburg-Schwerin, in the year 1735; and from this union its present princes are descended.

On the demise of Adolphus-Frederic III., in 1752, the dukedom of Mecklenburg-Strelitz passed to his nephew, Adolphus-Frederic IV., who died unmarried in 1794, and was succeeded by his brother, Charles-Lewis-Frederic, the father of the present Grand Duke of Mecklenburg-Strelitz, as well as of Louisa, late Queen of Prussia, and of the present Duchess of Cumberland; which last is, consequently, a niece of Sophia-Charlotte (the mother of George the Fourth, King of England and Hanover), she being a sister of Adolphus-Frederic IV., and, as we have now shewn, a descendant of Cirk,

* A sea-port and manufacturing town in East Friesland, with a population of 6000 inhabitants.

burgher of Norden, whose fellow-countrymen of the present day have returned to the allegiance sworn in olden times to one of his princely posterity.

Among the descendants of Maria-Catherine, grand-daughter of Count Edzard, are, the present hereditary Prince of Denmark, the Crown Prince of Prussia and his brothers and sisters, the wife of the Grand Duke Michael of Russia, the Queen of Bavaria, the Duchess of Cumberland, the Empress of Russia, *cum plurimis aliis*.

MUSIC.

NEW PUBLICATIONS.

A Set of Turkish Melodies: the Poetry by Maurice Dowling, Esq.; and the Music by David Lee. Vol. I. A. Lee and Lee.

THIS little volume ought and must speedily be very popular. The music is beautiful and characteristic; and we think "The Nightingale," "Gulnare's Love," and the air "Dost thou, Laila" (the last being extremely lively and pretty), admirably calculated for the pleasures of the drawing-room and social circle.

The Archer Boy. Written by Mrs. B. C. Wilson; composed by John Barnett. Barnett and Co.

WE like the archness, yet simplicity, and grace of this cavatina very much. It was sung by Miss Love in the *Partisans*, and found almost equal favour with the auditory as "Gentle moon;" together with which it deserves a light and pleasing popularity.

Orook's Daughter. Music by J. Reeves. Falkner.

ANOTHER of the numerous sweet and simple compositions, which is sure to be every body's favourite.

Echoes of the Alps. By J. Moscheles. Mori and Lavenu.

A FINE composition: the original parts extremely brilliant, and well contrasted with the beautiful Swiss airs which Mr. Moscheles has introduced with infinite taste.

The Land which no Mortal may know. By Mrs. Shelton. J. B. Cramer.

THIS touching ballad, to which the charming voice of Mr. Wood does such ample justice, is one of the most enchanting compositions of the season. The words are affecting, and the melody and pathos perfectly adapted to them.

The Argyle Wreath. W. T. Ling. Preston. To young players we cannot recommend a better or a prettier exercise: it is simple, easy, and short; and several sweet Scots melodies enrich the divertimento.

DRAMA.

COVENT GARDEN.

THE public meeting called for next Wednesday affords the last hope for removing the present obstacle to the re-opening of the theatre, so as to enable Mr. Willet to carry on the concern another season, which he has promised to do if the executions are taken out, and the scenery, &c. preserved. Mr. Kemble is to be present at the meeting. There is a report that the Duke of Bedford means to offer 120,000*l.* for the property altogether, with the intention of appointing his own manager, and making it his own speculation. Should no arrangement be made on Wednesday, there is a conditional agreement entered into between the principal actors of Covent Garden, Mr. Arnold, and the Lord Chamberlain's office, by which that gen-

tleman is empowered to keep open with the regular drama four nights per week, (the French play to occupy the other two,) until the existing differences shall be settled by the decree of the Lords.

We have also heard that Macready has offered 6000*l.* for the season, and M. Laporte a still higher sum. It is, therefore, as yet impossible to say how the matter will terminate.

HAYMARKET THEATRE.

Les Suites d'un Mariage de Raison has been translated by Miss Boaden, the adapter of *Quite Correct*. It is a novelty in its way, being a tragic drama in one act; but the oblivion to which its predecessor has been long consigned depreciates the only intrinsic merit it possesses — the picture of the *Fatality* (an old woman's phrase, by the way,) which, nine times out of ten, would follow so foolish a marriage as that which the French author has designated one of reason. A young, beautiful, and enthusiastic girl is *reasoned* into a match with an old lame sergeant, her *love* being unalterably fixed upon the companion of her infancy and the son of her benefactor, a romantic though somewhat libertine captain. Such is the story of *Love and Reason*, produced some seasons back at Covent Garden. In its sequel (*Fatality*), the young captain returns, a colonel and a married man, but parted, of course, from a wife whom he never loved, and fonder than ever of the sergeant's wife, from the very circumstance of her being another's. The sergeant takes alarm, and, anticipating consequences, thinks it most prudent to call out the colonel before worse happens; shoots him, and the curtain falls.

There is a pleasant touch of the exquisite inconsistency of dear human nature in the interview between *Susannah* and the *Colonel*, who, describing the misery of his own married life, and imprecating curses on every wife who, like his own, shall slide from the path of duty, in the same breath makes violent love to the fair partner of his old friend and faithful servant, and seems perfectly astonished when the conscious but indignant lady quotes his words against him. The piece was acted with spirit, and received with applause; but, for the reason we have already given, cannot hope for a long existence.

ENGLISH OPERA.

THE new grand opera, *Der Vampyr*, has made the decided hit we anticipated. The beauty of its melodies has nightly stolen more sweetly on the ears of the public. Phillips has immortalised himself by his personation of the terrible hero; and Miss H. Cawse has rendered *Liska* the sweetest of rural brides. The minor parts are most admirably supported by Pen-son, Salter, and J. Russell; the latter gentleman has farther raised himself in the public estimation through his excellent singing of the imitative scene in the *Spring Lock*, which is about one of the best things of its kind we ever heard: his imitation of Velluti is *inimitable*. The absence of Phillips, at the Cheshire meeting, unfortunately interrupts the run of the opera for one week; but Mr. Arnold has two novelties to supply the gap, one of which is to be produced this evening.

VARIETIES.

Receipt to destroy Vermin on Cattle, and to cure the Mange. — Put into an earthen vessel four ounces of flour of sulphur, and a pound weight of nut-oil; place the vessel upon a moderate fire, and stir the mixture with a piece of wood, until part of the flour of sulphur is dis-

solved, and the oil has acquired a reddish-brown colour; then remove it from off the fire, and, before it is entirely cold, add four ounces of essence of turpentine; then stir it again until it is incorporated. This preparation is neither expensive nor complicated; and when used, is merely put upon the parts infested with a feather. — *Bibliothèque Physico-Economique.*

The Netherlands. — In the last "Jaarboekje," an annual work published at the expense of the King of the Netherlands, is a statement, derived from the observations of ten years, of the comparative amount of births and deaths in the different months of the year, for the whole kingdom. Taking unity as representing the medium amount of all the months (considered as of the same length), the following is the scale of proportion:

	Births.	Deaths.
January	1,091	1,196
February	1,117	1,177
March	1,171	1,171
April	1,017	1,091
May	0,934	0,978
June	0,876	0,897
July	0,851	0,833
August	0,918	0,826
September	0,903	0,860
October	1,003	0,837
November	1,011	0,962
December	1,021	1,043

It appears, therefore, to be clearly established, that the greater number both of births and deaths occur in the winter months.

The Russian Empire. — The following is published, in a work by M. Adrien Balbi, as a statement of the progressive aggrandisement of the Russian empire:

	Sq. Miles.	Population.
1462, at the accession of John III.	256,900	6,000,000
1505, at his death	594,900	10,000,000
1584, at the death of John IV.	2,007,400	12,000,000
1645, at the death of Mich. Romanof ..	4,069,800	12,000,000
1689, at the accession of Peter I.	4,223,400	15,000,000
1726, at his death, comprising the conquests from the Persians ..	4,413,000	20,000,000
1762, at the accession of Cath. II.	5,119,600	25,000,000
1796, at her death	5,300,300	35,000,000
1825, at the death of Alexander	5,879,900	56,000,000

He considers the following to be the existing state of the empire:

Surface, in square miles	5,912,000
Population	60,000,000
Revenue, in francs	400,000,000
Debt, in francs	1,300,000,000
Army	1,039,000
Ships of war of all sizes	130

Spiders. — In a memoir on spiders, lately read to the Académie des Sciences, the author, M. Straus, divides them into three orders; one breathing by lungs, and having a circulation of blood through very complicated vessels; another breathing by a windpipe, and having no blood-vessels; the third breathing by gills. M. Straus intends to publish a work on the subject, illustrated by anatomical plates. — At the same sitting, M. Virey communicated to the Academy the result of some observations which he had made on the small spinning spider, and which satisfied him that it ascended and floated in the air by the movement of its four pair of feet, which acted like little oars or wings.

Parrots. — A whimsical treatise has appeared at Paris, entitled the "Physical and Moral Education of the Parrot, with Instructions for curing the various Diseases to which it is subject." What a treasure to many an old maid!

Yamantaga. — There is in the Imperial Museum at Moscow a Mongolian idol, Yamantaga, the God of Destruction. It represents a man with a bull's head, round which are six grotesque men's heads, with sixteen feet and thirty-four hands. Above these seven heads rises an eighth, equally deformed, and surmounted in its turn by another head, which is very beautiful. All these heads are encircled

with flames, and with fillets formed of human skulls. This statue, which embraces a female, holds in its hands the symbols of destruction and regeneration, and its feet are placed on similar symbols. Its total height is about six inches; and it is very skilfully wrought.

Silo.—M. Tolhuire, an inhabitant of Brussels, has taken out a patent in the Netherlands for a silo, in which corn may be kept in a perfect state for any number of years.

Simple Method of Preserving Fruits.—When the fruit has been well plucked, and is not too ripe, it is placed in common bottles, which must be entirely filled. The bottles are to be corked, and are then to be placed upright in a vessel filled with water, which is to be heated gradually, until it acquires a temperature which the hand can bear. This degree of heat is to be kept up about half an hour; the bottles are then to be withdrawn one by one, and are to be filled to within an inch of the cork with boiling water: they are then to be hermetically sealed, and should be placed on one side, so that the cork is kept wet, to prevent the fruit from fermenting or becoming mouldy. The bottles are to be turned once or twice a-week during the first and second months, and once or twice afterwards in each succeeding month. Fruit heated in this manner will keep for more than two years. The heat should not be strong enough to burst the fruit.—*Biblioth. Physico-Econom.*

Preservation of Meat and Fish with Ice.—Some experiments have been made, by the council of health of the prefecture of police in Paris, upon the preservation of viands and fish by means of ice. The experiments have been very various, as much from the nature of the alimentary substances which have been tried, as from the time they were allowed to remain in the ice. The results are as follow:—1. That fresh viands of every sort, as well as fish, may be kept in ice for a long time without experiencing the least alteration. 2. That the placing of these substances in ice, when in a state of putrefaction, will stop the decomposition. 3. That the substances put in a fresh state in the ice, and kept so for a longer or shorter time, when they are withdrawn and exposed to the action of the air, putrefy with the greatest rapidity; and if the temperature of the atmosphere is rather high, some hours suffice to bring on putrefaction and render them unfit for nourishment. 4. That these substances, when cooked after being taken from the ice, not only do not lose any of their good qualities, but become even more tender and delicate.

Mode of Making and Preserving Verjuice.—Some unripe grapes are put into a mortar, the stones being carefully extracted, as they would give a bad taste to the liquor; the juice is then strained through a cloth and put into bottles, which are placed in the sun, without corks: the liquor is left to ferment until all impurities are extracted. During six or seven days the bottles are filled up every morning; at the termination of this time the scum becomes white, and the fermentation ceases: it is then decanted, taking care to keep back the dregs. The bottles are well secured, so as to exclude the air; and it is then fit for use.—*Hygie de Bruxelles.*

Mount Sinai.—The monastery on this mountain is 5400 feet above the surface of the Red Sea, and the perpendicular elevation of its summit above that monastery cannot be less than 2000 feet; so that the height of Mount Sinai itself is 7400 feet. But this is not the loftiest

feature of the Sinai chain. Mount St. Catherine's is at least 1000 feet higher; and the most elevated ridge of this chain cannot, therefore, be estimated at less than 8400 feet above the level of the Red Sea.

Relic of Mary, Queen of Scots.—In what is styled the "schöne capelh," or beautiful chapel of the palace at Munich, there exists a most interesting relic of the unfortunate Mary, which the Scottist nunnery at Vienna spent much precious time, without avail, in claiming as its property, both before the ancient Diet of Ratisbon, as well as subsequently before the council of religious foundations at Vienna. It consists of a diminutive altar of molten gold, four inches in height, and was a present from the French Jesuits and the Scotch refugees, who were their allies, to the Jesuits of Munich. The following inscription was attached to it by order of Maximilian the First, Elector of Bavaria:—

Ex illi comes et careris imago
Mar. Stuarde Scot. Reg.
Fuit, fulset cedis, al vixisset.

Duchesse de Bouillon's Satan.—It will be in the recollection of our historical readers, that there existed under the reign of Lewis XIV. a commission of inquiry, denominated the "chambre ardente," whose province it was to probe and check the frightful extent to which poisonings, enchantments, and other necromantic practices, were carried between the years 1675 and 1680. The Duchesse de Bouillon was one of the individuals summoned before this tribunal; and La Reynie, its president, was weak enough to open her examination by asking her whether she had seen his satanic majesty? "Most undoubtedly," she replied; "he stands before me at this very moment; he is an ugly, detestable-looking fellow, and calls himself a president and privy-councillor." This sarcasm provoked the duchess from any further molestation.

Farina of Potatoes.—The quantity of farina which potatoes produce varies not only according to the species, but according to the period when the extraction takes place. The variations produced by this last cause are nearly as follows: two hundred and forty pounds of potatoes produce of farina, or potato-flour, in

August, from 23	to 25 pounds.
Sept. 32	— 38
Oct. 32	— 40
Nov. 38	— 45
March 45	— 38
April 48	— 28
May 28	— 20

The extraction of the farina should be discontinued at the period when the potatoes begin to grow, the farina being destroyed by germination. Red potatoes produce a smaller quantity of farina. Those which are blue on the outside give little, but it is of a good quality: the white, which is often tinged with red in the interior, is the least proper for this extraction. The best of all is that which has a yellow tint, as its farina is of very good quality, and abundant.—*Hygie de Bruxelles.*

LITERARY NOVELTIES.

The new volume by L. E. L., containing the Venetian Bracelet, the Lost Pleiad, and other Poems, is expected very early in October. A beautiful frontispiece for it, from a painting by Howard, has been engraved by William Finden.

The Literary Souvenir is in a state of great forwardness. Among its contributors are the Authors of "Highways and Byways," "Constantinople in 1828," "Tales of the Munster Festival," "Recollections of the Peninsula," "Tales of the O'Hara Family," "The Kuzilbash," "Tales of the Moon," "The Sorrows of Rosalie," "The Bath Man," "Richelieu," "Tales and Confessions," "Rouge et Noir," and also J. Galt—W. M. Ford—Miss Milford—Mrs. Hemans—Miss Bowles—J. Montgomery—Professor Wilson—Barry Cornwall—

T. H. Bayly—Dr. Maginn—T. K. Hervey—Sir Aubrey de Vere Hunt—Hartley Coleridge—D. M. Moir—J. Bowring—Miss Jewsbury—Rev. T. Dale—W. and M. Howitt—Derwent Conway—W. S. Walker—Rev. C. Hoyle—Alaric A. Watts, &c. &c. The illustrations are from pictures by Sir Thomas Lawrence—Howard—Collins—Chalon—Harlowe—F. P. Stephanoff—Martin—Lestie—Allston—Westall—Phalippion, and Uwins.

The Amulet for the coming year is stated to us to be nearly complete; and Mr. Hall, it is added, has been very successful in obtaining the co-operation of many distinguished writers. Among its illustrations will be an engraving, from the King's picture, of an English cottage, by Mulready—another from Wilkie's painting of the "Dorcy Balm"—another from a drawing by Martin, by Le Keux, for which, it is said, the engraver received the unprecedented sum of 180 guineas.

The Juvenile Forget-Me-Not is also announced for publication, under the superintendence of Mrs. S. C. Hall. It is, we understand, to contain twelve engravings of a very interesting character to the little folk, for whom it is intended as a Christmas present or new year's gift.

The Musical Bijou is another of our promised Annuals: the prose and poetical articles are by Sir Walter Scott—Mr. T. H. Bayly—Lord Nugent—Mrs. C. B. Wilson—the Ettrick Shepherd—Lord Ashmont—Messrs. Planche, Pocock, E. Fitz-Ball, Richard Ryan, &c. &c. and the music by Rossini, Bishop, Herz, Kalkbrenner, Rodwell, Kiallmark, J. Barnett, J. Parry, and others.

In the Press.—An Account of the Origin, Rise, and Progress, of the Town of Greenock; with numerous embellishments.—A German and English Comparative Dictionary, meant to hold out to the beginner encouragement and facility to the acquisition of the German language.

LIST OF NEW BOOKS.

Moore's Lalla Rookh, 15th edition, fcp. 14s. bds.—Mangnall's Questions, new and improved edition, 12mo. 5s. bd.—Goldsmith's Grammar of Geography, new edition, 18mo. 3s. 6d. sheep.—Gwill's Anglo-Saxon Grammar, 8vo. 6s. bds.—Morrison's Mercantile Teacher's Assistant, 12mo. 5s. sheep.—Bonington's Drawings, by Harding, No. 1. 4to. 12s.; proofs, 18s.—Platt on Covenants, 8vo. 1l. 5s. bds.—Selby's Ornithology, Second Series, No. VII. folio, plain, 1l. 11s. 6d.; coloured, 5l. 5s.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. August 1829.

Thermometer—Highest	74° 00'
Lowest	38° 00'
Mean	54° 33.14
Barometer—Highest	29.96
Lowest	29
Mean	29.62236

Number of days of rain, 18.

Quantity of rain in inches and decimals, 4.66125.

Winds.—0 East—5 West—2 North—3 South—0 North-east—4 South-east—9 South-west—8 North-west.

General Observations.—The same similarity to the weather of 1823, noticed last month, occurred again in this; the minimum of the thermometer the same, and the range only one degree greater than at that time; the mean, however, was less than any one in the last thirteen years; the month consequently cold, and the quantity of rain unusually great, being exceeded only by the quantity which fell in last August. From the 24th to the 28th there were continual gales of wind from the west and north-west, and nearly half the rain fell in that time. Thunder heard on the 27th about midnight. The evaporation 0.3875 of an inch.

TO CORRESPONDENTS.

The London Miscellany is, we believe, published somewhere in Fleet Street.

The sale of game ought certainly to be legalised, if the admirers of our labours will continue to evince their feelings in the shapes of grouse, partridges, venison, &c. &c. A game and poultry shop might be opened next door to the Literary Gazette Office, and, between the two, a capital and brisk trade be carried on. Seriously, we do not know how, except thus publicly, to thank our unknown liberal and complimentary friends.

If the vagabond who, under the name of Mr. Jardine Brown, and calling himself Assistant Editor of the *Literary Gazette*, applied to Mr. Hughes for orders for Vauxhall, should forge the same request to any other public place, we shall be much obliged to the managers to cause him to be apprehended. We never ask favours of the sort; and no one is authorised by us to do so.

ADVERTISEMENT

Connected with Literature and the Arts.

A NEW PROPOSAL for a QUAY on the THAMES.

The noble plans hitherto suggested have been formed on two grand and expensive scales; the one now submitted appears useful and ornamental, and yielding an ample interest, immediately compensating the expense incurred.

Between two bridges, a line of flat-bottomed ships, not floating, but fixed, resting on the ground; the heads and sterns in a line with the tide, with open spaces between every two vessels, so as to allow three barges plying at the same time; two bridges thrown over from vessel to vessel. The range of vessels placed either central between shore and shore, or if nearer one shore than another, leaving ample space for the craft to lie between them and the shore. The access to them by like vessels from the shore, or by the bridges; in the latter case, the decks of the vessels must be on a level with the road of the bridge.

These vessels could be warehouses below, and dwellings above the water: suppose each of six hundred tons burthen, or less, or as much more as might be suitable. The rent of these warehouses and dwellings would, I should suppose, much exceed the hiring of vessels for mercantile speculations: being, as they are grounded, they would be subject to no movement, either by tides or storms.

It would be adding to the city a new and noble street of communication and traffic; the dwellings themselves would be healthy, and much sought after by people in business, and by such invalids as have great benefit of enjoying the freshness of air only a board of ships, which are capable of being rendered as warm as houses on shore. Any other forms could be adopted, which might be thought more eligible; but I mention ships, conceiving no other form would be so appropriate on the Thames, so beautiful, — galleys, merchantmen, frigates, or even men of war of the largest size.

For the carriage-way, the middle road over them should be sixteen feet wide, with a broad path for passengers on each side.

There might be apartments for gangways or masts, the two quarter galleries would serve, — one as a staircase, and the other, on an inclined plane, the carriage-way.

The appearance would be highly ornamental, the vessels being kept fresh by occasional renewal of paint; and the iron bridges being handsomely cast.

It is not at all paradoxical to say the river would appear of greater magnitude; for it is observed, if the eye be attracted by any object in the centre of a river, in extending the view to the other bank, the river will appear a third broader.

The proposal might be tried on a narrower scale for foot passengers only; it could be at any time enlarged for carriages.

In this manner the river also may at once be established, the vessels forming at it were the pier, with the communication by iron or chain bridges. It matters not how deep the river may be, the greater the depth, the greater the space for storage, and the greater the rent to be received.

No more would our country envy be excited by the fine quays of the different cities of Europe; — nothing would equal this: viewing the river on both sides, and then the facility of execution, the augmentation of space, and the immediate compensation by interest.

August 21st, 1820.

THEATRE OF ANATOMY, GREAT WINDMILL STREET.

The following courses of Lectures will be delivered during the ensuing season:—

Anatomy, Physiology, Pathology, and Surgery, by Mr. Herbert Mayo and Mr. J. Wilson.

Theory and Practice of Physic, by Dr. Chambers and Dr. Macleod.

Theory and Practice of Surgery, by Mr. Brodie.

Midwifery, and Diseases of Women and Children, by Mr. Stone, alternately with Mr. Harvey.

Materia Medica, by Dr. Macleod.

Botany, by Mr. Gilbert Burnett.

For further Particulars inquire at the Theatre; at the Hospital or Dispensaries at the West End of London; or, at the Residences of the different Lecturers.

TO PARENTS AND GUARDIANS. A few

Young Gentlemen can be accommodated with Board and Lodging, in a private respectable Family, pleasantly situated, to attend a Public Classical School, of the highest repute, in the West of England, where every attention will be paid to their comfort, &c.

For Terms, &c. apply, post-paid, to Mr. E. L. to be left at No. 10, Bridge Street, Exeter.

PORTRAIT OF HER MAJESTY the

QUEEN OF PORTUGAL. This day is published, by R. Ackermann and Co. 26, Strand, a most highly finished Engraving, (being a companion Print to the Portrait of M. R. H. the Princess Victoria), engraved by T. Woolnot, from a Picture by J. Holmes. Price, proofs, on India paper, 7s. 6d.; Prints, 6s. Price of each Number, royal 18mo. 1s.; royal 8vo. 1s. 6d.; imperial 8vo. 2s.; imperial 4to. 3s. 6d. Nos. I. and II. (comprising Waverley).

A SERIES OF SKETCHES of the existing

NOVELS. Localities alluded to in the WAVERLEY

NOVELS. Enriched from Original Drawings.

By JAMES SKENE, Esq.

Printed for Cadell and Co. Edinburgh; and Simpkin and Marshall; and Moon, Boys, and Graves, London.

The Sketches illustrative of Guy Manner-

ing, will be ready on the 1st September.

MUSIC.

London, 30, Soho Square, Sept. 1, 1820.

TO MUSIC PUBLISHERS AND IMPORT-

ERS, and MUSIC-SELLERS in general.

Messrs. Goulding and D'Almeida hereby inform the Trade in general, that they have, by deed of assignment from Signor Rosini and Messrs. E. Trompagni, of Paris, become Proprietors and Purchasers of the whole and sole Copy-right, for the United Kingdom of Great Britain and Ireland, of an Opera, entitled "Guillaume Tell," composed by the said Signor Rosini; and all Publishers, Importers, and Dealers in Music in general, are hereby requested to take Notice, that the Sale or Publication, in any way whatever, of any Copy or Copies of the said Opera, or parts of the said Opera, or any arrangement of Air or Airs from the said Opera, which are not printed and published by the said Goulding and D'Almeida, will be an infringement on their Right, and be proceeded against as the Law allows, without any further Notice.

BOOKS PUBLISHED THIS DAY.

Lately published, 2d edition, 8vo. 12s.

IRELAND; its Evils, and their Remedies.

By MICHAEL THOMAS SADLER, M.P.

"Dwell in the land, and rest; then shall ye be fed."

"This book, with respect both to the magnitude of its topics, and the mode in which they are treated, we do not hesitate to place far above any work that has for a long time appeared upon any branch of national economy."—*Morning Journal*.

John Murray, Albemarle Street.

Just published, Family Library, No. V. being

THE HISTORY of the JEWS. Vol. I.

(to be completed in 3 vols.), illustrated with original

Maps and Woodcuts. 6s.

"The character and execution of this interesting and delightful little volume cannot fail to make a very valuable addition to the already well-established reputation of its accomplished and very estimable author. We consider it a valuable acquisition to our literary stores, and peculiarly adapted to give clear and correct views of the leading characters and more important events which figure in the records of the Old Testament. We are acquainted with no volume which we can more heartily recommend to our readers; to the younger part of them especially, we are sure it will prove a most acceptable present."—*Literary Gazette*.

"The volume before us is written by Mr. Milman, and treats of the history of the Jews, from the patriarch Abraham down to the death of the prophet Jeremiah. The narrative of the various and highly interesting events that period flows on in a chaste style; and a thorough knowledge of his subject is evident in every page. Many points of Sacred History are obscure to us from the imperfectness of our knowledge of eastern countries, particularly in those remote periods. These are cleared up in the present work, without, however, in the least interrupting the narrative, or being ostentatiously put forward to show the erudition of the author."—*Brigden's Gazette*.

"The volume is, on the whole, clear, spirited, well arranged, and full of information, and of a wise and well-cultivated religious spirit."—*Advertiser*.

John Murray, Albemarle Street.

Engravings on Steel, with descriptive and entertaining Accounts

of all the most interesting and popular Genera and Species of the

Animal World. Each Number contains Six Engravings and Six-

teen pages of Letter-press. Price 1s.

Conducted by J. LE KEUX.

Aided by Gentlemen of high Literary Talent.

Published by Longman and Co. Paternoster Row; Jennings,

Paulist Church, Fleet Street; and may be had of all booksellers in

Great Britain.

"The exhaustless varieties of Nature,

For ever seen, and yet for ever new,

are likely, from the specimen of this work which we have re-

ceived, to be brought, at a cheap rate, more completely home to

the reader than any other work of the kind. The engravings are

remarkably spirited, and true to the life. These alone would give

the work value; but the accompanying descriptions and anecdotes

of animals are peculiarly entitled to notice,—as, while con-

vveying to the mind important information, they are as amusing

as an Arabian tale."—*Sunday Times*, June 21, 1820.

Price Seven Shillings and Sixpence, No. VIII. of THE FOREIGN QUARTERLY REVIEW.

Article. Contents.

I.—Revolutions of Naples in 1807 and 1808.

Foreign Booksellers to the King, 20, Soho Square.

In 8 vols. post 8vo.

THE SCHOOL OF FASHION.

"If it were not rather late in the day to recommend a book which is already a current topic in society, we would venture to send the reader to the 'School of Fashion,' as affording, more than any other of what are called fashionable novels, a true index to the tastes and feelings of the great world. The author is known to be a person of high rank, and this is a circumstance in which some weight is really due, when a book professes to depict the lives and manners of an assembly, but in this respect the author is more than merely a person of high rank. It is impossible to read her book without acknowledging that she is also a person of lively talents and quick observation, with a keen sense of the ridiculous, united by rather a rare combination with clear sound sense and perspicacity of judgment."—*Concise*.

Printed for Henry Colburn, 5, New Burlington Street.

Recently published by Baldwin and Cradock, London.

AN ELEMENTARY SYSTEM of PHY-

SIOLGY; with a General Index.

LORD KING'S LIFE and CORRE-

SPONDENCE of JOHN LOCKE.

"The Life of the celebrated John Locke, just published by

Lord King, is the most important addition ever made to our

national literature. The journal, the common-place book,

and the inedited writings of the illustrious philosopher, which

have descended to Lord King as a branch of the family, are invalu-

able; and the correspondence, which his lordship has inserted

by way of clearing up the memoirs, in the letters of King Charles

the 11th, Lord Shaftesbury, Sir Isaac Newton, Earl of Sunderland,

Bishop of Oxford, Earl of Pembroke, Lord Mordaunt, Lord Ash-

ley, Earl of Monmouth, Earl of Peterborough, Lord Somers, Sir

Cudworth, &c. &c."—*Globe*.

Printed for Henry Colburn, 5, New Burlington Street.

English Syntax.
Handsomely printed on fine paper, demy 18mo. price 1s. 6d.

NEW EXERCISES IN ENGLISH SYNTAX, intended to succeed those usually found in English Grammars, by the Senior Scholars, Ladies, and Gentlemen's Schools with additional Rules and Examples, to complete their Knowledge of Syntax.

By JOSEPH GUY, Jun.
Member of the University of Oxford.

* In order to assist and amuse those classes in our academies that are supposed to be learning English through the medium of the Latin grammar, these Syntactical Exercises will prove a useful auxiliary in initiating the more classical student in the important study of English syntax, and thereby supply a desideratum that experience has demonstrated cannot be effected by a knowledge of the dead languages only.

London: Printed for Baldwin and Cradock.

Where may be had, by the same Author, the following established Works for Schools:—

3. Guy's English School Grammar, in which practical Illustration is, in every Step, blended with Theory, by Rules, Examples, and Exercises; adapted to the Use of Schools and private Teachers. The 7th edition, demy 18mo. 1s. 6d. bound in red.

8. Guy's New Exercises in Orthography, 8th edition, with the Addition of an Expositor, explaining the Meaning and correcting the Orthography of the Words wrongly spelled in the Work. Same price 1s. bound.

4. A Key to Guy's English School Grammar and New Exercises in Orthography. In 1 vol. price 3s. bound and lettered.

5. Guy's New Latin Primer; or, a Companion to Latin Grammar. In 2 Parts, 18mo. price 3s. bound.

6. Guy's New Arithmetical Plan; or, an improved Method of Teaching the First Four Rules of Arithmetic, Simple and Compound. Price 1s. bound.

A Key to the above, on a Sheet, price 1s.

7. Guy's Outlines to Walker's Themes and Essays, price 1s. sewed.

* This Work will much assist early attempts at English composition, & is deemed of great importance in the earliest views of modern instruction.

8. Guy's School Epitome of British Geography, price 1s. sewed.

* The want of such a work as this must have been felt by every teacher who has had to instruct a pupil in the geography of the British Isles.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

CAIN THE WANDERER; VISION OF HEAVEN; DARKNESS; NAPOLEON BUONAPARTE; and other Poems.
By
"This volume has sought for material in that inexhaustible mine, — the poet's own heart. The author of 'Cain' does what our actual time is so fitted for, — called upon by his feelings to minister to his thoughts; and in depicting the feverish workings of vain imaginings, and valuer hopes, he has painted what will come home to many a bosom. 'Cain' is a most extraordinary performance, whether in its deep thoughtfulness, or its touches of exquisite beauty." — *Literary Gazette*.

An equally high character is given of this work, with numerous extracts, in different papers of the *Examiner*.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Dr. Philip on Indigestion. — Sixth edition; 8vo. price 9s.

A TREATISE ON INDIGESTION and its CONSEQUENCES, called Nervous and Bilious Complaints, with Observations on the Organic Diseases in which they sometimes terminate.
By A. P. W. PHILIP, M.D. F.R.S.L. and E. &c.
6th edition, with considerable Additions, respecting the Nature and Treatment of the Disease, and particularly of the more protracted Cases.
Printed for T. and G. Underwood, 26, Fleet Street.

History and Art of Printing.
In a very large and royal 8vo. price 4s. extra boards.

TYPOGRAPHIA; or, an Historical Sketch of the Origin and Progress of the Art of Printing; with Practical Directions for conducting every Department in an Office; also a Description of Stereotype and Lithography.
By T. C. HANSARD.

"* The work is illustrated by numerous Engravings of Presses, Machines, and various Instruments and Utensils employed in Letter-press, and in the Art of Printing; and it is embellished by some curious and beautiful Portraits, as well as by other Engravings, interesting both to the Antiquarian and the Printer.

London: Printed for Baldwin and Cradock.

Petersdorf's Abridgment.
Just published, Vol. 10, completing about Two-thirds of the entire Work, in royal 8vo. price 11. 11s. 6d. boards.

A PRACTICAL AND ELEMENTARY ABRIDGMENT of the CASES argued and determined in the Courts of King's Bench, Common Pleas, Exchequer, Appeal, and at Nisi Prius, and of the Rules of Court, from the Restoration in 1660, to Michaelmas Term, 4 Geo. IV. &c.
By CHARLES PETERSDORF, Esq.
Of the Inner Temple.

London: Printed for Baldwin and Cradock, Paternoster Row; and H. Butterworth, Fleet Street.

Volume the Eleventh will be published in the early part of October, and the work is expected to be completed by Midsummer 1830.

"* It can scarcely be necessary to point out to the Profession that every article is entire, and therefore, those persons who may defer taking the work till its completion, will lose the immediate advantage which would be derived from consulting the volumes as they appear, for the subjects which they respectively embrace.

Second edition, post 8vo. 8s. 6d.

NARRATIVE of a JOURNEY from CALCUTTA to EUROPE, by way of EGYPT, in the Years 1827 and 1828.
By Mrs. CHARLES LUSHINGTON.
"We have no hesitation in recommending Mrs. Lushington's Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of approbation." — *Oriental Herald*.

John Murray, Albemarle Street.

Dr. Agre on Dropsy.
2d edition, just published, price 8s. boards.

PATHOLOGICAL and PRACTICAL RESEARCHES concerning the NATURE and TREATMENT of the several FORMS of DROPSY.
By JOSEPH AGRE, M.D.
Member of the Royal College of Physicians, &c.

2d edition, with additional Cases, illustrative of the very successful results of a new and greatly improved Method of treating these Diseases.
Printed for Longman, Rees, Orme, Brown, and Green.

In 2 vols. royal 8vo. embellished with Fifty Engravings, price 2s. 12s. 6d. boards, a few Copies with the Plates on India paper, price 2s. 12s. 6d. boards.

ACCOUNT of a TOUR in NORMANDY, undertaken chiefly for the purpose of investigating the Architectural Antiquities of the Duchy, with Observations on its History, on the Country, and on its Inhabitants.
By DAWSON TURNER, Esq. A.M. F.R.S. L.S. &c.
Author of "Historia Pictorum."
London: Printed for John and Arthur Arch, Cornhill.

In 2 vols. 4to. price 4s. 4s. in boards, illustrated with 21 Copper-plates and 78 Woodcuts, or with Proof Impressions of the Copper-plates, on India paper, at 5s.

LETTERS of an ARCHITECT, from France, Italy, and Greece.
By JOSEPH WOODS, F.L.S. F.G.S. &c.
Printed for John and Arthur Arch, Cornhill.

In post 8vo. price 6s. dedicated to the Hon. Mrs. C. J. Fox.

THE MYSTIC WREATH; or, Evening Pastime, consisting of original Enigmatical Poems, Charades, Anagrams, Conundrums, Rebuses, &c. &c.
By "SUSAN and ELIZABETH."
Printed for the Authors, and may be had of Messrs. Sherwood, Gilbert, and Piper, Paternoster Row.

The 3d edition, price 2s. bound, of
THE NEW ORTHOGRAPHICAL ASSISTANT; or, English Exercise Book. Written on an improved Plan, for the more speedy Instruction of Young Persons in the Art of Spelling and Pronunciation. Intended for the Use of Schools.
By THOMAS CARPENTER.

By the same Author,
The Scholar's Spelling Assistant. A new edition, corrected, 1s. 6d. bound.
An English Vocabulary. In 12mo. new edition, corrected, 9s. bound.
Printed for Longman, Rees, Orme, Brown, and Green.

To Engineers, Mechanics, &c.
A new edition, embellished with 24 superior Engravings, price 10s. 6d. cloth boards.

STUART'S HISTORY of the STEAM ENGINE, giving a full Description of every Invention and Improvement from the earliest Ages to the year 1829.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Price 3s. 6d. bound,
THE STUDENT'S ALGEBRA, with Notes and Observations, in which the Elements and Practice of that Science are rendered familiar, and practically adapted to the use of Schools.
By JOHN DARBY.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane, London; and John Heston and Frederick Hobson, Leeds.

In post 8vo. 7s. 6d. boards,
EVENING; with other Poems.
By the Rev. PERRY NURSEY, B.A.
Sold by Longman, Rees, Orme, Brown, and Green, London; and John Stacy, Norwich.

To Parents and Teachers. — Price 1s.
A SKETCH of a NEW METHOD of TEACHING and LEARNING GREEK.
By ARTHUR CLIFFORD, Esq.
Author of a "Letter to the Earl of Shrewsbury, on a new Method of Learning Languages."
London: Published by Whittaker and Co.; Simpkin and Co. Keating and Co.; and J. Booker.

Price 6s.
DIOCLESIAN; a Dramatic Poem.
By THOMAS DOUBLEDAY.
"Blanda illi vultus gravitas, et mite severa Fronte supercilium; sed pectus mitius omni."
Newcastle. — Ed. 1.
London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

THE CHILD'S FRENCH TRANSLATOR, consisting of Three Stories, selected from the Lectures Gradues of M. L'Abbe Gaultier, with an Interlinear Translation.
By A. GROVERAM.
Printed for Septimus Morris, Stratford, Essex; sold by Simpkin and Marshall, London; and all other Booksellers.

Actual State of Turkey.
TRAVELS in TURKEY, EGYPT, NUBIA, and PALESTINE.
By R. R. MADDEN, Esq. M.R.C.S.
In 2 vols. 8vo. 36s. with a Portrait of the Author.
"Mr. Madden's volumes are replete with entertainment. The details respecting Constantinople, a place to which the eyes of the whole civilised world are just now directed with extraordinary interest, are full, lively, and descriptive." — *Sun*.
Printed for Henry Colburn, 6, New Burlington Street.

Study of Medicine.
THE FOURTH EDITION of DR. CONOLLY'S LECTURE, delivered in the University of London, on Thursday, October 24, 1828. Price 1s. sewed.
Printed for John Taylor, Bookbinder, and Publisher to the University, 30, Upper Gower Street.

Price 4s. 6d.
THE ENGLISHMAN'S GUIDE to FRANCE.
By JAMES ALBANY, Esq.
London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

8vo. with Maps, &c.
THE HISTORY of the PENINSULAR WAR.
By WILLIAM F. P. NAPIER, C.B. Lieut.-Colonel, H.M. 10th Regt. Foot.

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 660.

SATURDAY, SEPTEMBER 12, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

History of the Rise of the Mahomedan Power in India, till the Year A.D. 1612. Translated from the original Persian of Mahomed Kasim Ferishta. By Lieut.-Col. Briggs, M.R.A.S. 4 vols. 8vo. London, 1829. Longman and Co.

WITH the knowledge that history of a departed interest, and in a voluminous form, is uninviting to general readers, we shall, before we enter on our review of this History of the Mahomedan Power in India, indulge in a few preliminary observations, in order to court the public mind to a little more attention to it and to similar publications. We must admit, *a priori*, that histories of such times, if only cursorily perused, seldom offer more than confused and oft-repeated recitals of the rapid elevation of obscure chiefs to supreme power, and their sudden declension—of a recklessness, a disregard of human life in all ranks, from the mere exalted to the most abject—of acts of barbarous cruelty, accompanied, as usual, by deeds of sensual license;—all this, even to repetition, with scarce a character of rainbow brightness to break through the surrounding gloom. The reader thus becomes discouraged, relinquishes his task with disgust, and volumes of the same description become sealed ones to the many; but, however burdened with such matter, the reflective mind will discover and separate the sterling ore from the dross that accompanies it; and even in the single instance of the narration before us, we venture to say, there is hardly a branch of learning or science that a perusal may not require by furnishing curious information, or materials and hints for further research;—and to justify as well as illustrate our conclusions, we observe, that among other varieties, they indicate a clue to the early intercourse between India and Egypt, which may tend to the development of the history when these two countries were so intimately connected, as the similarity which pervades the mythology, astronomy, and calculation of time of both would seem to evidence;—likewise, a curious mention, on the authority of a work called the *Mutla-ool-Anwar*, of the tribe of Afghans, stating them to be Copts of the race of the Pharaohs; and that when the prophet Moses got the better of that infidel, who was overwhelmed in the Red Sea, many of the Copts became converts to the Jewish religion; but others, refusing to embrace the true faith, came to India, and settled in the Soolimony mountains, where they bore the name of Afghans. Together with other circumstances favourable to this belief, is the remarkable one of the Hebrew names of Dawood, Moosa, Yakoob (David, Moses, Jacob), being of frequent occurrence with them, and seldom to be met with among the Moslems of any nations with whom the Afghans are unconnected. Although such stimulants are freely scattered through this work, they are not the only encouragements to a perusal; for under the present political circumstances of India, now, perhaps, on the eve of a great

change, it can be neither altogether uninteresting nor useless to revert to the period of this conquest, and note the characteristics by which the contending parties were distinguished,—forming, as they do at this moment, the mingled population of the country. The merciless and errant Mahomedan remains unchanged; but the character of the Hindoo appears to be most grossly misrepresented, when charged with the opprobrium of being devoid of moral energy, and inclined to submit without resistance to the grossest oppression. The pages even of the Mahomedan narration before us teem with examples of Hindoo self-devotion and patriotism worthy of the best days of more ancient history; and when the strong attachment they have ever borne to their national and religious tenets, and the desperate courage they have evinced for their retention, is here studied, with the knowledge that the same seeds are still rife in their bosoms, we trust it may conduce to the warning of other rulers to avoid all direct and forcible interference with them, under the specious guise of reclamation, and to leave the suppression of their most offensive customs and contemptible superstitions in the peaceful yet all-powerful hands of fast approaching knowledge and civilisation. We trust we have said enough on this subject; and we pursue our task. This account of the Mahomedan Power in India commences with its rise in the year 977 of our era, and is continued to 1609. It was composed by Mahomed Kasim Ferishta, at the command of his sovereign; and although a work of acknowledged importance, several portions of it having long since been translated, yet to Lieut.-Col. Briggs is due the merit of laying before the public, for the first time, a complete and admirably rendered version of the original. Of Ferishta few particulars are known, and those only derived from the portion of his history wherein he was himself an actor. We thus learn that he was born at Astrabad, on the borders of the Caspian, and that he was the son of a learned man, who quitted his native country, and established himself and family at Athmudnuggur in the Deccan, during the reign of Moortuza Nizam Shah. Of the precise date of the historian's birth we have no information; but circumstances lead us to assume its having been about 1570, and that his life was not prolonged beyond his fortieth year. The labours of the English translator have been of no ordinary character; the tables of comparative chronology are very serviceable; and we could only wish that the number and extent of the valuable notes which are appended had received a further augmentation from the same storehouse of Oriental learning. We do not in our extracts confine ourselves to the regular course of the volumes, but quote *ad libitum*; and we commence with Ferishta's mention of our countrymen, who had then for the first time gained a footing in India. He thus quaintly describes them:—

"In the year 1611, the Emperor of Dehly, Jehangeer, the son of Akbur Padshah, granted

a spot for the English to build a factory in the city of Surat, in the province of Guzerat, which is the first settlement that people made on the shores of Hindoostan. The persuasion of this nation is different from that of other Europeans, particularly the Portuguese, with whom they are in a state of constant warfare. They assert that Jesus was a mortal, and the prophet of God; that there is only one God, and that he is without equal, and has no wife nor son, according to the belief of the Portuguese. The English have a separate king, independent of the King of Portugal, to whom they owe no allegiance; but on the contrary, these two nations put each other to death wheresoever they meet. At present, in consequence of the interference of Jehangeer Padshah, they are at peace with each other, though God only knows how long they will consent both to have factories in the same town, and to live on terms of amity and friendship."

The devastating progress of the Mahomedan conquest in India, here described, is strikingly similar to that achieved by the Spaniards of the New World. "Mahmood, in the year 1024, having mustered all his forces, found them to consist of 54,000 chosen horse, and 1200 elephants, disposable for foreign service. With this army he marched to Bulkh, to expel Allyinggeen from the government of Mawur-ool-Nehr, for oppressing the people, who complained of his tyranny to the king. When the chiefs of Mawur-ool-Nehr heard that the king had crossed the Jyhoon, they came with presents to meet him. Kuddur Khan, of Khooutun, also paid him the compliment of a visit, and was honourably received. Mahmood prepared a great feast upon this occasion, and concluded a treaty, after which the monarchs took leave of each other, making an exchange of princely presents. Allyinggeen, seizing this opportunity, betook himself to flight, but the king of Ghizny sent a party of horse after him; after a long search he was discovered and brought to the camp, after which he was confined for life in one of the forts of India. The celebrated temple of Somnat,* situated in the province of Guzerat, near the island of Dew, was in those times said to abound in riches, and was greatly frequented by devotees from all parts of Hindoostan. These infidels not only believed that souls after death went before Somnat, who transposed them into other bodies according to their merits in their former state, but also pretended that the ebb and flow of the tides represented the obsequies paid by the ocean to this shrine. Mahmood marched from Ghizny in the month of Shaban (Sept. 1024) with his army, accompanied by 30,000 of the youths of Thorakistan, and the neighbouring countries, who followed him without pay, for the purpose of attacking this temple. Somnat, which gives its name to the city, is situated on the sea-shore,

* Som signifies in Sanscrit the moon: it is well known how this planet affects the tides; and this circumstance was, no doubt, taken advantage of by the priests of Somnat to enhance the sanctity of the temple."

and is to be seen in the district of Dew, now in the hands of Europeans. Some historians affirm that the idol was brought from Mecca, where it stood before the time of the Prophet; but the Bramins deny it, and say that it stood near the harbour of Dew since the time of Krishn, who was concealed in that place about 4000 years ago. In the middle of the month of Rumzan (Oct. 1024), the Mahomedan army reached the city of Mooltan; and as a great desert lay before them, the king gave orders for the troops to provide themselves with several days' water and provisions, as also with provender for their horses, besides which 20,000 camels were laden with supplies. Having passed the desert, the army reached the city of Ajmeer. Here, finding the Raja and inhabitants had abandoned the place rather than submit to him, Mahmood ordered it to be sacked, and the adjacent country to be laid waste. Conceiving the reduction of the fort of Ajmeer would occupy too much time, he left it unmolested; and proceeding on his expedition, took by assault some smaller forts on the road, till at length he arrived at Nehrwalla, a frontier city of Guzerat, which was evacuated on his approach. Mahmood, taking the same precautions as before, by rapid marches reached Somnat without opposition. Here he saw a fortification on a narrow peninsula, washed on three sides by the sea, on the battlements of which appeared a vast host of people in arms, who, making a signal for a herald to approach, they proclaimed to him that their great idol, Somnat, had drawn the Mahomedans thither to blast them in a moment, and to avenge the destruction of the gods of India. In the morning, the Mahomedan troops, advancing to the walls, began the assault. The battlements were in a short time cleared by the archers, and the Hindoos, astonished and dispirited, crowded into the temple, and, prostrating themselves in tears before the idol, prayed for assistance. The Mahomedans, having seized this opportunity, applied their scaling-ladders and mounted the walls, shouting aloud 'Alla Akbur!' The Hindoos, urged by despair, returned to the defence of the works, and made so spirited a resistance, that the Mahomedans, unable to retain their footing, and wearied with fatigue, fell back on all sides, and were at length obliged to retire. Next morning the action was renewed, but as fast as the besiegers scaled the walls, so fast were they hurled down headlong by the besieged, who now seemed resolved to defend the place to the last. Thus the labours of the second day proved even more unsuccessful than those of the first. On the third day an army of idolaters having arrived to reinforce the garrison, presented itself in order of battle in sight of the Ghizny camp. Mahmood determined to prevent this attempt to raise the siege; and having ordered a party to keep the garrison in check, himself engaged the enemy in the field. The battle raged with great fury: victory was long doubtful, till two Indian princes, Brahma Dew and Dablahleem, with other reinforcements, joined their countrymen during the action, and inspired them with fresh courage. Mahmood at this moment perceiving his troops to waver, leaped from his horse, and, prostrating himself before God, implored his assistance. Then mounting again, he took Aboul Hussun, the Circassian (one of his generals), by the hand, by way of encouragement, and advanced on the enemy. At the same time he cheered his troops with such energy, that, ashamed to abandon their king, with whom they had so often fought and bled, they, with one accord, gave a loud shout and rushed for-

wards. In this charge the Moslems broke through the enemy's line, and laid 5000 Hindoos dead at their feet. The rout became general. The garrison of Somnat, beholding this defeat, abandoned the defence of the place, and issuing out at a gate towards the sea, to the number of 4000, embarked in boats, intending to proceed to the island of Serendeeep or Ceylon. This manœuvre did not escape the king, who secured some boats left in a neighbouring creek, manned them with rowers and some of his best troops, and pursued the enemy; on which occasion he took and sunk some of their flotilla, while a part only escaped. Having now placed guards round the walls and at the gates, Mahmood entered Somnat, accompanied by his sons and a few of his nobles and principal attendants. On approaching the temple, he saw a superb edifice built of hewn stone. Its lofty roof was supported by fifty-six pillars curiously carved and set with precious stones. In the centre of the hall was Somnat, a stone idol, five yards in height, two of which were sunk in the ground. The king, approaching the image, raised his mace and struck off its nose. He ordered two pieces of the idol to be broken off and sent to Ghizny, that one might be thrown at the threshold of the public mosque, and the other at the court door of his own palace. These identical fragments are to this day (now 600 years ago) to be seen at Ghizny. Two more fragments were reserved to be sent to Mecca and Medina. It is a well-authenticated fact, that when Mahmood was thus employed in destroying this idol, a crowd of Bramins petitioned his attendants, and offered a quantity of gold if the king would desist from further mutilation. His officers endeavoured to persuade him to accept of the money; for they said that breaking one idol would not do away with idolatry altogether; that, therefore, it could serve no purpose to destroy the image entirely; but that such a sum of money given in charity among true believers would be a meritorious act. The king acknowledged there might be reason in what they said, but replied, that if he should consent to such a measure, his name would be handed down to posterity as 'Mahmood the idol-seller,' whereas he was desirous of being known as 'Mahmood the destroyer.' He therefore directed the troops to proceed in their work. The next blow broke open the belly of Somnat, which was hollow, and discovered a quantity of diamonds, rubies, and pearls, of much greater value than the amount which the Bramins had offered. The author of the Hubeeb-ool-Seer relates, from other authorities, that Somnat was the name of the idol; but he is contradicted by Sheikh Fureed-ool-Deen Attar, who observes, that 'the army of Mahmood found in Somnat the idol whose name was Nat.' I have, however, inquired on this subject, and learn, that Soma was the name of the prince after which the idol Nat was called. Nat signifies, among the Hindoos, lord or chief, and is rendered applicable to idols. Thus we have Jugnat, signifying the lord of the creation, to whom divine honours are offered up. In the time of eclipses we are told that from 200,000 to 300,000 worshippers used to frequent this temple, and that the different princes of Hindoostan had bestowed in all 2000 villages, the revenues of which were applied to maintain its priests. This revenue was independent of other costly presents received from all parts of the empire. It was customary, also, for those idolaters to wash Somnat twice daily with fresh water from the Ganges, though that river is above 1000 miles distant. Among the spoils of the temple was a

chain of gold, weighing 200 muns (say 400lb.), which hung from the top of the building by a ring; it supported a great ball, which called the people to worship. Besides 2000 Bramins, who officiated as priests, there belonged to the temple 500 dancing women, 300 musicians, and 300 barbers to shave the devotees before being admitted to the sanctum; and it was even usual for the princes of Hindoostan sometimes to devote their daughters to the service of the temple. The King of Ghizny found in this temple a greater quantity of jewels and gold than it is thought any royal treasury ever contained before. In the Zein-ool-Maasir it is related that there were no lights in the temple, except one pendent lamp, which, being reflected from the jewels, spread a bright gleam over the whole edifice. Besides the great idol above mentioned, there were in the temple some thousands of small images, wrought in gold and silver, of various shapes and dimensions."

The following, we think, is one of the happiest specimens of the author's style; and not the less curious for the poetry by the celebrated Hafiz:—

"After the coronation, Bahadur Khan, Sufdur Khan, and Azim Hoomayoon, hastened to the capital, where they pledged their allegiance and made suitable offerings of congratulation; while the Ray of Beejanuggur, having raised the siege of Rachore, agreed to pay to Mahmood the tribute stipulated in the reign of Mahomed Shah Ghazy. Mahmood Shah had a taste for poetry, and wrote some elegant verses. He also spoke the Persian and Arabic languages fluently. He was neither too much elated with prosperity, nor did he allow grief to overwhelm him in the hour of misfortune or disappointment. He never cohabited but with one wife, and paid great regard to the opinions of divines, in whose company he delighted. During his reign the poets of Arabia and Persia resorted to the Deccan, and partook of his liberality. Meer Feiz Oolla Anjoo, who presided on the seat of justice, once presenting the king with an ode, received a thousand pieces of gold, and was permitted to retire to his own country, loaded with wealth and distinction. The fame of the king's taste, his affability, and munificence, spread so widely, that the celebrated poet of Shiraz, Khwaja Hafiz, determined to visit the Deccan, but was prevented by a train of accidents, which are thus related. Meer Feiz Oolla Anjoo sent to this famous poet a present from the king, and a letter from himself, promising, if he would come to Koolburga he should be handsomely rewarded, and have safe conduct back to Shiraz. Hafiz, from these kind assurances, consented; and having disposed of the articles sent him among his relations and creditors, quitted Shiraz and arrived safely at Lar, where he assisted a friend who had been robbed with part of his ready money. From Lar he was accompanied to Ormus by Khwaja Zein-ool-Abid-Deen Hamdany and Khwaja Mahomed Kaziroony, who were also going to visit Hindoostan. With these persons he took shipping in one of the royal vessels, which had arrived at Ormus from the Deccan; but it had scarcely weighed anchor when a gale of wind arose, and the ship was in danger, and returned to port. Hafiz suffered so much during the storm, that he insisted on being put ashore, and abandoned his voyage. Having written the following verses, he delivered them to his companions to be given to Feiz Oolla Anjoo, after which he returned to Shiraz.

Can all the gold the world bestow,
Though poured by Fortune's bounteous hand.

Repay me for the joys I lose,
The haunts of my native land?
My friends exclaimed, 'Oh! stay at home,
Nor quit this once-beloved spot;
What folly tempts thee thus to roam—
To quit Shiraz—desert thy cot?
Yon royal court will ill repay,
Though all its gorgeous wealth be given,
The blessings which you cast away,
Health and content, the gifts of heaven.'
The glare of gems confused my sight—
The ocean's roar I never had heard;
But now that I can feel aright,
I freely own how I have erred.
Though splendid promises were made,
How could I such a dotard prove,
How could I leave my natal glade,
Its wines, and all the friends I love?
Hafiz abjures the royal court—
Let him but have content and health;
For what to him can gold import,
Who scorns the paths of worldly wealth?

When Feiz Oolla received this poem, he read it to the king, who was much pleased; and observed, that as Hafiz had set out with the intention of visiting him, he felt it incumbent not to leave him without proofs of his liberality. He therefore intrusted a thousand pieces of gold to Mahmood Kasim Meshidi, one of the learned men at Koolburga, to purchase whatsoever, among the productions of India, was likely to prove most acceptable, in order to send them to the poet at Shiraz.—Mahmood Shah, while a youth, was fond of gaudy apparel; but upon his accession to the throne he always wore plain white robes. He frequently observed, that kings were only trustees of the state, and that it was a breach of trust to expend more on themselves than necessity required. A famine occurring during his reign, he employed ten thousand bullocks, at his private expense, constantly going to and from Malwa and Guzerat for grain, which was distributed to the people at a cheap rate. He established orphan schools at the cities of Koolburga, Bidur, Kand'har, Elichpoor, Dowlatabad, Choul, Dabul, and in some other great towns, with ample foundations for their support. He appointed stipends for the expounders of the scriptures, and gave monthly charity to the blind throughout his dominions. He paid great attention to Sheikh Siraj-ood-Deen, visited him in his last illness, and after his death, going often to his tomb, offered up prayers, and gave alms to the poor pilgrims who resorted to it. The king, preferring the blessings of peace to engaging in war, allowed his reign to pass in tranquillity; and from his great wisdom the Deccanies gave him the title of Aristotle. * * * The king died of a putrid fever, on the 20th of April 1367; and on the following day, Mullik Seif-ood-Deen Ghooory, the faithful adherent of the house of Bahmuny, after a life of one hundred and seven years, most of which was devoted to the service of this family, died also. He was buried, agreeably to his will, in the court of the tomb of Sooltan Alla-ood-Deen Husun Gungoo Bahmuny, and over his grave was laid a terrace of stone. It is recorded, that Mahmood Shah was a strict promoter of the law of the Koran, permitting no neglect on the smallest point, which occasioned the judges to take cognisance of all deviations in points of morality. One day a woman convicted of adultery was brought to the court of justice to receive sentence; when the judge, asking her how she came to be guilty of so heinous a crime, she replied, 'How could I think, O judge! that the act was unlawful? Seeing that one man may have four wives, why might not I also indulge with equal propriety in four husbands? If I am in error, I repent, and will not offend by a repetition of the crime.'

The judge was perplexed, and suffered her to escape only with a reproof. Mahmood Shah Bahmuny reigned nineteen years, nine months, and twenty-four days."

We must here close our labours for this week.

Constable's Miscellany, Vol. XLV.

THE forty-fifth part of this popular series is a happy choice; for it is a republication, in a form at once neat and cheap, of the Rev. Gilbert White's delightful Natural History of Selborne, with a few additions by that zealous and eminent naturalist, Sir William Jardine. It is forty years since these, Mr. White's, letters (to Mr. Pennant and the Hon. Daines Barrington) originally appeared, in conjunction with his account of the antiquities of his secluded parish, and making a quarto volume, which soon became scarce. In 1802 and in 1825 they were republished, also in union with other matter, and of considerable size; and we rejoice to see them now (calculated as they are to amuse and inform the general reader of every age and class,) singly and simply confined to the subject of natural history, of which they are so pleasant an illustration.

In a recent review of the Journal of a Naturalist,* we thought we could pay its author no higher compliment than by comparing his volume to that of Mr. White: the study is so innocent and interesting, and the habits of many creatures which we may call our constant companions so curious, that we hardly know a purer gratification than may be derived from observing and communicating a knowledge of their wonderful instincts and remarkable characteristics. Of such information the Natural History of Selborne is full; and the anecdotes are told in so unaffected a way, that we quite forget they are conveying scientific intelligence, and fancy they are penned merely for our entertainment. It would, nevertheless, be rather an encroachment on our page were we to transplant into it any considerable portion of a performance so well known as Mr. White's, and one likely to be disseminated still more in its new shape:—but we will afford a little space to some of the matter introduced by Sir W. Jardine. In a note on Mr. White's Plestor oak, Sir W. says:

"The celebrated Cowthorpe oak, upon an estate near Wetherby, belonging to the Right Hon. Lady Stourton, measures, within three feet of the surface, 16 yards in circumference, and close by the ground 26 yards. Its height is about 80 feet, and its principal limb extends 16 yards from the boll. The Greendale oak, at a foot from the ground, is in circumference 33 feet 10 inches. The Shire oak covers nearly 707 square yards; the branches stretching into three counties—York, Nottingham, and Derby. The Fairlop oak, in Essex, at a yard from the ground, is 36 feet in circumference. Damory's oak, in Dorsetshire, at the ground, was in circumference 68 feet, and when decaying became hollow, forming a cavity capable of containing 20 men; and Wallace's oak, in Torwood, in the county of Stirling, must have been at least 11 or 12 feet in diameter."

In another note, on a page where the historian of Selborne regrets the forsaking of that part by the black game, his editor remarks:

"Black game have increased greatly in the southern counties of Scotland and north of England within the last few years. It is a pretty general opinion, though an erroneous one, that they drive away the red grouse; the two species require very different kinds of cover,

* Published by J. Murray, and already running rapidly through a second edition.

and will never interfere. It is to be regretted that some of our extensive and wealthy northern proprietors do not attempt the introduction of the wood grouse; extensive pine or birch forests, with quiet, would be all the requisites; and the birds themselves, or their young, could be very easily obtained, and at a trifling expense. In a late number of Mr. J. Wilson's Zoological Illustrations, there is an excellent plate of the *tetrao urophasianus* of North America, a very handsome species, which, with some others lately discovered by Mr. Douglas, might be introduced into this country, and form a fine addition to our feathered game. The little American partridge, the *ortyx borealis* of naturalists, has been introduced, and is now plentiful, in some counties in England."

Why not also endeavour to introduce into the larger pine-forests of the North the superb Cock of the Wood, once a denizen of our island, and yet so abundant in Norway and other congenial regions?

Respecting the hedge-hog we find the following:—

"The hedge-hog feeds indiscriminately on flesh and vegetables, is very fond of eggs, doing considerable mischief by destroying game during the breeding season. It will even enter a hen-house, and when within its reach, will turn off the hens and devour the eggs. They are frequently caught in traps baited with eggs for the carrion crows. They are easily tamed, and become very familiar in a state of confinement; will eat bread, potatoes, fruit, flesh, raw or cooked, without any apparent choice."

On the subject of animal habits, and connected with this extract, we may here notice the peculiar predilection of a spaniel within our own experience. This fellow, so sleek and handsome as to be quite fit for a lady's lap-dog in the drawing-room, had a particular fancy for, or, we should perhaps rather say, antipathy to, hedge-hogs. In Gloucestershire, when permitted to attend us on a shooting excursion, his chief employment and delight was to discover the unfortunate hedge-hogs in their holes under copse-bush or in sandy bank, and drag them forth to day. Nor was this the worst: he had a cruel knack of skinning the spine-defended animal with the most singular dexterity; seizing it in his teeth, and by a quick spurring sort of application of his fore-paws tearing off its hide, generally in less than a minute; while larger, stronger, and bolder dogs could hardly be induced to bring their noses a second time near so prickly a customer!!

Of cats, Mr. White observes: "There is a propensity belonging to common house-cats that is very remarkable; I mean their violent fondness for fish, which appears to be their most favourite food; and yet nature in this instance seems to have planted in them an appetite that, unassisted, they know not how to gratify; for, of all quadrupeds, cats are the least disposed towards water, and will not, when they can avoid it, deign to wet a foot, much less to plunge into that element:—" and upon this Sir W. Jardine adds: "In the Library of Entertaining Knowledge, on the authority of Dr. Darwin, cats fish. He says, 'Mr. Leonard, a very intelligent friend of mine, saw a cat catch a trout by darting upon it in a deep clear water, at the mill at Weaford, near Lichfield. The cat belonged to Mr. Stanley, who had often seen her catch fish in the same manner in summer, when the mill-pool was drawn so low that the fish could be seen. I have heard of other cats taking fish in shallow water, as they stood on the bank. This seems to be a natural method of taking their prey, usually lost by

domestication, though they all retain a strong relish for fish.' The Rev. W. Bingley mentions another instance of a cat freely taking the water, related by his friend Mr. Bill, of Christchurch. When he lived at Wallington, near Carshalton, in Surrey, he had a cat that was often known to plunge, without hesitation, into the river Wandle, and swim over to an island at a little distance from the bank. To this there could be no other inducement than the fish she might catch on her passage, or the vermin that the island afforded."

These are curious instances; but the following, which may be depended upon as a fact, is still more remarkable. At Caverton Mill, in Roxburghshire, a beautiful spot upon the Kale Water, there was a favourite cat, domesticated in the dwelling-house, which stood at two or three hundred yards from the mill. When the mill-work ceased, the water was as usual stopped at the dam-head, and the dam below consequently ran gradually more shallow, often leaving trout, which had ascended when it was full, to struggle back with difficulty to the parent stream; and so well acquainted had Puss become with this circumstance, and so fond was Puss of fish, the moment she heard the noise of the mill-clapper cease, she used to scamper off to the dam, and, up to her belly in the water, continue to catch fish like an otter. It would not be easy to cite a more curious case of animal instinct approaching to reason and overcoming the usual habits of the species.

At an era when scientific inquiry is extended to every distant region of the globe, we read the following with surprise and regret.

"Ireland even still remains comparatively unexplored, except in its botanical productions. The *Sceloporus sabini*, a new species of snipe, was, I may say, accidentally discovered there about three years since, of which specimens have been subsequently got, confirming the identity of the species; and we have every reason to expect some novelties, particularly in ichthyology and entomology. *Sedum palustre* and *papaver medicale* are among the late botanical discoveries."

Of the affections of birds, &c. Sir W. Jardine relates the following:

"I once slept, during a very stormy night, in a house of considerable age, and not in the best state of repair; one of the windows in my bedroom had been built up, but so loosely, that bats and swifts had free access between the wall and a large board that was placed on the inside to add to the warmth of the room. On the night above mentioned, this board was blown down inwards, and the room immediately filled with bats and swifts. Many of the former had one or two young adhering to their breasts while flying round the room, and even when knocked down, were not freed from their burdens. Above sixty were caught in this small space, and kept until morning, and at least as many must have escaped. They appeared to be in terms of perfect amity with the swifts."

"All birds of prey are capable of sustaining the want of food and water for long periods, particularly the latter, but of which they also seem remarkably fond, drinking frequently in a state of nature, and during summer washing almost daily."

"Cats (Sir W. tells us, in another place) will kill shrews, but will not eat them." (See p. 231.) The tabbies against the shrews is rather an odd warfare; but we take the word of so distinguished a naturalist, that it really exists—*fera natura*!

But we have now given a sufficient little

cento of natural history to indicate the sort of matter of which this volume is composed; and have only to conclude by again warmly recommending it to our readers, and especially to the young and observant.

The Life and Services of Captain Philip Beaver, late of H. M. S. Nisus. By Captain W. H. Smyth, R.N., &c. 8vo. pp. 340. London, 1829. J. Murray.

THIS volume has, somehow or other, had the ill-luck to be one of our postponements; for in keeping up the *march* of reviewing during the active period of the campaign, which more resembles levies *en masse* than recruiting, it is impossible, with all our discipline and exertion, to prevent an occasional falling into the rear. Yet this memoir of Captain Beaver deserved better at our hands, being a just tribute to the character of a very able and meritorious officer, and containing much that is worthy of the attention of the profession and the public. It is true that Captain Beaver had the misfortune to dissipate a large portion of talent in writing in newspapers and other periodical publications; a fact which, though valuable to the recipients, is but ill adapted to reward the author, or procure for him that fair share of fame to which his labours, in another more concentrated shape, would entitle him. Still, Captain Smyth has now rescued so many clever papers and ingenious speculations from their first and temporary repositories, and placed them before us in so clear a light, that we can better appreciate the active intelligence of the man; and by holding his skill and bravery forth as an example, not only stimulate others, but raise a memorial to his own honour. The only fault we have to find with his friendly biographer is, that his style is too ambitious;—a simple, characteristic portrait is far preferable to one overloaded with ornament and finery, especially when the subject is a captain of the British navy. But observe Captain Smyth:—

"In describing a personal career, the principles of action should be investigated and carefully defined, in order that genuine ardour may be distinguished from spurious. Love of glory supports the energies drawn forth in battle; but fortitude is, perhaps, more truly and extensively tried in lingering blockades and pestilential climates, in the noise of many waters, and the darkness of the moonless gale; and, indeed, in most of the occurrences incidental to maritime life. But many a mediocr man, borne on the tide of ephemeral success, is decked with laurels, while others of ardent zeal and acknowledged talents pine in the intricacies of service, and are scarcely lifted above oblivion's surge. Thus it was with the subject of this memoir, whose merits, except in the navy, were not known as they justly deserved; nor were the rewards he received at all commensurate with the prosperous results of his skill. It is, therefore, an imperative duty to point out the claims of deserving individuals to the notice of their country; and to shew that, though mere chance may confer both riches and popularity, abilities only can procure fame."

We are sorry to blame, where a warm admiration of the individual has betrayed his encomiast into so flowery a path of composition; but in our critical chair we cannot but point out what appears to us to be bad taste in a writer.

Captain Beaver (originally said to be Beauvoir) was derived from a good family, and commenced his naval career in 1777. He was engaged in the American war and against the

French (principally in the West Indies); of which brief accounts are given. In 1784 Mr. Beaver, whose conduct had, on several occasions, attracted the notice of his superiors, obtained his lieutenant's commission—though peace had then nearly shut the door of promotion, and laid many an ardent and aspiring hero upon the shelf. In the interim, between this and 1789, Mr. B. seems to have read much, and greatly improved himself in that species of knowledge which was best calculated to be useful to him in his future life. Embarking in busier scenes, we soon find our enterprising lieutenant one of an expedition (under Mr. Dalrymple, who had been disappointed of the governorship of Sierra Leone) to colonise Bulama, an island near that settlement; and as this is about the earliest mooted of a question—that of the cultivation of the coast of Africa by free labour—which has since led to so much controversy, and is fiercely agitated at the present day, we shall select a part of the history which is given of the fruitless and fatal attempt.

"The views of the society, in this undertaking, were directed to cultivation; it being imagined that the produce of the West Indies might be readily raised at Bulama by free natives, and thus, forming a contrast to the vicious habits of the slave-dealing Europeans, contribute towards the civilisation of those regions. Though commerce was considered only in a subordinate point of view, when compared with their grand object, it was conceived that a new and extensive channel would be opened to trade, which would at the same time be the means of introducing letters, liberty, and, above all, a knowledge of the Christian religion, amongst the sable sons of that vast continent. By this scheme, happiness was promised to thousands,—misery to none: the only fear was, that as the paucity of their wants, and the natural fertility of their soil, render negroes averse to labour, they could not be relied upon; and it was apprehended that white colonists would be very unequal to the toil of field-work in that enervating climate. 'I have nothing to do,' says Beaver, 'with the question, whether a state of uncultivated nature, or of civilisation, be most conducive to happiness. The man who prefers being a brute to a rational creature, may put down the book.' Having been acquainted by Mr. Pitt, that government had no objection to the enterprise, the number of subscribers increased rapidly; though the infant colony was not viewed with friendly eyes, either by the speculators of Sierra Leone, or the West India merchants. As might have been expected, the whole of the adventurers were not actuated by the same praiseworthy motives which influenced our Cincinnati, and many great errors took place in the outset. 'A plausible rascal,' says the note-book, 'of the name of Bant, who called himself a Quaker, but was really of no religion, and had been successively of all, possessed an exquisite facility of imposing upon almost every body. This fellow, having gained the ear of Mr. Dalrymple, was recommended as a man so valuable and useful, that, being too poor to subscribe, five hundred acres of land were offered to induce him to embark with us. This was not only agreed to, but he was shortly after elected into a committee, and would probably have crept into the council, had I not proposed that no member sitting there should hold any place of profit,—the latter of which, from his endeavours to procure the storekeeper's office, I knew he would prefer to the former. Now this vaunted addition to our party was so well

known to many mercantile houses in the city, that his very name operated like a pestilence on some of our proceedings; for it was naturally enough supposed, that no honest people could possibly be connected with so notorious a character.' Besides this man, many profligate and worthless wretches enrolled themselves as subscribers; and one, who died at Bulama, was found to have committed arson, robbery, forgery, incest, and murder!"

Various untoward events preceded the sailing of the expedition, which at last set out.

"Eighty-three men, thirty-three women, and thirty-three children, were embarked on board the Calypso, of two hundred and ninety-eight tons, commanded by Lieutenant Hancorne;—sixty-five men, twenty-four women, and thirty-one children, were on board the Hankey, of two hundred and sixty-one tons, under the authority of Lieutenant Beaver; and five men and a boy were in the Beggar's Benison, a Gravesend boat of thirty-four tons, in charge of Lieutenant Dobbin. Thus, with a fair breeze, they stood out of the channel, a heterogeneous assemblage; several of them animated with the highest emotions of hope; others, willing to barter life for profit, plunging into what they considered a desperate undertaking; and many, too prone to idleness to have any defined object in view,—

'Hard sons of penury, abroad they roam,
To seek that competence they want at home.'"

The vessels, owing to some strange inattention, having parted company, the Hankey "entered the Bijuga channel on the 3d of June, with two boats constantly a-head sounding; and thus, on the 5th, they anchored within sight of Bulama. Judging it expedient to have a better knowledge of the strait before venturing farther, Mr. Beaver, with the master of the Hankey, went in the long-boat to explore it; and perceiving two vessels at anchor near a square-bastioned fort at Bissao, they rowed thither to procure a pilot. 'There they heard of a ship, answering to the description of the Calypso, having passed a few days before; and the appearance of a second strange sail in those unfrequented parts excited a strong suspicion in the minds of the Bissosons of their being pirates. The Portuguese governor, actuated by this idea, kept the whole party in close confinement for the night, determined to make the master produce his papers before he would grant a pilot. Beaver argued very warmly against condescending to this step, but to no avail, his costume of a sailor's jacket and trousers not appearing consistent with his high tone: he was therefore detained as a hostage, until the required examination had taken place on the following day. In the mean time the Calypso had joined company, after a melancholy event, which struck terror into the hearts of the colonists; and what rendered matters worse was, that the calamity resulted entirely from the contempt of method and discipline which characterised that ship. Being in want of fresh provisions, the Calypso sailed from Teneriffe to Goree, a place well known to be incapable of supplying any; but having procured a pilot, they ran through the Bijuga channel, and anchored at Bulama on the 25th of May. The colonists were allowed to go on shore without any kind of precaution, strolling about night and day, wherever they chose; some seeking crabs and muscles, others taking oysters from the mangrove branches, while many were inland botanising, or hunting after lizards; and others chasing, 'some butterflies, and some elephants.' On the 30th, a war canoe, contain-

ing twenty or thirty armed men, reconnoitred the ship, but refused every advance towards friendly intercourse. Even this act did not suffice to instil any prudential measure, and consequently next morning it was discovered that the natives in the night had carried off all the tents which had been pitched on shore. Although as yet the colonists had no right to land, they immediately commenced erecting what they ridiculously termed a block-house,—a mere hut, enclosed with inch plank; and in this place they deposited fire-arms, ammunition, and utensils, without planting a single sentinel. On Sunday, the 3d of June, instead of being called to prayers, and having that opportunity taken for pointing out the difficulties of their situation, and the necessity of order and industry, they were, as usual, permitted to follow their individual fancies. Thus many were wandering over the island with the most incautious confidence, while a few were sleeping in the block-house, and some of the women and children sitting in its shade. In this criminally unguarded state, with all their guns lying still dismounted in the hold of the ship, they were suddenly alarmed by the Bijugas firing a volley of musketry into the hut, which rousing the sleepers, they rushed out, and were all shot. The savages then entered and seized sixty stand of arms, loaded and primed; and with these very means sallied forth and accomplished their object. Loaded with booty, they retreated to the bushes, having killed five men and one woman, desperately wounded four men, and carried off four women and three children; whilst not one of their own party received the slightest hurt. 'Among all who suffered on this occasion,' says Beaver, 'the fate of Mr. and Mrs. Gardiner was certainly the most cruel and the most lamented. He had been wounded by a musket-ball, and was endeavouring to reach the beach, when he was intercepted by one of the party of the islanders, who had been stationed for that purpose. To go back was certain death; to advance towards the ship, it was necessary to pass this man. Unarmed, and weakened by loss of blood, Mr. Gardiner advanced, bowing as he approached; but the savage, regardless of his humiliation, made a stroke at him with his well-tempered cutlass, which Mr. Gardiner attempting to parry with his hand, it was severed from the arm at the wrist. He passed on into the water, and was one of those standing up to his chin in it, when the boats of the Calypso arrived to carry them on board. He died a few days afterwards. His wife, having witnessed the fate of her husband, was a prisoner in the hands of the savages; these, having rifled the block-house and stripped the dead, began their retreat, with their prisoners and booty, across the island. Mrs. Gardiner was unfortunately lame, and unable to keep pace with their rapid march; they therefore shot her.' The irrational boldness of the colonists was now converted into the most groundless fear; no attempt was made to recover either the dying or the dead; but getting under sail, they were standing towards Bissao, where the Hankey and the cutter were seen at anchor. The communication between the two ships produced the worst consequences; for not only did the discontent and irregularity of the Calypso spread to her consort, but also a fever which had been contracted by her crew. Bitter reproaches against each other were heard in that unfortunate ship; and finding the comfortable order in which the Hankey was kept, and that she had been carefully supplied with fresh provisions, they loudly ac-

cused their members of the council of neglect. 'They were tired with the length of the voyage, irritated with sickness, the loss of their associates, and the disappointment of their hopes; and became extremely dissatisfied with their situation.' Indeed, apprehension and despondency had already become pretty general. The first object after the junction of the ships was the redemption of the captive women and children; which was kindly undertaken by Señor De Sylva Cordoza, a merchant of Bissao, who sent a boat with some of his grumetes, or native servants, to King Bellchore, a savage remarkable for his exploits and his treachery, who resided at Canabac, with the articles requisite for their ransom. On the 19th they returned with the prisoners, except a woman and child, who were detained in the clutches of King Jalorem, on another part of the island of Canabac. These females had been tolerably treated by the natives, for which they were indebted to the prejudice that makes them regard European women with disgust: 'their devil,' says Beaver, 'is white.' After having procured a plentiful supply of water, provisions, and refreshments, the vessels proceeded to Bulama."

It is nearly needless to add, that this unfortunate expedition ended most miserably: the particulars are very distressing, though both interesting and curious; and, as they must be read with feelings of deep anxiety, we regret that they are too long for extract. Beaver lost two years and a half in the wretched experiment, of which he was at last almost the only survivor.

In 1795, having rejoined the service, he was at the taking of the Cape of Good Hope; and in 1799, after frequently and greatly distinguishing himself, he was appointed Commander of the *Dolphin*, 44. The narrative proceeds to detail his gallant exploits, and his numerous plans for improving various departments, arms, charts, works, machinery, &c. &c., connected with his profession,—but for these we must refer to Captain Smyth's volume. In 1800 he was posted, and took a prominent part in Sir Ralph Abercrombie's landing in Egypt. His last important service was the disembarkation of the force by which the Isle of France was conquered in December 1810. He afterwards cruised about for several years in his fine frigate the *Nisus*, achieving laudable enterprises in the Indian Seas; and died April 5th, 1813, aged only forty-eight, at the Cape of Good Hope, on his return to England. "Admired in life" (says his friend, the author), "he was still more worthy of admiration in that trial which is the touchstone of us all. To use the emphatic words of a gallant companion in arms, Captain Schomberg, who assiduously attended his sick-bed,—'He has not only taught us how to die, but also how we should live, in order to be enabled thus to meet death.'"

With this we should conclude our remarks, but that the Appendix supplies the following pleasing specimen of Captain Beaver's literary talents.

"On the Battle between the *Milford* frigate and the *Dieu de Ciel*, fought on the 10th of May, 1790.

Up in the wind, three leagues or more,
We spied a lofty sail;
'Let's hoist a Dutch flag for decoy,
And closely hug the gale.'

Nine knots the nimble *Milford* ran—
'Thus, thus,' the master cried;
Hull up, she raised the chase in view,
And soon was side by side.

'Down the Dutch ensign, up St. George,
To quarters now all hands!—

With lighted match, beside his gun,
Each British warrior stands.

• Give fire! the gallant captain cries;
"The done—the cannons roar;
• Stand clear, Monsieur, digest those pills,
And then we'll send you more."

Yon French jack shivers in the wind,
Its files look all pale
And well they may—they must come down,
For Britons shall prevail.

Raked fore and aft, her shatter'd hull
Admits the briny flood;
Her decks are covered with the slain,
Her scuppers stream with blood.

Our chain-shot whistle in the wind,
The grape descend like hail;
• Huzza! my hearts, three cheering shouts!
Our foe begins to quail."

The fight is done—she strikes—she yields;
No more our force she braves!—
Henceforth she'll bear our cross, and prove
That Britons rule the waves."

ROYAL POETRY.

Two volumes of poetry, by King Louis of Bavaria, have been translated into French, and published in Paris. This monarch, happily for his country, is (as we have often had occasion to state) most advantageously distinguished from the other kings of continental Europe. His education was not the usual education of courts. He resided, a simple student, at the universities, associated with learned men and artists, travelled over Europe with an inquisitive and poetical eye, and every where sought knowledge, and imbibed generous feelings. In a word, he studied to become a king, as if he were studying an art or a science, or rather, as if he were about to devote himself to some sacred office. In consequence, scarcely had he mounted the throne, when he cast a new splendour on Bavaria. Germany saw in him a genuine German prince, who had witnessed her calamities, and the slavery by which Napoleon had disgraced her. At that earlier period, when the heroic youth of the German universities followed their professors and masters, alternately chanting and philosophising, to the army or to the assault, Prince Louis of Bavaria, distant, and almost in captivity, participated in their enthusiasm, and envied Körner his death on the field of battle. In subsequent and more tranquil days, longing for liberty as ardently as the humblest subject of the monarchs whose equal he was soon to become, he profoundly meditated on reforms and ameliorations of government: always attached to the arts, he repaired to Italy, to increase his acquaintance with them: devout, he maintained his faith, without forgetting that the religion he professed was one of philosophy and benevolence. Thus passed his youth; occupied by patriotism, the arts, and piety. Every day, as a relaxation, or rather as a pledge of intended and future good, he composed some short piece of poetry. The day of his accession to the Bavarian crown arriving, he shewed himself what he had always been; only his speculations were converted into actions. A severe economy, unlooked-for retrenchments, replaced the somewhat improvident luxury of the excellent Maximilian his father. Liberty of thinking, equality of religious sects, received a new sanction. Munich became a city of arts and sciences: a museum, rich, and every day augmenting—a university, which reckoned Schelling at the head of its philosophers—magnificent libraries—wise regulations, especially calculated to reform the savage manners of the students—attracted to it the flower of the German youth. King Louis thus created in the south a rival to Berlin; and he himself, in the midst of this learned world which he animated,

a frank and unpretending author, submitted, from the elevation of his throne, to criticism; and opened to the public his journal of good thoughts—for so ought the two volumes to which we have alluded to be entitled, and as such they ought to be read. They are the notes of the studies of a good king. The following are a few specimens; divested, of course, of their metrical form.

"Tivoli.

"Do you hear the lamentable voice which escapes from the midst of these ruins? This was the magnificent and vain-glorious residence of our enemy. But the whole has crumbled away. In vain does the eye of curiosity seek for its traces: the earth has long ago reclaimed what belonged to it.

To appear, to disappear,—is the common fate of us all. Nations unceasingly prey upon one another; authority changes hands every moment; but the earth always preserves its ancient power. What German must not experience a profound emotion on this spot? Traveller! thou treadest the soil on which was built the villa of Quintilius Varus; of that Varus who despised the Germans, and whom the Germans made to feel the weight of their vengeance. The name of Hermann faintly resounds amidst the silence of the solitary valley.

I redder, at once with shame and joy, when I reflect on what Germany is, and on what she formerly was. Will she no more be roused by the voice of the liberator? Has she reached that point of debasement? Are her present chains less heavy than those of ancient times? Now, as then, victories are to be gained, liberty is to be achieved. Was not Rome then all-powerful? Were not the legions which perished under the walls of Teutoburg the flower of her armies?

What! we are never to profit by the lessons of history! Fame is no more to proclaim the glorious triumphs of the Germans! Rome has long been the spoil of every conqueror: Germany, self-destroyed, bends to the yoke of the Corsican; discord alone has vanquished her."

"On hearing the Bavarian March.

(Jan. 1814.)

"Sounds which powerfully move my soul, which inspire me with new ardour, and give me new strength for the combat—you kindle the courage of my heart. A burning desire fills my breast. I seize the sword with enthusiasm; and a devouring fire consumes my being.

The time has arrived at which we must live only for the present moment. Determined action alone can regenerate order. It is only by war that a durable peace can be obtained. The blood now spilt will ensure a rich produce for the future.

What superlative transport to enjoy such a triumph!—to be present at the finest epoch of Germany! But the death of those who die for their country is not less enviable: an eternal glory awaits them.

Behold the German youth; who, led by their princes, rush on France! I alone am compelled to remain inactive, and far from the field! I! who was so early imbued with the German spirit; who never shrunk in the presence of danger, or was intimidated by the victories of our opponents; I see myself excluded from this good fortune!

I feel my blood boil in my veins. I struggle with the destiny which detains me from the conflict. To assist in the downfall of the tyrant, to pursue him to his own throne—alas!

that is a happiness for the privation of which nothing can compensate.

Yes, ye martial trumpets, ye summon me to follow the brave sons of Germany, to share in the battle of the nations, to fight until the enemy of humanity is defeated,—until the peace of the world has been conquered. May that great work be accomplished by us!"

"On my Visit to Schwetzingen, in the Summer of 1810.

"Seated, solitarily, on the ruins of the temple of Mercury at Schwetzingen, my thoughts reverted to a period long passed. Artificial ruins, you have become real ones since I saw you; so many things, alas! have perished. These haunts, which witnessed the days of my youth, are now the confidants of my sadness; and yet they awaken the most pleasing recollections. What I have undergone, what I have seen, and what I have acquired, are no where so vividly recalled to my mind as here. Schwetzingen! afflicting image of worldly vicissitudes! I resided there but as a stranger. Hidden from the eyes even of those who loved me, I lived on the past, with respect both to the dead and to the living. I had before me the writings of Jean de Müller, that friend of whom death has prematurely deprived me,—those admirable works which warm the heart and elevate the soul. Absorbed in profound melancholy, tears filled my eyes on thinking of Hompesch;* of that friend whom I lamented as I never did lament, and as I never shall lament, any other person. Rapid death tore those two cherished beings from me in the same year. Alas! I little thought at that time that I should so soon assume the mourning scarf for thee, O noble Stadion!† the friend of Hompesch, and of Germany. The same day which had separated those two friends, a year after re-united them for ever. Will my life also terminate at the same instant? Death has deprived me of many faithful friends; but the memory of them survives. Let all totter around me, I will remain to myself the same—attached to whatever is good."

"On contemplating my First-born, when only six days old.

"May a sweet sleep close thine eyes! Repose in peace, beloved infant! Thou art yet ignorant of the troubles of this life; but, alas! happy childhood flies with rapid wing.

A stranger to the joys of existence, thou art also a stranger to its sufferings; but thou wilt not escape them more than any other mortal. We are all born imperfect.

The morning of thy life has been saluted by general rejoicing. Max, O! my dear Max, be a good man. Then, even amidst the cares of royalty, thou wilt enjoy the serene slumbers of innocence.

Thou smilest, and openest wide thine eyes. At present thou castest on the world a joyful look. This world will one day make thee taste its bitterness; and thou wilt learn how wicked and deceitful it is.

Behold, extended on his little couch, feeble and helpless, he who one day is to govern men! Happy will the person then be considered who knows how to please, even in trifles, one who has so much to give, and who can take so much away.

Nothing on earth is durable. May this truth be early engraved on thy young mind.

* Baron William de Hompesch, Minister of the Finances of Bavaria, died the 9th of December, 1809.

† Count Frederic Lothaire Stadion, Minister Plenipotentiary from Austria at the Court of Bavaria, died the 9th of December, 1810.

But virtue will render herself superior to all vicissitudes. Thou owest her eternal fidelity.

Wear heaven in thy heart. Whether in solitude or in crowds, obey like a child the divine precepts; and death will find thee tranquil and happy.

Never forget, O Max! that thou art a German. Let not the false splendour of the foreigner dazzle thee. Be ever on thy guard against his stratagems.

If he who has given thee life should hear from thy mouth only the liasings of infancy; if he should fall early in the defence of his country, drop a tear on his grave.

Learn to inherit his German feelings. Draw thy sword fearlessly for thy fire-sides; die with joy in protecting them; be worthy of thy ancestors!"—*Foreign Journals.*

PHRENOLOGY.

[Second notice.—Conclusion.]

As Dr. Spurzheim has arrived in town since our preceding paper was written, we shall, in courtesy to our foreign visitor, treat the subject with less of levity than before; though, having indulged in a peep at Mr. De Ville's gallery of casts, we certainly were never more inclined to laugh in our lives than we were at the numerous collection of desperately ugly specimens there exhibited. To be hanged is nothing; and even the terror of dissection fades before the more horrible apprehension of being thus gibbeted in everlasting plaster, and stuck up to be viewed and lectured upon, in grinning phrenological infamy. It should operate strongly against the commission of crime; and we are inclined to think, that if a row of these busts were planted in front of the Old Bailey, as the Grand Signior exhibits ears and heads in front of the Seraglio, they would strike such a dread into the hearts of evil-doers, that we should have few more instances of capital offences. We hope the Secretary of State for the Home Department will ponder upon this suggestion; and we dare say the patriotism and science of Mr. De Ville will induce him to sell a set at a reasonable price. Meanwhile return we to our publications on Phrenology.

Mr. Stone, in his pamphlet, demonstrates that the phrenological developments of the monsters Burke and Hare not only do not correspond with, but directly and absolutely contradict, their acknowledged characters. Burke's organ of destructiveness was below the common average in fifty skulls, and his organs of benevolence and conscientiousness above the average; and yet Burke was one of the most cold-blooded, systematic destroyers that ever disgraced humanity: his cerebellum was also below the average size. With regard to Hare, Mr. Stone, from an accurate comparison, shews that the organ of destructiveness in this atrocious murderer was not above the average size, and that many individuals of exemplary character, at the same time that they possess this organ larger than he did, exhibit a greater deficiency in the alleged organs of benevolence and conscientiousness. The skulls of other hardened assassins, of whom a list of sixteen is cited, afford similar results, and are all formed as if it were on purpose to stultify the theories of the phrenologists. The same examination and ratiocination applied to thieves proved that they had the organ of acquisitiveness often absolutely and relatively less than honest individuals, and the organ of conscientiousness larger:—from all which data, and a table of measurements (fatal to phrenology as figures and demonstrations can be), Mr. Stone thus concludes:

"They profess that their doctrines are as well established, and as palpable to every inquirer, as the most demonstrable truths in nature, yet do not agree among themselves on the most preliminary points;—Dr. Gall ridiculed the bumps of Dr. Spurzheim; Dr. Spurzheim rejects with disdain the callipers of Mr. Combe; and Mr. Combe has been lately engaged in an open phrenological warfare with one of the most intelligent of his contemporaries, on the subject of what is even the necessary result or tendency of their faith;—they give an organ one function to-day, another to-morrow;—they maintain that a large organ of veneration is, at one time, the characteristic configuration of the head of a saint—at another, equally essential to that of the most notorious and professed infidel! Lastly come the interminable combinations of their imaginary organs; and thus the phrenologists shift from argument to argument, from position to position, resembling the ghosts in Virgil's Inferno:

'Huc, illic volitant, nec certis in sede morantur.'

To this mortal *carte* Mr. George Combe, the Edinburgh apostle of phrenology, returned *tierce*. He accuses Mr. Stone of omitting the breadth of the organs in his measurements, and thence of drawing erroneous deductions; and also of mistaking one of the cases (that of Pepe) on which he argued. Mr. Stone rejoins, that he did not measure breadth, because it was purely fanciful and ideal—a trick of every manipulator, incapable of rule or definition. In other points this is a very able pamphlet, resting on strong facts and arguments, which it would be no easy matter to meet—impossible to overthrow.

The publication of Mr. Montgomery, with Dr. Thompson's answer, is of very little importance to phrenology. Neither of the writers apply the callipers so closely as to elucidate the dispute with any new discoveries; and we pass to the Travels of Phrenologasto, as affording more amusing materials; though we regret that its playful and ingenious author (Mr. Trotter) has since fallen a victim to the climate of India. The Introduction is a whimsical piece of mystification, but we learn that the MS. had fallen from the moon, whither its writer, Gio. Bal-scopo, had flown in a balloon, and whence the said Gio. could devise no means of returning. In that lunar world he tells us—"When I began to examine the inhabitants a little more closely, I found that they all wore their hair very closely shaved, and had their heads painted white. Nor was this the only thing remarkable, for the head of every individual was chalked out by black lines into a variety of little fields and enclosures, very much in the same style as we see a gentleman's estate in England laid down on a map. These divisions, among the bulk of the people, amounted altogether to thirty-three; but a few gentlemen, dressed in long black gowns, and who appeared to be possessed of some authority, had extended them, by fainter lines, to a much greater number. These divisions and subdivisions had each a particular number affixed to them, and the philosophers above mentioned had, by way of ornament, a skull hanging on a golden chain round their necks. The dress of the women, too, I could not but think very fantastic, and unlike any thing I had seen before, being of a light sky-blue substance interspersed all over with groups of skulls, which in some of them were clustered together in a very fanciful way. One lady, whose name I refrain from mentioning, on whose dress was a great profusion of these insignia, afterwards assured me that they represented the skulls of all her ancestors, in a

direct line, for fifteen generations, and amounted to the enormous number of thirty-two thousand seven hundred and sixty-eight."

One of the philosophers further informs him, that "this flourishing country is the famous kingdom of Phrenologasto, the capital of which, in the Italian tongue, is Cranioscoposco. The origin of the nation, as it has been recorded in all our most learned works, and handed down by tradition through twenty-five centuries, is highly curious and instructive. Our forefathers, you must know, from whom the whole colony is descended, were originally twelve inhabitants of that part of the globe to which you belong, which is called Egypt. At the time when that country was renowned for the occult sciences, and had obtained a glory for learning and philosophy which has been since eclipsed by the pre-eminence of other states, there lived a sect of philosophers who devoted their whole labours to the study of craniology. Start not, young man," he continued (for I began to be incredulous), "start not at this information, which I see must be new to you, as from your surprise it is clear that you regard that noble art as an invention of modern days. Is it then indeed true that this profound science, which was once the glory of Egypt, has been again lost to the world? Holy fathers! can it be so? No wonder that the world is in its present state of degradation and darkness. Alas! alas! too truly did the wise Proco, looking through his telescope on the world below, allege that the art there had again sunk into oblivion."

He is presented to the king, and says: "My hair was cropped very short, and to cover the natural deformity of my head, an artificial skull, of perfect symmetry, was fastened over it by means of springs. I afterwards discovered, that many ladies and gentlemen of the court wore this disguise, much in the same way as artificial teeth and hair are worn in my own country. When I entered the presence-chamber, I was instructed to advance twelve paces into the room, and kneeling down, to strike my head thirty-three times on the ground, in token of the thirty-three grand divisions of the human skull; and that a herald would then advance, who would call out in a loud voice the names of the thirty-three different organs. As every person in the kingdom has some organ more developed than another, by which it is known to what clan or family he belongs, it is the usual custom, when the herald arrives at that particular organ in the catalogue, for the individual to raise his hand, and, touching the corresponding spot on his head, to answer 'Eccomi.' As for me, I could not yet be said to belong to any one division, the shape of my skull not being particularly ascertained; in which I might have been put to some difficulty, when it was fortunately discovered in the herald's office, that there was a saving clause for those who had no predominant quality, and who were classed under the general title of idiots (goffi). Upon this it was thought advisable by the lord chamberlain and master of the ceremonies, that to avoid the enactment of a new law, or the infringement of the rules of the court, I should consider myself for the present under that denomination."

All the principal officers in the government are elected according to their phrenological developments.

"The king alone wore his head covered; as it was thought more politic, and more accordant to the dignity of majesty, that the manifestation of his faculties should not be open to public inspection, or the vulgar surmises of the multitude."

We have not room to follow our amusing traveller through his moon adventures, but must quote his account of the great national University.

"The following was the form of entrance into the lower class, or that of mechanics,—which was by far the most numerous division of the school. Having ascertained the predominant organ in the boy's head, the particulars of the examination, as in the higher college, were registered in the books of the society, and it was immediately determined to what walk in life he should be educated. Those who had large protuberances in the parts of time and number were marked down as watchmakers and accountants; those who shewed a disposition for harmony and time were destined to be musicians; and others, who were inclined to secretiveness or cunning, were set apart for police officers; the combative and destructive classes were destined for soldiers; a shew of the principle of constructiveness led the way for coachmakers, carpenters, or tailors; whilst wit, individuality, and imitation, gave rise to lawyers, fiddlers, and mountebanks; the organ of conscientiousness was supposed to be best for an attorney's clerk—the organ of firmness for a jailor. In this manner the whole professions in the kingdom were supplied with men of the most certain and undeniable qualifications; and as in the whole world the just proportion of males and females has been reasonably pointed out as a singular mark of the wisdom of nature, so it was found that, in this institution, the number of persons in every condition of life exactly adapted itself to the demand; which analogy is, to my mind, a more satisfactory proof than any other of the reasonableness of the system."

On examining a chamber of comparative anatomists, the author related—

"This was a noble room, two hundred feet long by eighty wide, and filled with many tables, at each of which one of the anatomists was at work. I computed there could not be less than four hundred present; besides a vast collection of all manner of beasts and birds, which were confined in cages round the room, and supplied to those learned gentlemen at the expense of government. The first I came up to was employed in extracting the destructive organ from a cat's head. The operation being finished, and a mouse placed before her, she took it gently up in her paw and licked it all over, apparently with much tenderness. The mouse, on getting on its legs, ran immediately under an adjoining table, where another gentleman was employed in inserting the same organ into the head of a lamb, who no sooner saw the mouse than he devoured it without remorse. An anatomist, a little further down the room, who was also a great architect, was extracting the organ of constructiveness from a spider's head, in which, he said, it was much more fully developed than in any other animal that was known. Another had been employed for three months on the head of a musquito (a common animal in that country): in comparing it with that of a famous murderer who died about that time, he had found in both heads a strong degree of the organ of blood-thirstiness. I had not gone much further when a young tiger came running towards me, at which I felt rather uneasy, till my guide assured me his destructive organ had been completely extracted a week before. Her majesty the queen keeps a number of these animals in her park, who, having gone through this operation in the anatomical school, herd with the cows and deer, and eat apples from her majes-

ty's hand. I was just leaving the room when a gentleman begged me to step aside to look at the head of a frog he was then dissecting, in which he had found the organ of locomotion in a very perfect state. At his right hand lay a cast in plaster of Paris of a grasshopper's skull, which he had made for the purpose of examining its salutory organ. He assured me he had found a perfect fac-simile of it in the head of an eminent dancing-master who had but lately died. The same person, a year before, had made some curious experiments on the head of a cock-chaffer, where the organ of circumspection was very remarkable. He proved to me, beyond a doubt, that this organ did not originally belong to that species of animal, but was an hereditary quality, which had gradually manifested itself from the time that boys became acquainted with the cruel practice of spinning them on needles."

And now we must leave phrenology and our author together, with one piquant extract relative to the fair sex (o' th' moon, be it remarked).

"The queen, in whose pericranium, like that of most of her sex, was a wonderful rise of inquisitiveness, was particularly anxious to know if the organs of curiosity and vanity were as prevalent with my own countrywomen as with hers, and said she would be happy if I would describe the means by which we depressed them; for this lady had a great idea of promoting, by her own example, and by her personal influence, the moral and domestic virtues of her female subjects. In reply to these inquiries, I assured her majesty that it was a subject to which I had seldom given much attention, either in the land below or in her majesty's realms; though I could answer for my own dear countrywomen, that they possessed as great a share of love, and modesty, and attachment to their children, as in any other country of the world. But when her majesty, who would not be put off with a general answer, asked me the average number of inches which ladies' heads displayed of these qualities, I was obliged to confess my ignorance on this point; upon which she told me I was a credulous old dotard, to suppose that a woman's disposition could be guessed at by any thing she said or did."

Who durst say so of the dear creatures on our earth? Let him who dare!

The Gardens and Menagerie of the Zoological Gardens delineated, &c. &c. Nos. I. and II. 8vo. London, 1829. N. Hailes.

As the Zoological Society has been gradually advancing in importance, and will soon, we trust, shew its utility, by introducing into the country such animals as may adorn its pleasures as well as enrich its economy and commerce, we have from time to time recorded those proceedings which seemed to tend to this desirable consummation. In some minor points we think there might be improvements; but there are few of any consequence which, on examining the *pros* and *cons*, we have not found bottomed on good reasons. The form of a subscriber being called on to sanction the entrance into the gardens of a visitor paying a shilling, is, for instance, in our opinion, a needless piece of trouble and inconvenience; and we shall be still more sorry to hear that a prevalent suspicion respecting the Institution is well grounded, viz. that it is intended to make it more aristocratical, and to get rid of the class of subscribers in middle life, such as respectable tradesmen, by whom in its infancy it has been mainly cherished and supported.

We cannot, however, believe that there is any truth in this rumour, and we should be glad to see it contradicted by authority.

But to come to the publication before us. It is the commencement of a work in monthly parts, purporting to furnish descriptions and figures in illustration of the natural history of the living animals in the Society's collection, with the sanction of the council, and under the superintendence of the secretary (Mr. Vigors) and the vice-secretary (Mr. Bennett). We have in a preceding review spoken of the gratifications which attend the studies of the naturalist, and therefore need only notice here that they are not a little enhanced when they can be particularly directed to rare and curious subjects, as in the case of the Zoological Gardens. If we find amusement in observing the habits of creatures the most familiar to us, still greater entertainment is afforded us when making ourselves acquainted with those of stranger natures. The soft chinchilla, the architect beaver, the graceful llama, the anomalous kangaroo, and many others both of birds and beasts, offer constant food for observation; and when located in habitats similar to their native climates and congenial to their native characters, are admirably adapted impressively to instruct the young and enlarge the minds of all. And this purpose the present design is beautifully calculated to aid. The embellishments are very handsome; the animals finely drawn by W. Harvey; and the wood-cuts, by Branston and Wright, quite little gems in that style of art. Of the letter-press, also, we may speak in high terms, as well suited to convey popular information. The proper study of mankind, it is true, may be man; but it will be no disadvantage to add to it some knowledge of the animal world—links in the chain of creation so intimately connected with its moral and intellectual trend. And here we have their history, anecdotes of their instincts and habits, and all that information which the undertaking requires. In these Numbers, the Chinchilla; Ratel; Wanderoo, Diana, and Mona Monkeys; Hare Indian, Esquimaux, and Australian Dogs; Barbary Mouse; Condor; Crested Curassow; Macaws (2); Napu Musk-deer; Palm Squirrel; Peccaries (2); Storks (2); Spoonbill; and Californian Owl—are ably figured and described; and we have only to add, that the tail-pieces are delightful little bits of art, and, with the typography, reflect great credit even on Whittingham's Chiswick press.

SIGHTS OF BOOKS.

Polynesian Researches, during a Residence of nearly Six Years in the South Sea Islands. By William Ellis. 2 vols. 8vo. London, 1829. Fisher.

WE have no space even to enter into a brief analysis of these highly interesting volumes; and it must suffice for the present to observe, that they are replete with valuable and curious matter, descriptive of the South Sea Islands and their inhabitants. Having on a former occasion spoken rather despondingly of the labours of Mr. Ellis and his Missionary brethren, we are the more pleased that an opportunity now offers to congratulate them on a partial success they have undoubtedly achieved, and which is proven by the practical results of their having induced the natives to abandon infanticide, formerly so all-prevailing in these islands; by the abolition of the brutal, yet singular institution of the Areois; and by their having excited these people from their natural indolence to works of useful labour and industrious occupation. A strain of unaffected, unexaggerated

piety runs through the work, without interfering, in the slightest degree, with the information it affords. A more advantageous title might certainly have been chosen: the resort to a Greek nomenclature for this portion of the world, appears to us, in the first instance, to have been absurd; and we suspect that not a few readers will be startled to find the Missionary Ellis's account of the South Sea Islands ushered forth as "Polynesian Researches."

A Comprehensive Grammar of the English Language, with Exercises in a familiar Style, &c. &c. By W. Pinnock. London, 1829. Poole and Edwards.

MR. PINNOCK is so generally known and appreciated as an able guide to the instruction of youth, that his name is a sufficient passport to any work of education. Nor will this Grammar detract from his credit: on the contrary, as far as we have had time to examine it, we consider it to be a very valuable production, very sound in its older canons, and very ingenious in its newer views.

History of the Jews. Family Library, No. VI. Of the History, Vol. II. J. Murray.

HIGHLY as we spoke of the first volume of this History, we owe no less praise to Mr. Milman's second, which relates the events from the captivity to the period of Vespasian, when John of Gischala fled from Jerusalem, and left it a prey to feuds and disorder. Another of these admirable little tomes will finish this branch of the Family Library, of which the early volumes are already out of print.

The Friends' Epistle, 1829.

IT is generally known that the Society of Friends yearly circulate a moral and religious admonition, which is drawn up at their annual meeting: that of the present year is now before us, and somewhat remarkable for the fashion in which it appears. For though plain in their own attire, language, and manners, the Friends seem to be quite the reverse in their typography. The Epistle is indeed a brilliant specimen of the various ways in which Howlett and Brimmer print with letters of gold, silver, and the gayest colours, upon paper of the most beautiful texture and various hues. The little books are truly literary curiosities. With regard to their contents, it appears that it has cost members of this Society 13,800*l.* in resisting the payment of tithes, ecclesiastical, and some military demands; and that numbers once in communion with them in America have fallen off from their persuasion. The rest of the text is exhortative to piety and virtue.

ORIGINAL CORRESPONDENCE.

OUR Paris letter of this week contains nothing of sufficient interest to print. A few days ago, says our correspondent, a *gourmand* of *haut ton* and fastidious taste promised the sum of a thousand francs reward to any member of the gastronomic trade who should invent a new dish capable of tickling his palate. Accordingly, before twenty-four hours had elapsed, a squirrel, stuffed with pounded eels, snails, truffles, garlic, and anchovies, was served up to his epicureship. Were I, however, to offer double the sum for either a novel idea or curious anecdote, I should be left in the lurch. We are to have private concerts during the winter,—or rather performed at private houses, for admittance will not be gratis, as the object of these musical meetings is to form a fund for portioning orphans. The poor ought to bless St. Paul; for had he not said that "charity

covereth a multitude of sins," poverty would interest but little.

ARTS AND SCIENCES. ANCIENT AND MODERN EGYPT.

M. Champollion's Eleventh Letter—concluded.

I HAVE given almost a whole day to the little isle of Beghé, near Phile, where the commission of Egypt indicated the remains of a small Egyptian edifice:—in fact, I found some columns of a very small temple of very bad workmanship, and of the time of Philometor; but I learned, from inscriptions, that I was in the isle of Snem—a name which I have frequently met with, from Ombos to Dakkeh, in the legends of the gods, especially those of the god Chnouphis and the goddess Hathor. This was one of the most holy places in Egypt, and a sacred island, to which pilgrimages were made much earlier than to the neighbouring isle of Phile, called in the Egyptian language Manlak. Hence came the Coptic Pilaseh, the Arab Bilaq, and the Greek Philai,—none of which have any thing at all to do with *fil* (elephant), as some pretended etymologists have affirmed.

The temple of Snem (Beghé) was, in fact, dedicated to Chnouphis and Hathor; and the monument now existing was only the second edition of a much older and larger temple, built under the reign of the Pharaoh Amenophis II., the successor of Meris. I have found the ruins of this temple and the remains of a colossal statue of the same Pharaoh, which adorned one of the pylones of the ancient temple. I collected in this island, while scrambling over rocks of rose-coloured granite, twenty inscriptions, all of the times of the Pharaohs, proving visits and acts of adoration in the holy island of Snem by great personages of ancient Egypt; and, among others, 1st, a proscynema of a Basilico-grammate, commanding the troops under the Pharaoh Amenophis III. (Memnon) grammate, named Amenomoph; 2d, an inscription certifying the pilgrimage of a high priest of Ammon, a prince of the family of Rhameses; 3d, that of an Ethiopian prince named Memosis, under Amenophis III.; 4th, that of the Ethiopian prince Messi, under Rhameses the Great; 5th, that of a high priest of Anouké, called Amenomoph; 6th, a proscynema, conceived in these terms—"I am come to you, I your servant to you all, great gods who reside in Snem; grant me all the benefits which are in your hands (to me), the intendant of the lands of the king, lord of the world, Amenophis (III.): Amosis."—this Amosis is represented by the side of the inscription, raising his hands in an attitude of adoration; 7th, lastly, towards the summit of a mountain of great rocks of granite, I have copied a beautiful inscription, which certifies that in the years thirty, thirty-four, and thirty-nine, of the reign of Rhameses the Great (Sesostris), one of the princes, his children, was present at the panegyrie of Snem, and celebrated it by sacrifices. I do not speak of many other inscriptions, which are merely onomastic; and of some others, which, containing only royal legends sculptured on a large scale, of the Pharaohs Psammeticus I. and II., Apries and Amasis,—seem to have been intended to record the visit of those Pharaohs to the isle of Snem, or perhaps great excavations in the mountains of this island, the granite of which is very beautiful.

Before we left Phile, I landed on the right or opposite bank of the river, to hunt after the inscriptions on the rocks of granite, among

which is that hewn into the form of a seat, which M. Letronne has thought might be the *abaton* mentioned in the Greek inscriptions of the obelisks of Phile; it is, however, only a rock like the others, with this difference, that it is covered with very curious inscriptions, but which have no connexion with the gods of Phile. The most remarkable of these inscriptions are the following:—1. A stela sculptured on the rock, but half effaced, which records a victory gained over the Libyans by Thoutmosis IV., in the seventh year of his reign, the eighth day of the month of Phanemoth. 2. A stela of his successor Amenophis III. (Memnon) in pretty good preservation; also fourteen lines, recording that Pharaoh having just subdued the Ethiopians, in the fifth year of his reign, passed by this place, and held a panegyrie (a religious assembly). 3. A proscynema to Neith and to Mandou, for the health of King Mandocouthph (Smendes), of the twenty-first dynasty. 4. A proscynema to Hor-Ammon, Saté, and Mandou, for the health of King Nephrothoph (Nepherites), of the twenty-ninth dynasty. I do not speak of a multitude of proscynema of private individuals to Chnouphis and to Saté, the great divinities of the cataract.

The rocks on the way from Phile to Syene, and which I explored on the 7th of February, have also a great number addressed to the same divinities: I also copied three inscriptions and sculptures representing Ethiopian princes doing homage to Rhameses the Great, and to his grandfather Mandouei—the same of whom I have found similar monuments in Nubia.

I at length returned to Syene, which I left in December, and re-examined the ruins of the temple dedicated to Chnouphis and Saté, under the Emperor Nerva; it is a monument of the extreme decline of the arts in Egypt; but interesting, 1st, because it is the only one which bears the legend of Nerva; 2d, because it acquaints me with the hieroglyphic-phonetic name of Syene, Souan; which is the Coptic name, Souan; and the origin of the Syene of the Greeks and the Osouan of the Arabs; 3d, because the symbolic name of this same town, representing the plummet of an architect or mason, most undoubtedly alludes to the ancient position of Syene under the tropic of Cancer, and to the celebrated well into which the rays of the sun fell perpendicularly at the summer solstice: the Greek authors are full of this tradition, which might, indeed, have been founded on a real fact, but at an infinitely remote period.

I visited in my boat the granite rocks in the environs of Syene, ascending towards the cataract: I found the homage of an Ethiopian prince to Amenophis III. and to Queen Taia, his wife; an act of adoration to Chnouphis, the local deity, for the health of Rhameses the Great; of his daughters Isenofré and Bathianti, and of their brothers Scha-bem-kame and Merenptah; the Ethiopian prince Memosis (the same of whom I found an inscription in the isle of Snem) on his knees, and adoring the phenomenon of King Amenophis III.; lastly, several proscynema of private persons or public functionaries, to the divinities of Syene and the cataract, Chnouphis, Saté, and Anouké.

I visited for the second time the isle of Elephantina, the whole of which would hardly make a park fit for a good citizen of Paris, but which certain modern chronologists would fain make into a *kingdom*, in order to dispose of the ancient Egyptian dynasty of the Elephan-

times. The two temples have been recently destroyed to build a barrack and magazines at Syene: thus the little temple has disappeared which was dedicated to Chnouphis by Amenophis III. I have found nothing standing but the two granite jambs of the doors, which belonged to another temple of Chnouphis, Saté, and Anouké, dedicated under Alexander, son of Alexander the Great. But a bad wall of a quay of Roman construction afforded me mangled and mutilated fragments of several of the most curious edifices of Elephantine, built under kings Moeris, Mandouei, and Rhameses the Great. From the remains of a chamber which terminates the flight of steps of the Egyptian quay, I have copied several curious hieroglyphic proscynema, and the inscription of a mutilated stela of the Pharaoh Mandouei.

Having rejoined my squadron, and having nothing more to see or to do at the ancient boundary of the Roman empire, I quitted the granitic rocks of Syene and Elephantine, and we proceeded on our voyage to Ombos, where we arrived on the 12th February, and resumed and finished the work we began in December. Every thing here is of the Greek period; the architecture of the great temple is, however, very fine, and has a grand effect: it was begun by Epiphanes, continued under Philometor and Evergetes II. Some bas-reliefs are of the time of Cleopatra—Cocce, and Soter II. This grand edifice, the ruins of which are extremely imposing, was consecrated to the two triads which share the temple, which is, in fact, divided lengthwise into two very distinct parts. Sevek-Ra (the original form of Saturn, Kronos) with a crocodile's head, Hathor (Venus), and their son Khous-Hôr, form the first triad. The second is composed of Aroeri, of the goddess Tsouenoufré, and their son Pnevtho: these are the two lords of Ombos; and the crocodile on the medals of the Ombite Nome is the animal sacred to the principal god, Sevek-Ra.

Cleopatra, the consort of Philometor, bears in the dedications and scrolls (*cartouches*) sculptured on the cornice of the pronaos, a surname which can be no other than the Greek Triphone or Dropion; but the first is the more probable: it is repeated thirty times, and is impossible to be mistaken.

The little temple of Ombos, like one of those at Philé and the temple of Hermonthis, was an *emissi* or *mammisi*, (a sacred edifice, typifying the birth-place of the young god of the local triad), that is to say, a terrestrial image of the place where the goddesses Tsouenoufré and Hathor brought into the world their sons Khous-Hôr and Pnevtho, the two sons of the two triads of Ombos. In making my way among the fallen stones of this little monument, and visiting one by one all those remains which will soon be swallowed up by the Nile, that has already destroyed the greater part of this temple, I found some blocks belonging to a much more ancient edifice, namely, a temple dedicated by Thoutmosis III. to the god Sevek-Ra, and with the ruins of which part of the *emissi* was built under Evergetes II., Cocce, and Soter II.

The great temple of Ombos, therefore, is likewise only a second edition; and it is to the more ancient temple of Saturn that the jambs of a very little propylon belong, which is now let into the exterior face of the brick wall that surrounds the temple on the south-east side. The sculptures are of the time of Thoutmosis III., and the hieroglyphic name of this propylon, inscribed at the bottom of the two jambs,

was *porte* (or propylon) of Queen Amensé, leading to the temple of Sevek-Ra (Saturn). This Queen Amensé, we must remember, is the mother of Moeris. The great propylon near the Nile is of the time of Philometor, and led to the little temple.

At Ghebel-Selseleh we expect a rich harvest, of the times of the Pharaohs.

I have not forgotten the notes of M. Letronne. He will be glad to hear that the fillet on which the inscription of Ombos is engraved was gilt, and that the letters have retained a bright red colour, which is still very visible. I have not been able to verify what there was upon Serapis at Tafah, as the stone said to have that name on it no longer exists. Adieu!

Twelfth Letter.

Biban-el-Molouk (Thebes), March 25th, 1839.

The first paragraph mentions incidents of no consequence, and that the expedition had paid further attention to the monuments of Luxor.

On the 23d they went over to the left bank, proceeded to the valley of Biban-el-Molouk, where the tombs of the kings of the 18th and 19th dynasties are situated: and the narrative continues. This valley being narrow, stony, and bounded by pretty high mountains, which are wholly destitute of vegetation, the heat must be insupportable in the months of May, June, and July. It was therefore of great importance to explore this rich and inexhaustible mine, at a time when the air, although very much heated, is however tolerable. Our caravan took up its quarters there the same day, and we occupy the best and most magnificent lodging which it is possible to find in Egypt. It is king Rhameses (the fourth of the 19th dynasty) who affords us hospitality, for we all reside in his splendid tomb, the second on the right hand as you enter the valley of Biban-el-Molouk. This hypogeum is in an admirable state of preservation, and admits so much air and light, that we are very well lodged: we occupy the first three halls, extending together to the length of 65 paces. The walls, which are from 15 to 20 feet high, and the ceilings, are wholly covered with painted sculptures, the colours of which still retain almost all their brilliancy: it is a truly princely habitation. The ground is entirely covered with mats and rushes. Lastly, the two *kaouas*, (our body-guard) and the domestics, sleep in two huts, set up at the entrance of the tomb. Such is our establishment in the Valley of Kings, which may truly be called the abode of death, as not a blade of grass is to be found in it, nor any living creature, except the jackals and hyenas, which the night before last devoured, at the distance of a hundred steps from our palace, the ass which had carried my Barabra servant Mahomet, during the time that he was agreeably passing the night of the Ramadan in our kitchen, which is in a royal tomb, entirely dilapidated.

A courier whom I received at Thebes brought me letters of the 20th of December.

The announcement of the archaeological commission for the Morea, given to our friend Du Bois, has afforded me great satisfaction. Twenty years ago we dreamed together of the journey to Egypt and to Greece which we are now performing. This dream is realised; and I can write a letter from Thebes to Athens! What different historical ages are brought together for the same object! It is like a general search which modern civilisation is making among the ruins of the ancient; and I hope that the labour will not be in vain.

I have also caused excavations to be commenced at Karnac and Kourna. I have collected eighteen mummies of all sorts and kinds; but I shall bring away only the most remarkable, and especially the Greco-Egyptian, which have both Greek inscriptions and demotic and hieratic legends. I have several of this kind, and some of children entire, which are hitherto rare. All the bronzes obtained by my excavations at Karnac, and taken even from the houses of ancient Thebes, fifteen or twenty feet below the level of the plain, are in a state of complete oxydation, which renders them of no use. I have given the direction of my excavations on the eastern bank to a man named Temahh (the crocodile), formerly employed by M. Drovetti in the same capacity, who appears to me skilful, and gives me great hopes. I do not much depend upon them, because it would be necessary to work upon a large scale, and my means will not suffice. I shall endeavour, however, to have the works carried on with more diligence in the months of June, July, and August, at which time I shall be upon the spot, either at Karnac or at Kourna. I have forty men at work, and I shall see if the produce of their labours will nearly make up for the expense, and if my budget can bear it. I have also thirty-six men employed at Kourna, on the joint account of Rosellini and myself. It is evident that I cannot think of carrying away precisely what the Royal Museum is in want of,—namely, large pieces; because the carriage alone to Alexandria would much more than exhaust my finances.

I shall now resume my itinerary and the account of the monuments from Ombos, whence my last letter was dated. Having left Ombos on the 17th of February, on the 18th, in the evening, we reached the vast quarries of Ghebel-Selseleh (Silsila), where I promised myself an ample harvest. My hopes were fully realised, and the five days which we passed there were well employed.

The two banks of the Nile, which is confined between mountains of very fine freestone, were used as quarries by the ancient Egyptians; and the traveller is confounded, if he reflects, as he passes through them, on the immense quantities of stone which have been taken from them, to form the open galleries and the vast excavations. The most remarkable monuments are on the left bank.

LITERARY AND LEARNED.

THE BRITISH MUSEUM.

WE recently alluded to the meagre funds which put it beyond the power of the British Museum adequately to sustain its character as a great literary institution, worthy of the wealth and intelligence of the British nation; and since then another striking and melancholy proof of this fact has come to our knowledge. It is well known that the Cottonian library is extremely rich in historical documents: among the rest, the diplomatic correspondence of the reign of Henry VIII. is very voluminous and important; as original letters and communications of this class are (as we have often stated) the only genuine foundations on which true history can be built. It is also curious to mention, that a very large portion of these valuable records remain at this moment locked up in cipher, useless alike to the student of general literature and to the historian. Will it be credited that, though a most eligible offer has been made to the trustees of the Museum to expound these interesting papers (probably

more interesting on account of the secret characters in which they are preserved), the proposition has been declined; owing, we believe, to there not being any means applicable to defray even the small expense requisite for this purpose!!!

THE ARABIAN NIGHTS.

M. DE SACY, in opposition to Messieurs Von Hammer and Langlès, who stoutly maintain the Indian origin of these seductive tales, has satisfactorily shewn, in a memoir read in a public sitting of the Academy of Inscriptions, that they have no claim to such an origin, and are not of any very ancient date. It would be wearisome to any but a classical reader to accompany us through the pithy commentary with which De Sacy has convicted his opponents out of their own shewings; but it would be inexcusable in us to suppress his summary of the most probable conjectures which can be formed in reference to the literary history of this work, which, as he observes, has stood proof against the caprices of fashion and the convulsions of social usages, has never failed to find publishers and readers, and has lost nothing of its original popularity and estimation. "It appears to me," says this profound Oriental scholar, "that it was originally written in Syria, and in the common tongue; that the death of the author, or some other cause, prevented his putting a finishing hand to it; that copyists subsequently endeavoured to complete it, either by inserting tales which were already known, but did not form part of the collection, such, for instance, as the *voyages of Sindbad the Sailor*, and the *book of the Seven Viziers*; or by using their various talents in the construction of additional stories, whence arise the discrepancies which have been observed between the several MSS. of this collection; that this is also the reason why those MSS. differ as to the *dénouement*, which is related in two very dissimilar ways; that the additional tales have been incorporated at different periods, and perhaps in different countries, but especially in Egypt; and, lastly, that the only assertion we can venture with any degree of satisfactory probability is, that it is not of very ancient date, as is proved by the language in which it is written, and that at the time of day when it was so written, the use of coffee and tobacco was unknown, as neither of these luxuries are named in it; for the author does not evince such a degree of respect for probabilities as would lead us to suppose that he would have omitted to have pipes or cups of coffee presented to the personages of his piece, in order to avoid compromising the faith of his narratives by committing slight anachronisms. This remark would place the formation of this collection at least in the middle of the ninth century of the hejira, so that it cannot have existed above four hundred years."

Since we made the preceding extract, our attention has been called by a foreign friend to a very beautiful Arabic version of the Arabian Nights, which is in course of publication by Professor Habicht of Breslau. The type with which this work is printing, is a gift from the Prussian Sovereign to the press of that University. The first two pages are enclosed within a richly embellished red border, and the subsequent ones within a plain black rule: the print is of a brilliant jet black, the paper excellent, and the impression executed with great care and neatness. The learned editor mentions in his preface that he is indebted for the MSS. to Mr. M. Annagar, an Arabic

scholar of Tunis, with whom he spent some years under the same roof at Paris, and subsequently, when both had returned to their respective homes, kept up a constant correspondence. Amongst other MSS. which this friend forwarded to him, was the copy from which the present edition is publishing: it consists of ten volumes, in large octavo; and the conclusion of the last vol. bears the Mussulman date of 1144, or A.D. 1731. The fifth vol. contains a tale, of some length and great beauty, which is not found in any hitherto known copy of the "Thousand and one Nights."

ORIGINAL POETRY.

TO " " "

Oh, Lady! in my boyish hour,
Perchance thou see'st me gay as young,
The happy slave of Pleasure's power,
With rapture in my heart and tongue:
Yet think not thus I ever seem,
As though no grief did e'er annoy;—
There's darkness in the brightest dream,
And sorrow in the sweetest joy!
Alone amid the world I move,
With scarce a smile or tear for me,
And not a heart to share the love
Of unaffected sympathy:
Without it, what can realms bestow
Of all that mingling natures feel?—
It is to kindred mind we owe
The rapture Time delights to steal.
But may no cloudy shade intrude
Upon the sunshine of thy lot,
And all that dims my gayest mood
In thy fresh feeling be forgot:
May Heaven attend thee! wheresoe'er
The winging years may waft thee on;
And nothing mar that blissful air
All eyes have loved to look upon!

Sept. 4, 1833.

R. MONTGOMERY.

THE BUDDING LEAF.

Now Nature wears her vernal hue;
Again will poets sing
Of "daisies pied, and violets blue,"
And all the charms of spring:
The budding leaves with joy we see,
And former bliss recall;
But oh! what may our feelings be,
When these young leaves shall fall?
Then hearts that now are throbbing high
With hopes that wildly soar,
May heave sad disappointment's sigh,
And learn to hope no more:
The maid whose eyes, whose smile, whose bloom,
Are soft enchantment all,
May sink, love's victim, in the tomb,
When these young leaves shall fall.
The mind whose energy and fire
Shines through the sparkling eye,
May then—O fate forlorn and dire!—
A wreck, a ruin lie;
Its reason fled, its judgment lost,
While fancied fears appal,
In whirls of stormy passion tost,
When these young leaves shall fall.
And many a one whose soul is twined
With soul of kindred truth,
Whose passion, ardent yet refined,
Survives the charms of youth,
May sadly mourn love's broken tie
Within the lonely hall,
And heave the solitary sigh,
When these young leaves shall fall.

O Man! thy date of joy is brief,
More brief is pleasure's hour;
It withers like the blighted leaf—
Fades like the gather'd flower.
The view is awful, yet sublime,
Of earth's still changeable ball;
I shrink while musing on the time
When these young leaves shall fall.

But hark! I hear an airy voice,
Soft whispering in mine ear—
"Thou who dost mourn when most rejoice,
And saddenest hope with fear,
Thy worldly cares and woes may rest
Within the churchyard wall,
And dark weeds wither on thy breast,
When these young leaves shall fall."

Y. M.

SKETCHES OF SOCIETY.

RECOLLECTIONS OF RUSSIA.*

THE air of this country is wholesome, and the rigour of the climate is, in some measure, compensated by the purity of the atmosphere; as a proof of which may be cited the absence of contagious and epidemic diseases—even of those disorders which, without actually endangering existence, frequently attack the entire population of a country. Strangers preserve their health better than even in more temperate latitudes; but their features change sooner, and gray hairs generally anticipate old age. In short, the Russian faces may be said to grow old before their time. Females are particularly subject to the influence of the *Great Bear*.

It must be admitted, that a continued cold of fifteen or twenty degrees is a terrific enemy; and, in very severe winters, it sometimes reaches even twenty-five and thirty: nothing can be more rapid than the execution it then makes. Suppressed perspiration is equivalent to a sentence of death, to reverse which, the utmost efforts of medical science would prove unavailing. Drunkenness succeeded by sleep is almost always mortal. I recollect an instance of a coachman, who, after having driven his master's carriage to the theatre, repaired to a neighbouring *kobak* (wine-shop) to charm away the lingering hours with his usual beverage,—a glass or two of brandy. On returning to his seat he fell asleep: the footman some time afterwards gave the customary signal for departure, but the reins were motionless in the unfortunate Jehu's hand; and on endeavouring to rouse him, one of the lackeys found him dead.

It is easy to conceive the number of accidents that happen to sentinels during the excessive severity of a Russian winter: at Petersburg and Cronstadt, in the year 1820, many were found perished in a single night.

In Russia it is by no means an uncommon circumstance to hear two people accost each other in the following dialogue, by way of salutation: "I beg leave to acquaint you that your nose is freezing"—to which the other probably answers, "I was just going to observe to you that yours is already frozen." On such occasions both the sufferers stop, and reciprocally perform on each other the operation of rubbing the afflicted part with a piece of stuff, or sometimes with a handful of snow, in order to restore the circulation of the blood. After this service mutually rendered, the parties separate with the usual ceremonial of bows and salutations. Upon one occasion, an Italian arrived at Petersburg for the first time in the month of Decem-

* These recollections were intended to form the conclusion of our review of Russian Literature, last week, but were by some error omitted.

ber. He had scarcely stirred a short distance from the house, when his nose became completely frozen. A good-natured peasant perceiving his mishap, took up a handful of snow, and, without stopping for explanation, instantly commenced rubbing the stranger's nose in the most liberal manner. The latter, far from being grateful for the peasant's interference, mistook his humane but rather blunt procedure for a desire to insult him, and at last, in the violence of his passion, began to belabour the operator most lustily. A crowd soon gathered—a police-officer came up, to whom the peasant explained his motives. The officer luckily spoke French, and order was speedily restored. The Italian was now at a loss to find excuses for his ungrateful hastiness, and conjecturing that the *billet bleu* (worth about four shillings,) would be the most effectual peace-maker on the occasion, he slipped one into the hands of the nose-rubber, who, emboldened by the unexpected gratuity, immediately recommenced his operation with increased vigour. The Italian shortly afterwards retreated, carefully holding his nose, and exclaiming, "Good God! who would have imagined this at Florence!"

On another occasion, a Venetian, terrified, I had almost said petrified, by the severity of a winter at Petersburg, indulged in the most bitter and fruitless invectives against the climate. At the moment when his lamentations were most dolorous, he was informed that a foreigner had just committed suicide at the public baths. The narrator of the story, commenting on the event, exclaimed, "How horrible! no mercy can be extended to suicides!" "Excuse me, sir," replied the Venetian; "God can never be so unjust as to punish suicides committed at Petersburg."

The following anecdotes relative to the Emperor Alexander, and furnished by one of his *aides-de-camp*, will afford the reader some characteristic traits of his late imperial majesty:—

The gardens of Tsarkoé-Sélo (the favourite palace of the emperor) were always open to the public. Notwithstanding Alexander's taste for solitude, he could never bring himself to deprive the inhabitants or strangers of the pleasure afforded by the walks of this delightful retreat. He did not, however, usually extend his indulgence so far as to suffer any petition to be presented to him in the course of his promenades. No positive law existed on this subject; but custom is often more binding than any enactment. An advocate (M. Béakre), though perfectly aware of the strict etiquette observed in the imperial park, was determined to try all means to speak with his sovereign. The successful termination of a law-suit confided to his management, depended, in his opinion, on a few moments' audience of the emperor. Arming himself with a double dose of the assurance which is seldom lacked by gentlemen of his profession, he set off for the park. He was not, however, fortunate in his first essay, as the alleys of the park are of immense extent, and the emperor on that day did not happen to pass through the one in which the petitioner had taken up his position. The second trip was more successful, as the monarch and the advocate encountered each other almost immediately. The latter had already dressed his batteries: he hoped that the emperor, perceiving a neatly folded paper in his hand, and the half piteous expression of a suppliant in his countenance, would condescend to break the ice, and afford him some opening for preferring his suit. The emperor, however, escaped the snare; contenting himself with returning the

advocate's salute as he passed, he regained his palace, and the same evening went back to Petersburg. The advocate, though disappointed, was not discouraged. In a fortnight afterwards, his imperial majesty again visited his favourite palace. The autumn was already far advanced. The toughest trees in the park bent to the blast of a sharp north-east wind, which had put to flight all the promenaders except the emperor and the hardy petitioner. Chance at last befriended the advocate. At the extremity of one of the walks he suddenly found himself in the presence of his sovereign, and addressed him with confidence. To his respectful solicitations the emperor bluntly replied, "Pray, Sir, be covered; the air is too keen for you to remain bareheaded." The advocate, from excess of respect, thought it prudent to disobey this order: it was repeated. "Be covered, Sir, be covered," exclaimed the emperor, impatiently; and as the advocate still hesitated, Alexander himself seized his hat, forcibly pressed it down on M. Béakre's head with one hand, and with the other pinioned the advocate's arm to his side, to escape his further demonstrations of respect. The advocate immediately presented his petition. "I shall not take it, Sir," replied the emperor; "were I to receive it, I should to-morrow be pestered with a thousand more. But observe that alley—it leads in the direction of the post-office, where you may deposit your memorial; in an hour hence it will be in the palace." "Sire, I shall go instantly; but if your majesty would deign to cast your eyes upon this clause"—(and the advocate held his papers open): the emperor, overcome by his respectful importunity, hastily read the clause in question, and retired, saying, "Your claim is just—to-morrow it shall be attended to;" and the very next morning it was granted.

The emperor was one day walking in the gardens accompanied by two favourite dogs, whose frolicsome, though rather rough gambols, occasioned no little terror to a lady, who, from her appearance, was a foreigner. The emperor immediately accosting her, offered his excuses with the utmost politeness, and pursued his walk in company with the lady and the rest of her party, to whom his majesty had the complaisance to act as *cicerone* for several minutes, and to point out different objects worthy of notice. "Sir," at length observed the lady, "all that you have shewn us is certainly very fine; but, for my part, I should prefer seeing the emperor to any other sight." "Madam," replied the emperor, "nothing can be more easy than to gratify your wishes; Alexander frequently walks in these gardens, and you will see him sooner than you imagine; it is even probable that you may speak to him before the day be over." The emperor, upon this, saluted the party, who speedily lost sight of him in a thickly planted alley. The lady afterwards meeting with an officer of the court with whom she was acquainted, requested to know who the colonel was that had been so excessively polite. "The emperor, Madam," was the reply.

Most of the houses in Petersburg are provided with two doors,—a circumstance that, unfortunately for the *ivotchik* (Russian hackney coachmen), furnishes *mauvais sujets* with the opportunity of bilking them of their fare. Whilst the poor *ivotchik*, with his humble equipage, waits patiently at one door, the customer often walks quietly out at the other. The emperor, in the course of his *incognito* excursions, occasionally engaged one of the above-mentioned modest vehicles. He one day ordered

an *ivotchik* to drive him to the palace, and, on alighting, desired him to stop an instant, adding, that his fare should be sent out to him. "No, no," replied coachee, "I'm up to that trick; I've driven many a grand gentleman to this same palace, and never seen a sight of him again. Just try your pockets, will ye, and see if you can't find my fare at the bottom." "I positively have no money," replied the emperor; "but stay—here is my cloak, which I leave in pledge with you." "I'm satisfied," said the *ivotchik*; "I see it's new, and therefore you'll be in a hurry to redeem it." The emperor laughed heartily, and disappeared. In a few minutes, a valet-de-chambre of the court was sent to demand "his majesty's cloak," and at the same time presented a hundred rubles to the amazed *ivotchik*, to make up for the losses he might previously have sustained. Coachee retired in the utmost consternation, at the idea of having mistaken the "Emperor of all the Russias" for a *slippery customer*.

SIEGES OF CONSTANTINOPLE.

THIS celebrated metropolis, the *Anthusa*, or blooming maiden, of the Greeks, and the *Ummüdünya*, or mother of the universe, as it is styled by the Turks, has been visited with the horrors of nine-and-twenty sieges. The subsequent enumeration of their successive occurrence cannot fail to possess something more than a transient interest in the eyes of our readers.

- B.C. 477. Besieged by Pausanias after the battle of Platae.
 410. By Alcibiades, in the beginning of the fifth cent. anno 410 or 411.
 347. By Leo, Philip's general.
 A.D. 197. By the Emperor Septimius Severus.
 313. By Maximilian Caesar.
 315. By Constantine the Great.
 616. By Choroës of Persia, under Heradius, emperor of the East.
 626. By the Chaghan of the Avari, an ally of Choroës.
 666. By Moavia, the general of All, an Arab sovereign.
 669. By Isid, a son of Moavia.
 674. By Sofian Ben-Auf, one of Moavia's generals.
 719. By two sons of Caliph Merwan, when Anthemios was emperor.
 744. By Solymán, a son of Caliph Abdolmelek.
 764. By Paganos, the kral of the Bulgarians, under Constantine V.
 786. By Harun-al-Rashid, under Leo IV.
 796. By Abdolmelek, a general of Harun-al-Rashid.
 811. By Krumus, the despot of the Slavonians.
 830. By Thomas, the Slavonian, under Michael the Stammerer.
 886. By the Russians, under Ascol and Dir.
 914. By Shmeon, kral of the Bulgarians.
 1048. By Tormicus, the rebel, under Michael Monomachos.
 1081. By Alexius Comnenus, on Good Friday.
 1204. By the Crusaders, on the 12th of April.
 1261. By Michael Palaeologus, on the 25th of July.
 1396. By Bajazet, the lightning-flash. The first Ottoman siege.
 1402. By the same.
 1414. By Musa, a son of Bajazet.
 1422. By Amurath II, a son of Mahomet I.
 1453, 29th May. By Mahomet II. "the conqueror of Constantinople," against whose victorious host, Phrazaïs tells us, Constantine Dragoes Palaeologus, the last Greek emperor, rushed forth, exclaiming, "I would rather die than live!" and shortly afterwards, perceiving himself deserted by his recreant followers, and crying aloud, "Is there no Christian hand to smite off my aching head!" met a glorious death, though doomed to fall by the cimeter of an infidel.

DRAMA.

ENGLISH OPERA HOUSE.

If persevering and judicious exertion ought to command success, we need not wonder at

* Though Elmakim speaks of a second siege by the Russians, in 940, when Igor is said to have devastated the Greek territories at the head of 400,000 men, we feel ourselves justified, by Karamsin's silence, in excluding it from this enumeration.

On a previous occasion, namely, in the year 904, Oleg descended the Dnieper with 80,000 followers, and encamped under the walls of Constantinople, which, after Leo the philosopher had made a fruitless attempt to rid himself of his adversaries by wholesale poison, was redeemed by the cogent argument of an immense ransom.

the popularity which has this season rewarded the management of the English Opera House. The absence for a week of Mr. Phillips, to meet an engagement at the Chester Musical Festival, having interrupted the brilliant career of *Der Vampyr* for a few nights, we have had two novelties produced during that short period. The first is a little operetta called *Sold for a Song*, from the pen of Mr. T. H. Bayly; and the music, which is both clever and pleasing, by A. Lee. Something allied to *Il Fanatico per la Musica*, in this piece a Count Cremona (J. Russell) resolves to wed his niece Adele (Miss Cawse) to the singer of the best song among the aspirants to her hand. Alfred, her lover (Mr. Wood), woe in the prescribed fashion, but in the several characters of a Spaniard, Italian, and Englishman: the Count rejects the latter as a Boeotian; and it is only when convinced that the three musicians are the same person that he consents to make the youthful pair happy with each other. Two other parts, that of *Dense* (Mr. Salter), and *Elisa* (Miss H. Cawse), fill up the *dramatis personæ*, and give variety to the scene. Light and playful, there is all the merit that could be desired in this interlude; and it enjoys the further advantage of being well acted and charmingly sung. Russell and his fair companions are excellent; but the brunt of the battle is borne by Wood, and it could not be imposed on a more efficient supporter. His songs, and especially the English ballad, are remarkably sweet,—sweet enough to win fifty brides, were brides generally to be sold for songs, instead of gold, as is the usual practice. The drama has been received throughout by the audiences with unmixed approbation; and we notice this, because some of our brother critics have, we are told, offered different opinions. Citing jokes which do not occur in the piece, they censure them as too bad even for farce. Now, though it is almost absurd to weigh such matters nicely and gravely, we cannot think that any of the pleasantries which we heard were other than of that species of light badinage very well and laughably employed in so unpretending a composition. For instance, though we will not uphold them as belonging to the highest class of wit, we were amused with the following. The maid-servant, when informed by Dense that her mistress must marry to please her guardian, says, "Oh, but Alfred must and will have her. He'll take a lover's leap if he don't!" "What! tumble over a treble cliff?" rejoins the musical factotum. Again, when Cremona is playing on a square piano, Dense says, "I beg your pardon, sir, is not your piano a *leettle* out of tune?" "No," replies his master; "the question is an insult: my piano never fails me; I can always depend on it." "Then, sir," says Dense, "it is what I call really an *upright* piano-forte." Such dialogue is, in our judgment, precisely of that sportive cast which befits a trifle of this order. And a still more complete justification might be made for the author (were it worth while) against the charge of having spoken illiberally of foreign musical talent. In fact, he has done no such thing; and the public ought to thank him for the well-intentioned and well-expressed sentence or two which he has introduced in praise of

our native songsters. Much as every person of taste must admire the exhibitions of such foreign excellence as we enjoyed during the past season in London, it is not going too far to confess a wish that English excellence had not been so generally excluded from our musical entertainments. We cannot tell exactly how often the unrivalled Braham appeared,—only not half so often as was desirable; and (excepting the concerts of ancient music) we do not remember that Paton or Stephens sang more than twice each at the multitude of morning concerts which filled so many months. These hints, by the by.

With regard to the second drama, *the Recruit*, we regret that we cannot speak so favourably. It seems to be adapted from the Chronicle of the Canongate, where the Highland Widow drugs her son's cup to prevent him from joining the regiment into which he has enlisted; only the scene is laid in Switzerland, and it is husband and wife instead of son and mother. The circumstances are nearly the same, and few or none of them not familiar to the stage. Thus, the preparations for shooting a deserter, and the pathetic appeals of his spouse, though relieved, as usual, by an underplot with some comic situations, and though sustained by the powers of Miss Kelly, aided by J. Vining, O. Smith, Keeley, Mrs. K., &c., failed to produce altogether the effect which some of the scenes separately realised. *The Recruit* is, however, we understand, only the first attempt of a recruit in the dramatic world, —Mr. Haller, a banker.

Allowances to the French Theatres, &c.—It appears from a recent statement, that of the 1,300,000 francs which are carried annually to the civil list in France, for the support of the royal theatres, 840,000 francs are given to the Opera House (Académie de Musique), 200,000 francs to the Théâtre Français, 130,000 francs to the Opéra Comique, 140,000 francs to the Conservatoire de Musique, 90,000 francs to the Italian Theatre, and 160,000 francs to the Odéon. In addition to these, there are 120,000 francs allowed in pensions to literary men, who write for the theatres, and who are about eighty in number. Notwithstanding the enormous amount of the sum devoted to the Opera House (about £32,000), and the comparatively high prices of admission at that theatre, so numerous are the persons who are thrown upon the establishment by the influence of the ministry, that the director is said to gain very little by his privilege from government. The Odéon, notwithstanding the aid which it received, became a bankrupt concern; and Laurent, of the Italian Theatre, declares that it is impossible to carry on the business with the present allowance. The system of granting sums of money to the managers of theatres is not peculiar to the capital. In nearly all the large towns, and in many of the smaller ones, a fixed allowance is made by the municipal authorities; subject, however, to cessation, and to a revocation of the privilege granted to the manager, if he should fail to provide a *troupe* to the satisfaction of the inhabitants. There are some towns in France, with a population of less than 15,000, in which the manager is required to keep a full company for tragedy, comedy, and opera.

Foreign Drama.—The French papers contain a long account of the trial of a M. Carloti before the conventional police at Paris, upon a charge of having given dramatic representations without a license. On the trial, however, it appeared that M. Carloti merely

caused his pupils, who are learning languages upon a new system, to perform dramatic scenes in different languages, for the purpose of shewing the rapidity and correctness with which they obtain a knowledge of them under M. Carloti's tuition. The charge being proved, M. Carloti was sentenced to pay a fine of 100 francs; but the court recommended him to apply to the government for a license, and promised to use its endeavours in his behalf to obtain one.

VARIETIES.

Covent Garden.—At a meeting called by the performers of Covent Garden theatre on Wednesday, and attended by such of its friends as are in town at this season, a voluntary loan and subscription were entered into, to enable the house to be opened at the usual period. The creditors having abstained from pressing their claims, under all the unfavourable circumstances of the case, we rejoice to say that about 1500*l.* were subscribed, and since then (Friday evening) about 400*l.* have been received at the box door. This augurs well, as 6000*l.* will be sufficient for present purposes, and no account has yet been taken at the bankers', where, of course, the principal nobility, and other friends of the drama possessed of ample fortunes, from whom the largest sums may be expected, will, as speedily as their convenience allows, send their donations. Of these we hope to hear a satisfactory detail early in next week.

Population of Constantinople.—From the last returns, the population of Constantinople (which was thought to be very large) proves to amount to only 380,000 souls, reckoning the inhabitants of the environs. The number of persons capable of carrying arms is in a very small proportion. The number of houses is calculated to be 85,000.

Vegetable Poisons.—In a paper recently read to the Académie des Sciences, to shew the means of neutralising the action of vegetable alkalies on the animal economy, it was stated that the administration of two grains and a half of the iodide, the bromide, or the chloride of strychnia, produced no pernicious effect on a dog, although it is well known that strychnia is the most deleterious of the vegetable alkalies, and that half a grain will kill a large dog. It being important to ascertain whether, if the poison and the antidote were introduced into the stomach separately, an innoxious combination would take place, seven experiments were tried of administering, first, a grain of pure strychnia or veratrin, and subsequently a dose of tincture of iodine; and, with the exception of one case, in which the administration of the tincture of iodine was too long delayed, the life of the animal was uniformly preserved. The same success, however, did not attend the administration of the tincture of bromine.

The French Press.—It is painful to observe how completely any political movement in France destroys, for a time at least, the literary and scientific character of the French periodical press. At the present period, those columns which were, until lately, filled with valuable disquisitions on subjects of practical and general utility, are now devoted to the most bitter, malignant, and disgusting abuse of the party which has recently obtained an ascendancy in the French cabinet.

New Medicament.—Messrs. Caventou and François have announced to the Académie des Sciences the discovery of a particular chemical principle, which they consider as a useful remedy in which the therapeutic art has hitherto

* The only passage we remember that could be so construed at all is a mere jocular repartee, where Cremona calls the English a damp, foggy, husky, inharmonious atmosphere; and Elisa says, "Inharmonious! let me tell you, foreigners sing much higher in England than in their own countries:—Oh, they run up astonishingly. I've heard of a *shew*-toned voice: bless your heart, in England a voice is positively gold."

been deficient. They found it in the root of a Brazil shrub of the family of the rubiacæ. It is the *kaiaca chiococca racemosa*, known in the province of Bahia by the name of *rair-prela*, the black root. Various experiments have proved that the extract from this root is tonic, without being stimulating. It has other properties, which seemed to indicate that it would be serviceable in cases of dropsy; and it has been tried in such cases with the happiest results.

Sorofula.—Iodine has recently been administered, with great success, in the French hospitals in scrofulous disorders.

Imperial Munificence.—The Emperor of Russia has desired Von Cancrin, his minister of finance, to send Baron A. Von Humboldt twelve hundred ducats, on account of the expense of his intended visit to the Ural district. This sum, however, is merely designed to cover his disbursements until he reach St. Petersburg, where a further sum of ten thousand roubles (450*l.*) will be presented to him. The governors of all towns and provinces have been ordered to afford him every aid in their power. He travels from Berlin in company with Professors Rose and Eschenburg, and will be joined at St. Petersburg by several pupils of the mining department.

The Zend-Avesta.—The first European edition of this work, in its native tongue, is now in the Hamburg press. It is preparing at the instance, and with the support, of the Danish government, by Professor Olshausen of Kiel, who will enrich it with a critical and exegetical commentary. The celebrated lithographic establishment of Speeter is employed upon it; and the first volume is so far advanced that its appearance is at hand.

Ecclesiastical Edifices: their dimensions.—There is now in course of publication at Milan a most splendid work, entitled, "Chiese principali d'Europa," which will extend to thirty-six Numbers, each of them being devoted to one particular edifice. From the Nos. already published we extract the subsequent notes.

St. Peter's, at Rome.
Width of the cathedral..... 333 English feet.
External diameter of the cupola .. 158
Total height 448

Cathedral at Milan.
Width of the front..... 216 feet.
Width of the cross 251
Total height 350

Pantheon, at Rome.
Length of the portico 103 piedi.*

* The measurements of this edifice are given in feet; but they are neither the Roman, nor the Parisian, nor any other feet we are acquainted with. The other measurements are given in French metres of 39.37*in.* English inches.

Width of ditto..... 61
Interior diameter 133
Height from the pavement to the summit of the cupola 133

St. Stephen's, at Vienna.
Width of the facade 148 feet.
Great tower (from the ground to the tip of the cross) 450
Greatest breadth between the two chief towers 235

St. Mary's "del Fiore," Florence.
Whole length 517 feet.
Total height 366

Preservation of Canvass, &c.—An inhabitant of Troyes, in Champagne, has discovered a method of preparing canvass, and every other description of coarse linen, so as to resist damp, and prevent the approach of insects or vermin; thus rendering it a valuable article for flour and provision bags generally. Some sail cloth, which had been prepared by this person, and laid by in a very damp situation for two years, was found to be in perfect condition; whilst another portion of the same cloth, which had not been so prepared, was nearly rotten. He premises to make his discovery public.

French Cavalry.—The Comte de la Roche-Aymon, a lieutenant-general in the French army, has just published a work on the improvement of the French cavalry; in which he admits that the French horses, although abundant, are much inferior to the English, and attributes the superiority of the latter principally to the race-course. Of all the continental states, Prussia seems to be that in which the amelioration of the various breeds of horses has been the most attended to.

German Receipt to cure Hams.—In Westphalia they prepare the hams in the months of November and March. The Germans place them in deep tubs, which they cover with layers of salt and saltpetre, and with a few laurel-leaves. They are left four or five days in this state, and are then completely covered with strong brine. At the end of three weeks they are taken out, and left to soak for twelve hours in clear well-water; they are then exposed during three weeks to a smoke produced by the branches of juniper, which is very common in that country. — *Biblioth. Physico-Econom.*

A Word!—A late Number of the Cherokee Phoenix furnishes an example of a long and very significant word. It is written thus:—wi-ni-dau-di-ge-gi-na-li-akau-lung-da-nau-neli-di-se-ti, and signifies—"They will, at the time, have almost ceased to shew favour from afar (or, while absent) to me and to thee." The first syllable, *wi*, denotes that the subject of the verb is absent. *Ni* denotes that some circumstance or other is spoken of, and that the action of the verb will be completed as soon as that circumstance takes place: hence it is rendered, *at the time*. The syllable *dau* shews that the action of the verb is dative—to thee and to me, to each severally. *Di* denotes the plural of the object of the verb, that more than one favour is shewn. The word favour is not expressed in this polysyllabic word, but merely the circumstance that several are shewn—the abstract idea of the plurality of the object. The next syllable, *ge*, denotes the person and the number of the verb, *they*. *Gi-na*—these syllables express the persons and numbers of the receivers—*thou and I*. Only three syllables, *li-akau-lung*, are radical and unchangeable. *Da* varies with tenses and moods, but is not of particular importance. The syllable *nau* indicates that the action is nearly finished—they will almost have ceased. *Ne* is equivalent to our *to*, and has a dative signification. *Li-di* signifies almost, or rather our *to be about—they are about to finish, or to cease*. The concluding *se-ti* is the termination of the future. This example shews that the Cherokee language can make shift with few particles, and without any prepositions at all.

LITERARY NOVELTIES.

A new Annual, announced to be upon a more enlarged and splendid scale than any hitherto undertaken, is now, we are informed, in active preparation. It is to be entitled "the Landscape Annual, or the Tourist in Switzerland and Italy;" and will be published by Mr. Jennings, with its contemporary, about November. Twenty-six highly finished line engravings, executed from coloured drawings taken on the spot by Mr. Prout, and the whole of the embellishments under the direction of Mr. Charles Heath, are the attractions advertised. The literary department is conducted by Mr. T. Roscoe. A few specimen copies of the work, a size larger than the Keepsake, are already exhibited.

The Winter's Wreath for 1830, a Collection of Original Pieces in Prose and Verse, contributed by Mrs. Hemans—Miss Mitford—Mary Howitt—Miss Jewsbury—Miss E. Taylor—Miss Bowles—Miss M. A. Browne—Delta—author of "Recollections of the Peninsula"—author of "Selwyn"—author of "Rank and Talent"—a Modern Pythagorean—the Roscoes—Archdeacon Wingham—Rev. Drs. Butler, Raffles, and J. Parry—Bowring—Wiffen—W. Howitt—Derwent Conway—Hartley Coleridge, &c.

&c.;—and embellished with engravings from Northcote—Howard—H. Bone—Havell—Stephanoff—Christall—Lewis—Wild—Jan Steen—Moses—Williamson, and Austin,—finishes (we believe) the Annuals announced for the ensuing season.

A History of China, translated from the Chinese of Choo-Poo-Tze, by P. P. Thoms, many years resident at Macao in China, is announced for early publication. It is stated to commence with the reign of Fuh-ha, according to Chinese chronology B.C. 3000, and to reach the reign of Min-te, A.D. 300, including a period of 3,300 years.

In consequence of a representation from the proprietors of "Friendship's Offering," "the Offering," a new Annual, announced by Mr. Dale (see our No. 369), is to be named "the Iris, or Literary and Religious Offering."

We have had a very satisfactory letter from the author of Herbert Milton, and of the King's Page, in which he explains the causes (over which he had no control) that led to the marked inferiority of the latter publication, and to the long-continued system of puffing which preceded its appearance. Having in the former instance spoken highly of the author's talents, and in the latter felt it to be our duty to censure his work,—we think it but justice to him and to ourselves to notice his explanation, and to absolve him almost entirely from responsibility for the errors we condemned.—We believe the author has another novel in hand, which we trust will equal his first clever production, and stand dear of the faults of his last.

Herbert Milton has been translated into German by Mr. Richards (formerly a lieutenant in the Hanoverian service); and the same gentleman is now employed on Devereux, having already given Pelham and the Disowned a German dress. These translations, though stiff and destitute of grace and elegance, are very popular in Germany.

A monthly Edinburgh Journal of Natural and Geographical Science, conducted by an Association of Naturalists, illustrated occasionally with Maps, Charts, and Engravings,—is about to appear.

There is nearly ready for publication, a second edition of the works of George Peele, collected and edited, with some Account of his Life and Writings, by the Rev. Alexander Ayrton. This edition will, we are told, contain the fac-simile of a very curious letter from Peele to Lord Bureleigh, the entire poem of Polyhymnia, and numerous additional notes and corrections.

Mr. Cooper, the American novelist, has nearly ready for publication a new tale called the Borderers.

It has, we are assured, been erroneously stated that Sir Walter Scott is preparing another series of the Tales of a Grandfather. Sir Walter Scott is now, and has been for some months, preparing a history of Scotland from the earliest period of authentic record to the union of the crowns. This work is already in the press, and will be published on the 1st of November, being the first volume of Dr. Lardner's Cabinet Cyclopædia. In conjunction with Sir Walter Scott, are engaged Sir James Macintosh and Thomas Moore, Esq.—the one for the history of England, and the other for that of Ireland.

In the Press.—The fourth volume of Russell's Works of the English and Scottish Reformers.—A third edition of the Familiar Treatise on the Human Eye, by Francis Westcott, M.D.—Selections from the German, in Prose and Poetry, for the use of the students in the University of London, by L. Von Mühlenfels, LL.D.;—and Lectures Preliminary to the Study of German Literature, by the Same.—Second Edition of Compton's Savings Bank Assistant; with the Report of a Committee of the House of Commons on Life Annuities in Connection with Savings Banks.

LIST OF NEW BOOKS.

ADVERTISEMENT

Connected with Literature and the Arts.

Royal Irish Academy House, Dublin, August 25th, 1820.

THE ROYAL IRISH ACADEMY hereby give notice, that they propose to give a Premium, not exceeding 60*l.* to the Author of the best Essay, in case it should have sufficient merit, on the following subject:—Ireland during the Reign of Henry II.: its Civil and Political History; its Religious Opinions and Ecclesiastical Establishments; its Advancement of Retrospect in the Arts and Sciences; its Laws and Customs; its Social and General Habits within that interval, and what changes therein were effected or influenced by the Events of the Period. The Academy propose to give, in like manner, a Premium, not exceeding 60*l.* to the Author of the best Essay on the following subject, which was proposed last year, but which is now repeated, the answers returned not having deserved satisfaction:—Whether we have reason to believe that a change has taken place in the Climate of Ireland, and if such change has occurred, through what period can we trace it, and to what causes should we assign it?

Essays on the subjects here proposed will be received, if sent post free, to the Rev. J. H. Singer, D.D. Secretary, at the Academy House, 114, Grafton Street, Dublin, on or before the 1st of November, 1820. Each Essay to be inscribed with some motto, and accompanied with a sealed billet, superscribed with the same motto, in which shall be written the Author's Name and Address.

TO BOOKSELLERS and PRINTERS.

To be Shipped of, a Bookbinding, Stationery, and Printing Business, to which is attached an extensive modern Circulating Library and Music Trade, situate in a principal Market Town in the County of Suffolk, the Proprietor declining Business. The Premium moderate. Stock and Fixtures to be taken on the usual Terms. Letters (post-paid) addressed to A. B. at Mr. Linbald's, Mirror Office, 142, Strand.

E. GOULD'S IMPROVED LUCERNAL MICROSCOPE.

This instrument is admirably calculated for viewing lamps or small objects, particularly covering the field being capable of taking in, at one view, suns, moons, batteries, &c. &c. By this instrument that superb insect the orcutilla, or diamond beetle, is magnified to 18 inches, showing its variegated brilliancy in the highest perfection. The astronomer may examine any rare insect without injury, and the mineralogist will be afforded the means of viewing the beauties of his cabinets in a unique and splendid manner.

A microscope of this description has long been a desideratum; such instruments have, hitherto, been both expensive and complicated; this one is with confidence offered to the public, and will be duly appreciated for its prominent qualities, splendid effects united with great facility in its management. Made and sold by W. Cary, 181, Strand, price 2*l.* 12*s.* to 2*l.* 12*s.* 6*d.*

MUSIC.

PIANO-FORTES. An extensive Assortment, usually above 50, of the various kinds, and of the most fashionable and choice descriptions, by all the eminent Makers, on highly eligible Terms, at from Ten to Fifty Guineas and upwards, warranted. The equitable and undeviating plan pursued in the Prices fixed, and no Abatement whatever made. At 71, Dean Street, Soho, opposite Queen Street.

The Vale of Slaughtden, a Poem, in Five Cantos. By James Eisd. 2d edition, price 7*s.* 6*d.*

In 3 vols. post 8vo.

THE SCHOOL of FASHION.

"If it were not rather late in the day to recommend a book which is already a current topic in society, we would venture to direct the attention of our readers to the 'School of Fashion,' as affording more than any other of what are called fashionable novels, a true index to the tastes and feelings of the great world. The author is known to be a person of high rank, and this is a circumstance to which some weight is really due, when a book pretenses to depict the lives and manners of the aristocracy. But in this instance the author is more than merely a person of high rank. It is impossible to read her book without acknowledging that she is also a person of lively talents and quick observation, with a keen sense of the ridiculous, united by rather a rare combination with clear sound sense and perspicacity of judgment."—*Courier.*

Printed for Henry Colburn, 5, New Burlington Street.

Albemarle Street, August 1820.

Volumes of the Family Library published up to this time, by

NOS. I. and II. containing the **LIFE of NAPOLEON BUONAPARTE**, with Fifteen Engravings on Steel and Wood, by Finden and Thompson; the Extracts from Designs of George Cruikshank. Very neatly bound in canvass, 5 vols. 8*s.* each. 3d edition, in the press.

No. III. *The Life of Alexander the Great.* By the Rev. John Williams, M.A. Rector of the Edinburgh Academy. In 1 vol. 3*s.* 2d edition.

No. IV. *Lives of the most Eminent British Painters, Sculptors, and Architects.* By Allan Cunningham. Vol. I. (to be completed in 5 vols.) illustrated by Ten Engravings on Steel and Wood. 4*s.*

No. V. *The History of the Jews.* Vol. I. (to be completed in 5 vols.) illustrated with original Maps and Woodcuts. 5*s.*

No. VI. Vol. II. of the *History of the Jews*, will be published early in September.

Second edition, post 8vo. 2*s.* 6*d.*

NARRATIVE of a JOURNEY from CALCUTTA to EUROPE, by way of EGYPT, in the Years 1827 and 1828.

By Mrs. CHARLES LUSHINGTON. "We have no hesitation in recommending Mrs. Lushington's Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of approbation."—*Oriental Herald.*

John Murray, Albemarle Street.

Dr. Ayre on Dropsy.

3d edition, just published, price 8*s.* boards.
PATHOLOGICAL and PRACTICAL RESEARCHES concerning the NATURE and TREATMENT of the several FORMS of DROPSY. By JOSEPH AYRE, M.D.

Member of the Royal College of Physicians, &c. 3d edition, with additional Cases, illustrative of the very successful results of a new and greatly improved Method of treating these Diseases. Printed for Longman, Rees, Orme, Brown, and Green.

In 2 vols. 8vo. with numerous Plates, from Drawings by Mrs. Ward, price 2*l.* 2*s.* boards.

M E X I C O. By H. G. WARD, Esq.

"The 3d edition, revised. Comprising an account of the Mining Companies, and of the Political events in that Republic, to the present time."

"We are glad to see this second and enlarged edition of the most systematic and complete work of the kind in possession of respecting Mexico. Mr. Ward, as British Charge d'Affaires, for more than two years, enjoyed the best opportunities for acquiring the first intelligence; and he has evidently possessed the ability to make the best use of these advantages. Thus his work is of very great value; and, at this time, when the political fate of Mexico is again in the balance,—when an attempt is making to retrieve it for a Spanish dependency, and when union with North America and separate existence are equally spoken of—it is important to have reference to a work of that high authority which these volumes present. Not only their matter, but their maps and illustrations, render them of sterling worth and utility."—*Literary Gazette.*

Printed for Henry Colburn, 5, New Burlington Street.

In 2 vols. 8vo. price 2*l.* boards.

A SECOND COURSE of SERMONS for the YEAR, containing two for each Sunday and one for each Holyday; abridged from the most eminent Divines of the Established Church, and adapted to the Service of the Day; intended for the Use of Families and Schools. Dedicated, by permission, to the Lord Bishop of London.

By the Rev. J. R. PITMAN, A.M. Alternate Morning Preacher at Belgrave and Berkeley Chapels, and alternate Evening Preacher of the Foundling and Magdalen Hospitals.

"There is no question which the clergy are more frequently asked, and to which they find it more difficult to give a satisfactory reply than this.—What sermons would they recommend for the use of a private family? We really think that Mr. Pitman's work bids fair to supply the deficiency which has been so much regretted."—*Quarterly Theological Review.*

2d edition of the First Course is just published, same size and price as above. Printed for James Dancourt, 3, Paternoster Row.

In 2 vols. 8vo. 2*l.*

HISTORY of the late CATHOLIC ASSOCIATION of IRELAND, from its Institution in 1792, to its final Dissolution in 1820.

By THOMAS WYSE, Jun. Esq. Printed for Henry Colburn, 5, New Burlington Street.

In 1 vol. 8vo. 1*l.*

PERSONAL and LITERARY MEMORIALS. By HENRY BEST, Esq.

Author of "Four Years in France," and "Italy as it is." Printed for Henry Colburn, 5, New Burlington Street.

3d edition, in 2 vols. 8vo. with Map and Plans.

BURCKHARDT'S TRAVELS in

ARABY, comprehending an Account of these Territories which the Mohammedans regard as Sacred. "A valuable legacy from one of the most laborious, learned, and amiable of modern travellers."—*Athenaeum.*

"The real value of the book consists in the complete view it gives us of Mecca and Medina—the chief cities of the sacred soil—embracing the whole succession of ceremonies connected with the visits to the temples, the numerous objects of adoration or respect, and the performance of the pilgrimages; of all of which very little was before known from any authority to which implicit credit could be attached. With the dress and manners, the author assumed the character of the religious professors of an Egyptian gentleman of decayed fortunes, visiting Mecca as a hagi, or pilgrim, and under this disguise, which he was so well qualified to sustain, uninterrupted surveyed the forbidden scene."—*New Monthly Magazine.*

Printed for Henry Colburn, 5, New Burlington Street.

Novels by Distinguished Writers.

Lately published by Henry Colburn, 5, New Burlington Street; and to be had at all respectable Libraries.

THE NEW FOREST.

By the Author of "Brambletye House," &c.

In 3 vols. 3*s.* 6*d.*

Devereux, by the Author of "Pelham,"

and the "Disowned." In 3 vols. 3*s.* 6*d.*

The King's Page. By the Author of "Almack's Revisited." 3 vols. 3*s.* 6*d.*

Traits of Travel; or, Tales of Men and Cities. By the Author of "Highways and Byways." In 3 vols. 3*s.* 6*d.*

The Chelsea Pensioners, a Series of Tales, by the Author of "The Subaltern." 3 vols. 1*l.* 11*s.* 6*d.*

Contents:—The Gentle Recruit—A Day—Saragoza—Malda—a Pyrenean Adventure—the Rivals.

THREE YEARS in CANADA. An

Account of the actual State of that Country in 1826, 1827, and 1828.

By JOHN MACTAGGART, Esq.

Civil Engineer in the Service of the British Government.

"This is the most valuable work that we have hitherto seen upon one of the most important colonies of the British empire. It embraces every topic—navigation, agriculture, discovery, transportation, the settling of the means of subsistence, wood-clearing, the civil and political relation of Canada to Europe and the United States, climate, temperature, diseases, traffic, canals, &c. The book is interesting to every man who desires to have a statement of Canada, free from fiction or exaggeration of any kind. To the emigrant it seems indispensable, and is the best vade-mecum that could prepare him for his enterprise, or guide him in its prosecution."—*Globe.*

PRICE 8d.

REVIEW OF NEW BOOKS.

The Epping Hunt. By Thomas Hood, Esq. author of "Whims and Oddities." Illustrated with six engravings on wood, by Branston and Wright, Bonner, Slader, and T. Williams; after the designs of George Cruikshank. 12mo. pp. 29. London, 1829. C. Tilt.

THE epigraph of "Hunts roasted —" on the title-page indicates the drollery we are to expect in this amusing account of an Epping Hunt, where the whim of Hood and the humour of Cruikshank conspire to furnish a hearty laugh to the lovers of pun and fun. The English language, indeed, seems to have no protection against the curious ingenuity of Mr. Hood, who twists it into such grotesque shapes, and brings such dissimilar ideas into close contact by his odd fancies, that we are apt to think the whole of its structure has been framed merely to be his sport and plaything. The annual exhibition at Epping, too, has afforded him excellent materials for the exercise of his very peculiar talent; and since the epoch of the renowned John Gilpin, there has been nothing of this kind produced so well calculated to rival the popularity of that most popular of poems. But though we can compare this new citizen-like excursion to no other prototype than its celebrated model describing the adventures of the famous Linen-draper, it must be understood that no two performances can in their execution be more different. In Cowper, the public applause is earned by the natural simplicity of the narrative, and the portraiture of manners and feelings where every one readily recognises the numerous and angust family of Cockney: in Hood, on the contrary, the effect is produced by the most epigrammatic point, and a broader style of painting,—for almost every line is a witticism, and every verse a jest. The whole is irresistibly jocular and comic; as the following extracts (which we are ashamed to pillage at such length from so short a piece) will convince Gravity itself.

"The Easter chase (says the preface) will soon be numbered with the pastimes of past times: its dogs will have had their day, and its deer will be fallow. A few more seasons, and this City Common Hunt will become uncommon. In proof of this melancholy decadence, the ensuing epistle is inserted. It was penned by an underling at the Wells, a person more accustomed to riding than writing.

"Sir,—About the Hunt. In answer to your Inquiries, their as been a great falling off lately, so much so this year, that there was nobody almost. We did a near nothing provisionally, hardly a Bottle extra, which is a proof in Pint. In short, our Hunt may be sad to be in the last Stag of a Decline. I am, sir, with respects from your humble servant, Bartholomew Rutt."

To rescue the ancient and honoured custom (more honoured in the breach than in the ob-

servance) from falling into unsung oblivion, the inspired bard commences—

"John Huggins was as bold a man
As trade did ever know,
A warehouse good he had, that stood,
Hard by the church of Bow.

There people bought Dutch cheeses round,
And single Gloster flat;
And English butter in a lump,
And Irish in a pat.

Six days a-week beheld him stand,
His business next his heart,
At counter with his apron tied
About his counter-part.

The seventh, in a sluice-house box,
He took his pipe and pot,
On Sundays, for ecstacy,
A very noted spot.

Ah, blest if he had never gone
Beyond its rural shed!
One Easter-tide some evil guide
Put Epping in his head.

Alas! there was no warning voice
To whisper in his ear,
Thou art a fool in leaving Cheap
To go and hunt the deer!

No thought he had of twisted spine,
Or broken arms or legs;
Not chicken-hearted he, although
"Twas whisper'd of his eggs!

Ride out he would, and hunt he would,
Nor dream of ending ill;
Mayhap with Dr. Ridout's fee
And surgeon Hunter's bill.

So he drew on his Sunday boots,
Of lustrous superfine;
The liquid black they wore that day
Was Warren-ter to shine."

Our hero is mounted on a gallant gray, in the keep of which he goes halves with a brother cit.

"A well-bred horse he was, I wis,
As he began to shew,
By quickly rearing up within
The way he ought to go.
But Huggins, like a wary man,
Was ne'er from saddle cast;
Resolved, by going very slow,
On sitting very fast."

He proceeds to Tottenham Cross, where a companion, who was to have joined him, is found a defaulter.

"Whereas the man had changed his mind
Meanwhile upon the case,
And meaning not to hunt at all,
Had gone to Enfield Chase.

For why? his spouse had made him vow
To let a game alone,
Where folks that ride a bit of blood
May break a bit of bone.

"Now be his wife a plague for life!
A coward sure is he!
Then Huggins turned his horse's head,
And crossed the bridge of Lea.

Thence slowly on through Laytonstone,
Past many a Quaker's box—
No friends to hunters after deer,
Though followers of a Fox.

And many a score behind—before—
The self-same route inclined,
And minded all to march one way,
Made one great march of mind."

The cortège of the various hunters is next amusingly and accurately described, among which John—

"paced on to Woodford Wells,
Where many a horseman met;
And letting go the reins, of course,
Prepared for heavy trot."

Old Tom Rounding, the landlord of the Wells, is a very clever portrait; though one verse, in

page 13, may provoke the charge of bordering on the profane.

"Now welcome, lads," quoth he, "and prads,
You're all in glorious luck!
Old Robin has a run to-day,
A noted forest buck.

Fair Mead's the place, where Bob and Tom
In red already ride;
'Tis but a stop, and on a horse
You soon may go a stride."

So off they scamper'd, man and horse,
As time and temper press'd;
But Huggins, hitching on a tree,
Branch'd off from all the rest.

Howbeit he tumbled down in time
To join with Tom and Bob,
All in Fair Mead, which held that day
Its own fair meed of mob.

Idlers, to wit—no Guardians some
Of Tattlers in a squeeze;
Ramblers in heavy carts and vans,
Spectators up in trees.

Butchers on backs of butchers' hacks,
That shambled to and fro;
Bakers intent upon a buck,
Neglectful of the dough!

Change Alley Bears to speculate,
As usual, for a fall;
And green and scarlet runners, such
As never climb'd a wall!

'Twas strange to think what difference
A single creature made;
A single stag had caused a whole
Stagnation in their trade.

Now Huggins from his saddle rose,
And in the stirrups stood,
And lo! a little cart that came
Hard by a little wood.

In shape like half a hearse, though not
For corpses in the least;
For this contained the deer alive,
And not the deer deceased!"

The deer alive being let out—

"Away he went, and many a score
Of riders did the same,
On horse and ass—like high and low
And Jack pursuing game."

The hunt is up—

"Some lost their stirrups, some their whips,
Some had no caps to shew;
But few, like Charles at Charing Cross,
Rode on in statu quo.

"O dear! O dear!" now might you hear,
'I've surely broke a bone';
'My head is sore,' with many more
Such speeches from the throng."

Howbeit their wallings never moved
The wide satanic clan,
Who grinned, as once the devil grin'd,
To see the fall of man.

And hunters good, that understood,
Their laughter knew no bounds,
To see the horses 'throwing off,'
So long before the hounds.

But now Old Robin's foes were set,
That fatal taint to find,
That always is scent after him,
Yet always left behind.

And here observe how dog and man
A different temper shews—
What hound resents that he is sent
To follow his own nose?

Towler and Jowler—howlers all—
No single tongue was mute;
The stag had led a hart, and lo!
The whole pack follow'd suit.

No spur he lack'd—fear stuck a knife
And fork in either haunch;
And every dog he knew had got
An eye-tooth to his paunch!

Away, away! he scudded like
A ship before the gale;
Now flew to 'hills we know not of,'
Now, nun-like, took the vale.

Some gave a shout, some roll'd about,
And antick'd as they rode,
And butchers whistled on their curs,
And milkmen taily-ho!

About two score there were, not more,
That galloped in the race;
The rest, alas! lay on the grass,
As once in Chevy Chase.

But even those that galloped on
Were fewer every minute—
The field kept getting more select,
Each thicket served to thin it.

For some pulled up and left the hunt,
Some fell in miry bogs,
And vainly rose and 'ran a muck,'
To overtake the dogs.

And some, in charging hurdle stakes,
Were left bereft of sense;
What else could be premised of blades
That never learn'd to fence?

But Roundings, Tom and Bob, no gate,
Nor hedge, nor ditch, could stay;
O'er all they went, and did the work
Of leap-years in a day!

And by their side see Huggins ride,
As fast as he could speed;
For, like Mazeppa, he was quite
At mercy of his steed.

No means he had, by timely check,
The gallop to remit,
For firm and fast between his teeth
The bitler held the bit.

Trees raced along, all Essex fled
Beneath him as he sate—
He never saw a county go
At such a county rate!

But soon the horse was well avenged
For cruel smart of spurs,
For, riding through a moor, he pitched
His master in a furze!

Where, sharper set than hunger is,
He squatted all forlorn;
And like a bird was singing out
While sitting on a thorn.

Right glad was he, as well as might be,
Such cushion to resign;
'Possession is nine points,' but his
Seemed more than ninety-nine.

Yet worse than all the prickly points
That enter'd in his skin,
His nag was running off the white
The thorns were running in!

We omit Huggins's further exploits, and
return him safely to the Wells, after the hunt
was over.

"And many a horse was taken out
Of saddle and of shaft;
And men by dint of drink became
The only 'beasts of thought.'

For now begun a harder run
On wine, and gin, and beer;
And overtaken men discuss'd
The overtaken deer.

How far he ran, and eke how fast,
And how at bay he stood,
Deer-like, resolved to sell his life
As dearly as he could:

And how the hunters stood aloof,
Regardful of their lives,
And shunn'd a beast whose very horns
They knew could handle knives.

How Huggins stood when he was rubb'd
By help and ostler kind,
And when they cleaned the clay before,
How 'worse remain'd behind.'"

And now to conclude with the *Moral*.

"Thus Pleasure oft eludes our grasp,
Just when we think to grip her;
And hunting after Happiness,
We only hunt a slipper."

We can assure all readers, however, that
there is a pleasure to be derived from the
perusal of Mr. Hood's very whimsical effusion,
which we advise them not to suffer to slip.
In these dull times it is quite a treat to en-
counter so merry a companion; and we are
sure his little book will rapidly spread a broad
grin all over the island when it is published—
next week, we believe.

*The Influence of Climate in the Prevention and
Cure of Chronic Diseases, more particularly
of the Chest and Digestive Organs: com-
prising an Account of the Principal Places
resorted to by Invalids in England and the
South of Europe; a Comparative Estimate
of their respective Merits in particular Dis-
eases, &c. &c.* By James Clark, M.D. &c.
&c. 8vo. pp. 328. London, 1829. Under-
woods.

The work whose rather lengthy but charac-
teristic title we have just transcribed, is on a
subject of the very first importance to the in-
habitants of this country; and it would claim
the attention of our readers in the strongest
manner if its whole scope were confined to the
consideration of only one of the diseases of
which it treats. This disease is *consumption*,
which is estimated to carry off one-sixth part
of the inhabitants of this country. Dr. Clark
professes to lay before us the advantages and
disadvantages to be expected from a visit to
the milder climates of the South in this dis-
ease,—the particular cases likely to be benefited
or injured by such a measure,—the stage of
the disease at which patients should leave their
homes,—and the particular places which should
be sought or avoided by them. If this were
all that the work professed to teach, and if it
taught this accurately, we need add nothing
more with the view of enhancing its value,—
as most of our readers must be aware that
more is at present expected by the faculty
from change of climate than from any merely
medicinal treatment in this disease; and that,
while agreed as to the superior efficacy of cli-
mate, they are much disunited as to the par-
ticular climates that are most beneficial. But
the author of this volume professes not merely
to give us this information in respect of con-
sumption, but relatively to many others of
our chronic diseases, particularly all the va-
rieties of catarrh and cough, asthma, disorders
of the stomach, hypochondriasis, gout, rheu-
matism, &c. &c.;—and to give it as the result
of his own experience and personal observation
of the effects of the various climates on these
various diseases: and we are bound to con-
fess, after an attentive perusal of the work,
that its contents justify the promise of its
title. We look upon it, indeed, as one of the
most valuable works that has appeared for a
long time in medicine: it is extremely cre-
ditable both to the head and heart of the
author, as almost every page bears witness to
his zeal, industry, and talents. Dr. Clark, to
judge by his book, appears to belong to that
class of good and simple-minded men who con-
sider it as a matter of course, that they are to
devote themselves heart and soul to their pro-
fession, merely because it is their profession,
and because they find that the study and prac-
tice of it, in the manner they think it de-
serves, leaves them no time for other pursuits
or pleasures. In the first part of his work he
has occasion to treat of almost every place of
note in Italy, Switzerland, and the South of
France, famous in ancient or modern times for
their natural or artificial beauties, as for the
great deeds of which they have been the
theatre; and it is almost amusing to see with
what ardour and straightforwardness he pro-
secutes his researches respecting the tempera-
ture, winds, rain, diseases, &c. of each place,
without ever seeming to be aware that out of
the thousands who annually visit it, he is per-
haps the only one whose eye and imagination
are not fixed on other objects of contemplation
presented or suggested by the scene before

them. No doubt the plan adopted by Dr. C. is
the very one he ought to have adopted; and his
silence respecting the topics that engross the
attention of the common traveller, is the re-
sult of a correct and philosophical conception
of the relation in which he wishes to stand
with his readers. We are not sure, however,
if in so acting he has consulted his own popu-
larity, at least with the general reader. Of
this, at least, we are assured, that if he had,
like some recent travellers, made use of the
Guide-books only, even although he had shut
his eyes to the scenes before him, the result of
his ten years' travel and residence abroad
would have amounted to something very dif-
ferent from a modest octavo. We, however,
of all men, must not quarrel with our author
on this score; and we shrewdly suspect that
some of his learned brethren, on the winding
up of their accounts with their publishers, will
lament that they have not shewn some of the
forbearance of Dr. Clark, and "bridled in
their struggling muse," although "with pain."
But, lest we should be accused of lapsing into
the same faults we are reprehending, we must
now proceed, in our usual way, to make our
readers acquainted with what they have really
to expect from the perusal of the volume be-
fore us.

The first part gives an account of the gen-
eral physical character of the climate of the
milder parts of England and of the South of
Europe,—notices the manner in which this
general climate is modified, in different places,
by local circumstances,—and states the actual
and relative effects of each particular place on
the various diseases for which change of cli-
mate is recommended. In this way we have
accounts, in England, first, of the south coast
—including Hastings, Brighton, Isle of Wight,
Southampton; secondly, of the south-west
coast—including the various watering-places
in Devonshire, more particularly Torquay;
thirdly, of Cornwall, more especially Penzance;
fourthly, of the west of England, including
Clifton, Bristol, Bath, &c. &c. In France,
we have, first, an account of the west and
south-west coast—including Pau on the
Pyrenees, respecting which, long details are
given; secondly, of the south-east of France,
including Montpellier, Marseilles, Aix, &c.
&c. Intermediate between France and Italy,
are Nice, Villa Franca, &c., of the first of
which places we have a very full account. In
Italy, the author particularly dwells on Genoa,
Florence, Pisa, Rome (where he appears to
have resided eight or nine winters, practising
his profession among our British nobility and
gentry annually crowding to the Eternal City),
Naples, Ischia, Sienna, Lucca, &c. Under the
head of "a summer residence," an account is
given of the climate of Switzerland; and this
part concludes with a circumstantial history of
the climate of Madeira. The chief particulars
of the climate of each place are given in the
text, and the whole illustrated by a series of
meteorological tables, which the author (we
believe justly) characterises as being more com-
prehensive and perfect than any previously
published. These tables are, indeed, singularly
minute and comprehensive, and must prove
extremely interesting to the meteorologist.
We surmise, however, that most of Dr. C.'s
readers will be contented with the general
results given in the body of the work, and will
leave the Appendix for the perusal of the pro-
fessed meteorologist or natural philosopher.
We ought to have stated, that this account of
places is preceded by an interesting chapter on
the general effects and *modus operandi* of

change of climate on diseases. Our limits deny us the privilege of making large extracts from any parts of the work; but we shall select a few passages which will at once serve as specimens of the manner in which the author handles his subject, and may be also interesting and useful to some of our readers. We commence with one which, we are sorry to say, comes too closely home to our own business and bosoms.

"On the continent, the beneficial effects of change of air are duly estimated; and the inhabitants of this country, and more especially of this metropolis, are now becoming fully sensible of its value. The vast increase in the size of our watering-places of late years, and the deserted state of London during several months, are sufficient proofs, not to mention others, of the increasing conviction among the public in general, that, for the preservation of health, it is necessary, from time to time, to change the relaxing, I may say the deteriorating, air of London, for the more pure and invigorating air of the country. This, indeed, is the best, if not the only remedy, for that terrible malady which preys upon the vitals, and stamps its hues upon the countenance of almost every permanent resident in this great city, and which may be justly termed the *cachexia Londinensis*. When the extent of benefits which may be derived from this remedy, both on the physical and moral constitution, is duly estimated, no person whose circumstances permit him to avail himself of it, will fail to do so."

It is by no means a matter of indifference, it seems, to what place or to what climate the invalid, even the sufferer from slight disease, turns his steps.

"In that numerous class of persons, indeed, who are merely suffering from a residence in the city, without any decided disease, the simple change to the country may be all that is requisite to restore their health, and it is of less consequence to what part of the country they go. But the case is very different with the real invalid, whose sufferings are chiefly referable to some particular disease. To him, the selection of his temporary residence is not a matter of indifference. For one individual of this kind, an elevated situation, and a dry bracing air, will be most proper; a sheltered residence, with a milder air, will be suitable to another; while the sea-side may be the situation indicated for a third. In like manner is it with the more important measure of change of climate."

It seems that the common opinion, that change of climate is especially, if not exclusively, beneficial in consumption, is a great error.

"Such an opinion could only have originated in a very limited acquaintance with the influence of climate on disease; and, indeed, it is so far from being a correct view of the matter, that, were the character of this remedy to be estimated by its effects on consumption, when fully formed, it would be justly valued at a very low rate. In dyspepsia, and disorders of the digestive organs generally, and in the nervous affections and distressing mental feelings which so often accompany these; in hypochondriasis, in asthma, in bronchial diseases, in scrofula, and in rheumatism, the beneficial effects of climate are often far more strongly evinced than they are in consumption. Likewise in cases of general delicacy of constitution and derangement of the system, in childhood and in youth, which cannot be classed strictly under any of these diseases; and in that disordered state of the general health which so often occurs at a cer-

tain period of more advanced life, when the powers of the constitution, both mental and bodily, are apt to fail, and the system to lapse into a state of premature decay, change of climate becomes a most powerful remedy."

We think our author, in his zeal in behalf of the beneficial effects of climate in chronic diseases, pays too little attention to the influence of the mere act of travelling, independently of the climate. He by no means, however, overlooks this agent, as the following paragraph from the same chapter will shew:

"The mere act of travelling over a considerable extent of country is itself a remedy of great value, and, when judiciously conducted, will materially assist the beneficial effects of climate. A journey may indeed be regarded as a continuous and rapid change of climate, as well as of scene; and constitutes a remedy of unequalled power in some of those morbid states of the system in which the mind suffers as well as the body. The continued change of air seems to do that for the corporeal part, which the constant succession of new scenes and objects does for the mind. In chronic irritation of the mucous surfaces of the pulmonary and digestive organs, especially when complicated with a morbidly sensitive state of the nervous system, in hypochondriasis, &c., travelling will often effect more than any other remedy with which I am acquainted."

The second part of Dr. C.'s work is devoted to an account of the diseases benefited by a residence in a mild climate, and to the determination of the place or places best suited to each particular case. We have already enumerated the chief diseases noticed in this treatise; but there are two of these which have justly obtained a much greater share of the author's attention. These are, diseases of the digestive organs and consumption; his account of which must be considered as truly excellent in every way. In his extended chapter on dyspepsia, under which term he comprehends all the varieties of bilious or stomach complaints, he has, in our opinion, given a more admirable and instructive monograph of this most important class of diseases than any preceding writer. In the discrimination of the various forms of this proteiform affection, and in the application of the remedial means best adapted to each, he has evinced great power of accurate observation, and proved himself to be long disciplined in the philosophic practice of medicine. Like the most illustrious among his predecessors, Dr. Clark appears to depend more upon the use of the simplest means, properly applied, than upon the array of a bold, novel, or complex medication. His motto resembles that of the great Boerhaave—*Nullum ego cognosco remedium, nisi quod tempestivo usu fiat tale*. He evidently trusts as much to the sage avoidance of the exciting causes of disease—in other words, to *regimen*, in the full sense of that term—as to medicines properly so called. It will not be matter of surprise, therefore, that change of air, change of climate, change of diet, mineral waters, &c. &c., figure more in his pages than the barbarous names of chemicals or Galenicals; and least of all will it surprise those best acquainted with the nature of stomach disorders, that these means constitute a large proportion of those recommended in the cure of that prolific source of disease and misery, in all times,—whence

*Macies et nova febrim
Terris incubuit cohors.*

The only thing we have to regret in this part of the work is the want of details on some important points, owing, obviously, to

the restrictions laid upon the author by the plan of his treatise. We believe that if Dr. C. were to enlarge the articles on dyspepsia and consumption, and publish them separately, he would confer a great benefit on his professional brethren; as we think we see in his views of these diseases, things by no means generally known by the profession, and the general knowledge of which could not fail to be most useful. We cannot make any extracts from the essay on disorders of the stomach; but we strongly recommend its perusal to our readers, medical and non-medical, as containing much that it is for their interest to know.

The article on consumption is also highly interesting. Assuming the fact, now universally admitted by the profession, that this disease, when fully formed, is, in the vast majority of cases, incurable, the author puts forth his strength in delineating the embryonic features of the malady, and in rousing the attention of parents and practitioners to a state even antecedent to any formal symptom of pulmonary disease. Of this masterly sketch we cannot here give even an outline; but we strongly recommend it to the attention of the profession, as well as to those intrusted with the supervision of youth, whether parents or teachers.

It is only in the very earliest stages of consumption, or rather in the stage of disordered function antecedent to this, that a change of climate is advised by Dr. Clark. Different places are recommended for such cases as can with any prospect of benefit be sent abroad, according to the nature and stage of the affection, the constitution of the patient, or the disorders with which the chief disease is complicated. In a few, Nice is most proper; in a much greater number, Rome and Pisa are preferable; but the place which above all others Dr. C. considers as best suited to consumptive invalids, is the island of Madeira. The climate of this island is described as most delightful, being equally temperate both in its summer and winter, to a degree almost unknown in any other place of which we have accounts. Unfortunately, it lies too remote from our shores; and it possesses few other attractions besides those afforded by its climate.

We cannot conclude this account of Dr. Clark's work without once more recommending it, in the strongest terms, to all those who are interested in the important subjects of which it treats. To that numerous class of our countrymen who travel for health, and who now, almost as periodically as the swallows, forsake our shores for the south, on the approach of winter, we would more particularly recommend it. We are well assured that all who peruse it will be ready to admit that the author has succeeded very completely in the object he had in view in composing his work. "It has been my wish," he says in the preface, "to lay before the public such a work as might serve at once as a manual to the physician in selecting a proper climate for his patient, and a guide to the latter while no longer under the direction of his medical adviser."

Family Library. No. VI. History of the Jews, Vol. II. Murray.

WE last week briefly mentioned the appearance of this interesting volume, and that it brought the current of Jewish history down to the commencement of the siege of Jerusalem. As in the former volume, the author has evinced singular judgment and discretion in the selection of the incidents on which he has

thought proper to dwell, and equal skill in placing in the most prominent light both the events and the characters with which he has to deal. The account which he gives of the rise, prosperity, and fall of the Herodian family, is remarkable for its clearness and force: he does full justice to the general ability of Herod the Great, and paints in vivid and appalling language the domestic feuds and dissensions which embittered the latter days of that celebrated and powerful monarch, and entirely ruined his family. The entire story is admirably told, and will be perused with deep attention; for although the principal facts must be familiar to all our readers, yet the tragical scenes which took place in the family of Herod are so clearly and powerfully described, that the narrative excites intense emotion. It is, indeed, a dreadful tale, calculated to fill the mind with affright and horror. We would gladly make some extracts from this domestic tragedy; but the whole is too long for our pages,—and mere fragments would mar its beauty. To prove to our readers, however, that we have not spoken of the contents of this volume in language either of undeserved or overstrained commendation, we select for their perusal the following beautiful account which the author has given of the sect called the Essenes.

“At a considerable distance from the metropolis, in some highly cultivated oases, amid the wilderness on the shores of the Dead Sea, were situated the chief of the large agricultural villages of the Essenes. According to Philo, their number was about 4000. Almost in every respect, both in their rules and in the patient industry with which they introduced the richest cultivation into the barren waste, the Essenes were the monastic orders of the Jews. Among groves of palm-trees, of which, according to the picturesque expression of Pliny, they were the companions, and amid fertile fields won from the barren wilderness, they passed their rigid and ascetic lives. They avoided populous cities, not from hatred of mankind, but from dread of their vices. In general, no woman was admitted within their domains. Some of the inferior communities allowed marriage, but only associated with their wives for the procreation of children; the higher and more esteemed societies practised the most rigid celibacy, and entirely forswore all communication with the other sex. Wonderful nation, says the Roman naturalist, which endures for centuries, but in which no child is ever born. They were recruited by voluntary proselytes, or by children whom they adopted when very young, and educated in their discipline. Among the Essenes all pleasure was forbidden as sin; the entire extinction of the passions of the body was the only real virtue. An absolute community of goods was established in their settlements: even a man's house was not his own; another person might enter and remain in it as long as he pleased. The desire of riches was proscribed; every lucrative employment, commerce, traffic, and navigation, were forbidden. They neither bought nor sold; all they had was thrown into a common fund, from which each received the necessities of life; but for charity, or for the assistance of the poor or the stranger, they might draw as largely as they would on this general revenue. They were all clothed alike in white garments, which they did not change till they were worn out: they abhorred the use of oil; if any one were anointed against his will, he scrupulously cleansed himself. Their lives were regulated

by the strictest forms; they rose before the sun, but were forbidden to speak of any worldly business, and devoted all the time till break of day to offering up certain ancient prayers, that the sun might shine upon them. After this they received their orders from the superior, and went to work, according to his commands, at the labour or craft in which they were skilled; but their artisans might only work on articles used in peace, by no means on swords, arrows, or military weapons,—though they carried arms when they travelled, to defend themselves against robbers. Having worked till the fifth hour, eleven o'clock, they assembled for refreshment. First, however, they washed, and put on a linen garment; they then went into a room which no one might enter who was not of their sect. After that, they entered the common refectory as if it were a sacred place; there in silence waited till grace was said; then each received his portion, from the baker and the cook, of bread, salt, and hyssop; another grace closed the meal: then, putting off their sacred garment, they returned to their toil till evening, when they again assembled to supper. No noise or tumult was heard; they spoke only by permission and in turn: on other occasions, if ten were met, one could not speak without the consent of the nine. In company they were to avoid spitting either before them or to the right hand. They observed the sabbath with the strictest precision, not even lighting a fire or performing the necessities of nature. At all other times they concealed their excrements with scrupulous care, digging a pit a foot deep, lest the holy light should be defiled. They then washed themselves with great care. On the sabbath they all met in their synagogues, where the elders interpreted the sacred writings, explaining them chiefly by parables. In their religious opinions they differed from their countrymen; though they sent their gifts to the Temple, they offered no sacrifices there. They were strict predestinarians. They believed that the body was mortal, the soul immortal: that the soul, emanating out of the noblest and purest air, is imprisoned in the body, where it is subjected to severe trials: when released from its corporeal bonds, it escapes as it were a long servitude, and soars back rejoicing to its native element. They believed, with the Greeks, in a delightful region beyond the ocean, in which the souls of the good dwell for ever. There rain, and snow, and parching heat, were unknown, but the air was continually refreshed with balmy and gentle breezes from the sea. The souls of the wicked were doomed to a cold and gloomy place of everlasting punishment. They were great students of their sacred books, and especially of the prophetic writings. Many were endowed, according to Josephus, with that gift. They studied likewise the nature and cure of diseases, and the medicinal properties of herbs and minerals. Their morals were rigid in every respect. They were bound, by solemn vows, to worship God, and to be just to men; to keep inviolable faith; if intrusted with authority, to abstain from all wrong, and from splendid apparel; to love truth, and hate liars; to communicate only to the members of the society the tenets of the sect; to preserve their sacred doctrinal books, and the names of the angels. They paid the highest veneration to age: many of them, from their temperate habits, lived to more than one hundred years. They abstained from all oaths, considering an oath as bad as perjury. They abhorred slavery, as an infringement of the natural liberty of men. In

their civil constitution, they were all equal as regards their rights, but divided into four classes; of which the superior class looked down so much on those beneath them, that if touched by one of a lower order, they were defiled, and washed themselves. There were stewards who managed the common stock, and officers who took care of all strangers who might enter their towns. No one was admitted into the society without the strictest probation; the proselyte received a small pickaxe, linen garments, and a white dress, and so commenced his year of novitiate. After having given satisfactory proof of continence and temperance for that period, he was admitted to closer intimacy, and to wash in the holy water: yet for two years longer he remained on trial, and only at the end of that time was admitted to the common refectory. Whoever was guilty of any great crime was expelled from the society—a fearful doom! for having sworn that he would receive no food but from his own sect, the outcast fed, like a beast, on the grass of the field, till at length he perished with hunger. Sometimes, if at the last extremity the criminal shewed sincere repentance, he was readmitted, from compassion, within the society. But this awful fate was inflicted with great reluctance; for justice was administered with the utmost care; and no verdict could be given unless a hundred were present; it was then irrevocable. The Essenes were cruelly persecuted by the Romans, who probably entered their country after the capture of Jericho. They were tortured, racked, had their bones broken on the wheel, in order to compel them to blaspheme their lawgiver, or eat forbidden meats. They did not attempt to appease their tormentors; they uttered no cry, they shed no tear; and even smiled in the worst agony of torment; and in steadfast reliance on the immortality of their souls, departed, rejoicing, from life.”

The cruelties and extortions of the various governors who were sent to plunder Judea, and whose atrocities at last drove the people to revolt, are well calculated to rouse our bitterest indignation against these infamous delegates of oppressive power. We are told that one of these worthies, “Felix, administered the province with the authority of a king, and the disposition of a slave. Supported by the interest of Pallas, says Tacitus, he thought he might commit all crimes with impunity. The land was full of armed robbers, who wasted the country. Felix at first proceeded with vigour and severity against them; but afterwards, for his private ends, entered into a confederacy with some of the most daring. The high-priest, Jonathan, assuming the privilege of a friend, like the Christian apostle, would reason with him on temperance and righteousness. His remonstrances, if at the time they produced the same effect, and made Felix tremble, were fatal to himself. Felix, weary with his importunity, entered into a secret conspiracy with some of the Sicarii, or assassins, the most extravagant of the school of Judas the Galilean. These were men, some fanatics, some unprincipled desperadoes, who abused the precepts of the Mosaic law, as authorising the murder of all on whom they might affix the brand of hostility to their country and their God. Having bribed Doras, the intimate friend of Jonathan, through his means Felix sent a party of these wretches into the Temple. With their daggers under their cloaks, they mingled with the attendants of the high-priest. They pretended to join in the public worship, and suddenly struck dead the unsuspecting

pontiff, who lay bleeding on the sacred pavement. From this period, says the indignant Josephus, God hated his guilty city, and disdaining any longer to dwell in his contaminated Temple, brought the Romans to purify with fire the sins of the nation. The crime remained unrevenged and unnoticed. The assassins, emboldened by their impunity, carried on their dreadful work. No man was secure. Some from private enmity, others on account of their wealth, as they pursued their peaceful occupations, were struck dead by men who passed by, apparently unarmed, and as peacefully disposed as themselves. Even the Temple was not a place of safety; the worshipper did not know but that the man who knelt by his side was preparing to plunge his dagger to his heart. Such was the state of the city; the country was not much more secure. The robbers multiplied, and grew more bold. Nor were these the worst; in every quarter arose impostors, and pretenders to magic, who, asserting their miraculous powers, led the people into desert places, and harangued them on the impiety of obedience to the Roman government. Felix in vain scoured the country with his horse: as fast as some were seized and crucified, others arose; and the fanatical spirit of the people constantly received new excitement. The most formidable of these men was a Jew of Egyptian birth. He assembled in the desert, probably that of Quarantania, between Jerusalem and Jericho, as many as 30,000 followers. He led them to the Mount of Olives, and pointing to the city below, assured them that its walls would fall down, and admit his triumphal entrance. Felix marched out to attack him: the Egyptian escaped; but many of his followers were killed, many taken, the rest dispersed."

The dreadful details of the ferocious contest which at length took place between the Jews and their relentless and insulting masters, are prefaced by the following judicious remarks and reflections:—

"Judæa was now in open rebellion against Rome. It was a mad and desperate revolt, for to declare war against Rome was to defy the whole force of the civilised world. The insurgents neither had, nor could hope for allies; the rest of the Roman provinces were in profound peace, and little likely to answer the call or follow the example of a people they despised, in assertion of their independence. In Europe the only unsubdued enemies of the Romans were the wild tribes in the north of Britain, or in the marshes of Germany. In Asia, the only independent kingdom, the Parthian, was not in a state to make a war of aggression. Philo, in his oratorical invective against Caligula, threw out hints of the formidable numbers of his countrymen in Babylonia, and of the multitudes who were scattered throughout almost all the cities in the eastern dominions of Rome. But the foreign Jews, though, as Josephus hints in one place, solicited by ambassadors, either took no interest in the fate of their countrymen, or were too sadly occupied in averting the storm of public detestation from their own heads, or in bewailing its consequences, in the unprovoked carnage of their own friends and families. They were trembling in the agony of personal apprehension, or gathering up for burial the bodies of their murdered countrymen. The state of the country offered scarcely better grounds for any reasonable hope of permanent resistance. The fortified places were not all in the power of the insurgents; they had no organised or disciplined force; no warlike engines, except those cap-

tured from the enemy; no provisions of any kind for a long war. Worse than all, they were divided among themselves. In every city there was an interested, or a timid, or a prudent party, anxious to purchase peace at any cost. They had no acknowledged leader. The representative of the Herodian house, Agrippa, openly espoused the Roman party. The rest were either undistinguished as soldiers, or strangers and robber chieftains. Their only trust was in their own stubborn patience and daring valour, in the stern fanaticism with which they looked upon themselves as the soldiers of their God, and in the wild hope that Heaven would work some miraculous revolution in their favour. Yet, however frantic and desperate the insurrection, why should the Jews alone be excluded from that generous sympathy, which is always awakened by the history of a people, throwing off the galling yoke of oppression, and manfully resisting to the utmost in assertion of their freedom? Surely if ever people were justified in risking the peace of their country for liberty, the grinding tyranny of the successive Roman procurators, and the deliberate and systematic cruelties of Florus, were enough to have maddened a less high-spirited and intractable race into revolt. It is true that the war was carried on with unexampled atrocity; but on the other hand, insurrectionary warfare is not the best school for the humaner virtues; and horrible oppression is apt to awaken the fiercer and more savage, not the loftier and nobler passions of our nature. And it must be borne in mind, that we have the history of the war, only on the authority of some brief passages in the Roman authors, and the narrative of one to whom, notwithstanding our respect for his abilities and virtues, it is impossible not to assign the appellation of renegade. Josephus, writing to conciliate the Romans both to his own person and to the miserable remnant of his people, must be received with some mistrust. He uniformly calls the more obstinate insurgents, who continued desperately faithful to that cause which he deserted, by the odious name of robbers; but it may be remembered that the Spanish guerillas, who were called patriots in London, were brigands in Paris."

The siege of Jotapata called forth the most extraordinary acts of valour on the part of the combatants; but notwithstanding the prodigies of valour which were performed by the Jews during its investment, "the end of Jotapata drew near. For forty-seven days its gallant inhabitants had resisted all the discipline and courage of the whole Roman army, under their most skilful general; they had confronted bravery with bravery, and stratagem with stratagem. They were now worn out with watching, and fatigue, and wounds, and thirst. Their ranks were dreadfully thinned; and the over-wearied survivors had to fight all day, and watch all night. A deserter found his way to the camp of Vespasian, and gave intelligence of the enfeebled state of the garrison, urging him to make an assault at the early dawn of morning, when the sentinels were apt to be found sleeping on their posts. Vespasian suspected the traitor, for nothing had been more striking during the siege than the fidelity of the Jews to their cause. One man who had been taken had endured the most horrible torments, and, though burnt in many parts of his body, steadily refused to betray the state of the town, till at length he was crucified. Still the story bore marks of probability; and Vespasian, thinking that no stratagem could inflict great injury on his

powerful army, prepared for the assault. A thick morning mist enveloped the whole city, as at the appointed hour the Romans, with silent step, approached the walls. Titus was the first to mount, with Domitius Sabinus, a tribune, and a few soldiers of the fifteenth legion. They killed the sentinels, and stole quietly down into the city. Sextus Cerealis and Placidus followed with their troops. The citadel was surprised: it was broad day, yet the besieged, in the heavy sleep of fatigue, had not discovered that the enemy were within the walls; and even now, those who awoke saw nothing through the dim and blinding mist. But by this time the whole army was within the gates, and they were awakened to a horrible sense of their situation, by the commencement of the slaughter. The Romans remembered what they had suffered during the siege, and it was not a time when mercy and compassion, foreign to their usual character, could arrest the arm of vengeance. They charged furiously down from the citadel, hewing their way through the multitude, who, unable to defend themselves, stumbled, and were crushed in the uneven ways, or were suffocated in the narrow lanes, or rolled headlong down the precipices. Nothing was to be seen but slaughter; nothing heard but the shrieks of the dying, and the shouts of the conquerors. A few of the most hardy had gathered round Josephus, and mutually exhorted each other to self-destruction. As they could not slay the enemy, they would not be tamely slain by them. A great number fell by each other's hands. A few of the guard, who had been at first surprised, fled to a tower on the northern part of the wall, and made some resistance. At length they were surrounded, and gave themselves up to be quietly butchered. The Romans might have boasted that they had taken the city without the loss of a man, had not a centurion, named Antonius, been slain by a stratagem. There were a great number of deep caverns under the city, in which many took refuge; one of these, being hotly pursued, entreated Antonius to reach his hand to him, as a pledge of accepting his surrender, as well as to help him to clamber out. The incautious Roman stretched out his hand, the Jew instantly pierced him in the groin with a lance, and killed him. That day all were put to the sword who appeared in the streets or houses; the next, the conquerors set themselves to search the caverns and underground passages, still slaughtering all the men, and sparing none but infants and women: 1200 captives were taken. During the siege and capture 40,000 men fell. Vespasian gave orders that the city should be razed to the ground, and all the defences burnt. Thus fell Jotapata, on the 1st day of Panemus (July)."

History of the Rise of the Mahomedan Power in India. By Lieut.-Colonel Briggs.

(Second notice: conclusion.)

AMONG the curious statements we every where meet with in these volumes, we find the extraordinary one of the existence of a convent of Russian Missionaries in Thibet so early as A.D. 1556: they are thus described—

"Ahmad Hoorein went to Sumurkote, a place occupied by a people called Russies, a description of Sofy. He seized some of these people, and inquired of them where Beiram Chuk had gone. They replied, that they had conveyed him in a boat to Nadilly, and delivered him safe over to Ameer Zeina. These Russies are an agricultural people, employing themselves either in sowing grain or planting

fruit-trees. They live in a society by themselves, and do not marry."

We have also mention of fire-arms being in use by the Hindoos so early as 1368—only fifty years after the time usually assigned for the invention of gunpowder; and the proficiency of the Indian nations in the conduct of sieges, and the construction of field works, is very remarkable, and well illustrated in the siege of Chittoor, by Akbur Padshah, in 1567.

"Akbur, having invested Chittoor, employed five thousand workmen of different descriptions to conduct the siege. The approaches were made by *sabat*, a description of defence for the besiegers peculiar to India. The *sabats* are constructed in the following manner. The zig-zags, commencing at gunshot-distance from the fort, consist of a double wall, and by means of blinds or stuffed gabions covered with leather the besiegers continue their approaches till they arrive near to the walls of the place to be attacked. The miners then proceed to sink their shafts, and carry on their galleries under ground, for the construction of the mines; in which having placed the powder and blown up the works, the storming party rushes from the *sabat*, or superior galleries, and assaults the place. On the present occasion, two *sabats*, or superior galleries, having been constructed, two mines were carried under bastions at different spots, and they were both fired at the same time. It happened that one of them exploded before the other, and a practicable breach was formed. Two thousand men, prepared to storm, advanced immediately, under the supposition that both mines had been sprung, and the parties divided, in order to enter both breaches at once. One of the mines, however, exploded only just as one of the parties got close over it, when five hundred men were killed, besides a number of the enemy who were crowded on the bastion. Of the Moguls, fifteen officers suffered on this occasion, among whom were Syud Jumal-ood-Deen Khan Barha Murdan Koolly Shah and others. The consequence was, that both attacks failed. Other mines were directed to be constructed; and as the works were in progress, the king, while in the batteries, observed Jugmul, the governor of the place, superintending the repairing of the breaches, and giving his orders by torch-light. Akbur, seizing a matchlock from one of his attendants, fired at him, and was so fortunate as to lodge the ball in Jugmul's forehead. The spirit of the besieged fell with their governor; and in their despair, they performed the ceremony of the jowhur, and putting their wives and children to death, burned them with the corpse of their chief on a funeral pile. The king, perceiving what was in progress within the fort, advanced under the cover of night to the breaches, and found them abandoned, so that he entered the fort without opposition. Daylight appeared, and still not a soul was to be seen of the garrison; all had retired to their temples, and, as usual, refused quarter. The king, mounting his elephant, ordered the temples to be stormed, when ten thousand rajpoots fell in the assault; while, with the exception of one Noosrut Ally, not a Mahomedan lost his life. The command of Chittoor being conferred on Asuf Khan Hirvy, the king returned to his capital."

The word admiral is supposed by Lieutenant-Colonel Briggs to have been introduced by the Moors, through Spain, into Europe; the ancient Arabian title for a commander at sea being *ameer-al-bher*; and the word *bher*, signifying ocean, being dropped, leaves us *amiral*, or *admiral*, a naval commander only.

In the reign of Mahomed Toghluq, of Delhi, A.D. 1325, we find the following mention of a paper currency. "The king, unfortunately for his people, adopted his ideas upon currency from a Chinese custom of using paper on the emperor's credit, with the royal seal appended, in lieu of ready money."

From the earlier period of the history of the kingdom of Sind, we cite a romantic instance of female ingenuity for the gratification of revenge.

"The widow of Raja Dahir resolved to adopt the measure abandoned by her son; and, with a truly masculine spirit, placing herself at the head of fifteen thousand rajpoots, prepared to meet the Mahomedans. Mahomed Kasim, however, giving orders to his troops not to attack, they merely stood on the defensive; and the rajpoots quietly withdrew with their female chief into the fort of Ajdur, which was now closely invested. The siege being protracted to a great length of time, the garrison were nearly starved out, when they came to the final alternative of performing the jowhur, a ceremony which requires the Hindoos to sacrifice their women and children on a burning pile; and the men, after bathing, rush on the point of the enemy's lances sword in hand. This dreadful step being taken, the gates of the fortress were thrown open, and a body of rajpoots, headed by the widow of Dahir, attacked the Mahomedans in their camp, and all lost their lives. The heroes of Assyria having repulsed this attack, forced their way into the fort, where they slew six thousand rajpoots, and took prisoners three thousand more. Among the latter were the two daughters of Raja Dahir. These princesses were sent by Mahomed Kasim to Hijaj, to be received into the seraglio of Wuleed; and after having placed all the towns of Sind under Arab governors, Mahomed Kasim proceeded to reduce Mooltan, which was also subject to the authority of Dahir. On reaching Mooltan, Mahomed Kasim also subdued that province; and himself occupying the city, he erected mosques on the site of the Hindoo temples. When the two daughters of the King of Sind arrived at the court of Hijaj, at Bussora, he forwarded them to the seraglio of the Caliph Wuleed, at Damascus, where they remained until the year 96, A.D. 714, when having sent for them into his presence, he inquired their names. The elder replied that she was called Surpa Devy, and the younger Burreel Devy. The caliph becoming enamoured of the elder, wished her to submit to his embraces; when she burst into tears, and told him that she was unworthy of him, since she had been disgraced on three successive nights by Mahomed Kasim. The enraged caliph, whose will was the law, wrote with his own hand an order to Mahomed Kasim, requiring him to clothe himself in a raw hide and embrace that death which he so richly merited. The faithful Kasim submitted to this unjust decree, and caused himself to be sewn up in a raw skin, which produced his death, after which his body was sent to the caliph. Upon the arrival of the corpse, the caliph, sending for Surpa Devy, said, 'Behold Mahomed Kasim in his shroud: it is thus I punish the sins of those servants who insult the deputy of the prophet of God.' Surpa Devy replied, with a smile full of triumph and of sarcasm, 'Know, oh caliph, that Mahomed Kasim respected my person as that of his own sister, and would no more have polluted my bed than that of his mother. He, however, put to death my father, my mother, my brother,

and my countrymen; and in his death, indifferent to my own fate, I have gratified that revenge which has so long been consuming me.' The caliph became much disconcerted; and having dismissed the damsel, he lamented over the body of his faithful and innocent servant."

The little regard paid during these periods to the Prophet's injunction of abstinence from fermented liquors is very remarkable: we cull one from among the many instances recorded.

"In the year 1519, Ismael Adil Shah made preparations for marching to recover Moodkul and Rachore from the Ray of Beejanuggur; who, gaining early intelligence of his intention, moved with a great force, and stationed his camp on the banks of the Krishna, where he was joined by many of his tributaries; so that his army amounted to at least fifty thousand horse, besides a vast host of foot. The king would now have deferred his expedition, as the enemy held possession of all the ferries of the Krishna, but his tents being once pitched, he considered it would be undignified to delay. He therefore marched with seven thousand cavalry, composed entirely of foreigners, and encamped on the bank of the river opposite to the Hindoos, waiting for the preparation of rafts to cross and attack. Some days after his arrival, as he was reposing in his tent, he heard one of his courtiers without the screens reciting this verse: 'Rise and fill the golden goblet with the wine of mirth, before the quaffer shall be laid in dust.' The king, as if inspired by the verse, called his favourites about him, and spreading the carpet of joy, gave way to the pleasures of music and wine. When the banquet had lasted longer than was reasonable, and the effects of the liquor began to exercise their influence, a fancy seized the king to pass the river and attack the enemy. He accordingly called on his military officers to state the cause of the delay in preparing the boats and rafts. He was told that one hundred boats were already finished, and the rest would be ready in a few days. The king, heated with the banquet, resolved to cross immediately; and mounting his elephant, without making his intentions known, proceeded to the river, as if to reconnoitre, but suddenly gave orders for as many of his troops as could go to embark on the rafts, directing others to follow him on elephants. The officers in vain represented the imprudence and danger of this precipitation; but the king, without reply, plunged his own elephant into the stream, and was instantly followed by some of his officers and soldiers, on about two hundred and fifty elephants. By great good fortune all reached the opposite bank in safety, and as many troops as could cross on the rafts and boats at two embarkations had time to arrive before the enemy opposed him. The Hindoos, however, were in such force as precluded every hope of the king's success, with whom were not more than two thousand men to oppose thirty thousand. The heroes of Islam, as if animated with one soul, behaved so gallantly, that above a thousand of the infidels fell, among whom was Sungut Ray, the chief general of Beejanuggur. The Mahomedans, however, found themselves so harassed by cannon shot, musketry, and rockets, which destroyed nearly half their numbers, that the survivors threw themselves into the river, in hopes of escaping. Tursoon Bahadur and Ibrahim Beg, who rode on the same elephant with their king, drove the animal across the stream; but so rapid was the current, that, with the exception of that elephant and seven others, the rest were all drowned. The

king's rashness was severely punished by so great a loss. He took a solemn vow never to indulge again in wine till he had wiped away the stain of this defeat; and for this purpose he bent his whole mind to repair his misfortune."

We here conclude our extracts, which we trust will in themselves be a recommendation to our readers for a more intimate acquaintance with these curious and very amusing annals: but we must remind them on a perusal to make liberal allowance for the historian's extravagant laud of the Mahomedan, and his undue abasement of the Hindoo. Kasim Ferishta was recording the progress of his own religion, and the glories of his own people. Colonel Briggs's book is one of those which belong to the library as a sterling and permanent work.

SIGHTS OF BOOKS.

Florence; or, the Aspirant: a Novel. 3 vols. London, 1829. Whittaker and Co.

INTO what unknown region will the novel writer adventure for materials? We have gone back upon the past, till not a bone has been left in the graves of our ancestors undisturbed;—we have lifted up the crimson curtains of modern life, till the mysteries of fashion are familiar in our mouths as household words;—love has not a distress, or sentiment, or danger, that has not been portrayed to the minutest particle. Yet the author of the work before us has, at least, novelty of subject:—under the guise of a fiction we are involved in the mazes of religious discussion; and *Florence* is, in reality, but a defence of the Roman Catholic religion, embodied in the history of a young and fair convert. We will leave these polemical disputes to the higher authority of our divines, and confine ourselves to the literary merits of the work in question; and in this point of view it is below mediocrity. The picture of English society is as untrue as it is absurd; and the only touch which discovers knowledge of human nature is where the heroine, after hearing a young and handsome Jesuit preach, is made to exclaim, "O that I might be adopted by that holy and elegant man!"

Miscellanies in Prose and Verse; consisting of the Inspector, a periodical Paper. By Isaac Wilson. 12mo. pp. 360. Kingston-upon-Hull, for the Author: London, Simpkin and Marshall.

Something New on Men and Manners; a Critique on the Vices and Follies of the Age. 8vo. pp. 295. Hailsham, for the Author; London, Baldwin and Cradock.

SOMETHING old would have been far more suitable to these volumes, which belong to a school of essayists at least "sixty years since," when Flirtillas, Hortensios, Coquetts, Poppings, &c. were the staple commodities of those moral picture-galleries, now as threadbare as they are common-place. That of being well-meaning, is the only praise we can justly bestow on these publications.

Memoirs of a New England Village Choir; with occasional Reflections. By a Member. pp. 149. R. J. Kennet, London; S. G. Goodrich and Co., Boston, U.S.

We really do not see enough of merit in these pages to justify their republication in this country. The squabbles among the psalm-singers in the gallery of a country church are matters, we know, of mighty import to the parties concerned; yet their interest must necessarily be local. Still, however, there is an occasional vivacity and neatness of description that make

us think the author of these pages might do much better. Animated and accurate sketches of Transatlantic scenes and manners would be very popular:—an American *Mias Mitford* would be a very original and delightful person.

Miscellanies. By William Mavor, LL.D.: with a Portrait. 8vo. pp. 512. Longman and Co.

WE protest against being considered as critics while speaking of this very delightful volume: the recollections of our youth rise up in judgment against us; and all we can do is to recall the many happy hours spent with its pages. We strongly recommend these *Miscellanies* to our youthful readers; they must gain from them something of instruction—some wise or kindly precept will impress itself upon the mind, stored up, almost unconsciously, among the better materials of future years. We recommend them, in the belief that few could rise unbenefited from their perusal.

A Token for Children; being an enlarged Edition of Mr. Janeway's Work: containing Thirty-Six Memoirs of Young Persons. Collected and revised by Mrs. Cameron. 2 vols. 18mo. pp. 528. London, Seely and Co.

THIS is an improved edition of Mr. Janeway's *Memoirs of Pious Children*. The biography of infantine devotion, and the records of the good among the youthful portion of society, are at all times gratifying to those of their own age, who generally feel a deep interest in perusing such brief annals, and in whose breast that perusal is calculated to excite virtuous emulation. On this account such collections as the little volumes under notice are valuable; and we need therefore only remark, that Mrs. Cameron seems to have so modernised Mr. Janeway's style, as to render her *Token for Children* an acceptable offering to the more religious orders. The advertisement, in the midst of all its seriousness, made us smile, by speaking of the liberties taken by the editor "with the additional lives, from the necessity of shortening them:"—a murderous mode of expression.

The Picture of Australia; exhibiting New Holland, Van Diemen's Land, and all the Settlements from the first at Sydney to the last at Swan River. 12mo. pp. 370. Whittaker and Co.

THIS volume has picked out of travels, and other publications, a number of details respecting Australia; but we can neither praise the judgment with which they have been weighed, nor the style in which they are related. Of the Swan River Settlement the author appears to know nothing, though the principal subject of immediate interest for such a volume to elucidate; and we were surprised to learn, from a supplemental note, page 367, that honest Allan Cunningham, whom we saw in good health and at large in London at the very time, had been transported to Sydney in April last!

The Principal Events of the History of Ireland, in the form of Stories. 18mo. pp. 230. London, 1829. E. Lloyd.

THIS pretty little volume seems intended to match Mr. Croker's pleasing *Stories from the History of England*; and we can hardly award it higher praise, than that it is justly entitled to a place on the juvenile library shelf along with the publication we have mentioned, the *Tales of a Grandfather*, and other favourites. It is evidently the production of an accomplished mind; and has the rare merit, treating of Ireland, of being moderate and unprejudiced.

The Library of Entertaining Knowledge. Vol. II. Part II. London, C. Knight; Longman and Co.

THIS fifth part of a very successful, very useful, and well-digested publication, resumes the History of Vegetable Substances; and as we had the trees before, now gives us concise but interesting, though not sufficiently full, accounts of the various fruits which they produce. Notwithstanding it does not afford us convenient specimens for extract, we can most cordially recommend this intelligent volume to every class of readers. The Library of Useful Knowledge, under the superintendence of the Society, has also just published the *Art of Brewing.* Part I. Baldwin and Co.

ORIGINAL CORRESPONDENCE.

Paris, Sept. 10th.

THE Royal Society of Antiquaries of France is at its last gasp—last session (if I may use the expression, as they still sit): they never collected above four or five at any of their meetings, held once every ten days; and the indefatigable, unwearied five, "nothing daunted," have magnanimously determined to forego the pleasures of vacation, and to continue their sittings! What they sit about, I know not, never having formed part of the quintetto; or what the learned Oldbucks propose by their perseverance, except upon the principle, that vacation is a sort of *restaurant* for the exhausted powers of the mind, as Veréy's is for the weakened force of the body; and as they had nothing last winter to exhaust their mental faculties, they have no need of the *restaurant*. Quoad effects, this spirited "resolve" seems much like the favourite *tisane*, which is ordered here on every occasion, from a cut finger to a formidable attack of gout; in this point the whole faculty coincide:—however, they differ on others, like two eminent M.D.'s, the Baron Dupuytren and a Dr. Maisonnabe. The latter—who seems to think that our Abernethy and the late illustrious Gregory owe their reputation to their candid manner alone, forgetting that nothing but their talents made the former bearable—wishes to bludgeon himself into notoriety, and was nearly knocking the Baron down, when argument failed to convince him. The Royal Council of Public Instruction have decided, that "Dr. Maisonnabe offered at the Faculty of Medicine, before a great number of persons, serious and unprovoked insults to Baron Dupuytren that the former shall be censured in the presence of the council of the University, on a day to be fixed by the grand master; and shall make an apology and reparation to the Baron, in presence of the Faculty of Medicine, convoked especially for this purpose; and further, that his complaint against M. Dupuytren is devoid of foundation in every respect." There is no appeal: should he prove sturdy, which is most likely, his diploma is recalled, and he cannot practise in the French dominions without it, under heavy penalties, *ad infinitum*. He will probably betake himself, bludgeon and all, to the Netherlands, the asylum at present for the "oppressed by power" of every description.

ARTS AND SCIENCES.

ANCIENT AND MODERN EGYPT.

M. Champollion's Twelfth Letter—continued.

COMING from Syene, we first meet with three chapels, heven in the rock, and nearly contiguous. All three are of the best Pharaonic period, and resemble each other as well in the

plan and arrangement as in the whole of the external and internal decorations: all open with two columns formed of truncated buds of lotus.

The first of these chapels (the most southerly) was excavated in the rock under the reign of the Pharaoh Ousirei of the eighteenth dynasty: it is almost entirely destroyed. Only two bas-reliefs are still visible, and are not interesting except on account of the workmanship, which has all the elegance and delicacy of that time. The second chapel is of the following reign, that of Rhamsees II. The pictures which adorn the walls to the right and left acquaint us with the divinity to whom this little edifice was dedicated by Pharaoh. He is represented adorning, first, the Theban triad, the greatest of the gods of Egypt—Ammon-Ra, Mouth, and Khous, those who were invoked in all the temples, because they were the type of all the others; farther on, he is offering wine to the god Phré, to Phtha the lord of justice, and to the god of the Nile, who is called in the hieroglyphic inscription *Hapimouou*, the vivifying father of all that exists. It is to this last divinity that the chapel of Rhamsees II., as well as the two others, were particularly consecrated: this is shewn by a very long hieroglyphic inscription, of which I have taken a copy. It is dated "the year IV. the 10th day of Mesori, under the majesty of the powerful Aroëri, the friend of truth and son of the sun, Rhamsees, beloved by Hapimouou, the father of the gods." The text which contains the praises of the god Nile (or Hapimouou), identifies him with the celestial Nile (*Nenmouou*), the primordial water, the great Nilus, whom Cicero, in his treatise on the Nature of the Gods, calls the father of the principal divinities of Egypt, even of Ammon, which I have found attested also by monumental inscriptions.

The third chapel is of the reign of the son of Rhamsees the Great. It was natural that the chapels of Silsilis should be dedicated to Hapimouou (the terrestrial Nile), because it is the place in Egypt where the river is the most confined, and seems to make a second entrance after having burst through the mountains which here oppose its passage, as it forced it, way through the granite rocks at the cataract, to make its first entrance into Egypt.

To the north of these chapels is a series of tombs made to receive two or three embalmed bodies: they are all of the time of the first Pharaohs of the eighteenth dynasty, and some of them belong to directors of the works, or chief inspectors of the quarries of Silsilis. We have also copied some stele, bearing dates of the reign of several Rhamsees of the eighteenth and nineteenth dynasties, as well as a great inscription of the year 22 of Sesonchis.

The most important of the monuments of Silsilis is a great specos, or edifice excavated in the mountain, and singular on account of the variety of the epochs of the bas-reliefs which ornament it. This beautiful excavation was commenced under King Horus, of the eighteenth dynasty; it was intended for a temple, dedicated first to Ammon-Ra, and then to the god Nile, the divinity of the place, and to the god Sevek (Saturn with the crocodile's head) the principal divinity of the Om-bite nome, to which Silsilis belonged. It is with this design that the sculptures and inscriptions of the principal door were executed, under the reign of Horus, as well as all the bas-reliefs of the sanctuary, and some of those which decorate a long and beautiful cross-gallery which precedes the sanctuary. This very extensive gallery forms a real historical museum. One

of the walls is covered in its whole length with two rows of great stele, or bas-reliefs, sculptured on the rock, and for the most part of various epochs: similar monuments decorate the intervals between the five doors which are the entrances to this curious museum. The most ancient bas-reliefs, those of King Horus, occupy a portion of the western wall; the Pharaoh is there represented standing, with a battle-axe on his shoulder, receiving from Ammon-Ra the emblem of divine life, and the gift of subduing the north and conquering the south. Below are Ethiopians, some of them thrown on the ground, others raising their hands in an attitude of supplication, to an Egyptian chief, who reproaches them, in a legend, with having closed their hearts against prudence, and not having listened when they were told—"Behold the lion is approaching the land of Ethiopia (Kousch)." This lion was king Horus, who conquered Ethiopia, and whose triumph is recorded by the ensuing bas-reliefs.

The victorious monarch is borne by military chiefs on a rich palanquin, accompanied by fan-bearers. Servants are keeping the road clear through which the procession is to pass; after the king come warriors leading captive chiefs; other soldiers, with their shields over their shoulders, are marching, preceded by a trumpeter; a group of Egyptian sacerdotal and civil functionaries receive the king and do him homage. The hieroglyphic legend of this representation is to the following effect: "The gracious god returns (to Egypt) borne by the chiefs of all the countries (the nomes); his bow is in his hand, like that of Mandou the divine lord of Egypt; he is the king, director of the vigilant, who leads (captive) the chiefs of the lands of Kousch, a perverse race: this king, director of the worlds, approved by Phré, son of the sun and of his race, the servant of Ammon, Horus, the vivifier. The name of his majesty has been made known in the land of Ethiopia, which the king has chastised, conformably to the words addressed to him by his father Ammon."

Another bas-relief represents soldiers bringing prisoners of the ordinary class in very great numbers: the legend expresses the following words, which they are supposed to utter in their humiliation:—"O thou, the avenger! king of the land of Kémé (Egypt), son of the Niphaïat (the Libyan people), thy name is great in the land of Kousch, the royal ensigns of which thou hast trampled under thy feet!"

All the other bas-reliefs of this specos, whether stele or pictures, belong to various later epochs, but, however, not lower down than the third king of the nineteenth dynasty. We remark among other subjects:—1. A picture representing an adoration of Ammon-Ra, Sevek (the god of the nome), and Bubastis, by the Basilico-grammate, charged with the execution of the palace of King Rhamsees Meiamoun, in the western part of Thebes (the palace of Medinet Habou), Phori, a man of veracity. 2. Three magnificent inscriptions, in hieratic characters, recording that the same functionary came to Silsilis in the month of Paschous, the fifth year of the reign of Rhamsees Meiamoun, to direct the working of the quarries, for building the palace of that Pharaoh. 3. A great bas-relief—King Rhamsees Meiamoun adoring the god Phtha and his companion Pascht (Bubastis). These monuments demonstrate, without any doubt, that all the free-stone employed in building the palace of Medinet Habou at Thebes came from Silsilis, and that this great edifice was begun, at the

soonest, in the fifth year of the reign of its founder. 4. A great stele, representing the same king adoring the gods of Silsilis, and dedicated by the Basilico-grammate Honi, superintendent of the buildings of Rhamsees Meiamoun, intendant of all the palaces of the king in Egypt, and charged with the erection of the temple of the sun, built at Memphis by that Pharaoh. Pictures representing acts of worship, and several stele more ancient than the preceding, prove also that Rhamsees the Great derived from Silsilis the materials for others of the great edifices erected under his reign. Several of these stele, dedicated by intendants of the buildings, or by princes who came to upper Egypt to hold religious assemblies, in the years 30, 34, 37, 40, and 44, of his reign, have furnished me with curious details respecting the family of the conqueror. One of these stele tells us that Rhamsees the Great had two wives: the first, Nofré-Ari, was the consort of his youth—the same who appears, as well as some of her children, in the monuments of Ypsamboul and Nubia; the second (and last, as far as we yet know) was called Isénofré: she was the mother—1. of the Princess Bathiani, who appears to have been her favourite daughter, the darling of the old age of Sesostris: 2. of Prince Schahemkémé, who presided over the religious assemblies in the last years of the reign of his father, as is proved by three of the great stele at Silsilis. This is probably the son who succeeded him, and, laying aside the name which he bore as prince, assumed on the monuments that of Thmeiothph (the possessor of truth, or he whom truth possesses). This is the Sesostris II. of Diodorus, and the Pheron of Herodotus. Like his father, he was the founder of many buildings, of which but few traces remain. Three are in the specos at Silsilis—1. a little chapel, dedicated in his honour by the intendant of the lands, of the Om-bite nome, named Pnahasi: 2. a stele (the date effaced), dedicated by the same Pnahasi, and recording that the quarries of Silsilis furnished the stone used in the erection of the palace which that king built at Thebes, where there is no trace of it, at least to my knowledge. This stele tells us, that the wife of this Pharaoh was called Isénofré, like his mother, and his eldest son Phthamon: 3. a stele of the year 2 of the fifth day of Mesori, stating that Silsilis furnished the stone for building the palace of King Thmeiothph at Thebes, and for additions and repairs to the palace of his father the Rhamseion (the edifice which has improperly been called the tomb of Osymandias and the Memnonium). Lastly, there are at Silsilis similar stele relative to some other kings of the eighteenth and nineteenth dynasties. Two stele of Amenophis Memnon, the father of King Horus, are on the east bank, where the most extensive quarries are situated. These stele give the first sure date of the most ancient working of the quarries of Silsilis. It is certain, that after the nineteenth dynasty they always furnished the materials for the monuments of the Thebaid. The stele of Sesonchis I. prove it, where mention is made of their being worked in the twenty-second year of the reign of that prince, for erections in the grand abode of Ammon;—these are those which form the right side of the first court at Karnac, near the second pylon—a monument of the reign of Sesonchis, and of the Bubastite kings, his descendants and successors. Lastly, it is natural to suppose that the materials of the temples of Edfou and Eneah came chiefly from these same quarries.

On the 24th, in the morning, we visited the

porticoes and colonnades of Edfou (Apollinopolis Magna). This monument, which is striking from its extent, bears, however, the marks of the decay of the Egyptian art under the Ptolemies, to whose time it entirely belongs. There is no more the same ancient simplicity: we observe in it an injudicious affectation and profusion of ornaments, which indicate the transition from the noble gravity of the Pharaonic monuments to the tasteless decorations of the temple of Raneh, built in the time of the emperors.

The most ancient part of the decorations of the great temple at Edfou (the interior of the naos and the exterior of the right side) is no older than the reign of Philopator. The work was continued under Epiphanes, whose legends cover part of the shafts of the columns and the internal pictures of the right wall of the pronaos, which was terminated under Evergetes II.

The sculptures of the external frieze, and of the outside of the walls of the pronaos, were decorated under Soter II. The gallery on the right of the court before the pronaos was sculptured under the same king. The gallery on the left, and all the sculptures of the two walls (massifs) of the pylon, belong to Philometor. I have found, however, towards the bottom of the right wall a bad little bas-relief, representing the Emperor Claudius adoring the gods of the temple. The wall enclosing the naos is wholly covered with sculptures: those on the inner side are of the reigns of Cleopatra-Cocce and Soter II., of Cocce, of Ptolemy, Alexander I., and of his wife, Queen Berenice. This will give a correct idea of the antiquity of the great temple at Edfou;—not from conjectures, but facts, inscribed on a hundred parts of the monument, in characters ten inches, and in some instances two feet in height. This vast and magnificent edifice was consecrated to a triad, composed—1. of the god Har-Hat, celestial knowledge and light personified, of which the sun is the image in the material world: 2. of the goddess Hathor, the Egyptian Venus: 3. of their son Har-Sout-Tho (the Horus, support of the world), who corresponds with the god of love, the Eros of the Greek and Roman mythology. The attributes, titles, and diverse forms of these three divinities, which we have collected with care, throw great light on many important parts of the Egyptian theogony. It would occupy too much time to enter here into such details.

I have also had drawings made of a series of fourteen bas-reliefs of the interior of the pronaos, representing the rising of the god Har-Hat, identified with the sun, his setting and his symbolic forms, at each of the twelve hours of the day, with the names of these hours. This collection is extremely interesting, as illustrating the small portion of Egyptian mythology which is really relative to astronomy.

The second edifice of Edfou, called the Typhonium, is one of those little temples named mammisi (lying-in chamber), which were always built by the side of all the great temples where a triad was adored: it was the image of the celestial abode where the goddess had brought forth the third person of the triad, who is always represented under the form of an infant; and the mammisi of Edfou represents, in fact, the infancy and the education of the young Har-Sout-Tho, son of Har-Hat and Hathor, with whom flattery has associated Evergetes II., represented likewise as a young child, and sharing in the caresses which the gods of all orders lavish on the infant son of Har-Hat. I have had copies made of a great number of bas-reliefs on this monument, of the reigns of Evergetes and of Soter II.

Having completed our task at Edfou, we went to refresh our eyes, (wearied by the bad hieroglyphics and the wretched Egyptian sculptures of the time of the Lagides,) in the tombs of Elethya (El Kab), where we arrived on Saturday, 28th of February. We were received by the rain, which fell in torrents, with thunder and lightning, during the night of the 1st of March. Thus we may say with Herodotus, I think,—“in our time there was rain in Egypt.”

I eagerly explored the interior of the enclosure of the ancient town of Elethya, still existing, as well as the second enclosure, which contained the temples and sacred edifices. I did not find a single column standing: the barbarians have destroyed within these few months what remained of the two inner temples, and the whole temple situated outside of the town. I was obliged to content myself with examining one by one the stones which had escaped the spoilers, and on which there remained some fragments of sculpture and inscriptions to show that the temple of Elethya, dedicated to Sevek (Saturn) and to Sowan (Lucina), belonged to various times of the Pharaonic period: those which the town contained were built and decorated under the reigns of Queen Amensé, of her son Thoutmois III., and under Amenophis Memnon, and Rhameses the Great. Kings Amyrtheus and Acoris, two of the last princes of the Egyptian race, repaired these antique edifices, and added to them some new buildings. I found at Elethya nothing of the Greek or Roman times: the temple without the town is of the reign of Moeris.

The tombs, or hypogea, excavated in the Arabic chain near the town are most of them of very remote antiquity. The first that we visited is that of which the commission of Egypt published the painted bas-reliefs relative to rural occupations, to fishing and navigation. This tomb was excavated for the family of a hiero-grammate named Phapé, attached to the college of the priests of Elethya (Sowan Kah). I have had drawings made of several inedited bas-reliefs, and have taken copies of all the legends, rural and other scenes, which have been rather negligently published. This tomb is of very great antiquity. A second hypogeum, that of a high-priest of the goddess Ilythya, or Elethya (Sowan), the goddess of the town of the same name, bears the date of the reign of Rhameses Meiamoun: it offers a great number of family details, and some agricultural scenes in very bad condition. I remarked, among other things, the beating or treading out of the sheaves of wheat by oxen; and above the same we read in hieroglyphics, which are almost all phonetic, the song which the conductor of the operation is supposed to sing; for in ancient as well as in modern Egypt all was done singing, and every kind of work had its peculiar song.

The following is that belonging to the treading out of the corn, in five lines,—a sort of address to the oxen, which I have since found, with very slight variations, in tombs much more ancient. “Tread for yourselves (*bis*), O oxen!—tread for yourselves (*bis*)—bushels for you—bushels for your masters.”

The poetry is not very brilliant; probably the air made the words pass; however, it is adapted to the occasion on which it was sung; and I should still think it very curious, if it only proved the antiquity of the *bis*, which is written at the end of the first and of the third lines. I should have been glad to find the

music to send to our respectable friend General La Salette: it would have furnished him with some data for his learned researches into the music of the ancients.

The next tomb to this is still more interesting in an historical light: it was that of an individual named Ahmosis, son of Obeschné, chief of the mariners, or rather of the pilots; he was a great personage. I have copied in his hypogeum what remains of an inscription of thirty columns, in which this Ahmosis addresses himself to all persons present and future, and tells them his history, which is to the following effect. After having stated that one of his ancestors held a distinguished rank among the servants of an ancient king of the sixteenth dynasty, he informs us that he himself entered the naval career in the time of King Ahmosis (the last of the seventeenth legitimate dynasty);—that he went to join the king at Tanis;—that he took part in the wars of those times, in which he served on the water;—that he afterwards fought in the south;—that he took some prisoners with his own hands;—that in the war of the sixth year of the same Pharaoh he took rich spoils from the enemy;—that he accompanied King Ahmosis when he went up by water to Ethiopia, to impose tribute upon it;—that he distinguished himself in the war that followed;—and, lastly, that he commanded ships under King Thoutmois I. This is, without any doubt, the tomb of one of those warriors who under the Pharaoh Ahmosis nearly completed the expulsion of the shepherds, and delivered Egypt from the barbarians.

Not to extend the account of Elethya to too great a length, I will conclude by noticing a tomb which is nearly ruined: it has made me acquainted with four generations of great personages of the country, who governed it under the title of Soutensai of Sowan (princes of Elethya), during the reigns of the first five kings of the eighteenth dynasty, viz. Amenophis I. (Amenostep), Thoutmois I., Thoutmois II., Amensé, and Thoutmois III., in whose personal service they held a high rank, as well as in that of queens Ahmosis-Alare and Ahmosis, the wives of the two kings first named, and of Ranofré, daughter of Queen Amensé, and sister of Moeris. All these royal personages are successively named in the inscriptions of the hypogeum, and thus form a supplement and a valuable confirmation of the table of Abydos.

NEW PUBLICATIONS.

A Series of Maps, Modern and Ancient. Under the Superintendence of the Society for the Diffusion of Useful Knowledge. No. I. Baldwin and Cradock.

THE object of the Society in this publication is to furnish geographical students and readers of history with maps of an intermediate size between the large and expensive ones, fit only for the library, and the smaller sort usually adopted in schools. The series will consist of at least fifty plates; and the price is exceedingly moderate. No. I. contains “Ancient Greece; Southern part,” and “Turkey, III., containing the Southern Part of Greece and Candia.” They appear to be very accurate; and we have no doubt that the publication will be very acceptable to a large class of the population of the empire.

LITERARY AND LEARNED.

EUROPEAN UNIVERSITIES.

IN the subjoined statement we have included no establishments which are frequented by fewer

than 1000 students; neither have we been enabled to ascertain whether any of the Spanish or Portuguese universities are, or are not, entitled to be inscribed upon our tablet. The estimate cannot fail to suggest matter for deep and sorrowing meditation to our countrymen in general, though it is more especially designed for those to whom the youth of England look up for the means of intellectual advancement.

Proportion of Professors to Students.

Berlin	1 to 13	Naples	1 to 30
Leipzig	1 to 17	Lemberg	1 to 34
Göttingen	1 to 17½	Pavia	1 to 36
Halle	1 to 20½	Munich	1 to 36½
Vienna	1 to 23	Cambridge	1 to 40½
Upsala	1 to 26	Oxford	1 to 40
Prague	1 to 26½	Edinburgh	1 to 102½
Paris	1 to 27		

It would hence appear, that the capital of Prussia has made the most liberal, and that of Scotland the most niggardly, provision for the intellectual training of their youthful frequenters; whilst our own universities occupy a scarcely less conspicuous rank as adepts in the craft of cultivating the mind with the slenderest means.

ORIGIN OF THE ARABIAN NIGHTS.

To the Editor, &c.

SIR,—I observe in an article on the "Arabian Nights," published in your esteemed Journal of Saturday last (p. 603), that M. De Sacy charges my friend, Von Hammer, with ascribing an *Indian* origin to those beautiful tales. But De Sacy must excuse me for preferring to his assertion the recorded opinion of the Ottoman historiographer, as to the source of what he terms "the ripened blossoming of the most enchanting flower of the garden of romance, which has immortalised with its undying splendour the Nile, and the Nile alone." This passage must have escaped the intelligent and inquiring eye of De Sacy, no less than another, in which Von Hammer not only states an opinion, but delivers a matured judgment, on the origin of these tales. "The Thousand-and-one Nights, as known to the world by Galland's translation, and my continuation, is wholly and obviously of *Egyptian* stamp and fashioning: they date partly from the times of the Fatemites and Ejbides,* and partly from the nearer age of the Circassians and Mamelukes of the Nile: this is amply evidenced by the tale of 'Al-bondakani,' i. e. Bundukdari, the cognomen of Bibars, the fourth sultan of the Mamelukes of the Nile."

However Von Hammer may differ from De Sacy in ascribing an *Egyptian* where the latter ascribes a *Syrian* origin to the Arabian Nights, it is quite evident that he neither supposes them to be of an ancient date nor of *Indian* derivation. I am, sir, &c.,

16th Sept. 1839.

NUREDDIN.

Since the preceding lines were written, it has occurred to me, that there is, in truth and *ipso facto*, the meekest shade of difference between the two apparently conflicting parties; for as De Sacy refers the main composition of the tales to a period when Syria was in the hands of the Mameluke dynasty of the Nile (which endured from the close of the twelfth to that of the fourteenth century), the *Syrian* writer was, of course, an *Egyptian* subject; and, as an individual of a lively and susceptible imagination, very likely,—if, indeed, he was not of Egyptian origin,—to have acquired a high relish for the refinements, pomp, and magnificence, which his new masters brought

with them; and to have moulded his beautiful imaginings accordingly.

FINE ARTS.

NEW PUBLICATIONS.

Traditions of Lancashire.

WE have seen a set of proofs of the illustrations, twelve in number, of a work about to be published under the above-mentioned title. They are engraved by Mr. E. Finden, from drawings by Mr. G. Pickering; and are eminently beautiful. Without departing from local fidelity, Mr. Pickering, by a skilful management of effect, especially in the skies, has imparted to his views much of the character of compositions. "South Port," "Hornby Castle," "Collegiate Church, Manchester," and "Lathom House," are singularly fine. Mr. Finden has engraved the plates with his usual power and taste.

Searching the Net. Painted by W. Collins, R.A.; engraved by J. Phelps. F. Collins. ONE of those charming little groups of a fisherman's children, in the representation of which Mr. Collins is always so successful. The engraving is very elaborate; perhaps too much so. It strikes us that if it had been less minute in its execution, the effect would have been better.

Illustrations of Natural History. Conducted by J. Le Keux, &c. The engravings by J. Le Keux and R. Sands. 4to. Edition, Part 2. 8vo. Edition, Parts 4, 5, and 6. Longman and Co.

THIS publication continues to maintain the pleasing and unassuming character which it evinced at its commencement. It is peculiarly calculated for the information and amusement of youth.

The Spirit of the Plays of Shakspeare. Drawn and engraved by Frank Howard. No. XIV. Cadell.

KING JOHN and Coriolanus have furnished Mr. Howard, the former with thirteen, the latter with nine, subjects for this No. "Arthur leaping from the walls of the castle," and "Caius Marcius alone within the walls of Corioli," are our favourites. Mr. Howard would do well to attend a little more carefully to the drawing of his extremities: in some of the plates it is susceptible of much improvement.

Great Britain Illustrated; from Drawings by William Westall, A.R.A.; engraved by E. Finden. No. XIII. Tilt.

THE embellishments of this No. are strikingly contrasted. It is difficult to conceive a greater variety of subjects than "Melrose Abbey," "Hampstead Heath," "Newmarket," and "Lymouth and Linton." The last-mentioned is certainly the most picturesque; but they are all pleasing in their way.

ORIGINAL POETRY.

STANZAS.

(Unpublished.)

In a drear-nighted December,
Too happy, happy Tree,
Thy branches ne'er remember
Their green felicity:
The north cannot undo them,
With a sleety whistle through them;
Nor frozen thawings glue them
From budding at the prime.

In a drear-nighted December,
Too happy, happy Brook,

Thy bubble's ne'er remember
Apollo's summer look;
But with a sweet forgetting,
They stay their crystal fretting,
Never, never petting
About the frozen time.

Ah! would 'twere so with many
A gentle Girl and Boy!
But were there ever any
Writhed not at passed joy?
To know the change and feel it,
When there is none to heal it,
Nor numbed sense to steel it,
Was never said in rhyme.

JOHN KEATS.

THE STORM.

THERE is a Ship upon the western deep,
One only which the eye discerns between
The cliff and the horizon—for the storms
Have made old Ocean's realm a solitude,
Where man may fear to roam.

The winds are up
Again, maddening the wave; and from the strand

There comes a heavier sound, a lengthened roar,
Each moment deeper, rolling on the ear
With most portentous voice. Rock howls to rock,

Headland to headland, and upon the wings
Of the wild gale of eve the feathery foam
Sails o'er the dim-seen capes; the strong-winged gull

With scream prophetic seeks his savage cliff;
And e'en the bird that loves to sail among
The ridges of the sea, with hurried wing
Flies from the blast's dread onset. Swift the Sun

Descends beneath the wave, and, black as night,
And big with fate, the giant Tempest comes,
Darkening the occident, as if to quench
The last faint streaks of day.

At once the womb
Of horror bursts; the lightning gilds the sea
E'en to the far horizon. Ocean roars
To the loud Thunder; and the Thunder speaks
To the rebellious Ocean with a voice
So terrible, that all the rush and roar
Of waves are but the murmuring of rills,
To that deep, everlasting tone which peals
From Niagara, flinging down his steep
The rivers of a world.

Again the flash
Hisses along the main, and hovers there
As if it lingered o'er the black abyss,
And raised its veil of darkness, but to shew
Its wild and tortured face. There is no eye
That looks upon the writhing billows now,
But turns away and hails the gloom which drops
At once upon them, when the arrowy fires
Vanish a moment. The remorseless winds
Grow mightier with the deepening night, and scourge

The waves to madness, and each moment burst
With tenfold added power, and shriek and cry
Almost unearthly.

Morning came at last:
The eye looked out upon the watery world—
With fearful glance looked east and west, but all
Was wild and solitary, and the surge
Dashed on the groaning cliff, and foaming rose
And roared, as 'twere triumphing. Nought
was heard
But the mad mirth of mountain billows, mixed
With revelry of winds, that through the night,
Like bloodhound on the stretch, had chased
that Ship,
Flying with lightning-speed in vain. Ah!

* Of the tenth to the twelfth centuries.

The flash had lit the seaman to his grave—
The sea-dog feasted on the dead!

Plymouth.

N. T. CARRINGTON.

SKETCHES OF SOCIETY.

RECOLLECTIONS OF THE BLACK SEA.

(At a period when every thing descriptive of Turkish feelings and habits is more than usually interesting, we select the following from the MS. notes of M. Fontanier, who was sent into the East by the French Government, and with instructions from the Geographical Society at Paris.)

At the close of the winter of 1826 I left Georgia for Redut-Kale, where I was desirous of embarking for Trebisond. With this view, I made terms with a Turkish captain, who had just entered the harbour with a cargo of citrons and dried fruits, which he intended to barter for Turkish wheat; an article sold at a low rate by the Mingrelians. My passage being secured, I went into quarantine, spent the night on board of the vessel, and received permission to depart the next morning from the superintendent of the Russian lazaretto; who availed himself of the opportunity afforded, by our having been allowed to enter the day before without being either examined or reported, to make a display of his authority by administering a score of *coups de bâton* upon the backs of the offending sentinels.

My companion was a young Byzantian, who had followed some merchants into Persia as an interpreter, and was now on his way homeward. * * * Our vessel had but one mast, with a large sail, besides a foresail and two small ones: it had what was intended to serve as a deck, and in her after-part was a species of hold, dignified by the name of a cabin, in which we stretched a carpet upon the substratum of maize. She was navigated by five sailors, who were interested in the vessel's adventure, and before the anchor was raised betook themselves to their prayers; which being ended, we steered our course through narrow channels, to the mouth of the Copi; and setting our sails, were wafted, by a stiff breeze, along the coast of Georgia. The mouth of the Phasis being speedily doubled, about noon we were in sight of the mountain behind Batum; left the Caucasus on our stern, and gradually approached the lofty ranges of Asia Minor. Both of these elevated masses run nearly parallel to each other from north-east to south-west: a branch of the Caucasus passes through Suram, and forms a junction with the opposite chain; whilst at the foot of the three mountains lie the marshy plains of Mingrelia, and spacious forests of Gurriel, through which flow the Phasis and Copi, descending from the towering Caucasus.

As the wind continued favourable during the night, we determined upon holding our course, frail as our bark was, in a straight line to Trebisond; but were assailed the next morning by so strong a north-easter, that we were compelled to put our helm about, and make for the coast. The clouds were arrested by the mountain tops, and collecting in a heavy mass over them, we had scarcely time to gain a sheltered roadstead, when a tempest vomited its fury around us: it continued eight-and-forty hours, and we were obliged to wait until the forty-ninth, employing ourselves in the interval on the repair of our solitary mast, which he blast had snapped. Hospitality is so rare in this quarter of the globe, that our roommates canvassed the matter over and over gain before they ventured to set foot on shore; and even then declined to take us with them,

as we should have been inevitably consigned to incarceration. They had previously felt great alarm at the prospect of being compelled to take refuge in Batum, where they would have been certain to experience maltreatment. In fact the four or five districts between Trebisond and that place are generally at variance; nor can any native, much less a stranger, attempt to land without imminent danger. * * * There are many bights, such as that in which we lay, along this coast: the mountain chains of Asia Minor run in a north-westerly direction; and their points, jutting out into the sea, afford shelter to wind-bound navigators.

We prosecuted our course towards midnight, and in the morning came in sight of *Risa*, or *Irissa*, a place of considerable traffic, which its inhabitants consider a gem in their sovereign's aigrette: it lies upon the sea-shore, and contains about four thousand souls. The houses are not crowded upon one another, as in other parts of Turkey; but each of them is encircled by trees, and many are surrounded by a fenced parterre, in which maize is grown. Some few, situated on the declivity of a hill, wore a picturesque appearance in the distance, but we were completely undeceived on a nearer approach: a similar impression accompanies the remote aspect of most of the towns, and even villages, in Turkey. The natives are happy in their choice of sites: they are an indolent race of beings, and their gazing propensity impels them to prefer situations on which Nature has been lavish of her gifts; but the inert habits of the Turk bring under the stranger's closer eye a mass of ruins, instead of a knot of smiling habitations. No region would surpass the shores of the Black Sea in productiveness, were it not the scene of perpetual strife.

Suermene, the next spot we made, was the native place of our captain and his crew—their land of promise; and in defiance of the phlegmatic mien they put on, their patience was evidently succumbing under the pitiless indolence of the breeze. "God is great!" exclaimed the captain, as if apprehensive that his over-anxious petitions had insulted his Maker; and every lip responded "God is great!" with an affectation of unconcern which speedily faded from their brows. As we came alongside of the town in the afternoon, a boat put off from the shore: the helmsman carried a musket across his shoulder; his girdle was hung with pistols, a dagger, and several water-bullets. He instantly recognised the captain, who had been away a whole month. "Ah! Ali Reis, is it you? Welcome back, my friend—Mahmud, I'm glad to see thee. But what infidels are those you have on board?" "They are sons of some noble Franks," returned Ali Reis, "and we are taking them to Trebisond." "You are welcome, sirs." "Have you any thing new a-shore?" asked the Reis. "Nothing at all; only the son of the Aga of Risa has murdered his cousin in a fit of jealousy, and is come to us for shelter; 'tis a fine lad: ay, and Allah forgive my bad memory, Hussein laid a charge of gunpowder under your neighbour's house, and has blown it to atoms; five lives were lost by the accident." "That's an unfortunate piece of business," exclaimed Ali. "Not worth another thought; 'twas a parcel of children!" During this confabulation our boat was lowered, the whole crew armed themselves completely, and made for the shore, as if they were about to take the place by storm. In a few minutes our ears were saluted with the din of musketry; but it was mere *vox et præterea nihil*;

as it turned out to be nothing more than a *salvo* in honour of our friends' return, which they re-echoed from the muzzles of their own pieces. Anxious as I was to get loose from the pit in which I had been immured during the last four days, I was obliged to pass the night on board, and await the return of our crew. It appeared strange to me that the captain should venture to leave his ship and cargo in so perilous a neighbourhood with no better protection than a couple of travellers, who would have made but a sorry show against any predatory attempt. He certainly seemed struck when I made this observation to him, though he parried it by telling me, that from the moment the anchor was lowered, the property was looked upon as under the immediate safeguard of the inhabitants;—a strange sort of consanguinity this, between honesty and Vandalism!

At an early hour the next morning the sailors returned, with a number of their fellow-townsmen, who came to purchase their maize, and began their operations by coming up to us and examining our apparel: a dyer laid his indigo-clotted fingers upon my spectacles, and when he found his fist in such close proximity to my face, he seemed delighted beyond measure with the freak it suggested, and evinced an intention of making me look blue upon the occasion. He was taken somewhat a-back; however, when I ventured to push him away, but much more so when the captain stepped in between us and sided with me. "What! isn't this fellow an infidel?" he inquired: "am I to lose my right of exercising my craft upon him? am I doing any thing to hurt him?" There was sufficient point about these arguments to create an occasion for a pretty long discussion on the difference between a Frank and a Rajah; and my advocate dexterously enforced his remonstrances by a declaration, that on his return-voyage he would have to present the commandant of Redut-Kale with a certificate that he had taken due care of his passengers,—a circumstance which, as he alleged, to a certain extent made him responsible for our good treatment. Thenceforward, no further attempt was made to molest us. The aga of the village, who was interested in the cargo, next made his appearance on board, accompanied by the young man who had murdered his relative but two days before; he having, by that deed of valour, approved himself worthy of being appointed the aga's body-guard. During his visit, he descanted knowingly on politics, insisted upon the indubitable superiority of the Turks over every other power; lost no opportunity of abusing the Russians, and, in conclusion, graciously permitted us to set foot upon his territory. Not a moment was wasted in availing ourselves of the license; and our first visit was to the bazar, which we found in no small bustle, in consequence of the arrival of a caravan from Balbut. But not an individual would take us in. I had observed in the neighbourhood the ruins of a castle upon a hill, but I was not allowed to approach it; for the inhabitants not only declared that it contained hidden treasures, but had even attempted one night to try their luck at an excavation. Though they had found nothing, they were apprehensive lest the pasha should avail himself of the circumstance to extort a contribution from them: and on this account, my informant conjured me not to open my lips upon the subject.

Suermene contains about two thousand souls, Turks and Greeks. Their dwellings are low and insignificant, though built of stone; the

walls substantial enough for every purpose of defence; and most of the houses surrounded by an enclosure, in which maize (the principal food of their owners) is grown. They use it for bread and cakes, which are roasted in ashes, and esteemed a tit-bit: for my own part, I preferred the black rye-bread which I purchased at the bazar. The place also produces fruit, which is sent to Balbut: its olive-trees are numerous, though of a diminutive species; and citrons succeed better at Risa, whence they are exported to Redut-Kale and Trebisond. A considerable traffic is also carried on in hazelnuts and dried figs. The shops are ill supplied, and the majority of them belong to Greeks, who deal in woollens, cottons, tobacco, and groceries. Every shopkeeper has a loaded musket at his elbow, and is frequently called upon to use it when an attack is made by the neighbouring villagers. But when a quarrel breaks out between them and the town's-people, they, as Christians, are not allowed to employ firearms, but adopt a more prudent course, and put up with a cudgelling, as a ready means of terminating the broil. I was an eye-witness of the severe drubbing bestowed upon one of this ill-starred race, who objected to take up a hoe and join others of his own faith in working upon the aga's property. * * * Every Turk is abroad during the day-time; they collect in the bazar, smoke their pipes, and spend their hours in conversation: when evening approaches they go home to their families. Our skipper (who was anxious we should not conceive him to be impatient to see *his wife*!) had his children sent to him on the day of his arrival, and avoided crossing his own threshold until the following day, when, as he did not think fit to favour us with an invitation, we were doomed to wander about like outcasts in our foreign habiliments, exposed to the hostile stare of his suspicious countrymen. That we might be more at our ease, we therefore returned on board of our vessel, and here we remained in duration two days longer, whilst the cargo was discharging, and some unexpected difficulty was adjusted. The pasha of Trebisond was at war with an aga, a neighbour of the Suermeniotas, who had made common cause with him; they did not dare, therefore, to suffer themselves to be seen by their enemies, who would have instantly made a caption of the vessel and cargo; but got out of the dilemma by adopting an expedient of every-day occurrence among the Turks: on the one hand, they sent off proposals for settling their differences to the pasha, and promised him due submission and payment of the *fic*; and, at the same moment, shipped off, in the bark which carried the despatches, fifteen men, with the aga's nephew at their head, to the assistance of the rebel. These young adventurers, who were of course a sample of the most unruly fellows of the town, were destined to be our travelling companions to Trebisond, and met us on board of a large vessel with a single sail; but as it came on to blow hard, we were obliged to bring to, and they preferred going ashore and making their way by land. The captain was as much delighted to get rid of them as ourselves, and eagerly resumed his course, fearing lest they should change their minds and come on board again.

The coast of the Euxine, till we reached Trebisond, afforded a most delightful prospect; there were houses and gardens in all directions; and though judging from the uncultivated state of the soil that the population must be scant, yet their dwellings lay so scattered as to give the country an appearance of being well peopled.

In some places we perceived ruins—a sort of signal-posts that the traveller is approaching the capital of some ancient state. We doubled several small points of the mountain ridges, and I observed that a basaltic soil appeared to cover the limestone, which was the predominant mass throughout this elevated region. About five miles east of Trebisond I discerned two pyramids, which are probably used as light-houses, on the top of a hill. We ran into the harbour in the middle of the night, and were compelled to await the return of daylight before we could set foot within the last capital of the Greek empire. Trebisond lies on the seashore, the port being behind a promontory east of the town, beyond the outer extremity of which a pier has been built. This pier is a great protection to vessels against the dreadful north-west wind which rages in the Euxine during the summer, but in winter they are compelled to shelter at Platana, about five miles off. The flat on which the town lies, rises about ninety feet above the level of the sea; the dwellings of the Greeks and Armenians descending in an amphitheatre to the shore. The Christian population amounts to five or six hundred; but the Mahomedan is estimated at sixty thousand. With the exception of the French consul's residence, the houses are but of a mean description, and resemble a heap of prisons, for the walls are solid, and what few windows embellish them look upon the interior court-yards. Their internal arrangements are much of the same character as those I saw in other parts of Turkey. Every thing bespeaks the backward state of civilisation; and the European is perpetually reminded of the necessity of keeping a careful look-out after his sayings and doings.

MUSIC.

NEW PUBLICATIONS.

No. VIII. *Popular Songs, &c.* By C. Eulenstein. Mayhew and Co.

MR. EULENSTEIN, the celebrated and extraordinary player on the Jew's harp, or guimbardes, has here arranged most beautifully, with an accompaniment for the Spanish guitar, the well-known and justly popular air, "Rise, Gentle Moon"—"My Sweet Guitar"—and "A Wreath of Roses." Of these, we need only say that they display musical taste and talent of the first order, and are as pleasant and harmonious as the lover of melody could wish.

O give me but my Arab Steed. By T. A. Rawlings. Chappell.

"A ROMANTIC ballad" for the piano-forte, which, however, we have never seen: It is extremely well arranged for youthful beginners.

O Music, sweet Music. C. Vernot.

THE words are by a Mr. Bartholomew, and the music is Weber's last waltz, which we have heard tortured into so many shapes, that if ever so well done again, we could only express regret at the hackneying of so beautiful a composition.

The Elf-King; a Song. By Aug. Voigt. Calcott.

VOIGT rarely, now, makes his once familiar notes heard by the public,—and this little piece causes us to regret his abstinence. It is above the general compositions of the day,—each verse having a different air, and all being striking and original. The music of the second verse is particularly melodious, though it is almost an injustice to distinguish it from the others.

The Father Land. By John Barnett. Barnett, Moncrieff, and Co.

THIS charming song, sung by Mrs. Hughes, has been heard by every body at the Adelphi, when Monsieur Mallet drew his nightly crowds. It is written by Mr. Moncrieff, and is as delightful in the drawing-room as in the theatre.

Evening Song to the Virgin. The Words by Mrs. Hemans; the Music by her Sister. Willis.

A VERY lovely duet (from the Forest Sanctuary), in which a sister's music does justice to the beautiful sentiments of the poet.

Barnett's Songs of the Minstrels: arranged for the guitar by Eulenstein. Mayhew and Co.

WE have noticed these songs before, as arranged for the piano-forte; and have here only to say that we like them almost better with Mr. Eulenstein's graceful and easy guitar accompaniments.

The White Maid of Avenel. Balls.

A SERENADE composed by Mrs. Col. Stewart, late Miss Wainwright, and, we have heard (though we never had the pleasure of hearing it at first hand), sung delightfully by its fair author. We could have fancied something more wildly sweet for the White Maid of superstitious romance.

I'll come again to Thee. J. H. Calcott. Cramer and Co.

A BALLAD by Mr. Bayly, and the music familiar to us as an old Scots air—it is very pretty, though not one of this popular lyricist's great hits.

Andante e Rondo, from Semiramide. By A. Meves. Chappell.

A *Mavis* would be well understood by our northern friends to mean a *thrush*; and this little piece is worthy of such a warbler. Our young friends could meet with nothing more easy, simple, and pretty.

Adeste Fidelis; with Variations by W. E. Tipper. Cramer, Addison, and Beale.

It is almost impossible to spoil this splendid air; and it is sufficient to say that Mr. Tipper has done justice to it, and rendered it more delightful by his sweet variations.

PAGANINI.

[Mr. Ackermann has obliged us with the following extract of a letter dated]

Frankfort, September 1st, 1833.

THE extraordinary violin-player Paganini has been performing here lately; and although the playhouse prices were trebled on the occasion, it was overflowed—such was the desire to hear this celebrated musician. His execution is really wonderful. He goes to Paris, and then to London. The *Literary Gazette* of the latter metropolis contains a description of him, which is so truly exact, that no doubt great curiosity is already excited among the admirers of musical performance.

DRAMA.

COVENT GARDEN.

THE subscription in aid of this theatre has not, we regret to hear, succeeded so much as the hopes of its friends anticipated. It is a curious matter in theatrical history, that there is a very old precedent of a theatre in precisely the same situation with Covent Garden; and the proceedings on that occasion form a remarkable contrast to the present, and singularly ex-

hibit the difference of circumstances, manners, and public feelings. It was, we think, in 1633 (nearly two centuries ago), that the famous theatre of *Black Fryers* fell into overwhelming difficulties; upon which an application was made to the government for aid and relief. Government appointed the magistrates of Middlesex as a commission to inquire into the matter, and they made a Report to (if we remember rightly) the privy council. In this they represented, that on calling the players before them and examining them, they pointed out the deplorable state into which the vested interests of the house, the performers, and a number of widows, tradesmen, &c. connected with, or employed by, the theatre, would be plunged if it were shut up; and they offered to carry it on if 16,000*l.*!!! were granted to them,—a monstrous demand, equal to fully five times its amount according to the value of money in our days! The commissioners very naturally demurred, and called for the particulars which could reach to so enormous a sum. The players forthwith gave in the items, and it appeared from them that the total incumbrance of the *Black Fryers* was no less than 21,000*l.*!! Again taking this statement into their consideration, the justices estimated the concern very differently from the company of actors, which consisted of only twelve persons. They valued the interests of the two brothers Burbages, from whom the theatre was leased for *fifty-one* pounds per annum, at fourteen years' purchase = 714*l.*; some waste ground "for coaches to turn," at a similar rate; and the wages of the players, properties, and other matters, altogether in various ways; making the total of relief, in their opinion, a little above 3000*l.*! Instead of 21,000*l.*! We cannot recollect how the affair ended, but simply that the Report was signed, among others, by Mr. Childe, the founder of the wealthy and distinguished family of that name.

HAYMARKET THEATRE.

A BROAD farce, called *William Thompson*, broadly acted, and broadly successful, was produced on Friday week at this theatre; and has since furnished the less squeamish class of play-goers with abundant laughter.

VARIETIES.

Swiss Typography.—Such is the want either of writers or readers in Switzerland, that more than one half of the one hundred and thirty presses it has hitherto employed, have nothing to issue. *Geneva* stands at the head of the list, and has 18; *Zürich*, 17; *Basle* and *Argovia*, 16; *Berne* and *St. Gall*, not more than 9 together!

The Zend-Avesta.—Among the Literary Notices in the Foreign Quarterly Review (No. VIII.), there is one which shews that the first European edition is not that of Professor Olshausen, of Kiel (as mentioned in our last *Gazette*, from a foreign journal), a previous edition having been commenced in Paris.

Steam Carriages.—It is stated that Gurney's steam-coach is really to start next month (the 1st) in working—not experimental journeys—for travellers between London and Bath. A steam-engine, on some new principle, has recently been tried in a boat on the Thames. We heard that it belonged to the same parties: the action seemed slow, and the noise was great. A Mr. Nathan Gough has been travelling in a steam carriage before the people of Manchester, at from five to seven miles an

hour. Mr. Brown invites the scientific to witness the perfection of his gas apparatus for the same purposes at Old Brompton. Surely, among all the efforts, something efficient will be done.

Paris Geographical Society.—At the sitting of the Paris Geographical Society, on the 4th instant, some details were communicated by M. Brue relative to the islands of Saint-Pierre and Miquelon; from which it appears that, in 1783, Miquelon formed a distinct island. Since that period, however, the sand, which divided them, has disappeared, and at the north there is an extensive bay, at the end of which is a port. This port it is intended greatly to improve, as it is thought it will afford a better shelter for vessels than Saint-Pierre, and be useful to the cod-fishery. The roads of Saint-Pierre are very magnificent, and the bay is formed by the eastern part of the Isle St. Pierre and the Isle of Dogs. M. Brue states that the chart of Newfoundland published in 1784 was very defective, and calculated to cause danger, as the fogs which prevail often prevent navigators, going from France to these islands, from observing their position. M. Brue mentions a rock under the water, near the isle Saint-Pierre, not pointed out in any chart, rectifies the errors relative to the fogs, and describes the bank of Saint-Pierre at the western extremity of the great bank. Mention is also made of the rocks of Cape Raze, which are found to be situated nearly one degree more to the east than they are marked in the chart of 1784. At the same sitting a favourable account was given to the Society of the progress which the young Ethiopians now in Paris have made in the sciences; and it was stated that they are about to translate the Geography of Malte-Brun into the Turkish language: One of them is also about to engrave several lithographic charts from the atlas of Malte-Brun and that of M. Brue.

Literature.—A curious plan of literary agency is advertised in our usual columns: if the proposer gets as many fees as we get MSS., he will find it a flourishing concern; and we doubt not that, if properly conducted, it might be useful to *débutants* in the thorny paths of publishing.

Turco-Lancasterian System.—The St. Peter's of Mussulmen is the great mosque of Damascus, constructed by Abdolmelek, the fifth caliph of the house of Ommia. This superb edifice is six hundred feet long from east to west, and one hundred and fifty feet broad from north to south; its erection is said to have cost the enormous sum of five millions of ducats (2,250,000*l.*), and its daily expense to have amounted to three hundred (140*l.*). The various services of the day were performed by sixteen imams; and during the nights of the Ramadan it was resplendent with twelve thousand lamps! This was the mosque in which, as we are informed by Tefkeretub-hikem, Ebu Dürda, a disciple of the Prophet, and the chief reader of the Koran, adopted the system ascribed to Lancaster: one pupil taught one or more of his comrades; and in this way Ebu Dürda instructed 1,600 youth at a time in the art of reading the sacred books of Islamism.

Education in the Lower Seine.—The following is a statement of the degree of instruction of the young men who were submitted to the drawing for the conscription of the Department of the Lower Seine in 1828:—Submitted to the drawing, 5,331, (in 1827, 5,583); number able to read, 277, (in 1827, 172); to

read and write, 2,374, (in 1827, 2,324); unacquainted with either, 2,469, (in 1827, 2,684); number of those whose instruction was not ascertained, 211, (in 1827, 403). It results, by the comparison of these two tables, that the number of young men able to read in 1828 exceeds that of 1827 by 105; and of those who could both read and write by 50; and the number of those who know neither is less by 215.

Revenues, &c. of the Pasha of Egypt.—It is stated in a letter from Alexandria, dated May 18th, that the total amount of the revenues of the pasha of Egypt does not exceed 19,930,000 piastres, which is thus made out:

Direct taxes on land, date-trees, &c. nominally valued at 14,000,000 piastres, but of less real value, on account of the absolute want of means of payment by many of the agriculturists, &c.	10,000,000
Duties of customs	1,200,000
Fees for private monopolies	3,900,000
Profit to the treasury upon 150,000 quintals of cotton, taken at three piastres, and sold in Europe at eight piastres	750,000
Ditto, 20,000 quintals of flax and 60,000 ard. of flax-seed, which are taken by the pasha at three and two piastres, and sold at eight and five piastres	280,000
Ditto upon manufactured goods taken and sold in the same way	600,000
Ditto upon provisions for exportation	2,400,000
Ditto upon sugar, gums, indigo, elephants' teeth, and other articles	900,000
Ditto upon coining at the mint	600,000
Total	19,930,000

Sugar for Wine.—M. Mollerat, an experimental chemist of Pouilly, near Seurre, has substituted sugar extracted from potatoes for that of the sugar-cane, in sweetening those wines in which tartaric acid abounds. His motive for this substitution is, that the sugar of the latter, and that of the grape, are of a different nature, whereas the sugar from potatoes bears a strong affinity to it.

Gymnastics.—The *Revue Encyclopédique*, advertizing to a description in the Edinburgh newspapers of a festival at which a number of Highlanders went through certain gymnastic exercises, in which description it was stated that the best leaper sprang fifty inches from the ground, and that a weight of twenty-one pounds was cast to a distance of thirty-one feet four inches, and a hammer of twelve pounds to a distance of sixty-seven feet four inches,—observes, that certainly there can have been no exaggeration in the statement, and that many of the villagers in France, without having had any gymnastic training, would dispute the palm with the Scotch, either in leaping or in throwing the quoit.

Greece.—Independent Greece is at present divided into thirteen departments; seven continental, and six insular. The continental departments comprehend a surface of 6,439 square miles, and a population of 300,000 souls; the insular departments comprehend a surface of 1,339 square miles, and a population of 196,000 souls: making in the whole a surface of 7,778 square miles, and a population of 496,000 souls.

Population of Paris.—According to the last census, the population of Paris amounts to 713,765; the number of births yearly to 25,156; marriages, 6,465; and deaths, 22,917. It is estimated that there are in that capital 346,188 men; 367,796 women; 224,922 hearths; 366,000 individuals living upon their property, or by their industry; 348,000 by their daily labour; 77,192 from charity; 3,987 sick in the hospitals; 9,771 infirm or aged persons in the workhouses; 12,580 foundling children; 16,000

* In the best times of Greece the same space was occupied by not fewer than 205 cities and towns; and by a population of about 2,500,000 souls.

men in garrison; 429 public functionaries; 10,450 clerks; 446 individuals connected with the law; 1,139 at the Institute and the University; 47,000 students; and 80,000 domestics. This population, says a French paper, pays annually upon property and industry, in *contributions foncières*, 10,404,000*f.*; *personnelle*, 6,230,000*f.*; *doors and windows*, 1,942,000*f.*; *patentes* (licenses) 4,626,000*f.*; *contributions indirectes*, 10,000,000*f.*; expenses of justice, contracts of sale, registries, rights of succession, mortgages, fines, &c. 11,200,000*f.*; upon building materials, 1,300,000*f.*; upon journals, cards, public carriages, and passports, 2,000,000*f.*; lotteries, 25,000,000*f.*; total, 76,702,000*f.*;—to which may be added 22,100,000*f.* for excise (octroi) duties on articles entering Paris; 6,515,000*f.* duties upon provisions sold in the markets; and 7,772,600*f.* the amount produced by the farming of the gaming tables; making a total of 112,043,600*f.*; and to this must be added the customs' duties upon articles of consumption from abroad, making a total of public and municipal taxes on the inhabitants of Paris amounting to 165*f.* per head. From 1817 to 1827 the population of Paris increased 176,463, or about 25 per cent. The increase in the number of houses during the same period was 2,671, being about 10 per cent. The average number of inhabitants to each house in 1817 was 26*f.*; in 1827 it was 30*f.*.

Count Daru, the well-known author of the History of Venice, died a few days ago at his seat near Paris, aged sixty-two.

Silk-Worms.—The Society of Domestic Economy in France have, at the suggestion of Count Lasteyrie, offered several premiums for the cultivation of mulberry-trees, in different parts of France where they are not now planted, for the purpose of feeding silk-worms. The count asserts that silk-worms may be reared, and fine silk procured from them, in almost every part of France; and he states that a sample of silk produced in the North of France was pronounced by some Milanese manufacturers to be better than their own. The value of the raw silk used in France annually is 112 millions of francs, of which to the value of only 15 or 16 millions is of French production; so that more than 100 millions of francs are paid annually for foreign silk. It appears that in Flanders, and at Berlin, the cultivation of silk is carried on to a great extent, and with decided success.

The Hocco.—General Lafayette has imported from South America two birds, male and female, called *hocco*, which are now at his estate, near Paris. This bird, which is wild in South America, becomes speedily as tame as the domestic fowl, and thrives in our climates. The *hocco* is as large as a small turkey, and its flesh is said to be exquisite. The female in the possession of General Lafayette has laid six eggs, but they were broken by accident. It is thought, however, that it will soon lay again, and that the breed may be propagated to a great extent.

Dried Apples and Pears.—The apples and pears which arrive here in a dried state from France, are thus prepared. The fruit is put into boiling water, in which it is left until it becomes soft. It is then taken out and carefully peeled, the stalk being left on. To prevent any loss of juice, it is placed on a strainer, under which is a dish. When peeled it is put into an oven heated to the ordinary temperature for bread, and left there 24 hours. When taken out and cold, the fruit is pressed flat between the hands; and after being plunged

in its own juice, which has been set apart for that purpose, it is packed in boxes and exported.

LITERARY NOVELTIES.

Tales of a Grandfather: Third Series.—We had previously announced this forthcoming publication, but the statement that it was not in preparation reached us from so high and authentic a quarter last week, that we did not hesitate to insert it in the *Literary Gazette*. We were, however (as we are sure our informant was), misled—for the work is in progress, the first volume finished, and the second in the course of printing. Nay, all the plates are engraved and ready,—the frontispiece of the first volume being a portrait of the Chevalier St. George, and the vignette the execution of Lord Derwentwater and his unfortunate fellow-sufferers. The second Vol. has a portrait of the great Duke of Argyle, and a vignette of a celebrated incident which took place at the Battle of Sheriff Muir: Vol. III. portrait of a Highland Chieftain out in "the Forty-five;" and a vignette of Flora Macdonald. In short, this Third Series is expected to be out so early as November. With these particulars before us, we unhesitatingly correct the error in our last No.

The *Bijou* appears this season among its brother Annals with (we are told) high graphic and literary attractions. The embellishments are from pictures by Lawrence, Stothard, Wilkie, Bonington, &c.; including portraits of the King, from the original in the possession of Sir William Knighton, and of Mrs. Arbuthnot,—both by the President R.A.

We are glad to hear that the *Life and Times of Daniel de Foe* is preparing for publication. If well executed, we do not know a literary biography, or a period to illustrate in the whole annals of English literature, better calculated to make an interesting publication.

Now that Portugal, notwithstanding its ancient grandeur and modern interest, and after so much has been written respecting it, has almost ceased to be recognised among nations, it must appear singular that a new work on that country is announced from Lisbon, although under the simple title of "Gleanings of an English Hermit in Portugal during the Years 1827, 1828, and 1829." This work, however, professes to offer chiefly information on subjects that have not been hitherto treated, derived from personal observation and close intercourse with the natives of all classes. Historical and antiquarian researches, accounts of interesting points in the city and suburbs of Lisbon, tours for health, pleasure, &c.—are also promised.

Preparing for publication, *Some Account of the Life and Writings of White Kennett, D.D.*, Minister of St. Botolph, Aldgate, afterwards Lord Bishop of Peterborough, by W. Burgess.

The third Number of the *Enigmatical Entertainer*, and Mathematical Associate, for the year 1830, is announced.

The *Hamburg Reporter* states that the publication of *Childe Harold*, translated into German by Baron Von Zedlitz, has been prohibited by the Austrian authorities at Vienna.

Le Compilateur, in a recent Number, has an article on the state of the press in France, by which it appears that there are now in Paris 152 journals, literary, scientific, and religious, and seventeen political—in all, 169. Of these papers 151 are constitutional, or, as they are called, liberal—the eighteen others being more monarchical in their spirit. The 151 constitutional journals have, it is stated, 197,000 subscribers, 1,500,000 readers, and produce an income of 1,155,300 francs; the eighteen others have 21,000 subscribers, 192,000 readers, with an income of 437,000 francs. It goes on to give the names of the editors of the ten principal papers, as follows:—*Le Moniteur*, the official paper, from 2,500 to 4,000 subscribers, principally public functionaries—*M.M.* Manabiau, Pouchet, Amar, Aubert de Vitry—*Le Constitutionnel*: 18,000 to 20,000 subscribers—*M.M.* Etienne, Jay, Dumoulin, Léon, Thiers, Thiers, Annde, Desvoisins, Count de Laborde, Thierry, Rolle—*Journal des Débats*: 13,000 to 14,000 subscribers—*M.M.* Bertin-Devaux, Duviquet, Felet, Lesourd, Guisot, Salvandy, St. Marc-Girardin, Becquet, M. de Chateaubrand—*Quotidiens*: 5,000 subscribers—*M.M.* Laurentie, Michaud, Soulier, Mennechet, Merle, Larose, Audibert, F. Laloue, Bazin, and Charles Nodier.

Courrier Français: 4,500 subscribers—*M.M.* Chateilain, Keratry, Jouy, Avenel, de la Pelouse, A. Jumeau, Moreau, Guyet, De Pradt, B. Constant—*Journal du Commerce*: 3,500 subscribers—*M.M.* Best, Larrey, Rouen, Desloges, J. Genouli, Leclerc, Guilleminot, Thomas—*Gazette de France*: 7,000 subscribers—*M.M.* de Genoude, Colnet, Sevelinges, Boisbertand, Bénaben, de Rougemont, R. Perrin, Mme. Bolly, and the Counts de Permonnet and de Corbière—*Messenger des Chambres*: This paper, which since the accession of the Polignac ministry seems to have taken up liberal ideas, has 2,500 subscribers—*M.M.* A. Romien, J. Janin, Bruckner, Veron, Royer, &c.: Its late editors were *M.M.* Malitourne and Capéfigue—*Tribune des Départemens*, a new paper, 100 subscribers—*M.* Daunou, and the writers of the *Revue Encyclopédique*—*Nouveau Journal de Paris*: 1000 to 1,500 subscribers—*M.M.* Lecon-Pillet, Montglave, Eusebe Salverte. These are all published in the capital: those printed in the provinces it calculates at seventy-five journals, exclusive of papers for advertisement, and ministerial bulletins. Of these, sixty-six are constitutional, supported only by their subscribers of the same way of thinking. One, the *Mémorial de Toulouse*, is supported

by the archbishop of that diocese: four are, it is asserted, paid from the secret funds of the Jesuits; the other four are described as monarchical, but of little influence. With respect to the state of public opinion in France, it averages, according to the same authority, among 100 electors in one college, twenty-five revocable public functionaries, four judges, five advocates, four attorneys, six notaries, three physicians, ten merchants, and forty-three persons of no distinct profession. These latter give forty votes to constitutional candidates; and with eight merchants, two physicians, four notaries, one attorney, two advocates, three judges and revocable functionaries, make up in all sixty constitutional votes out of the 100.

In the Press.—Selections from Pliny's Natural History, with English notes, for the use of Schools, by the Rev. W. Turner.—The Mother and her Daughters.—A Manual of the Economy of the Human Body, in Health and Disease.—A third edition of the *Lacronics*.

LIST OF NEW BOOKS.

Edinburgh Review, No. XCVIII. 6*s.*—Knapp's Universal History, 6th edit. 12*m.* 5*s.* sheep.—Identity of the Druidical and Hebrew Religions, 12*m.* 5*s.* bds.—Sander's Select Florist, 12*m.* 2*s.* 6*d.* bds.—Paget's Way of Peace, 12*m.* 3*s.* 6*d.* hf.-bd.—Christian's Manual, 12*m.* 3*s.* 6*d.* bds.—Brace's *Edipus Coloneus* of Sophocles, royal 12*m.* 5*s.* bds.—Senger's *Abridgment of Hoogewegen*, 8*vo.* 7*s.* 6*d.* bds.—Valpy's *Septuagint*, with Apocrypha, 8*vo.* 1*l.* 1*s.*

Wind variable, prevailing S.W.

The frequent and heavy rains of the past week have been the cause of considerable damage in various parts of the country.

Rain fallen, two inches and $\frac{1}{5}$ of an inch.

Edmonton.

CHARLES H. ADAMS.

Latitude..... 51° 37' 39" N.

Longitude..... 0 3 51 W. of Greenwich.

Meteorology.—On the afternoon of Tuesday, the 15th inst., Deptford was visited by a short but violent storm of thunder and lightning: the flashes of lightning were of unusual vividness, and the peals of thunder very loud and protracted. At two minutes and a half after four a fire-ball fell a few yards to the north of St. Paul's church, but without doing any damage: it was accompanied by a sharp cracking explosion; its course was from the west, and inclined to the horizon in an angle of about forty degrees; the more condensed part of the ball, as observed at the distance of about fifty yards, was probably nine or ten minutes in diameter, of an irregular form, and reddish hue; the colour of the streams that proceeded from the upper part and sides more nearly resembled the flash of lightning with which the descent of the ball and the explosion was simultaneously attended. The storm came from the north-west, and did not continue longer than twenty minutes: about twelve minutes after the fire-ball fell, the sun was shining clearly.

Deptford.

J. T. B.

TO CORRESPONDENTS.

We regret we cannot be more agreeable to W. G. H.

"A beginner" need not fear our harshness, though we cannot insert his poem.

To the Editor, &c.

SIR,—In your criticism of 29th ult., on my "Simplicity of Health," you more than indirectly say that I published Mr. Abernethy's favourable opinion of the work without his consent. I think that you would not willingly hurt my moral character; and as this may injure me, I hope that you will allow for my defence the same extensive circulation that promulgated the unfounded charge.

When Mr. Abernethy expressed himself in favour of my production, I requested his permission to publish the circumstance, and I sent him a copy of what I proposed to state. To this he consented, on condition of my omitting some effusions of gratitude for his disinterested kindness—disinterested it may be well called, for I am even yet unknown to him! I regret my being thus forced to proclaim a private matter; but it explains, however, why I have been so reserved in my praise of Mr. Abernethy, to whom I owe so much.

As to your strictures on my work, authors being fair game for the public press, I only complain that you selected those passages alone that you thought were the most unimportant, and that even those you generally presented unconnectedly, and of course disadvantageously. To this I object, as not being a very fair kind of review; but as you appeared to be in a peculiarly severe mood, for reasons perhaps not inexpressible, I feel obliged by the general courtesy of your language.

HORTATON.

* Since writing the above, it has been discovered that the spire of the church was struck, and damaged by the electric fluid.

Connected with Literature and the Arts.

LITHOGRAPHY. In reply to a Pamphlet lately circulated by Mr. Hullmandel, I beg to make the following statements:—

1st. That Mr. Hullmandel has been a pupil of Mr. Engelmann, so far as paying a sum of money every year for instruction constitutes a pupil. The sum certainly was a mere trifle.

2dly. That the preparation of yellow facing was discovered in Mr. Engelmann's establishment at Mulhausen, and communicated to his house in Paris, where, after some experiments, it was found to be so dangerous that it was entirely given up. I have no doubt that Mr. Hullmandel was made acquainted with the circumstance; but supposing that was not the case, what blame could it reflect on Mr. Engelmann, not to have communicated a process he considered as good for nothing? The yellow facing used by Mr. Engelmann, I know to be a dangerous and uncertain process. It may succeed completely in one instance, and be an entire failure in twenty. I have some reasons to suppose that the preparation employed by Mr. Hullmandel is the same, having etched several drawings made on stones prepared by him, the last of which was the result of Bonington. Mr. Hullmandel told the artist (Mr. Colin) that it was impossible for any one but himself to etch that drawing with success, as it was made upon yellow facing, which was a discovery of his, and a secret to all other lithographic printers. Notwithstanding this, the publishers Messrs. Moore, Joyce, and Co. caused the drawing to be etched, and I have succeeded in publishing it in the most perfect manner. It is therefore not unfair to suppose that he who knows how to treat a preparation is acquainted with its principles; and I may add, that were I obliged to prove the uncertainty of that method, I could give facts from one of the very artists quoted by Mr. Hullmandel, who at once destroyed the reports which had been extensively circulated—that our establishment was formed in this country contrary to the said agreement.

As to the testimonials produced by Mr. Hullmandel, one has been evidently granted through politeness, and from its vague expressions, cannot be of use to its possessor. On Mr. Harding's letter I must remark, that that gentleman having from friendship towards Mr. Hullmandel given him all his drawings to print, he has no right to speak of the comparative merits of other establishments, much less to attribute a superiority to his friend. At all events, neither of these letters prove that the yellow facing is Mr. Hullmandel's discovery—a discovery of too little importance for me to have taken this method of refuting, had not Mr. Hullmandel's assertions involved in the question the conduct of one of my partners.

This is the first, and it certainly shall be the last time, that I will answer Mr. Hullmandel's circulars and pamphlets. I should not even now have done so, had not Mr. Hullmandel published assertions as false as they are injurious to Mr. Engelmann.

Let the public, who can feel no interest in statements and counter statements, decide who is the best lithographic printer, from the works produced by their respective presses.

JOHN COINDET.

14, Newman Street, 10th Sept. 1850.

DR. COPLAND will begin his **WINTER COURSE OF LECTURES ON THE NATURE AND TREATMENT OF DISEASES**, at the Medical School, Little Dean Street, Soho, on Thursday, the 1st of October, at Four o'clock. Dr. C.'s Pupils will also be entitled to attend his Practice at the Royal Infirmary for Children, and his Lectures on the Influence of Climate on Health, and on the Diseases of Warm Countries.

Apply to Dr. C., Balcony Street, Cavendish Square.

MR. ALCOCK will commence his **WINTER COURSE OF LECTURES ON THE PRINCIPLES AND SURGERY OF THE THROAT, NOSE, AND EAR**, at the Medical School, Little Dean Street, Soho, on Monday, 4th of October, at Seven o'clock in the Evening.

Gentlemen established in practice, desirous of renewing their practical attainments, may be assisted and superintended in a Private Course of Operative Surgery, adapted to their particular pursuits.

London: Fisher, Son, and Co. 21, Newgate Street.

LITERATURE. A Gentleman, practically acquainted both with the Business and Profession of Literature, offers his Services as the Medium of Communication between Authors and Publishers for the Sale of MSS., and other Literary Property. His Plan is intended not merely to obviate the unpleasantness and delays incident to personal and direct application, but embraces peculiar and substantial advantages, as detailed in the circular of the business, to be had by applying at the Advertiser's Chambers, 41, Leicester Square, South, near the Western Literary Institution; or by letter, post-paid, addressed to Mr. Fickens, Chelsea.

The Revision and Arrangement of MSS. and other Editorial Labour, as also Translation, form Part of the Business.

BOOKS PUBLISHED THIS DAY.

Second edition, post 8vo. 8s. 6d.
NARRATIVE OF A JOURNEY from CALCUTTA to EUROPE, by way of EGYPT, in the Years 1827 and 1828.

By Mrs. CHARLES LUSHINGTON.
"We have no hesitation in recommending Mrs. Lushington's Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of approbation."—*Oriental Herald*.

John Murray, Albemarle Street.

Just published, in 1 thick vol. 3d edition, much enlarged and improved, price 15s.

MODERN DOMESTIC MEDICINE; or, a Popular Treatise, exhibiting the Nature, Symptoms, Causes, and most efficacious Treatment of all Diseases, embracing all the Modern Improvements in Medicine. Containing also a copious Collection of approved Prescriptions, Medical Management of Children, most effectual Methods of rendering Assistance in Cases of emergency, Rules of Diet, Virtues and Doers of all Medicines, &c. The whole forming a comprehensive Medical Guide for the Use of the Clergy, Families, and Invalids.

By T. J. GRAHAM, M.D. &c.

"We conscientiously recommend it. It is very far above the celebrated Buchan's, and we shall preserve the volume as the advice of an invaluable friend, to which we can refer in the hour of need, without any doubt of being benefited by its wisdom."—*Literary Chronicle*.

"In the opinion of a respectable physician, well known in our connexion, it is not only incomparably superior to Buchan's, but also to every similar work in our language."—*Weston Magazine*.

"It will be found a very valuable acquisition to the family library."—*Imperial Magazine*.

"It is altogether deserving of permanent popularity."—*London Weekly Review*.

One of the very best and most useful books published in modern times."—*Monthly Observer*.

Published by Simpkin and Marshall, Stationers' Court, London; and sold by all Booksellers.

Also, by the same Author, 8d edition, revised and enlarged, price 8s. 6d.

2. A Treatise on Indigestion, illustrating the Symptoms, Varieties, Causes, and Treatment, of the prevailing Disorders of the Stomach and Liver, with Practical Observations on some painful Complaints originating in these Disorders, as Tic Douloureux, Gout, Fulness of Blood in the Head, &c.

"We sincerely recommend it, and have long been convinced that such a work was imperatively called for."—*London Medical Journal*.

REVIEW OF NEW BOOKS.

The Diary and Correspondence of Philip Doddridge, D.D. illustrative of various Particulars in his Life hitherto unknown, with Notices of many of his Contemporaries, &c. Edited from the original MSS. by his Great-Grandson, J. Doddridge Humphreys, Esq. 8vo. Vols. I. and II. London, 1829. Colburn and Co.

WE know not when, if ever, we have perused two volumes of the description of these now before us, with more intense curiosity, amusement, and instruction: curiosity, in following the "amours" (to use his own word, and in no improper sense,) of a young and warm nonconformist clergyman; amusement, in witnessing the various scrapes into which his devotion to the fair sex brought the worthy preacher; and instruction, in studying his philosophical views of human nature, his frankness, his general love of his kind, and his mild and liberal religious tenets. The picture of such a man drawn by his own hand, in his letters on every occasion which could call forth his sentiments, opinions, and actions, is to us worth a thousand such lives as Job Orton, or even Dr. Kippis, could write; and we have been accordingly entertained and delighted with these octavo thoughts of the length of 1000 honest pages.

Embracing so many interesting topics, the largest of our contemporary Reviews will be unable to afford any thing like a competent idea of their matter and variety; and they must, probably, as we in our more limited space are compelled to do, address themselves separately to such portions as are best suited to their several characters. Theology, the education of dissenting ministers, family biography, ecclesiastical affairs, criticism, &c. &c. we therefore leave to those to whom they are important, and trust we shall better consult the tastes of our numerous and miscellaneous friends if we take up the hitherto unknown particulars in the life of the celebrated author of the "Family Expositor" which are here unfolded, and exhibit the private traits of this justly popular and estimable person. It may be true that the medley will seem an odd one; for the mixture of the amorous and of the pious, of the flesh and of the spirit, of the natural and of the religious, of the earthly and of the heavenly, is indeed as naïve and candid a piece of *exposition* as can well be imagined. For it, his grandson thinks necessary to offer many apologetical passages,* which, however, we cannot consider to

* For example: "The gaiety of expression in certain letters, I have indeed been told may with some persons be a source of offence; and should it prove so, I can only say that I wish them warmer hearts and sounder heads."

It should also be remembered, that from family connexion and the advantages of education, having mixed in good society and become familiar with polite literature, there is nothing remarkable in the fact that, that pharisaical exhibition of solemn austerity with which the ignorant zealot and crafty professor overbear the unthinking and disgust the judicious, was in his estimation no proof of piety or object of imitation. He evidently considered a moderate enjoyment of the luxuriant products of nature and of art not only as innocent, but commendable, and therefore viewed the feelings and habits of polished life as in no way unconsensual with the virtues of the Christian.

have been called for by the occasion. Dr. Doddridge was, in truth, a good man, with as few of the infirmities of humanity as often fall to the lot of his kind. He was in most respects a fine character, whether we regard his conduct to his fellow-creatures, or his duties to God: he was amiable, learned, affectionate, enlightened, feeling, pious, just, and merciful, untainted by pharisaical pretence, and sincerely religious without dogmatism or cant. The world to this Dissenter was a world of innocent recreation and lawful pleasure; he thought it no crime to enjoy the good things with which its Maker had stored it; and he was neither guilty of the sourness of ascetic folly, nor of the worse guilt of that too common hypocrisy so prevalent in his as well as in our times, which cloaks its pride under counterfeit sanctity, and covers its hidden indulgences under gloomy externals and rigid austerities.

We will not meddle with the editor's preface, further than to notice that he declares his purpose to be to make his ancestor "better known as a man," by presenting a minute and faithful history of his public and private life;—that he is strongly opposed to the Evangelical party of our church, and asserts that the Nonconformist clergy alone can uphold the pure Christian faith against their encroachments, and at the same time against those now opened to the Roman Catholics.

Philip Doddridge was descended of an ancient family; and one of a numerous progeny,—as of twenty, only he and a sister were left orphans. He was born in 1702, and in his boyhood lost all his paternal property; so that, after several plans were proposed, he was finally educated at St. Alban's and Kibworth, as a minister of the sect to which his relations belonged. But we pass to his riper years, and, as we have promised, to his first affairs of the heart. In 1722 he thus writes on a delicate subject to Mrs. (i. e. Miss) Rebecca Roberts; and the following extracts are curious specimens of the epistolary style and conversation of the period, so familiar, indeed, to every reader of that Augustan age of our literature, and shewn as completely in the young dissenting divine, as in Pope, or Swift, or gayer folks. The first is dated April 17th, 1722.

A knowledge of these circumstances being premised, those passages in his correspondence where a playful air of gallantry is assumed, will not be misunderstood; and those where a more tender sentiment prevails will not be perverted, for such passages occur. If, indeed, a cold Platonic indifference to the general charms of female society be deemed a proof of exalted intellect, or an apathy to the blissful emotions of reciprocal affection, and the softer impressions of the senses, be deemed a proof of sanctity, Dr. Doddridge had no claim to either! nor was it a claim which he was ambitious to secure. To place virtue beyond the pale of humanity, and attempt to stifle in their birth the finer emotions of the heart, because in excess they grow pernicious, is little wiser than to tear away the vine that embowers our dwelling with a canopy of grateful fruit and soothing shade, because the wholesome grapes in another form may intoxicate and destroy."

We were inclined to preach on these texts, we should perhaps be inclined to go further, and to maintain that the individual destitute of ardour in the natural passions is incapable of experiencing the highest attributes of religious feelings: that a heart dry and hard towards man can never be finely expanded towards God.

"Your rules of behaviour are certainly very judicious; but the business of kissing wants a little further explanation. You tell me the ladies have resigned their claim to formal kisses at the beginning and end of visits. But I suppose they still allow of *extemporary* kissing, which you know a man may be led into by a thousand circumstances which he does not foresee. I cannot persuade myself that this pretty amusement is entirely banished out of the polite world, because, as the apostle says in another case, even nature itself teaches it. I would not for the world be so unmannerly as to ask my aunt whether she has not been kissed within this fortnight; but I hope I may rely on her advice, and that she will not deceive me in a matter of such vast importance. For my own part, I can safely say, I look upon this, as well as the other enjoyments of life, with a becoming moderation and indifference. Perhaps, madam, I could give you such instances of my abstinence as would make your hair stand on end! I will assure you, aunt, which is a most amazing thing, I have not kissed a woman since Monday, July 10th, 1721, about twelve o'clock at night; and yet I have had strong temptations both from within and from without. I have just been drinking tea with a very pretty lady, who is about my own age. Her temper and conversation are perfectly agreeable to mine, and we have had her in the house about five weeks. My own conscience upbraids me with a neglect of a thousand precious opportunities that may never return. But then I consider that it may be a prejudice to my future usefulness, and help me into further irregularities, (not to say that she has never discovered any inclination of that nature), and so I refrain. But tomorrow I am to wait upon her to a village about a mile and a half from Kibworth, and I am sensible it will be a trying time. However, I shall endeavour to fortify my mind against the temptations of the way, by a very careful perusal of your letter, and my mamma's of the 31st October."

We should note, that the phrases "aunt" and "mamma" imply no relationship, but are pet terms for female acquaintances; and that the very pretty lady here mentioned was Miss Catherine Freeman,—Doddridge's "amour" with whom figures singularly in these pages. But we proceed with the chapter on kissing.

"I wish, madam, I could fix the day when I am first to wait on you, that you might take care to be undressed to receive me. You know it is my misfortune to be extremely out of countenance at the sight of a fine suit of clothes, especially when an agreeable lady appears in them. I am sensible this is a weakness that every minister of the gospel ought to endeavour to conquer, if he expects his labours should meet with any success, and accordingly I have been using the means. The lady whom I mentioned above is very decent all the week, but, according to our country fashion, dresses best on a Sunday; and so I spend an hour every Sunday morning in looking upon a sort

of habit which they call a brocade, which she generally wears on that day. But I have still some dreadful apprehensions of seeing you dressed, and I hope you will mercifully provide against them. I am charmed with the thoughts of spending another day with my cousin Robson; but then you tell me I must furnish myself with something to make my company agreeable. Alas! madam, you quite mistake my abilities. My modesty and other imperfections instruct me to be on the obscure side; and at best you know there is very little gallantry to be expected from a scholar. I have not had an opportunity of making many observations upon the female world; but I am ready to imagine, from the little I have seen, that a man may have read all Aristotle's works, except his masterpiece, and all Plato's, but his pun upon kissing, and yet not be at all fit to entertain a roomful of ladies. However, there is a book called the Lady's Cabinet Opened, and another Callipædia, which it seems they are extremely fond of; and I design to set apart a whole week before the vacation for the perusal of them. But I am afraid they will not carry me completely through."

Next month the interesting theme is renewed in another letter.

"I am extremely concerned for the persecution you suffered from your *twenty-four* admirers, for I think that was the sum total. I concluded that the merry confessor was my friend and brother Mr. Mead; but I cannot imagine whom you mean by wise Sam! I am sure it cannot be Mr. Clark of St. Albans, for all his appetites to kissing are mortified, and he never goes about it but with fear and trembling. I suppose, however, that it was some reverend Sir, and if it were, I am sorry that you beat him. I thought our cloth had always protected us, and that we had never occasion to exercise our carnal weapon. I hope, for the sake of my dear brethren, that all the ladies have not this Amazonian turn. For my own part, I am not much concerned, for I have almost forgotten what kissing is. However, since I know it would be too great a presumption to use so much familiarity with my aunt, I must beg my cousin Robson to inform me whether the eyes or the lips are made use of upon that occasion. I remember that formerly I had a gift that way, and perhaps, with a little labour, might be able to recover it, especially under so good a mistress. And I am the more inclined to attempt it, because you know Solomon tells us that there is a time to kiss, Eccles. iii. 5. Our translators by a mistake render it to embrace; but the original Hebrew word properly signifies to kiss. However, if the ladies are very much bigoted to their English Bible, we young scholars must yield ourselves to their argument and their phrase."

At this period he preached his first sermon, and seems fond of the annexed anecdote connected with it, for he repeats it in three different letters to different persons.

"There was (he tells his sister) one good old woman that was a little offended to see such a lad get up into the pulpit; but I had the good fortune to please her so well, that as soon as I had done, she told Mrs. Jennings that she could lay me in her bosom. They tell me this may be the foundation of an amour; but I have so much respect for my unknown girl, that I do not intend to prosecute it any further."

To a lady for whom he seems to have entertained not quite a fraternal feeling, he relates

the joke thus:—"The old women treated me very graciously; and one of them, that was a little offended to see such a lad go up into the pulpit, was pleased to declare, when I came down, that she could have laid me in her bosom. Our young gentlemen tell me that this might be a good foundation to begin an amour; but I think I have heard you say that you do not like a married man so well as a bachelor, and so I will let my ancient admirer rest in peace. If you have a curiosity to see my text, you may take your Bible and turn to 1 Cor. xvi. 22."

And to a third fair dame it is thus recorded: "I am particularly obliged to one old woman, who when she saw me go up into the pulpit, was a little tempted to despise my youth; but, when I was come down, said she could have laid me in her bosom. I wish, for the jest, it had been Hannah Robson—but that, madam, you are to keep to yourself. As I shall be obliged to preach at Leicester once a-month, the preparing my sermons will be sure to take up some of the time that I used to devote to the service of my female idea. However, it may possibly turn to as good account in this way; and, that my dear unknown may not have any temptation to take it unkindly, I can assure her, that, after the gravest speculations, I shall still retain so much tenderness in my temper, that she may enchant me whenever she pleases. In the mean time, while I have my reason and my senses undisturbed, I shall always continue, &c."

It has been said that Queen Elizabeth desired to see Falstaff in love; and though commanded by so potent a monarch, and performed by so immortal a poet, we are not sure that there is any thing in the fat knight's sordid passion to be compared with the genuine amorousness of the Reverend Doctor Doddridge, as painted by his own hand. His first confiding of his passion for Miss Freeman to Mrs. Roberts ("aunt," as previously explained) is a curious example. After whispering that he has a most important secret to disclose, he proceeds—

"If I were even at Bethnal Green, I should be half an hour before I could bring it out; and at last, I should perhaps be so much embarrassed, that it is a thousand to one you would not understand me; but being all alone in my study, and almost a hundred miles off, I can give it utterance in three words. In short, madam, I—am—in—love,—and that is all. And, you will say, enough too. And yet, upon second thoughts, that is not all neither; for I am most violently in love with a charming girl that lives in the neighbourhood of Leicester, about seventeen years of age, and, to borrow an Arabian phrase, as beautiful as the moon in her fullness. * * * I have frequently told you that I have a heart exactly prepared to receive the fondest and tenderest impressions. But Clarinda has charms that would awaken the most stupid, and subdue the most obdurate. Clarinda is the darling of the old, and the joy of the young; the idol of our sex, and the envy of her own. You see my style begins to grow exalted, and my sentiments rapturous. But, *en vérité*, she is such a girl that language cannot paint. And now, madam, do you judge what work such a *dreadful* lovely creature must create in the soft, sensitive breast of your dutiful nephew. Reason and philosophy yielded at her first appearance; and when they afterwards rallied their forces, it was only that they might receive a more signal defeat. I own, madam, that your letters have done me considerable service; for

who can resist the force of reason and the charms of wit when communicated with so much freedom and good nature? but, as soon as those dear papers are laid aside, I forget every thing but Clarinda. I dream of her in the night, and rave of her in the day. If my tutor asks me a question about predestination, I answer him that Clarinda is the prettiest creature in the world! Or if I sit down to make a sermon against transubstantiation, I cannot forbear cautioning my hearers against the excesses of love. Now and then, after a long course of abstinence and mortification, I get a lucid interval for a few moments; but if I touch a romance or a play, drink a glass of wine, or take a cup of chocolate, I presently relapse. I am at this time tolerably serene, and therefore I earnestly entreat you to tell me what I must do. Recollect I have a wonderful opinion of your skill, or I should not put myself into your hands; but I beg that you will use me with a great deal of tenderness, or I shall certainly be killed outright. I do not inquire how I may gain my mistress, which, perhaps, might be very possible,—but how I may conquer this impetuous, ungovernable passion. It will certainly be a hard task, but I see that it is a very necessary one; for, in the first place, I have not the least thought of marrying till near thirty, unless I have a very clear and undeniable call, which, I think, will not be these ten years. And a more important consideration remains to be told: this dear, charming Clarinda, with all her wit, beauty, and tenderness, good breeding and piety, is—I am sorry to say it, but she is—the daughter of a dissenting minister, that has half-a-dozen children more to provide for! O aunt! why have not I five hundred a-year, that I might marry a girl of a small fortune, without ruining both her and myself?"

To another lady he writes—and it certainly is not easy to construe it figuratively:

"What have I done to displease the dearest, best mamma in the world, that I have not heard from her in so many ages? It is impossible to express my uneasiness at her silence. I answered her last almost a quarter of a year ago, and yet I have not so much as heard whether she be alive or dead. If the infirmitates of *old age*, which you talked of, have taken away the use of your limbs, surely, madam, you might have prevailed upon my aunt to have informed me of your misfortune, and I would not have failed to have sent you a most dutiful letter of condolence; but alas! my aunt is as unkind as my mother, and will not favour me with her advice, though I desired it with so much importunity; and although the circumstances of my case were so worthy of compassion. Will you drive me into the arms of Clarinda, to bury my sorrows in her beautiful bosom, and to search in that charming friend for all that I enjoyed and have lost in you? If you have any remaining affection for a dutiful son—nay, but common humanity and good nature, let me entreat you to write to me before you go to sleep: till then I remain, in the midst of ten thousand anxieties," &c.

In the next letter he says, playfully enough (and as it happens, by this publication, prophetically), "the historian who writes my life, in the fourth chapter of it, which may contain my behaviour at the academy, will have such a passage as this—'It is not to be wondered at, that, at the twentieth year of his age, Mr. Doddridge grew much more polite and agreeable than persons of his profession and circumstances gene-

* * Clarinda is one of the pet names for Miss Kelsey Freeman; Theodora, in after letters, is another.

really are; for it was then that he received the instructions of Mrs. Clark and Mrs. Farrington, which he found of great advantage to him in that part of his life." The whole paragraph is too long to be transcribed; but I suppose posterity will find it about the 75th page of the octavo edition. . . . I told you in my last, that my heart was an uninhabited box.

I am afraid the phrase may want a little explanation. Allow me then to inform you, that though I have not pitched upon any particular lady, yet I find it absolutely necessary to have some subject of amorous contemplation: and so my imagination has dressed up a very pretty piece of pageantry, which, in my scholastic language, I call the idea of —. It is true, some parts of it are a little confused, as a bachelor's conception of woman always must be; but yet, upon the whole, I am grown so fond of it, that I carry it to bed with me every night; and when I arise in the morning, it takes its place in my thoughts till some graver employment obliges it to retire. Now judge yourself, madam, how this impertinent idea will behave herself when she comes to be locked up. You know the creature it represents is noisy enough, and extremely impatient under the mere appearance of restraint; so that if I have recourse to violent methods, you may depend upon it, she will be bouncing and rattling about in her confinement, and perhaps disturb me when I do not desire to have any thing to do with her. Especially when I seek repose, she will be very clamorous in her demands, and if I should chance not to have any other company, perhaps she may force me to open the door almost against my will; so that I fancy it may prove more than an imaginary Bella Maria: and therefore, Clio, I beg the favour of you to send me a little good advice on this head."

Some eighteen months later, our loving hero seems to have sobered, if not cooled, a little, for he writes—"I acknowledge that I love her heartily, and have been applying to the grand business with a great deal of diligence, and I hope with some success. I have indeed no thoughts of marrying very soon, and whenever I come to take that master-work in hand, I hope I shall remember the important article of a provision for a family; for I have a mortal aversion to the cares of the world, and am fully convinced that it is impossible for the most agreeable woman it contains to preserve her beauty or good humour, if she has nothing to subside upon but compliments and kisses."

Again: "I am confident that I am not mistaken in her, for I have known her several years. I have lived several months in the same house with her, and can seriously affirm that, after the most diligent inquiry, and the most curious observation, even in her unguarded moments, the more intimately I have known her, the more I have admired and loved her. Rational esteem and friendship has by gentle degrees improved into love, under the approbation of reason, and, if you will permit me to be grave for a moment, I hope I may add of religion too. In short, madam, when I am speaking of Theodosia, it is but a trifle to say that (in my judgment, and at a little distance) she is very pretty. But it is most undoubtedly certain that she is prudent, generous, good-natured, cheerful, genteel, and, above all, has been remarkably religious from her earliest years. I think she has a good genius for politeness. And though it has not met with great opportunities for improvement in the obscure village where she was brought up, yet I assure you she has made the best of the advantages she enjoyed. . . . I knew there

is one question which you will be ready to ask me, and which is certainly of too great importance to be omitted, and that is, whether this butterfly's wings are spotted with gold; or in plainer terms, whether she has a good fortune? All that I can at present say to this sage interrogation is, that she has a great deal more than I can reasonably demand; that her good management will make a little go a great way; and that we are both persons of so much prudence and good sense as not to think of setting out for the East Indies without taking some provisions for the voyage."

And again: "I will content myself with telling you, in general, that I did not discover her to be wonderfully handsome till I had loved her about a month; and if I had not discovered it then I should not have been extremely concerned about it. I consider it of much greater importance that she is prudent, generous, cheerful, genteel, complaisant, and, above all, remarkably pious, and has been so from her very childhood. I am extremely charmed with the natural simplicity of her behaviour, in which I know none who excel her; indeed she is entirely free from that artifice and affectation, that has given me a feeling of disgust towards some of the finest women that I ever beheld. I wonder I did not mention her good nature before, for which she is so remarkable, that sometimes she is ready to carry it to an excess. Considering the family and neighbourhood in which she has been brought up, it is next to impossible that she should be mistress of a great deal of politeness: but she has naturally a very good genius; and as I conceive that I have her education in my own hands, I will not be wanting on my part to form her more completely, at least to my own fancy. I have endeavoured, sir, according to your kind and prudent directions, to act an open and honourable part with relation to the parents. They both of them very freely gave me their consent, and assured me that my only business lay with their daughter. As for the lady herself, I think she has not broken my rest above two nights, and then not for above two or three hours. Though she perfectly well understands the graceful decorum of her sex, yet she does not think it obliges her to assume either cruelty or dissimulation, and therefore does not scruple to acknowledge that she is touched with the tender stories I have sometimes told her; but rather takes a thousand opportunities of shewing that my addresses are not at all disagreeable. The principal remaining difficulty which I apprehend in the affair is from two rich uncles at London, on whom part of her fortune depends, and from whom in time she may expect something pretty considerable. They are both of them violent Tories, and I believe that a dissenting minister without an estate is the last thing in the world they would choose for their niece. However, they have often assured Mr. Freeman that they would acquiesce in any thing which he approved. As there is upon this account at least some uncertainty in the affair, I shall endeavour so to moderate my affection, as that I may be in no danger of breaking my heart, if upon the whole I should fail of success. The most formidable opposition that I meet with here in the country is from a large mastiff dog, who frequently posts himself in the lane that leads to Mr. Freeman's house. As I ride upon a horse that is little more than his own size, he has seized upon me twice with so much violence, as to carry off two large pieces of my greatcoat. I did not know but that some of my rivals might keep him in pay, for I have more than one in the neigh-

bourhood; and I was so terrified with the fury of his assaults, that my friends at Stretton were apprehensive that his interposition might break off the match; but, upon a further inquiry, I am inclined to believe that he is actuated purely by a zeal for the establishment, and that he would tear out my heart for being a schismatical teacher: and therefore, out of my concern for the dissenting interest, and abhorrence of a persecuting spirit, I shall sign a warrant for his execution, or at least close custody."

With all this prudence of passion, founded on long observation, and looking patiently so far forward, who could fancy that the fair lady should turn out a jilt, discard poor Philip, and each of them unite themselves to other partners for life? Such was the event; but it is really so amusing, that we trust we may allow ourselves another extraordinary *Gazette*, to finish the picture—for it is rather a novelty to see how serious people manage in these tight gambols.

The Borderers; or, the Wept of Wish-ton-Wish. 3 vols. 12mo. London, 1829. Colburn and Co.

WE can conceive few periods better calculated to offer a promising field to the novelist than that which these pages illustrate;—the mingling of wildest adventure with the most plodding industry—the severe spirit of the religion of the first American settlers—the feelings of household and home at variance with all the earlier associations of country—the magnificence of the scenery by which they were surrounded—their neighbourhood to that most picturesque and extraordinary of people we call savages;—these, surely, are materials for the novelist, and in Mr. Cooper's hands they have lost none of their interest. We shall not attempt to detail the narrative, but only say it is well worthy of the high reputation of its author. All the more serious scenes are worked up to the highest pitch of excitement: if any where we have to complain of aught like failure, it is in the lighter parts, and some of the minor details, which are, occasionally, spun out too much. But again the attention is aroused; and we only lament that our limits will allow short space for the justice we should wish to render. We endeavour to abridge the dramatic and powerfully written attack of the Indians on a small out-settlement; premising that the Indian youth alluded to has been made prisoner, and in some degree softened by the kindness with which he has been treated.

"Whoops and yells were incessantly ringing around the place, while the loud and often-repeated tones of a conch betrayed the artifice by which the savages had so often endeavoured, in the earlier part of the night, to lure the garrison out of the palisades. A few scattering shot, discharged with deliberation, and from every exposed point within the works, proclaimed both the coolness and the vigilance of the defendants. The little gun in the block-house was silent, for the Puritan knew too well its real power to lessen its reputation by a too frequent use. The weapon was therefore reserved for those moments of pressing danger that would be sure to arrive. On this spectacle Ruth gazed in fearful sadness. The long-sustained and sylvan security of her abode was violently destroyed, and in the place of a quiet, which had approached, as near as may be on earth, to that holy peace for which her spirit strove, she and all she most loved were suddenly confronted to the most frightful exhibition of human horrors. In such a moment, the feelings of a mother were likely to revive;

and ere time was given for reflection, aided by the light of the conflagration, the matron was moving swiftly through the intricate passages of the dwelling, in quest of those whom she had placed in the security of the chambers. 'Thou hast remembered to avoid looking on the fields, my children,' said the nearly breathless woman, as she entered the room. 'Be thankful, babes; hitherto the efforts of the savages have been vain, and we still remain masters of our habitations.' 'Why is the night so red? Come hither, mother; thou mayest look into the wood as if the sun were shining!' 'The heathens have fired our granaries, and what thou seest is the light of the flames. But happily they cannot put brand into the dwellings while thy father and the young men stand to their weapons. We must be grateful for this security, frail as it seemeth. Thou hast knelt, my Ruth, and hast remembered to think of thy father and brother in thy prayers?' 'I will do so again, mother,' whispered the child, bending to her knees, and wrapping her young features in the garments of the matron. 'Why hide thy countenance? One young and innocent as thou may lift thine eyes to Heaven with confidence.' 'Mother, I see the Indian, unless my face be hid. He looketh at me, I fear, with wish to do us harm.' 'Thou art not just to Miantonimoh, child,' answered Ruth, as she glanced her eye rapidly round to seek the boy, who had modestly withdrawn into a remote and shaded corner of the room. 'I left him with thee for a guardian, and not as one who would wish to injure. Now think of thy God, child,' imprinting a kiss on the cold, marble-like forehead of her daughter, 'and have reliance in his goodness. Miantonimoh, I again leave you with a charge to be their protector,' she added, quitting her daughter and advancing towards the youth. 'Mother!' shrieked the child, 'come to me, or I die!' Ruth turned from the listening captive with the quickness of instinct. A glance shewed her the jeopardy of her offspring. A naked savage, dark, powerful of frame, and fierce, in the frightful masquerade of his war-paint, stood winding the silken hair of the girl in one hand, while he already held the glittering axe above a head that seemed inevitably devoted to destruction. 'Mercy! mercy!' exclaimed Ruth, hoarse with horror, and dropping to her knees, as much from inability to stand as with intent to petition. 'Monster, strike me, but spare the child!' The eyes of the Indian rolled over the person of the speaker, but it was with an expression that seemed rather to enumerate the number of his victims, than to announce any change of purpose. With a fiend-like coolness, that bespoke much knowledge of the ruthless practice, he again swung the quivering but speechless child in the air, and prepared to direct the weapon with a fell certainty of aim. The tomahawk had made its last circuit, and an instant would have decided the fate of the victim, when the captive boy stood in front of the frightful actor in this revolting scene. By a quick forward movement of his arm, the blow was arrested. The deep guttural ejaculation, which betrays the surprise of an Indian, broke from the chest of the savage, while his hand fell to his side, and the form of the suspended girl was suffered again to touch the floor. The look and gesture with which the boy had interfered, expressed authority rather than resentment or horror. His air was calm, collected, and, as it appeared by the effect, imposing. 'Go,' he said, in the language of the fierce people from whom he had

sprung; 'the warriors of the pale men are calling thee by name.' 'The snow is red with the blood of our young men,' the other fiercely answered; 'and not a scalp is at the belt of my people.' 'These are mine,' returned the boy, with dignity, sweeping his arm while speaking, in a manner to shew that he extended protection to all present. The warrior gazed about him grimly, and like one but half convinced. He had incurred a danger too fearful, in entering the stockade, to be easily diverted from his purpose. 'Listen!' he continued, after a short pause, during which the artillery of the Puritan had again bellowed in the uproar without. 'The thunder is with the Yengeese! Our young women will look another way, and call us Pequots, should there be no scalps on our pole.' For a single moment the countenance of the boy changed, and his resolution seemed to waver. The other, who watched his eyes with longing eagerness, again seized his victim by the hair, when Ruth shrieked in the accents of despair—'Boy! boy! if thou art not with us, God hath deserted us!' 'She is mine,' burst fiercely from the lips of the lad. 'Hear my words, Wompahwiset; the blood of my father is very warm within me.' The other paused, and the blow was once more suspended. The glaring eye-balls of the savage rested intently on the swelling form and stern countenance of the young hero, whose uplifted hand appeared to menace instant punishment, should he dare to disregard the mediation. The lips of the warrior severed, and the word 'Miantonimoh' was uttered, as softly as if it recalled a feeling of sorrow. Then, as a sudden burst of yells rose above the roar of the conflagration, the fierce Indian turned in his tracks, and, abandoning the trembling, and nearly insensible, child, he bounded away like a hound loosed on a fresh scent of blood. 'Boy! boy!' murmured the mother; 'heathen or Christian, there is One that will bless thee!—'

One more scene, and we must leave the rest to the imagination of the reader, and also to his curiosity. They are attempting to bear the children from the flames.

'When the young Indian had rejoined the party in the dwelling, he led them, without being observed by the lurking band that still hovered in the smoke of the surrounding buildings, to a spot that commanded a full view of their short but perilous route. At this moment the door of the block-house half opened, and was closed again. Still the stranger hesitated—for he saw how little was the chance that all should cross the court unharmed; and to pass it, by repeated trials he knew to be impossible. 'Boy,' he said, 'thou, who hast done thus much, may still do more. Ask mercy for these children in some manner that may touch the hearts of thy people.' Miantonimoh shook his head; and pointing to the ghastly corpse that lay in the court, he answered coldly—'The red man has tasted blood.' 'Then must the desperate trial be done! Think not of thy children, devoted and daring mother, but look only to thine own safety. This witless youth and I will charge ourselves with the care of the innocents.' Ruth waved him away with her hand, pressing her mute and trembling daughter to her bosom, in a manner to shew that her resolution was taken. The stranger yielded; and turning to Whittall, who stood near him, seemingly as much occupied in vacant admiration of the blazing piles as in any apprehension of his own personal danger, he bade him look to the safety of the remaining child. Moving in front himself, he

was about to offer Ruth such protection as the case afforded, when a window in the rear of the house was dashed inward, announcing the entrance of the enemy, and the imminent danger that their flight would be intercepted. There was no time to lose—for it was now certain that only a single room separated them from their foes. The generous nature of Ruth was roused; and catching Martha from the arms of Whittall Ring, she endeavoured, by a desperate effort, in which feeling rather than any unreasonable motive predominated, to envelope both the children in her robe. 'I am with ye!' whispered the agitated woman; 'hush ye, hush ye, babes! thy mother is nigh!' The stranger was very differently employed. The instant the crash of glass was heard, he rushed to the rear; and he had already grappled with the savage so often named, and who acted as guide to a dozen fierce and yelling followers. 'To the block!' shouted the steady soldier, while with a powerful arm he held his enemy in the throat of the narrow passage, stopping the approach of those in the rear by the body of his foe. 'For the love of life and children, woman, to the block!' The summons rang frightfully in the ears of Ruth; but in that moment of extreme jeopardy, her presence of mind was lost. The cry was repeated; and not till then did the bewildered mother catch her daughter from the floor. With eyes still bent on the fierce struggle in her rear, she clasped the child to her heart and fled, calling on Whittall Ring to follow. The lad obeyed; and ere she had half crossed the court, the stranger, still holding his savage shield between him and his enemies, was seen endeavouring to take the same direction. The whoops, the flight of arrows, and the discharges of musketry, that succeeded, proclaimed the whole extent of the danger. But fear had lent unnatural vigour to the limbs of Ruth; and the gliding arrows themselves scarce sailed more swiftly through the heated air than she darted into the open door of the block. Whittall Ring was less successful. As he crossed the court, bearing the child intrusted to his care, an arrow pierced his flesh. Stung by the pain, the witless lad turned, in anger, to chide the hand that had inflicted the injury. 'On, foolish boy!' cried the stranger, as he passed him, still making a target of the body of the savage that was writhing in his grasp; 'on, for thy life, and that of the babe!' The mandate came too late. The hand of an Indian was already on the innocent victim, and in the next instant the child was sweeping the air, while with a short yell the keen axe flourished above his head. A shot from the loops laid the monster dead in his tracks. The girl was instantly seized by another hand, and as the captor with his prize darted unharmed into the dwelling, there arose in the block a common exclamation of the name of 'Miantonimoh!' Two more of the savages profited by the pause of horror that followed, to lay hands on the wounded Whittall, and to drag him within the blazing building. At the same moment, the stranger cast the unresisting savage back upon the weapons of his companions. The bleeding and half-strangled Indian met the blows which had been aimed at the life of the soldier, and as he staggered and fell, his vigorous conqueror disappeared in the block. The door of the little citadel was instantly closed, and the savages, who rushed headlong against the entrance, heard the fitting of the bars which secured it against their attacks. The yell of retreat was raised, and in the next instant the court was left to the possession of the dead. 'We will be thankful for

this blessing,' said Content, as he aided the half-unconscious Ruth to mount the ladder, yielding himself to a feeling of nature that said little against his manhood. 'If we have lost one that we loved, God hath spared our own child.' His breathless wife threw herself into a seat, and folding the treasure to her bosom, she whispered rather than said aloud — 'From my soul, Heathcote, am I grateful!' 'Thou shieldest the babe from my sight,' returned the father, stooping to conceal a tear that was stealing down his brown cheek, under a pretence of embracing the child—but suddenly recoiling, he added, in alarm—'Ruth!' Startled by the tone in which her husband uttered her name, the mother threw aside the folds of her dress, which still concealed the girl, and stretching her out to the length of an arm, she saw that, in the hurry of the appalling scene, the children had been exchanged, and that she had saved the life of Martha. Notwithstanding the generous disposition of Ruth, it was impossible to repress the feeling of disappointment which came over her with the consciousness of the mistake. Nature at first had sway, and to a degree that was fearfully powerful. 'It is not our babe!' shrieked the mother, still holding the child at the length of her arm, and gazing at its innocent and terrified countenance, with an expression that Martha had never yet seen gleaming from eyes that were, in common, so soft and so indulgent. 'I am thine! I am thine!' murmured the little trembler, struggling in vain to reach the bosom that had so long cherished her infancy. 'If not thine, whose am I?' The gaze of Ruth was still wild, the workings of her features hysterical. 'Madam—Mrs. Heathcote—mother!' came, timidly, and at intervals, from the lips of the orphan. Then the heart of Ruth relented. She clasped the daughter of her friend to her breast, and nature found a temporary relief in one of those frightful exhibitions of anguish which appear to threaten the dissolution of the link which connects the soul with the body."

The end of the second volume is somewhat languid; but the third will bear comparison with the very best of Cooper's works. The young Indian chief, the regicide, the English girl with all the habits and feelings of an education among the Indians, the stern old Puritan, are perfect of their kind; and it is in the belief that their interest will be as our own, that we recommend this work to our readers.

Waverley Novels, Vol. V. The Antiquary, Vol. I. Edinburgh, Cadell and Co.; London, Simpkin and Marshall.

THIS new edition proceeds most prosperously; indeed it is quite unprecedented that the circulation should be so immense, after the almost glut, as it was commonly considered, of the works in their several previous forms. The neatness, the consistency, the price, and the introduction of interesting particulars connected with the history of these extraordinary productions, however, fully warrant the success which has attended this experiment on the public taste.*

* As every hint which may tend to the improvement of this edition must be acceptable, we notice the following from a correspondent: "In the prospectus (he writes) I do not observe any mention of an accompanying Glossary. This, to southern readers, would be a very desirable accompaniment. The octavo collective edition has one, I think, attached to it; and I am sure it would greatly add to the value of this, which must decidedly take precedence of all others. I notice in *Waverley*, that the vignettes do not, in both cases, relate to the volumes on the *title-pages* of which they are engraved. They, in this instance, both relate to scenes in the *first* volume: might not this be corrected in future with advantage? A reference to the page in which the

The preliminary matter to the present volume consists of the advertisement to the first edition of the *Antiquary*, and a quotation respecting the character of Jonathan Oldbuck, from the *Chronicles of the Canongate*. Sir Walter Scott then states, that no incident of any consequence in the novel has been borrowed from the original who suggested the general idea of this admirably drawn character. He then refers to the part of the beggar, and gives us some remarks on a curious class now scarcely to be traced in Scotland.

"Many (he tells us) of the old Scottish mendicants were by no means to be confounded with the utterly degraded class of beings who now practise that wandering trade. Such of them as were in the habit of travelling through a particular district were usually well received both in the farmer's ha' and in the kitchens of the country gentlemen. Martin, author of the *Reliquia Divi Sancti Andreae*, written in 1683, gives the following account of one class of this order of men in the seventeenth century, in terms which would induce an antiquary like Mr. Oldbuck to regret its extinction. He conceives them to be descended from the ancient bards, and proceeds:—'They are called by others, and by themselves, Jockies, who go about begging; and use still to recite the Sloggorne (gathering-words or war-cries) of most of the true ancient surnames of Scotland, from old experience and observation. Some of them I have discoursed, and found to have reason and discretion. One of them told me there were not now above twelve of them in the whole isle; but he remembered when they abounded, so as at one time he was one of five that usually met at St. Andrews.' The race of Jockies (of the above description) has, I suppose, been long extinct in Scotland; but the old remembered beggar, even in my own time, like the Baccob, or travelling cripple of Ireland, was expected to merit his quarters by something beyond an exposition of his distresses. He was often a talkative, facetious fellow, prompt at repartee, and not withheld from exercising his powers that way by any respect of persons, his patched cloak giving him the privilege of the ancient jester. To be a *gude crack*, that is, to possess talents for conversation, was essential to the trade of a 'puir body' of the more esteemed class; and Burns, who delighted in the amusement their discourse afforded, seems to have looked forward with gloomy firmness to the possibility of himself becoming one day or other a member of their itinerant society. In his poetical works it is alluded to so often, as perhaps to indicate that he considered the consummation as not utterly impossible. Thus, in the fine dedication of his works to Gavin Hamilton, he says,

'And when I downa yoke a naig,
Then, Lord be thankit, I can beg.'

Again, in his Epistle to Davie, a brother poet, he states, that in their closing career—

'The last o't, the worst o't,
Is only just to beg.'

And after having remarked, that

'To lie in kilns and barns at e'en,
When banes are crazed and blude is thin,
Is doubtless great distress';

the bard reckons up, with true poetical spirit, the free enjoyment of the beauties of nature, which might counterbalance the hardship and uncertainty of the life even of a mendicant. In one of his prose letters, to which I have lost the reference, he details this idea yet more seriously, and dwells upon it, as not ill adapted

scene illustrated occurs, would also be a convenience worth attending to."

to his habits and powers. As the life of a Scottish mendicant of the eighteenth century seems to have been contemplated without much horror by Robert Burns, the author can hardly have erred in giving to Edie Ochiltree something of poetical character and personal dignity, above the more abject of his miserable calling. The class had, in fact, some privileges. A lodging, such as it was, was readily granted to them in some of the out-houses; and the usual *awmous* (alms) of a handful of meal (called a *goupen*) was scarce denied by the poorest cottager. The mendicant disposed these, according to their different quality, in various bags around his person, and thus carried about with him the principal part of his sustenance, which he literally received for the asking. At the houses of the gentry, his cheer was mended by scraps of broken meat, and perhaps a Scottish 'twalpenney,' or English penny, which was expended in snuff or whisky. In fact, these indolent peripatetics suffered much less real hardship and want of food than the poor peasants from whom they received alms. If, in addition to his personal qualifications, the mendicant chanced to be a King's Bedesman, or Blue-Gown, he belonged, in virtue thereof, to the aristocracy of his order, and was esteemed a person of great importance. These Bedesmen are an order of paupers to whom the Kings of Scotland were in the custom of distributing a certain alms, in conformity with the ordinances of the Catholic church,* and who were expected in return to pray for the royal welfare and that of the state. This order is still kept up. Their number is equal to the number of years which his majesty has lived; and one Blue-Gown additional is put on the roll for every returning royal birth-day. On the same auspicious era each Bedesman receives a new cloak, or gown of coarse cloth, the colour light blue, with a pewter badge, which confers on them the general privilege of asking alms through all Scotland,—all laws against sorning, masterful beggary, and every other species of mendicancy, being suspended in favour of this privileged class. With his cloak, each receives a leathern purse, containing as many shillings Scots (vide licet, pennies sterling) as the sovereign is years old; the zeal of their intercession for the king's long life receiving, it is to be supposed, a great stimulus from their own present and increasing interest in the object of their prayers. On the same occasion one of the royal chaplains preaches a sermon to the Bedesmen, who (as one of the reverend gentlemen expressed himself) are the most impatient and inattentive audience in the world. Something of this may arise from a feeling on the part of the Bedesmen, that they are paid for their own devotions, not for listening to those of others. Or, more probably, it arises from impatience, natural, though indecorous, in men bearing so venerable a character, to arrive at the conclusion of the ceremonial of the royal birth-day, which, so far as they are concerned, ends in a lusty breakfast of bread and ale; the whole moral and religious exhibition terminating in the advice of Johnson's 'hermit hoar' to his proselyte,

'Come, my lad, and drink some beer.'

Of the charity bestowed on these aged Bedesmen in money and clothing, there are many records in the treasurer's accounts. The following extract, kindly supplied by Mr. MacDonald of the Register House, may interest those whose taste is akin to that of Jonathan Oldbuck of Monkbarns.

* Like the Maundy pensioners in London.—*Ed. L. G.*

"BLUE GOWNIS."

"In the Account of Sir Robert Melvill of Murdocarny, Treasurer-Depute of King James VI., there are the following payments:—

"Junij 1580.

"Item, to Mr. Peter Young, Elimosinar, twentie four gownis of blew clayth, to be givin to xxiiij auld men, according to the yearis of his hienes age, extending to viij x vij elnis clayth: price of the elne xxiiij s.

Inde, ij c. j li. xij s.
Inde, viij li.
"Item, twentie four purses, and in ilk purse twentie four schilling, Inde, xxviij li. xvj s.

"Item, the price of ilk purse iij li. Inde, viij li."

"Item, for making of the saidis gownis, viij li."
(We omit the other examples.)

"I have only to add, that although the institution of King's Bedesmen still subsists, they are now seldom to be seen on the streets of Edinburgh, of which their peculiar dress made them rather a characteristic feature. Having thus given an account of the genus and species to which Edie Ochiltree appertains, the author may add, that the individual he had in his eye was Andrew Gemmells, an old mendicant of the character described, who was many years since well known, and must still be remembered, in the vales of Gala, Tweed, Etrick, Yarrow, and the adjoining country. The author has in his youth repeatedly seen and conversed with Andrew, but cannot recollect whether he held the rank of Blue-Gown. He was a remarkably fine old figure, very tall, and maintaining a soldierlike, or military manner and address. His features were intelligent, with a powerful expression of sarcasm. His motions were always so graceful, that he might almost have been suspected of having studied them; for he might, on any occasion, have served as a model for an artist, so remarkably striking were his ordinary attitudes. Andrew Gemmells had little of the cant of his calling; his wants were food and shelter, or a trifle of money, which he always claimed, and seemed to receive, as his due. He sung a good song, told a good story, and could crack a severe jest with all the acumen of Shakspeare's jesters, though without using, like them, the cloak of insanity. It was some fear of Andrew's satire, as much as a feeling of kindness or charity, which secured him the general good reception which he enjoyed every where. In fact, a jest of Andrew Gemmells, especially at the expense of a person of consequence, flew round the circle which he frequented, as surely as the bon-mot of a man of established character for wit glides through the fashionable world. Many of his good things are held in remembrance, but are generally too local and personal to be introduced here. Andrew had a character peculiar to himself among his tribe, for aught I ever heard. He was ready and willing to play at cards or dice with any one who desired such amusement. This was more in the character of the Irish itinerant gambler, called in that country a *carron*, than of the Scottish beggar. But the late Reverend Doctor Robert Douglas, minister of Galashiels, assured the author, that the last time he saw Andrew Gemmells, he was engaged in a game at brag with a gentleman of fortune, distinction, and birth. To preserve the due gradations of rank, the party was made at an open window of the chateau, the laird sitting on his chair in the inside, the beggar on a stool in the yard; and they played on the window-sill. The stake was a considerable parcel of silver. The author expressing some surprise, Dr. Douglas observed, that the laird was no doubt a humourist or original; but that many decent persons in those times would, like him, have thought there was nothing extraordinary in passing an hour, either in card-playing or conversation, with Andrew Gemmells. This singular man-

dicant had generally, or was supposed to have, as much money about his person as would have been thought the value of his life among modern foot-pads. On one occasion, a country gentleman, generally esteemed a very narrow man, happening to meet Andrew, expressed great regret that he had no silver in his pocket, or he would have given him sixpence:—"I can give you change for a note, laird," replied Andrew. Like most who have arisen to the head of their profession, the modern degradation which mendicity has undergone was often the subject of Andrew's lamentations. As a trade, he said, it was forty pounds a-year worse since he had first practised it. On another occasion he observed, begging was in modern times scarcely the profession of a gentleman, and that if he had twenty sons, he would not easily be induced to breed one of them up in his own line. When or where this *laudator temporis acti* closed his wanderings, the author never heard with certainty; but most probably, as Burns says,

"— he died a cadger-powry's death
At some dike side."

The author may add another picture of the same kind as Edie Ochiltree and Andrew Gemmells; considering these illustrations as a sort of gallery, open to the reception of any thing which may elucidate former manners, or amuse the reader. The author's contemporaries at the university of Edinburgh will probably remember the thin, wasted form of a venerable old Bedesman, who stood by the Potter-row port, now demolished, and, without speaking a syllable, gently inclined his head, and offered his hat, but with the least possible degree of urgency, towards each individual who passed. Their man gained, by silence and the extenuated and wasted appearance of a palmer from a remote country, the same tribute which was yielded to Andrew Gemmells's sarcastic humour and stately deportment. He was understood to be able to maintain a son a student in the theological classes of the University, at the gate of which the father was a mendicant. The young man was modest and inclined to learning, so that a student of the same age, and whose parents were rather of the lower order, moved by seeing him excluded from the society of other scholars when the secret of his birth was suspected, endeavoured to console him by offering him some occasional civilities. The old mendicant was grateful for this attention to his son; and one day, as the friendly student passed, he stooped forward more than usual, as if to intercept his passage. The scholar drew out a halfpenny, which he concluded was the beggar's object, when he was surprised to receive his thanks for the kindness he had shewn to Jemmie, and at the same time a cordial invitation to dine with them next Saturday, 'on a shoulder of mutton and potatoes,' adding, 'ye'll put on your clean sark, as I have company.' The student was strongly tempted to accept this hospitable proposal, as many in his place would probably have done; but as the motive might have been capable of misrepresentation, he thought it most prudent, considering the character and circumstances of the old man, to decline the invitation. Such are a few traits of Scottish mendicity, designed to throw light on a novel in which a character of that description plays a prominent part. We conclude that we have vindicated Edie Ochiltree's right to the importance assigned him; and have shewn, that we have known one beggar take a hand at cards with a person of distinction,

and another give dinner parties. I know not if it be worth while to observe, that the Anti-quary was not so well received on its first appearance as either of its predecessors; though in course of time it rose to equal, and with some readers, superior popularity."

Upon this extract we have little to observe, except that we do not think the quotations from Burns sustain the conclusion, that the immortal ploughman ever seriously contemplated the condition of an itinerant beggar as the fate of his old age; and indeed we can hardly read the bare supposition of its existence, without wishing that his great successor had expressed some stronger feeling on the subject than is contained in the dry detail of references.

The embellishments of this volume are, a frontispiece, by Stanfield, of Oldbuck removing old Saunders, in his distress, from the occupation of boat-mending; and a vignette, by Cooper, of little Davie run away with by his steed.

SIGHTS OF BOOKS.

The Carcanet: a Literary Album; containing select Passages from the most distinguished English Writers. 18mo. pp. 248. London, 1828. Pickering.

This interesting selection, got up with Mr. Pickering's usual good taste, doth give us pause. We begin to question whether a well-chosen mélange of past beauties is not more agreeable than a gathered collection of novelties, such as we see in too many modern publications. Certainly the former are flowers,—the latter have at least a due proportion of weeds. At all events, this pretty little volume is deserving of its name, though we only take two or three of the smaller jewels off its string.

"The Maiden's Choice.

Gentle in personage,
Conduct and equipage,
Noble by heritage.

Generous and free;

Brave, not romantic,
Learn'd, not pedantic,
Fratric, not fratric—

This must he be.

Honour maintaining,
Meanness disdaining,
Still entertaining.

Engaging and new;

Neat, but not finical,
Sage, but not cynical,
Never tyrannical,

But ever true."

"Farwell.

Oh, Anna! do not say 'farewell,'
Though we be doomed to sever;
'Tis like the mallow passing bell
Of pleasure gone for ever.

Ah! find a gentler language then,
The mournful truth to tell,
Say 'parted friends may meet again!'
But do not say farewell:

Oh, do not say farewell.

It tells of pleasure past away—
It tells of future sorrow—
That summer smiled on yesterday,
And winter comes to-morrow.

Around the heart it seems to throw
A melancholy spell
Of mingled memory and woe—
Oh, do not say farewell:

Oh, do not say farewell."

"Inscription on an old Tombstone.

We end

When scarce begun,
And ere we apprehend

That we began to live, our life is done.

Then count thy days; and if they flow too fast
For thy dull thoughts to count, count every
Day the last!"

These are but specimens, the least familiar we could pick out; but the best of ancient and modern authors contribute to this sweet nosegay of literature. The same piece carelessly appears at pages 108 and 247.

The Modern Traveller; a popular Description, Geographical, Historical, and Topographical, of the various Quarters of the Globe. 18mo. pp. 860. London. J. Duncan.

ANOTHER volume of this extensively and deservedly popular publication has just appeared. It treats of the South American States of Peru and Chile; and treats of them, as it has done of all the countries hitherto embraced in its circle, with a full measure of intelligence hardly to be reconciled with its brevity, and a degree of accuracy rarely to be met with in accounts brought down to the most recent periods. But the editor has carefully consulted all the later writers on his subject, (we speak from experience, having, in the discharge of our own duties, gone through the same travel), and, on the data which they have furnished him, produced a clear and excellent history of Peru; and of Chile, too, as far as he had materials, but these are so scanty, that he could not do much with them. The result is a nice standard work "in little," so well arranged, that we may refer to it for information relative to the past and present state of these provinces whenever changes and revolutions excite an interest in the public mind. That they will yet undergo many of these, is evident; and we have only now to add, from recent sources on which we can depend, that Chile, of which we hear least, is making more sure progress to prosperity than any other of the South American States: and the cause is this—however much parties may differ, there are none that do not endeavour to advance the happiness of Chile, instead of sacrificing every thing to their own lust of power, as is the case in the other governments.

A few Remarks on the Expediency and Justice of Emancipating the Jews; addressed to the Duke of Wellington. By P. Anichini. 8vo. pp. 82. London, 1829. E. Wilson.

THIS is a fierce and furious pamphlet against the Roman Catholics, against Mr. Peel, and all who supported his late measures,—a pamphlet speaking, to use the most moderate terms, very strongly about the aristocracy, the hierarchy, and the church of England—and a pamphlet which strenuously espouses the policy of emancipating the Jews from all disabilities. It is a broad question, and one which is not now likely to sleep; and, therefore, though the tone of Mr. Anichini must displease every moderate reader, and his arguments are neither well arranged nor altogether just, there is a force in his manner, and a curious jumble of facts in his researches, which render his performance striking where it is not convincing.

Halkjeton-Nutshi; or, the Adornment of the Saviour. Printed at Constantinople, at the close of the Rebantishir in the year 1244 (middle of November 1828). 4to. pp. 845.

WE gave our readers some account of a gem in Turkish jurisprudence on a former occasion; and it would seem by the present work, that the "din of war" has not arrested the activity of the Byzantine press. The *Halkjeton-Nutshi* is one of the numerous commentaries on the *Minijetol-Moselli*, or haven of the supplicant; the most celebrated digest which the Mussulman possesses on the duties of prayer; and the production of the actually celebrated Imam Kashgari. Seid Mustafa Ben Mohammed Ben Mustafa of Gisel-

hisar is the author of the publication before us: it was completed three years back, is to consist of two quarto volumes, and is written in Arabic, though such words as are of infrequent occurrence are explained in Turkish; a circumstance which cannot fail to prove eminently useful to oriental lexicographers. On every occasion he has quoted the various authorities in the circle of Moslem dogmatics which he has laid under contribution.

Having given this brief view of the nature of the learned commentator's production, we shall confine ourselves to a few such excerpts from it as may enable the reader to conjecture the character of its general contents.

"Every important concern which is not begun in the name of God, the All-merciful, is pointless.—It was prohibited by the prophet to drink whilst standing.—Actions are judged according to their intent.—The prophet was accustomed to kiss some of his wives without washing previously.—It is permitted us to partake of two kinds of carrion, and two sorts of blood; the first are fish and locusts, and the second liver and spleen. (The prophet was evidently no anatomist, though his biographers speak of him as an adept in medicine!)—In whatever direction you may turn yourselves, you are still in God's presence.—The power of heat proceeds from the effluvia of hell.—Whosoever amongst ye shall make confession of your faith, fly to God for refuge against four evils, saying, 'O God! I seek help of thee against the pains of hell, the pains of the grave, the disquietude of death, and the wickedness of Antichrist!'—On the back of every prayer it stands written, 'There is no God but the only God, without associates: his is the power, his the praise; he is my God, having dominion over all! None refuseth when thou givest; none giveth when thou refusest; and to the rich man nothing availeth his wealth.'"

Ainsworth's Latin Dictionary, reprinted from the folio Edition of M.DCC.LII., with numerous Additions, Emendations, and Improvements. By the Rev. B. W. Beatson, A.M., Pembroke College, Cambridge; revised and corrected by W. Ellis, Esq., A.M., King's College, Aberdeen. London, 1829. J. O. Robinson.

ENCOURAGED we trust by the deserved success of the edition of Johnson's Dictionary in one large 8vo. volume, we have here its Latin counterpart—a publication on which we do not hesitate to bestow our most unqualified praise. Ainsworth's has always been, what it merited, a popular Thesaurus; and, for ready reference to the student, none better could be constructed. There were, however, as there must be in all works of the kind, many errors, either original, or such as had crept in through careless reprinting; and we are glad to see a multitude of these rectified by the industry and judgment of the present editor. In other respects, also, great and notorious improvements have been effected—retrenchment of what was obsolete or unnecessary, and amplification where the nature of the explanations required it. Altogether, (and we have looked carefully through many intricate examples to enable us to give this honest opinion)—altogether we can most unreservedly recommend this volume as one of the best guides to early classical attainments, and also one of the completest Latin dictionaries that has ever courted public favour.

ORIGINAL CORRESPONDENCE.

Paris, Sept. 21.

A FEW days ago the obsequies of the Count Daru were celebrated at the church of St. Thomas Aquinas; and, as usual on such occasions, there were many "outward and visible signs" of grief displayed. The four corners of the pall were held by Maréchal Maison, M. Fourier, Comte de Cessac, and Duc de Bassano. Peers of France, dressed in all the glitter of embroidered costumes, artists, savans, and several military detachments, escorted the *convoi* to the churchyard of Montmartre, where Cuvier, Ternaux, and Silvestre de Sacy, pronounced orations over the inanimate body. The discourse of M. de Sacy was by far the most interesting. He gave, in simple language, a short sketch of the life of his friend, enumerated his public and private virtues, extolled his talents, and then terminated his eulogium by "Vanité des vanités, et tout n'est que vanité,—hormis craindre et servir Dieu."

Notwithstanding the *mauvais temps*, on Sunday the carriages to St. Cloud were filled in a true John Gilpin style: the old, young, middle-aged, halt, whole, and maimed, set out in high glee to trip a merry dance in honour of his saintship; but scarcely had the fiddlers struck up, and ladies ventured to look at their partners, when the heavens sent forth a shower which obliged musicians, dames, and demoiselles, to try their talents in swimming. Noah's deluge could scarcely occasion a greater confusion: husbands stormed, wives scolded, dandies hollowed, daughters wiped their bonnets, and some sent the saints to hot quarters. Not a carriage was to be had, inns were full, and many dripping human beings were compelled to wade through mud and dirt to the next town. In short, it was about as bad and foolish an affair as your Horticultural fete must have been;—only we have sometimes a fine day as an excuse for such entertainments in France.

To the Editor, &c.

PARIS POPULATION — UNIVERSITY — SUPERFICIES OF EUROPE — ANIMAL KINGDOM.

SIR,—I was somewhat startled by a statement of the present population of Paris, which you gave in your last Number. If it be correct, the mortality which has carried off 180,000 souls in two years has been most miraculously noiseless!—for I have at this moment before me an *official extract* from the census of 1826, which states the number of the inhabitants of that capital, at the close of that year, to be 890,431; and it is well known that it amounted to 715,000 even so far back as A.D. 1817. Now I submit that your informant must, at all events, be a blunderer; for if, as he says, there were 346,188 men and 367,796 women, the population must have been 713,984 (exclusive of persons under age), not 713,765,—the number with which he unfolds his intelligence. I assume the statement of *men and women* to be correct; and adding thereto one-fourth for *non-adults*, I arrive at a population of 892,480, which I should apprehend to be much nearer its actual state! Having thus given vent to my scepticism, I shall avail myself of the present opportunity to submit to your readers the result of an analysis of the official extract I have before alluded to.

French towns above 100,000 souls—3: viz. Paris, 890,431—Lyons, 145,675—Marseilles, 115,913.
Ditto above 50,000 and under 100,000—5: of which Bourdeaux, 93,549—Rouen, 90,000—Nantes, 71,739.
Ditto above 20,000 and under 50,000—39.
Ditto above 10,000 and under 20,000—65.

Your informant also speaks of a *University of Paris*, and of 47,000 students. It is right this blunder also should be corrected. There is no such thing as a *University of Paris*; but there is a *Royal University of France*, composed of twenty-six *Academies*, of which that of Paris is undoubtedly the most illustrious. Each of them has a rector and an academical council and professors; and most of them resemble what we call a University, though none approximate so closely to our apprehension of that designation as the Academy of Paris. The remaining five-and-twenty are—Aix, Amiens, Angers, Besançon, Bourdeaux, Bourges, Caen, Cahors, Clermont, Dijon, Douai, Grenoble, Limoges, Lyon, Metz, Montpellier, Nancy, Nîmes, Orleans, Pau, Poitiers, Rennes, Rouen, Strasbourg, and Toulouse. Subject to the jurisdiction of these academies are the Royal and Commercial Colleges; and I have little doubt but that the 47,000 students mentioned by your informant are the total numbers of the scholars entered on the books of the several academies, and therefore pupils of the University of France; for in 1827 the matriculated pupils of the Paris Academy amounted to 10,354; and though I admit there has been a considerable increase since that date, it cannot certainly have been in the ratio of five to one.

To shew you further how little dependence is frequently to be placed upon statistical data, I will only add two remarkable instances of discordancy between the statements of very intelligent and respectable writers.

Bergmann	181,682 square miles.
Galett	171,606
Gaspard	168,000
Hassel	155,481
Fabri	150,000

Between the highest and the lowest of these there is therefore a difference of more than one-fifth!

The second example of the uncertainty of wholesale enumerations occurs in one of the tables given by M. Moreau de Jonnès, in an attempt to ascertain the extent of lands devoted to pasturage in the various countries of Europe, to shew the backward state of France in this branch, and to deduce, from general and analytical statements, the advantages which flow from its extension.

Enumeration of horses, &c. bred in the under-mentioned territories:—

	Horses.	Cattle.	Sheep.
British Isles	1,800,000	10,000,000	42,000,000
France	1,656,000	6,681,000	29,000,000
German Confed.	1,900,000	12,000,000	20,000,000
Spain	140,000	1,000,000	12,000,000
Austria	1,180,000	4,689,000	10,867,000
Hungary	430,000	2,355,000	3,000,000
Prussia	1,202,000	4,355,000	2,049,000
Hanover	225,000	676,000	1,540,000
Netherlands	454,000	1,933,000	1,508,000

I shall but remark upon this statement, as regards the British Isles, that England alone has been generally accounted to breed 43,000,000 of sheep, and Scotland and Ireland 30,000,000. And I have recently seen a very careful estimate of the number of that invaluable animal bred in the Prussian dominions, which gives a total of more than 12,000,000. Even in 1821 it amounted to 9,597,151; and in 1827 the flocks of Silesia alone were ascertained to contain 2,250,000 sheep, which are beyond even Moreau's estimate for *all Prussia*. In 1827 the actual number of horses bred in that country was above 1,400,000, and of horned cattle above 6,000,000,—the official return of the latter in 1821 having been 4,275,679. As regards Austria, it is now nine years ago since Baron Lichtenstern reported the number of sheep at

11,358,000; and within less than a twelve-month back, the annals of Austrian husbandry have shewn an increase to 20,000,000.

I am afraid yourself and your readers will become impatient of my prolixity; and as that quality is ever "more honoured" the breach than the observance," it behoves me to lose no time in subscribing myself, sir, yours, &c. S.
Sept. 22d, 1829.

ARTS AND SCIENCES. SCIENTIFIC EXPEDITION.

LETTERS dated off the Cape of Good Hope have been received from Captain Foster, of His Majesty's Ship Chanticleer, who, our readers will no doubt remember, sailed from England more than a year since on a scientific voyage to the southern hemisphere. As might have been anticipated, the Chanticleer has encountered much severe weather, and was forced by it into Mossel Bay. Captain Foster, we are happy to learn, has procured satisfactory observations at Cape Horn and South Shetland; and from his operations, consisting chiefly of pendulum experiments, important results may naturally be expected.

THE JOURNAL OF MAJOR LAING.

[In giving this tragical and disgraceful story to the British public, we may notice that the individual who figures so suspiciously in it, viz. Hassouna d'Ghies, must be well remembered a few years ago in London society. We were acquainted with him during his residence here, and often met him, both at public entertainments and at private parties, where his Turkish dress made him conspicuous. He was an intelligent man, and addicted to literary pursuits; in manners more polished than almost any of his countrymen whom we ever knew, and apparently of a gentler disposition than the accusation of having instigated this infamous murder would fix upon him.—*Ed. L. G.*]

It was known some days ago that Baron Rousseau, the French consul-general and chargé d'affaires at Tripoli, had taken down his flag, in consequence of very serious disputes between the Pasha and him, respecting the papers of Major Laing. If we may credit the information which we have received, Baron Rousseau is implicated in this affair. As soon as the official documents, which we expect, have reached us, we shall lose no time in laying them before the public.

News received from Tripoli.

It was about three years ago, that Major Laing, son-in-law of Colonel Hammer Warrington, consul-general of England in Tripoli, quitted that city, where he left his young wife, and penetrated into the mysterious continent of Africa, the grave of so many illustrious travellers. After having crossed the chain of Mount Atlas, the country of Fezzan, the desert of Lempta, the Sahara, and the kingdom of Ahades, he arrived at the city of Timbuctoo, the discovery of which has been so long desired by the learned world. Major Laing, by entering Timbuctoo, had gained the reward of £3000 sterling, which a learned and generous Society in London had promised to the intrepid adventurer who should first visit the great African city, situated between the Nile of the Negroes and the river Gambaron. But Major Laing attached much less value to the gaining of the reward than to the fame acquired after so many fatigues and dangers. He had collected on his journey valuable information in all branches of science: having fixed his abode at Timbuctoo, he had composed the journal of his travels, and was preparing to return to Tripoli, when he was attacked by Africans, who undoubtedly were watching for him in the desert. Laing, who had but a weak escort, defended himself with heroic courage: he had at heart the preservation of his labours and his glory.

But in this engagement he lost his right hand, which was struck off by the blow of a yatagan. It is impossible to help being moved with pity at the idea of the unfortunate traveller, stretched upon the sand, writing painfully with his left hand to his young wife, the mournful account of the combat. Nothing can be so affecting as this letter, written in stiff characters, by unsteady fingers, and all soiled with dust and blood. This misfortune was only the prelude to one far greater. Not long afterwards, some people of Ghadames, who had formed part of the Major's escort, arrived at Tripoli, and informed Colonel Warrington that his relation had been assassinated in the desert. Col. Warrington could not confine himself to giving barren tears to the memory of his son-in-law. The interest of his glory, the honour of England, the affections of a father,—all made it his duty to seek after the authors of the murder, and endeavour to discover what had become of the papers of the victim. An uncertain report was soon spread that the papers of Major Laing had been brought to Tripoli by people of Ghadames; and that a Turk, named Hassouna Dghies, had mysteriously received them. This is the same Dghies whom we have seen at Marseilles, displaying so much luxury and folly, offering to the ladies his perfumes and his shawls—a sort of travelling Usbeck, without his philosophy and his wit. From Marseilles he went to London, overwhelmed with debts, projecting new ones, and always accompanied by women and creditors. Col. Warrington was long engaged in persevering researches, and at length succeeded in finding a clue to this horrible mystery. The Pasha, at his request, ordered the people who had made part of the Major's escort to be brought from Ghadames. The truth was at length on the point of being known; but this truth was too formidable to Hassouna Dghies for him to dare to await it, and he therefore took refuge in the abode of Mr. Coxe, the consul of the United States. The Pasha sent word to Mr. Coxe, that he recognised the inviolability of the asylum granted to Hassouna; but that the evidence of the latter being necessary in the prosecution of the proceedings relative to the assassination of Major Laing, he begged him not to favour his flight. Col. Warrington wrote to his colleague to the same effect. However, Hassouna Dghies left Tripoli on the 9th of August, in the night, in the disguise, it is said, of an American officer, and took refuge on board the United States corvette *Fairfield*, Captain Parker, which was then at anchor in the roads of Tripoli. Doubtless, Captain Parker was deceived with respect to Hassouna, otherwise the noble flag of the United States would not have covered with its protection a man accused of being an accomplice in an assassination.

It is fully believed that this escape was ardently solicited by a French agent, whom we see, with a profound sentiment of grief, engaged in this affair. It is even said, that the proposal was first made to the captain of one of our (French) ships, but that he nobly replied, that one of the king's officers could not favour a suspicious flight,—that he would not receive Hassouna on board his ship, except by virtue of a written order, and, at all events, in open day, and without disguise.

The *Fairfield* weighed anchor on the 10th of August, in the morning.

The Pasha, enraged at the escape of Hassouna, summoned to his palace Mohamed Dghies, brother of the fugitive, and there, in the presence of his principal officers, commanded him, with a stern voice, to declare the truth.

Mohamed fell at his master's feet, and declared upon oath, and in writing, that his brother Hassouna had had Major Laing's papers in his possession, but that he had delivered them up to a person, whom we shall refrain from naming, for a deduction of forty per cent on the debts which he had contracted in France, and the recovery of which this person was endeavouring to obtain by legal proceedings.

The declaration of Mohamed extends to three pages, containing valuable and very numerous details respecting the delivery of the papers of the unfortunate Major, and all the circumstances of this strange transaction.

The shape and the size of the Major's papers are indicated with the most minute exactness; it is stated that these papers were taken from him near Timbuctoo, and subsequently delivered to the person above mentioned *entire, and without breaking the seals of red wax*,—a circumstance which would demonstrate the participation of Hassouna in the assassination; for how can it be supposed otherwise, that the wretches who murdered the Major would have brought these packages to such a distance without having been tempted by cupidity, or even the curiosity so natural to savages, to break open their frail covers?

Mohamed, however, after he had left the palace, fearing that the Pasha in his anger would make him answerable for his brother's crime, according to the usual mode of doing justice at Tripoli, hastened to seek refuge in the house of the person of whom we have spoken, and to implore his protection. Soon afterwards the consul-general of the Netherlands, accompanied by his colleagues the consuls-general of Sweden, Denmark, and Sardinia, proceeded to the residence of the person pointed out as the receiver, and in the name of Col. Warrington, and by virtue of the declaration of Mohamed, called upon him instantly to restore Major Laing's papers. He answered haughtily, that this declaration was only a tissue of calumnies; and Mohamed, on his side, trusting, doubtless, in a pretended inviolability, yielding, perhaps, to fallacious promises, retracted his declaration, completely disowned it, and even went so far as to deny his own handwriting.

This recantation deceived nobody; the Pasha, in a transport of rage, sent to Mohamed his own son, Sidi Ali: this time influence was of no avail. Mohamed, threatened with being seized by the *chiaous*, retracted his retraction; and in a new declaration, in the presence of all the consuls, confirmed that which he made in the morning before the Pasha and his officers.

Now the outlines of this affair are clearly laid down, we submit them to the attention of France and of Europe. The reader will easily divine every thing that delicacy renders it our duty to pass over in silence. One consolatory fact results from these afflicting details: the papers of Major Laing exist, and the learned world will rejoice at the intelligence; but in the name of humanity, in the name of science, in the name of the national honour—compromised, perhaps, by disgraceful or criminal bargains,—it must be hoped that justice may fall upon the guilty, whoever he may be.

(From the *Semaphore of Marseilles*.)

ANCIENT AND MODERN EGYPT.

[Touching hieroglyphics, the conservators of the Museum at Naples have just announced that one of the manuscripts on papyrus, found in the excavations at Pompeii, and which has lately been deciphered according to the process of Sir Humphry Davy, bears the following

title:—"Septuaginta novem Inscriptiones ex Hieroglyphicis in Latinn verba Servorum." These papyri are supposed to be anterior to the dominion of the Ptolemies in Egypt; and this Latin version, it is hoped, will afford a sufficient insight into the hieroglyphics to compose an alphabet which may serve for the interpretation of hieroglyphic inscriptions; and also throw great light on the sacred language of Egypt, by explaining the inscriptions on the monuments, &c. in the temples of Egypt and Nubia.]

M. Champollion's Twelfth Letter—continued.

On the 3d of March, in the morning, we arrived at Esneh, where we were very graciously received by Ibrahim Bey, the governor of the province. Through his means we obtained permission to examine the great temple of Esneh, which is filled with cotton; and, being used as a general warehouse for that commodity, has been incrustated with the mud of the Nile, especially on the outside. Besides this, the intervals between the first row of columns of the pronaos has been filled up with mud walls; so that we were obliged to carry on our operations, sometimes with candles in our hands, and sometimes with the help of ladders, to examine the bas-reliefs more closely.

Notwithstanding these obstacles, I have collected all that it was important to know of this great temple with regard to mythology and history. This building has been considered, on the strength of mere conjectures founded on a particular mode of interpreting the zodiac of the ceiling, to be the *most ancient* monument of Egypt. The result of my study of it has been fully to convince me that it is the *most modern*; for the bas-reliefs which adorn it, and especially the hieroglyphics, are in such a rude and stiff style, that we perceive at a glance the extreme point of the decay of the arts; and the inscriptions fully confirm this view. The masses of this pronaos were erected under the emperor Cesar Tiberius Claudius Germanicus (the Emperor Claudius), whose dedication is on the door of the pronaos, in large hieroglyphics. The cornice of the façade, and the first row of columns, were sculptured under the emperors Vespasian and Titus. The back part of the pronaos bears the legends of the emperors Antoninus, Marcus Aurelius, and Commodus: some columns of the interior of the pronaos were adorned with sculpture under Trajan, Adrian, and Antoninus; but, with the exception of some bas-reliefs of the time of Domitian, all those on the right and left walls of the pronaos bear the legends of Septimius Severus and of Geta, whom his brother Caracalla had the barbarity to assassinate, at the same time proscribing his name throughout the Roman empire. It seems that the proscription, commanded by the tyrant, was carried into effect even in the Thebaid; for the cartouches (or scrolls) bearing the proper names of the Emperor Geta are all carefully effaced with a hammer, but not so effectually as to hinder me from clearly reading the name of that unfortunate prince—*The Emperor Cesar Geta, the Director*. I believe that Latin or Greek inscriptions, in which this name has been hammered out, are already known: here we have hieroglyphic legends to add to the list. Thus, then, the real antiquity of the pronaos of Esneh is incontestably fixed: its erection is not of a more remote period than the reign of the Emperor Claudius, and the sculptures come as low down as Caracalla; and among the latter is the famous zodiac which has been so much talked of. What remains of the naos, that is to say, the back wall of the pronaos, is of the time of Ptolemy Epiphanes; and therefore, as it were, but yesterday in comparison with what was believed. The excavations which we have made behind the pronaos have convinced

us that the temple properly so called has been razed even to the foundations.

However, let the friends of the antiquity of the monuments of Egypt console themselves:—Latopolis, or rather Esneh (for this name is read in hieroglyphics on all the columns and on all the bas-reliefs of the temple), was not a village in the great Pharaonic times; it was an important city, adorned with fine monuments; and I have discovered the proof of this in the inscription of the columns of the pronaos. I have found upon two of these columns, the shafts of which are almost wholly covered with hieroglyphic inscriptions, arranged vertically, a notice of the *fêtes* which were annually celebrated in the great temple of Esneh. One of them related to the commemoration of the dedication of the ancient temple by King Thoutmosis III. There exists, besides—and I have taken a drawing of it—in a small street in Esneh, in the quarter of Sheikh Mohammed Ebbedri, the jamb of a door, of very beautiful rose-coloured granite, bearing a dedication of the Pharaoh Thoutmosis II.; and belonging doubtless to one of the old monuments of the Pharaonic city of Esneh. I have also found at Edfou a stone, which is the only known remnant of the temple that existed in that town before the present structure, which was built under the Lagides. The ancient temple was of the age of Mæris, dedicated, like the new one, to the great god Har-Hat, lord of Hat-fouah (Edfou), by Thoutmosis III., who built most of the sacred edifices in the Thebaid, as well as in Nubia, after the invasion of the Hykshos—in the same manner as the Ptolemies rebuilt those of Ombos, Esneh, and Edfou—to replace the primitive temples destroyed during the Persian invasion.

The grand temple of Esneh was dedicated to one of the greatest forms of the divinity—to Chnouphis, who has the titles of "Nev-an-thosné, lord of the country of Esneh, creative spirit of the universe, vital principle of the divine essences, support of all the worlds, &c." With this god are associated the goddess Neith, represented under divers forms, and the various names of Menhi, Tnébouasou, &c.; and the young Haké, represented under the form of an infant, which completes the triad adored at Esneh. I have collected a multitude of very curious details relative to the attributes of these three personages, to whom the principal *fêtes* and religious assemblies annually celebrated at Esneh were consecrated. On the 23d of the month Hathor the *fête* of the goddess Tnébouasou was celebrated; that of the goddess Menhi was on the 25th of the same month—on the 31st that of Isis, the third form of the two above-named goddesses. On the 1st day of Choiak, a panegyria (or religious assembly) was held in honour of the young god Haké; and another on the same day in honour of Chnouphis. The following is the article of the sacred calendar, sculptured on one of the columns of the pronaos:—

"On the new moon of Choiak, panegyries and offerings in the temple of Chnouphis, lord of Esneh; all the sacred ornaments are displayed; there are offerings of loaves, wine, and other liquors, of oxen and geese; collyrium and perfumes are presented to the god Chnouphis, and to the goddess his consort; afterwards, milk to Chnouphis. With respect to the other gods of the temple, a goose is offered to the goddess Menhi; a goose to the goddess Neith; a goose to Osiris; a goose to Khous and Thoth; a goose to the gods Atmon, Thore, as well as to the other gods worshipped in the temple: seeds, flowers, and ears of corn; are

presented to the lord Obnoupis, sovereign of Eaneh; and he is invoked in these terms," &c. Here follows the prayer pronounced on this solemn occasion, and which I have copied, because it is highly interesting in a mythological view.

To the same divinities was dedicated the temple situated to the north of Esneh, in a fine plain, formerly cultivated, but now overgrown with briars, and very recently devastated. This temple is no longer such as it was left by the commission of Egypt; nothing remains of it but a single column, a small piece of a wall, and the bas-reliefs, almost on a level with the surface of the ground. Among the bas-reliefs I found one of Evergetes I. and Berenice his wife; and also the legends of Philopator on the column, those of Adrian on a portion of architecture; and on another, in most barbarous hieroglyphics, the names of the Emperors Antonine and Verna. Chance led me to discover, in the external basement of the left part of the temple, a series of captives representing nations conquered (by Evergetes I., according to all appearance); and by the help of the nails of our Arabs, who scratched up the ground valiantly, in spite of the stones and briars, I succeeded in copying ten of the onomastic inscriptions of the nations, engraved on a kind of shield, fastened to the breast of the vanquished. Among the nations whom the victor boasts of having subdued, I have read the names of Armenia, Persia, Thrace, and Macedonia; perhaps the victories of some Roman emperor may be referred to; for there is nothing in a sufficient state of preservation to clear up this doubt.

On the 7th of March, we visited the ruins of the ancient Tophium, now Taoud, situated on the right bank of the river, but in the vicinity of the Arabic chain, and very near to Hermonthis, which is on the opposite bank. Here there are two or three apartments of a little temple, inhabited by Fellahs or their cattle. In the largest there are still some bas-reliefs, which informed me that the triad worshipped in the temple consisted of Mandout, the goddess Ritho, and their son Harphre, the same as in the temple of Hermonthis, the capital of the nome to which Tophium belonged.

At noon we were at Hermonthis, where we again spent some hours in copying bas-reliefs and hieroglyphic inscriptions, to complete our labours relative to Erment, which we commenced at our first visit in the month of November last. This temple is only a mammi, or el-misi, consecrated to the delivery of the goddess Ritho, built and sculptured (as is proved by all the bas-reliefs) in commemoration of queen Cleopatra, daughter of Anletes, on the birth of Cesarion, son of Julius Caesar, who was pleased to be the Mandout of this new goddess Ritho, as Cesarion was the Harphre. It was, indeed, pretty much the custom of the Roman dictator to endeavour to complete the triad, especially when he met with queens who, like Cleopatra, had something divine in them, without disdaining on that account terrestrial joys.

On the 8th our little squadron moored at the foot of the ancient quay washed by the Nile, and which will not be able much longer to defend the palace of Luxor, the last columns of which nearly touch the banks of the river. This quay is evidently of two different epochs: the primitive Egyptian construction is of large burnt bricks, cemented with extremely hard mortar, and its ruins form enormous blocks from fifteen to eighteen feet broad, and from twenty-five to thirty in length, like rocks inclined over the

river, to the middle of which they project. The quay of freestone is of much later date: I have observed in its stones from demolished edifices still bearing fragments of sculpture of the style of the lower ages.

We had completed (within a trifle) our researches respecting Luxor before we came to take up our quarters here at Biban-el-Molouk, and I am able to furnish the necessary details respecting the era of the erection of all the parts that compose this great edifice. The founder of the palace, or rather of the palaces, of Luxor was Amenophis-Memnon (Amenothph III.) of the eighteenth dynasty. It was that prince who built the series of edifices which extends from south to north, from the Nile to the fourteen great columns, forty-five feet in height, which belong to this reign. On all the architraves of the other columns which adorn the inner courts and halls (which columns are 105 in number—most of them entire) there are, in large hieroglyphics, of a very low relief and excellent workmanship, dedications offered in the name of king Amenophis. I here subjoin the translation of one of them, to give an idea of all the others, which differ only in some royal titles more or less. "Life! Horus, powerful and moderate, reigning by justice, the organiser of his country, he who keeps the world in repose, because, great in his strength, he has struck the barbarians: the king, lord of justice, beloved of the sun, the son of the sun, Amenophis, moderator of the pure region (Egypt), has caused the execution of these buildings, consecrated to his father Ammon, the god lord of the three zones of the universe, in the Oph of the south: he has had them built of good and hard stones, in order to erect a durable monument. This is what has been done by the son of the sun, Amenophis, beloved of Ammon-Ra." These inscriptions therefore remove all kind of doubt respecting the precise epoch of the construction and decoration of this part of Luxor. My inscriptions are not without a verb, like the Greek inscriptions explained by M. Letronne, and which have been found fault with so *mal à propos*: I can announce to him on this subject that I shall bring him Egyptian dedicatory inscriptions of the temples of Phile, Omboe, and Dendera, in which the verb *to build* is never wanting.

The bas-reliefs which adorn the palace of Amenophis are, in general, relative to acts of worship paid by that prince to the great divinities of this portion of Thebes, who were—1. Ammon-Ra, the supreme god of Egypt, and he who was worshipped almost exclusively at Thebes; 2. his secondary form, Ammon-Ra, the generator, called mystically the husband of his mother, and represented under a Priapian form—it is the Egyptian Pan mentioned in the Greek writers; 3. the goddess Thamoun or Taton, that is to say, the female Ammon, one of the forms of Neith, considered as the consort of Ammon the generator; 4. the goddess Mouth, the divine grandmother, the consort of Ammon-Ra; 5. and 6. the young gods Khous and Harka, who complete the two great triads adored at Thebes, viz.—

Fathers.	Mothers.	Sons.
Ammon-Ra.	Mouth.	Khous.
Ammon-generator.	Thamoun.	Harka.

The king is represented making offerings, sometimes very rich ones, to these divinities, or accompanying their bar, or sacred arks, borne in procession by the priests.

Egyptian Antiquities, &c.—To the request of our correspondent, who says it would much enhance the interest and importance of Champollion's Letters were we

* The south part of the province of Thebes (Amon-Eli), that on the right bank of the Nile.

to indicate the period at which the lower Egyptian divinities, whose names and inscriptions are thus being rescued from their long oblivion,—we have to answer, that the subject has occupied much of our attention, and will be fully entered upon in many a future Gazette. But it is one of great doubts and difficulty; and the very discoveries which we are weekly recording, furnish the lights to guide us through the conflicting opinions that have prevailed upon it to the present day. In the mean time, we strenuously advise every reader who feels interested in this, certainly the most curious literary inquiry of the age, to peruse a small volume recently published by M. Pickering (8vo. pp. 129). It is entitled "The Ancient Fragments," &c. &c.; and contains all that remains of the earliest writers who have treated of the history of the first nations among mankind. Thus we have Sanchiathion, Berossus, Abydenus, Megasthenes, &c.; and, above the whole, Manetho, the oldest and best authority on the Egyptian dynasties. There are other very valuable relics in this most useful volume; and all excellently translated by the editor, J. P. Cory, of Caius College, Cambridge,—to whom the learned world, as well as the general reader, are under deep obligations for the work.

PARIS ACADEMY OF SCIENCES.

At the sitting of the Paris Academy of Sciences on the 21st instant, M. Payen announced a new mode of preparing plaster. By accident, he discovered that some sulphate of lime which had surrounded a tube heated to 105° by hot air, was converted into excellent plaster. He proposes, therefore, this method of preparing it, instead of that in general use, which is more expensive and less certain as to the result.—Geoffrey St. Hilaire read the report of the commission on the scientific expedition to the Morea. His report enumerated corrections of various geographical errors of importance, interesting researches among ruins,—drawings of which are given; experiments on the temperature of the sea, measurements of mountains, &c. The report states, that the members of the expedition were every where received with hospitality, that the agriculture of the country appears to be in its infancy, and that the inhabitants are destitute of a multitude of vegetables which would thrive in their climate. The report concludes by congratulating the Academy on the vast addition to the museum which will result from this expedition; and declares that M. Bory de St. Vinct, and each of its members, is entitled to the praise of the Academy.

CELESTIAL PHENOMENA FOR OCTOBER.

3d day—the earth at its mean distance from the sun. 23d day, 4 hrs. 29 min.—the sun enters Scorpio. The solar disc has latterly been copiously covered with spots, particularly those denominated facule.

Lunar Phases and Conjunctions.

	d.	h.	m.
First Quarter in Sagittarius . . .	5	11	49
Full Moon in Pisces . . .	12	3	20
Last Quarter in Cancer . . .	19	2	30
New Moon in Libra . . .	27	7	44

The moon will be in conjunction with

	d.	h.	m.
Jupiter in Scorpio . . .	3	11	49
Saturn in Leo . . .	20	19	30
Mars in Virgo . . .	23	13	6
Mercury in Libra . . .	27	13	15
Jupiter in Scorpio . . .	30	16	15
Venus in Ophiuchus . . .	30	21	45

3d day—Mercury at his greatest elongation, and visible as an evening star. 28th day, 13 hrs.—in his inferior conjunction.

Venus appears under a gibbous phase, with 9 digits west illuminated, and apparent diameter 14". This beautiful planet divides the empire of the evening sky with Jupiter, and will be in conjunction with the following stars, at the times specified respectively:—

	d.	h.	m.
2 α Libræ . . .	5	11	49
2 ——— . . .	21	14	—
2 ——— . . .	13	11	—
2 Scorpii . . .	13	11	—
2 Ophiuchi . . .	30	21	45

Mars will be in conjunction with β and γ Virginis on the 2d day 16 hrs., and 15th day 5 hrs. respectively.

Satellites of Jupiter.

The following will be the only visible eclipses:

First Satellite, emersion . 14 5 55 7

Saturn is rapidly gaining on the midnight heavens, and advancing towards the bright star Regulus in Leo. This planet rises at the following times: the intermediate periods may easily be obtained by proportion:—

D. H. M. D. H. M. D. H. M.
1 13 8 | 13 12 30 | 25 11 46

12th day—Uranus stationary. 25th day, 17 hrs. 30 min. in quadrature. This distant planet transits the meridian at the following times respectively:—

D. H. M. D. H. M. D. H. M.
1 7 40 | 11 7 12 | 21 6 36

Occultation of Aldebaran.—Oct. 15th day—this star will again be occulted by the moon, and under more favourable circumstances than those which have already preceded in this year; (see Celestial Phenomena for July and September). The apparent passage of the star will be considerably north of the centre of the moon, or according to the subjoined diagram.

Aldebaran projected on the disc of the moon.—The accompanying diagram will give some idea of this singular phenomenon.

The following will be the times of occultation, as computed for five principal observatories:—

	Sidereal Time.		Mean solar Time.	
	H.	M.	H.	M.
Paris.....	22	51	9	14
Greenwich ..	23	35	9	58
Bombay ..	23	43	9	19
Beiford ..	23	25	9	49
Batavia ..	23	48	9	13
Batavia ..	23	28	9	47
Batavia ..	23	50	9	15
Batavia ..	23	12	9	35
Dublin.....	22	31	8	56
Dublin.....	22	56	9	30

The circumstance that has rendered an occultation of Aldebaran a curious subject of investigation, is, that in former occultations of it since the year 1699, several of the most eminent astronomers on the continent, and a few in this country, have observed this star, which

is of a reddish colour, either clinging to, or projected on the disc of the moon, at the moments of immersion and emersion, during a period varying from one to ten seconds of time. A similar appearance has been observed with Regulus, Spica Virginis, and some other fixed stars, also with some of the planets; but the instances have been few with these compared with the frequency of its occurrence with Aldebaran.

Dejford.

J. T. B.

LITERARY AND LEARNED.

ANTIQUITIES OF FRANCE.

AT Plémur, in the department of Morbihan, in Brittany, a tumulus, eighteen feet in height, and three hundred feet in circumference at its base, has recently been opened. A vault formed of small stones, and closed by a cover, was found in the centre, containing the rotten remains of a large box, in the midst of which were ashes and charcoal. In the side of the mound was a Celtic axe, of black stone, half broken.—A very interesting Essay on the antiquities of the department of Morbihan, by M. Mahé, a canon of the cathedral of Vannes, was published last year. Among a number of curious details, is a notice of the abbey of St. Gildas. This abbey, founded by Duke Guerech the First, was afterwards very celebrated, in consequence of its becoming the residence of Abelard. The new abbot, having made many useless efforts to produce a reform in the manners of the monastery, at length excited so much discontent, that his life was several times in danger. One day especially, to avoid death, he was obliged to escape by the pipe of a sewer, which is shewn to this day. Before the revolution, was to be seen the pulpit, loaded with Gothic ornaments, from which he delivered his lectures. It appears that the republican soldiers, being in want of wood to warm themselves, did not hesitate to commit to the flames this valuable remembrance of the lover of Heloise.

FINE ARTS.

NEW PUBLICATIONS.

National Portrait Gallery of Illustrious and Eminent Persons of the XIXth Century. Engraved on Steel. With Memoirs by the Rev. H. Stebbing, M.A. &c. Nos. 1, 2, 3, 4, 5. London, 1829. Fisher, Son, and Co.; Colnaghi, Son, and Co.; Ackermann; Jones and Co.

In each of these Nos. are three portraits, with the autographs of the originals, and three memoirs, written by a gentleman well known to, and much appreciated by, the literary world, Mr. H. Stebbing; who has in these brief sketches displayed much laudable modesty in abstaining from giving opinions, and much good sense in stating the leading facts to which he confines his narrative. Princess Charlotte, Wellington, Byron, Wollaston, Davy, Marquess Wellesley, Lord Amherst, Lord Grenville, are among those distinguished personages here illustrated; the plan embracing the living as well as the dead. Most of the portraits are striking likenesses, and forcibly engraved; and as the work is very cheap, we think it likely to be popular.

Winter's Wreath, for 1830. Whittaker and Co., London; G. Smith, Liverpool.

SEVEN proofs out of the thirteen engravings which are to constitute the graphic flowers of the forthcoming "Winter's Wreath" have been sent to us. Several of them are exceedingly beautiful. Among these are, "The Parting

from the Bridal of Fontenaye," engraved by E. Goodall, from a picture by C. R. Bone; and "Il Cavaliere Pittore," engraved by H. Robinson, from a picture by F. P. Stephanoff. In the former, the general taste and elegance of the grouping—and in the latter, the fine contrast between the passionate declaration of attachment by the youthful artist, and the bashful yet graceful reception of that declaration by his exquisitely lovely model, are admirable. The "View near Derwent Water, Lodore," engraved by R. Brandard, from a picture by W. Havell, is also a rich and charming composition. Of some of the other prints we are unable to speak in terms of unqualified praise. To such an "Idol," especially, we trust that we are too good Christians ever to feel any inclination to bow down.

ANTIQUITIES.

A LETTER, of last month, from a distinguished English author at Naples, mentions that more than two thousand vases have been discovered in the Acropolis of the Volsci, in the Roman states, numbers of which have the names of Greeks inscribed on them in Greek characters. Of this treasure of arts and antiquities we shall endeavour to procure accurate accounts.

RUSSIAN SCULPTURE.

A RUSSIAN sculptor, of the name of Martoss, is at present engaged in casting in bronze a statue, which the inhabitants of Kherson have been authorised to raise within their walls, to the memory of Prince Potemkin. This monument, which will be placed on a pedestal, either of white marble or of granite, will consist of a statue of the height of the Hercules Farnese, representing Prince Potemkin, standing, supporting his left hand on his sword, and extending his right hand, in which he holds a roll of paper. The attitude, at once simple and majestic, is highly creditable to the artist; who has adopted for his draperies a mixture of the Roman and Slavonic. At the feet of the hero is a helmet; and at the four corners of the pedestal are four colossal figures, seated, and representing Mars, Neptune, Apollo, and Hercules. The expense of this monument is estimated at 170,000 rubles, (above £80,000.)—*Bulletin du Nord.*

ORIGINAL POETRY.

THE SONG OF THE POET'S WAKE.

LIGHT of the poet's eyes,
Fire of his breast,
Thou spirit of minstrelsy,
Where dost thou rest?

Cold is the ashy lips,
Colder the brow—
Spirit that warm'd them,
Where art thou now?

Haply thou slumberest
Inert in that clay,
And shall, corrupting,
With it melt away.

Noble in Nature's scale,
Lord of thy kind,
Creation's best masterpiece—
Courage and mind,

Art thou in slumber's chains
Shackled and hid?—
Forbid it, high heaven's powers—
Nature, forbid!

Soul of the form divine,
Where hast thou sped?
Where is thy resting-place,
Ghost of the dead?

Far o'er the starry sky,
Up through its dome,
Angels have waited thee
Hence to thy home.
Rest there in glory's lap:
Worlds shall fade,
But thou art eternal,
Soul of the dead!

Liverpool.

SIGMA.

[In our travels lately we picked up the annexed elegant little gem; and we trust we do no wrong in making it public: it is pleasant even in so slight a thing to see the union of petite literature and taste with philosophy and science.—Ed. L. G.]

THE CAPTAIN OF A STEAM-VESSEL *loquitur*.

ENTRATE, O fortunati! in questa
Nave, ond' io l' ocean sicuro varco;
Cui destro è ciascun vento, ogni tempesta
Tranquilla, e lieve ogni gravoso incarco.
Eastbourn, 1825. DAVIES GILBERT.

ISABEL IN HER GARDEN.

It is a morn of spring, and she has left
Her couch at dawn, and now amid the flowers
Delighted wanders. Thus should ever wake
Young Beauty, and adorn her laughing cheek
With vermeil hues; for health is in the breeze,
And life. The azure eye of Isabel
Sparkles with new-born fires; her lip has caught
The ruby's deepest tint; and as her form,
Her sylph-like form, is seen sweet gliding there
Amid the bud (the bloom of that fair world
Which May has quickened round her), earth
holds not
A lovelier vision.

She has stooped to kiss
The rose, and o'er the queen-flower now she
bends
In ecstasy; and see her ivory hand
Wanders among its buds, but with a touch
Gentle as that of the bland spring-breeze: then
Her eye roams o'er that paradise of hues,
Of beautiful hues, and forms assembled there;
And with a sweet uncertainty she strays
Amid them, charmed with all, and listening oft
To the musicians of the woods—the birds—
Pouring their first best lays, the while the
breeze
Is playing with her radiant locks.
Devonport. N. T. CARRINGTON.

SIGHTS OF LONDON.

WE were tempted on Wednesday to the Argyll Rooms by the challenge of a person of the uncommon name of J. Smith to M. Chabert, our old friend the Fire King, whom this individual dared to invite to a trial of powers in swallowing poison and being baked! The audacity of such a step quite amazed us; and expecting to see in the competitor of him of the *Zampagos* struggle at least a Vulcan, the God of all the Smiths, we hastened to the scene of strife. Alas, our disappointment was complete! Smith had not even the courage of a blacksmith for standing fire, and yielded a stake of fifty pounds, as was stated, without a contest, to M. Chabert, on the latter coming out of his oven with his own two steaks perfectly cooked. On this occasion Chabert took twenty grains of phosphorus, swallowed oil heated to nearly 100° above boiling water, took molten lead out of a ladle with his fingers and cooled it on his tongue; and, besides performing other remarkable feats, remained five minutes in the oven at a temperature of between 300° and 400° by the thermometer. There were about 150 persons present, many of them medical men; and being convinced that these things were fairly done, without trickery, much astonishment was ex-

pressed that any human being could do them and live. We are not very anxious to ascertain whether the challenge was or was not a device to attract public attention: be that as it may, the exploits of Chabert are very wonderful; and if, as he asserts, he possesses the secret of counteracting poisons by sure antidotes, we can only repeat our former opinion, that it ought to be rigorously inquired into by competent persons, and a just compensation be awarded for the discovery of so valuable a means of rescuing our fellow-creatures from agony and death.

DRAMA.

HAYMARKET THEATRE.

THE activity of the manager has presented another novelty at this house, under the name of *Procrastination*, and from the pen of Mr. Howard Payne. Most of the materials are gathered from various French pieces,—but they are put together very cleverly; and what the author has produced to connect them is extremely suitable and well done. The hero and support of the comedy is the late Mr. M. (Montague), performed by Farren. His want of punctuality involves him continually in scrapes and disappointments; but in the end he saves his distance and marries *Miss Duncan* (F. H. Kelly), an orphan ward, who has long been secretly attached to him. The personation of this character, which is younger—not thirty-five years of age—than Mr. Farren usually acts, is of the most perfect order, and adds another feather to the already full plume which adorns his histrionic brows. Nothing can surpass the pathos of his reading the letter which discloses the devotedness of his ward to him;—it is acknowledged by the audience with many tears. The other parts consist of a gay widow (Mrs. Humby), who escapes the man of delay, and weds, more to her mind, a person of greater promptitude in *Major D'Arcy* (Mr. Vining). Mrs. Glover and Mr. Webster, in a virulent old maid and her brother, a scheming attorney, trying to catch Mr. M., have a very good scene; and it is no small praise to Mr. Webster to say, that he plays fully up to Mrs. Glover, and in this and other parts displays so much talent, as to be rapidly and surely establishing himself as a decided public favourite. Mr. John Reeve as *John Bates*, a rustic servant, has not much to do; and on the second representation (when we saw the piece) could not do much. Mr. Williams, who is so useful here as to be in every thing, acquitted himself well in *Sir J. Franklin*, the brother of the widow; and, altogether, *Procrastination* bids fair to have a procrastinated run. There seems to have been great improvements made in it since the first night, when some indecorous allusions provoked the disapprobation of the audience. There are yet some passages which ought to be expunged.

ENGLISH OPERA HOUSE.

WE only notice this theatre to warn our readers that it approaches its close; for there have been no novelties since our last, and no need of any. Without stars, as they are ridiculously called, but with admirable music produced with great taste and skill, unceasing novelties, and an excellent company, we rejoice to say (for the sake of the Drama itself) that the English Opera House has been most attractive throughout the whole of its present season.

DRURY LANE has advertised to open on the 1st of October, at reduced prices; the boxes

being 6s. and the pit 3s. These are signs of the times, both with regard to theatrical property and public taste and means.

The Adelphi opens on the 29th; but, though Michaelmas day, it is not with *Mother Goose*.

De Begnis, Curioni, Blasias, Castelli, and Spagnioletti, have formed a little operatic company, and are about to set out for Dublin, to en-charm the natives there.

The Italian Opera in Paris promises to have a splendid season. Mademoiselle Sontag having concluded a treaty of peace with M. Laurent, made her re-appearance on the 15th inst., in the character of *Semiramide*; and Mademoiselle Heinefetter came out on the 19th, in the character of *Zelmira*. With these two singers, and the united talents of Madame Pissaroni, Donzelli, Bordogni, Santini, and Zuchindi, the most fastidious amateurs must be satisfied. The return of Madame Malibran, in October, will complete the attractions of the *Théâtre-Italien*.—*Foreign Journal*.

VARIETIES.

Celestial Phenomenon.—The newspapers contain an account of a remarkable appearance seen in the heavens from Epsom, on the 15th. It was produced by the moon and clouds, which assumed the shape of a prodigious and rainbow-coloured crucifix. Credulous folks think (in spite of later arrivals) that the Russians must have taken Constantinople on that date.

Orthopædic Establishment.—There is in Louvain an orthopædic establishment, which is in some respects superior to any other in Europe. It combines with the most ingenious means of the art all the contrivances of gymnastics. Progressive stretching-beds have there received great improvements; and have succeeded not only in correcting the obliquities of the vertebral column, but in successfully treating bendings of the ribs and clavicles, the deformities called club-feet, and incurvations or declensions of the head. In less than six months, in consequence of the regimen and exercises to which she was subjected at this establishment, a girl, thirteen years of age, grew six inches. The King of the Netherlands, as a testimony of his satisfaction at the conduct of M. Baud, one of the professors of the university, who affords his gratuitous assistance in directing the treatment of the inmates of this institution, has decorated him with the order of the Belgic Lion.

Greatest Elevation of the Apennines.—Nearly in the centre of the continuous chain which extends from the Col' di Tenda to the Capo dell' Armi, ulterior Calabria is crested by the noble summit of Mount Corno, which commonly bears the apposite cognomen of the "Gran Sasso d'Italia." Immense masses of calcareous substance, stratified and intersected with beds of pyramidal quartz, form the component matter of this mountain, as well as of its compeers, the Velino, Sibylla, and Majella. The lowest strata of carbonated chalk have a horizontal inclination of about five and forty degrees; these are succeeded by strata running parallel with the horizon; and above the latter are vertical layers, which take a gently horizontal direction when they approach their greatest elevation, and thus form a moderately inclined plane at the summit. From this point, on a fine clear day, the spectator enjoys a magnificent view of the Mediterranean on the one hand, and of the Adriatic on the other, as far as the last ripple which curls along the shore of Dalmatia. Reuss gave this summit an elevation of 8791 English feet above the

level of the sea; Professor Schouw, of 9585; and Delfco, of 10,191. The disparity in these admeasurements is accounted for, as regards the former, from the circumstance, that he did not visit the Sasso personally, nor contemplate it otherwise than from a considerable distance. The estimates of the latter approximate nearest to one which has been taken by Orsini after four years' successive observations, and gives to this "great rock of Italy" an elevation of 10,119 feet.

Philosophy.—There will shortly appear at Stuttgart, "*Corpus Philosophorum optima nate qui ab Reformatione usque ad Kantii ætatem floruerunt.*" This publication will contain select works of Bacon, Descartes, Spinoza, Locke, Hume, Leibnitz, &c. It will be printed in octavo, and a prospectus is preparing.

Our Netherland neighbours are also busily at work on a "*Bibliothèque Philosophique*," or Philosophical Library; in which Voltaire's "Pucelle," and Diderot's free and easy novels, will enjoy the distinguished honour of appearing by the side of Dugald Stewart and Reid.

Erlangen, in Bavaria, is about to send into the world her "*Organon des Menschlichen Wissens*," or Organ of Human Knowledge; a publication which, our correspondent writes us, will be a useful medium for philosophical discussions to every enlightened mind, and may therefore be regarded as a mortal blow given to scholastic philosophy! It will exhibit human nature arrayed in all her power and dignity; and glorying in her matured conception of first principles! The author has peculiarly aimed at expressing himself with concision and perspicuity.

Expeditions.—The Krotkey and Helena, Russian ships on a scientific voyage, were at Sydney, New South Wales, early in May, and about to pursue their course.

Anticosti.—It turns out to have been the crew and passengers of a vessel called the *Granicus*, who met with the horrid fate we recently described on the desolate island of Anticosti. Some means have been adopted to prevent the repetition of similar calamities.

Welch Modesty.—Between Caernarvon and Llanberis there is an insignificant bridge of one arch; the architect of which has placed thereon his profile, with an inscription, informing all passengers that "Harry Parry, the modern Inigo, built this bridge, A. D. 17, &c."

Earthquake.—On the 7th of last month, at three o'clock in the morning, several smart shocks of an earthquake were felt in various parts of the department of the Upper Rhine.

Wounds.—A surgeon at Lausanne has been devoting his attention to simplifying the dressings and ligatures employed in the treatment of wounds; and has endeavoured to shew that simple rags and water may be advantageously substituted for the lint; bandages of all kinds, and various medicaments at present used for that purpose.

The Gases.—From investigations made into the nature of the gases in the stomach and intestines of human beings in a state of sickness, it has been concluded, first, that in that state only six descriptions of gas are to be met with, viz. oxygen, azote, carbonic acid, hydrogen, proto-carbonated hydrogen, and sulphuretted hydrogen; secondly, that azote is found in much larger quantities in a man who has died of sickness than in a healthy man, the reverse of which in certain cases takes place with respect to carbonic acid; thirdly, that carbonic gas generally goes on increasing in the digestive canal of a man in a state of sickness, at the temperature of from 11° to 21°, and that it goes on

diminishing at the temperature of from - 2° to + 5°; fourthly, that in adult subjects the quantity of hydrogen gas is more considerable at the temperature of from 10° to 16° than at that of from - 1° to + 6°, while the reverse takes place with respect to old persons in the same circumstances of temperature; fifthly and lastly, that hydrogen is more abundant in the small intestines than in the stomach and large intestines; and, consequently, that it does not go on increasing in the latter, as has been hitherto supposed.—*French Paper.*

Canal of the Pyrenees.—A second canal, to connect the two seas between Bayonne and Toulouse, is in contemplation. The probable cost is estimated at 38 millions of francs. It is to be navigable for vessels of 140 tons burthen.

Russian Amazons.—In a recent official statement of the population of St. Petersburg (estimated on the whole at 422,166 souls) is the following singular item:

	Men.	Women.	Total.
Soldiers and Subalterns.....	46,076	9,975	56,051

LITERARY NOVELTIES.

Most of the Annuals for the ensuing Christmas, have agreed not to send out what are called *show-boards*, i. e. specimens of their plates on pasteboard, such as were last year so common in every bookseller's shop throughout the country. In some respects we consider this to be a judicious measure; for these displays not only tended to waste a number of the earliest and best impressions of the engravings, but also to do away with the charm of novelty in the volumes themselves, when purchased or presented as tokens of regard.

Transatlantic Annuals.—Besides our own Annuals, the Atlantic Souvenir, published at Philadelphia, and the Token, published at Boston, may be expected in London. They will, we are informed, be enriched with numerous engravings; and among the contributors are mentioned some of the most distinguished writers in the United States.

Historical Memoirs of the Church and Court of Rome, from the Establishment of Christianity under Constantine to the present period, is announced by the Rev. H. C. O'Donoghue, A.M. St. John's College, Cambridge. And also, by the same author, the Peculiar Doctrines of the Church of Rome, as contained exclusively in her own Conciliar Decrees and Pontifical Bulls, examined and disproved.

A volume of Sermons, by the Bishop of London, is nearly ready for publication.

Mr. Jennings is preparing for publication a second volume of the Topography, Edifices, and Ornaments of Pompeii, by Sir William Gell; containing an account of the excavations since the former volume.

We understand that the first volume, forming a new series of the Extractor, under the enlarged title of the Polar Star of Entertainment and Popular Science, will soon be published.

The first volume of Sir Walter Scott's History of Scotland, in two volumes, will be published on the 1st of October, and consequently will be the first work that Sir Walter will publish for the ensuing season.

Dr. Arnott's Elements of Physics, or Natural Philosophy, will be completed by the publication of the second volume, of which the first half, comprehending the subjects of Heat and Light, with a copious account of the important and the beautiful phenomena which range under these heads,—is to appear early in October. It will be accompanied by a fourth edition of Vol. 1, in which the true nature of the common defect in speech, called stuttering, or stammering, is for the first time completely exposed; and, as a fruit of the discovery, a Key, of very easy application, is given, for effectually setting free the imprisoned voice.

The Life of Romney the painter will, we learn, be ready about March next.

A new Juvenile Annual, to be called the Zoological Keepsake, treating its zoological topics in a light conversational manner, varied by anecdotes and a share of humorous poetry and description,—is announced. The embellishments are to consist of engravings from drawings by Cruikshanks, Landseer, Baynes, Saunders, &c.

Another and another "can we add" still succeeds. A Mr. Shes, who some years since published a poem called Budekiki in this country, and afterwards went to America, seems to have become a popular writer at New York, where a volume of poetry is just announced from his pen; a novel is immediately promised; and an opera of his (composed by M.J. Cramer) is to be performed at the theatre!

The Annual Gen announces contributions from Lord Nugent—Sir Aubrey de Vere—Hon. Mrs. Norton—Archdeacon Wrangham—Horace Smith—James Kenney—J. Carne—Miss Milford—Don T. de Trueba—J. Montgomery—Dr. Bowring—James Hogg—Mrs. Calcott—C. B. Sheridan—Miss M. A. Browne—the late John Keats—Miss Jewsbury—John Clare—Miss Lawrence—

W. Jerdan—Rev. T. Dale—Bernard Barton—Miss C. Bowles—N. T. Carrington—Delta—C. Redding—Sir Terlagh O'Brien—T. Marshall—R. Howitt—Rev. W. Shephard—Mary Howitt—E. Moxon, Esq.—Mrs. Balmanno—W. Howitt—T. K. Hervey—A. Cunningham, &c. The thirteen embellishments are under the direction of A. Cooper, and all from eminent living painters of the British school, and engraved by distinguished artists.

In the Press.—A Topographical and Historical Account of Wainfleet and the Wapentake of Candleshoe, in the County of Lincoln.—The second part of the Imperial School Grammar, with the new system of parsing.

LIST OF NEW BOOKS.

Wilmot Warwick, Vol. II. 8vo. 9s. bds.—The Garden of Surrey, or Sketches of Dorking, 12mo. 4s. bds.—Historical Recollections of Henry Monmouth, 12mo. 5s. bds.—Palmer's Illustrations of Medicine, 8vo. 10s. bds.—Bates on Inflammation, 8vo. 8s. bds.—Davies on Greek Verification, 12mo. 2s. 6d. sewed.—Petersdorf's Reports, Vol. II. royal 8vo. 11. 11s. 6d. bds.—Pulpit, Vol. II. 8vo. 8s. bds.—Principal Events in the History of Ireland, 18mo. 3s. 6d. hf.-bd.

Prevailing winds, N.E. and S.W.
Except the 16th, 18th, and 19th, when it was raining, generally clear; a heavy shower of rain on the 23d.

Rain fallen, .575 of an inch.

CHARLES H. ADAMS.

Latitude..... 51° 37' 32" N.
Longitude.... 0 3 51 W. of Greenwich.

Mr. Adams will, as requested by "a Constant Reader at Bath," give in an early No. of the *Literary Gazette* a tabular view of the amount of rain fallen in past years during the months of June, July, August, and September, the period in which so much rain has fallen during the present season; when our readers will be enabled to form a more correct idea of the excess of the quantity of the present over that of past years.

TO CORRESPONDENTS.

To the Editor, &c.

Sir,—I am confident that no one will rejoice more than yourself to find that the serious charge brought in your last No. against the English Universities, with regard to the paucity of instructors, rests entirely on a misapprehension:—It arises from the very different senses in which the word professor is applied. At Oxford and Cambridge the term does not apply to so many as one-fourth of those who are engaged in the duty of delivering lectures; whereas in the other universities mentioned by you, it includes all;—indeed, did we adhere to our strict and statutory sense of the word (which is a Dr. in any of the three faculties), not one even of those to whom in common parlance we extend the title, could claim it on the grounds of his office. The following is the amount of our staff of instructors.

Fewers to whom we limit the title of Professor	94
Lecturers appointed by the Senate	31
Lecturers appointed by the Colleges	87

Number of Professors, as they would be termed at } 108
Edinburgh and the foreign universities.....

The average number of residents in *status pupillari* is 1,600; so that we have rather more than one Professor to sixteen students, or more than double the proportion of that assigned for Berlin, which was the highest on your list. But this is not all. Besides these permanent officers, there is a body of annual officers, appointed for the purpose of conducting examinations, and who thus take a part of the professorial duties: were we reckon these in the joint ratio of their number, and the share they take, the above proportion would come out about one professor to twelve students. I doubt not but Oxford can give as favourable an account of herself. I leave Edinburgh, which is entirely modelled on the continental system, to settle the matter with you as she can. I am, &c.

Cambridge, Sept. 23d, 1829.

A CONSTANT READER.

The Secretary of the present London Philological Society assures us, with reference to our *Gazette* of the 5th inst., that it was not established until March 1824; and that none of the laws and regulations stated in our paper were ever enacted by them. They were, therefore, we acknowledge, somewhat wiser than their predecessors. Of our own feelings towards the Society, though we think little of the science, the best proof is, that we have cheerfully published their proceedings.

Thanks to K—y for an excellent h—ch, and for his northern letter. Thanks to W. L., Somersetshire; B. W.; W.; W. A.; T—H—; and other very pleasant correspondents.

. The variety and interest, as well as the temporary character, of the articles contained under our head of Arts and Sciences, have of necessity shortened our *Reviews* for this week;—which we have cause to regret, as several important new works, marking the recommencement of the publishing season, are consequently obliged to be postponed.

The letter to "T." has been duly forwarded.

ADVERTISEMENTS

Connected with Literature and the Arts.

EAST INDIA MONOPOLY.

Mr. BUCKINGHAM'S Lectures on the Oriental World, and especially on the East India Monopoly, continue to be followed in every Town in which they are delivered, with the most unequivocal demonstrations of their powerful effect; and have already led to the formation of Associations and Committees in various parts of the Country, for the purpose of organizing a constitutional and effective opposition to any further renewal of the East India Company's exclusive Charter. With a view to bring his Lectures within the means of all Classes to attend, Mr. Buckingham has reduced the rate of Admission; and thereby greatly increased the number of his Auditors; and following out the same principle, he has also reduced the price of his Monthly Journal, the "Oriental Herald," from 6s. to 2s. 6d. per Number, which has been already followed by a largely increased demand for the Work. It may, therefore, be safely presumed that there will now be few Families or Individuals in the respectable walks of life, who will not be anxious to make themselves acquainted with its contents. In addition to the latest and best information on all topics connected with the Policy and Commerce of the East, the "Oriental Herald" will now contain three distinct Branches of interesting and instructive Articles:—namely, Lectures on Palestine, including an enlarged view of Sacred Criticism, and Scriptural Illustrations in detail—Travels in Egypt, Nubia, and Arabia, and an Account of the splendid Antiquities to be seen on the Banks of the Nile; and a Voyage along the Coast of Malabar, Ceylon, and the first Marchants of Bengal; including the principal Ports between Bombay, Madras, and Calcutta. These three Series, which consist of matter equally interesting to the Biblical Reader, the Antiquary, and the lover of Voyages and Travels in distant regions of the Globe, cannot fail to render the Work acceptable to all classes.

THE UNIVERSITIES, LEARNED

PROFESSIONS, &c. Young Gentlemen are taught the Mathematics, Natural Philosophy, &c. as preparative to obtain the Highest Honours of the University. Professions which require a superior Knowledge of Arithmetic, Algebra, Geometry, Trigonometry, the Conic Sections, Mechanics, Hydrostatics, Optics, Astronomy, Navigation, Military Mathematics, Universal Measurement, Book-binding, &c. &c. are also taught. The highest References can be given.

MUSIC.

New Musical Annual, for 1830.

On Monday the 4th of October, 1829, will be published, price 8s. **FIRE-SIDE LYRICS; a new Musical Annual**, consisting of Vocal Music, Quadrilles, and Waltzes, composed by F. J. Klose; embellished with highly finished Lithographic Engravings, from Original Designs. The Poetry by the late Lord Byron, Ed. Knight, Esq. &c. &c. Handsomely bound in elegant leather binding; and Published by S. Chappell, 135, New Bond Street; and M. Traubner, 309, Piccadilly.

AN EMINENT PROFESSOR OF MUSIC

has now a VACANCY for a YOUNG LADY as a PROFESSIONAL PUPIL, who will be instructed in every necessary Branch of the Musical Profession, and (if desired) in the duty of an Organist, in the most complete manner. The possessor some previous knowledge of Music, is also a natural talent—as the Terms will be moderate.

For particulars, with the Name and Address of the Party, apply, by Letter (post-paid), to J. V. Mearns, Chappell and Co. No. 50, New Bond Street.

Fellow of Pembroke College, Cambridge.

Revised and corrected by WILLIAM ELLIS, Esq. A.M.

Of King's College, Aberdeen.

Johnson's Dictionary, complete in One Volume.

Price 7s. 6d. in cloth.

A Dictionary of the English Language, in which the Words are deduced from their originals, and illustrated in their different Significations by Examples from the best Writers to which are prefixed, a History of the Language, and an English Grammar. By Samuel Johnson, LL.D. Stereotyped verbatim from the last edition corrected by the Doctor.

"This edition of Johnson's Dictionary," stereotyped verbatim from the last folio edition, corrected by the Doctor, is eminently deserving of notice, for its accuracy, the beauty of its typography, and the character of its arrangements."—*Literary Gazette*.

"As a specimen of typographical art, the work before us is a splendid contribution to our libraries. It unites elegance, durability, exquisite accuracy, and convenience of form, in a manner altogether unprecedented."—*Monthly Review*.

London: Joseph Ogle Robinson, 48, Poultry.

For the Use of Private Families, Schools, &c.

In 1 handsome vol. 18mo. price 6s. 6d. dedicated, by permission, to the Right Hon. and Right Rev. the Lord Bishop of London.

THE LIFE of ARCHBISHOP CROMER. By J. A. SARGANT.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Geography, with Atlas, on an entirely new Plan.

In royal 18mo. price 8s. 6d. neatly bound and lettered, embellished with numerous Engravings, illustrating Manners, Customs, and Curiosities.

RUDIMENTS of GEOGRAPHY; on a New Plan, designed to assist the Memory by Comparison and Classification.

By W. C. WOODBRIDGE, A.M.

The Geography is accompanied by an Atlas, exhibiting, in connexion with the Outlines of Countries, the prevailing Religious forms of Government, the degree of Civilization, the comparative size of Towns, Rivers, and Mountains, and the Climates and Productions of the Earth. In royal 4to. coloured, price 8s. half-bound.

This Atlas has been compiled from the best authorities, and contains all the late Discoveries of Paris, Wexford, Denham, and Clapperton. But its principal claim to attention is founded on the entire novelty of the plan: each Map presents, not only the geographical outlines of countries, but a series of numbers affixed to the Mountains, Rivers, and Cities, which indicate their comparative rank, and enable the Student, by reference to the Table of Classification, to discover their actual magnitude.

The Isothermal Chart exhibits the Climate of different Regions, as determined by thermometrical observation, with their most important productions, and presents a striking illustration of the diversity existing in the same latitude, according to the situation of countries.

In the Moral and Political Chart, the outlines of each Country contain a number, showing its Population, and several emblems indicating its Government, Religion, and State of Civilization, and forms, in effect, a Moral Picture of the World.

Printed for Whitaker, Treacher, and Co. Ave Marie Lane,

Of whom may be had, gratis,

A Complete School Catalogue.

Falsely Standard Works, extremely reduced in Price.

ENCYCLOPEDIA BRITANNICA, and

SUPPLEMENT, Complete. 42 vols. quarto, fol.; published at 477.

J. DOWDING, Bookseller, No. 25, Newgate Street, begs to announce, that, in consequence of the death of the Author, he has been successful in procuring of all the remaining Copies of the *Encyclopædia of France* (upon the plan of Dr. Henry's celebrated History of England), in 9 vols. 8vo.—a Work of great estimation, and the only History of France in the English Language—which he is now enabled to sell at the reduced price of 1l.; published at 1s. 10d. 6d. This valuable Publication is included, with the above highly important and admired national Work, and more than 300 others, all upon equally advantageous Terms, in Dowding's Cheap List, for the present Month, which is just published, with additional recent purchases, on a large Sheet, for sending by the post to any part of the Empire, and may be had, gratis, on application, by Letter (post-paid) at No. 25, Newgate Street, London. Where may also be had.

Dowding's General Catalogue of Second-hand Books, for 1829.

In 1 vol. 12mo. price 8s.

THE HORSE, in all his VARIETIES and USES; his Breeding, Rearing, and Management, whether in Labour or Rest; with Rules, occasionally interpreted, for his Preservation from Disease.

Author of a "Philosophical and Practical Treatise on Horses," the "History of the Horse," &c.

M. Arnold, Tavistock Street, Covent Garden; sold by Longman and Co.; Whittaker and Co.; Hurst and Co. London; Oliver and Boyd, Edinburgh.

"A judiciously chosen and practical view of the book—and it is really and extensively valuable—it is one of the most amazing reader will meet with in a thousand—complete and unique, embracing every possible subject that can be connected with the horse."—*Monthly Magazine*.

With Plates, in post 8vo. price 10s. 6d. in boards.

A CONCISE HISTORY and ANALYSIS

of all the principal STYLES of ARCHITECTURE; namely, Egyptian, Grecian, Roman, that of the Dark Ages, of the Arabians, and of the Normans; including a detailed Description of the Origin, Progress, and Decline of the Gothic. To which is added, a Sketch of the Architecture of England, down to the present Time.

By an AMATEUR.

Printed for T. Cadell, Strand; and W. Blackwood, Edinburgh.

The Christian World.

With a fine Frontispiece of Eight Portraits, 12mo. 8s. boards.

A SKETCH of the DENOMINATIONS of the CHRISTIAN WORLD; to which is prefixed, an Outline of Atheism, Deism, Theophrastianism, Mahometanism, Judaism, and Christianity; with a Perspective to Religious Moderation.

By JOHN EVANS, LL.D.

The 15th edition, with the Author's last improvements, and an Account of the Ranters, or Primitive Methodists, and of the Irish Presbyterians, amounting to nearly a Million of People.

"If it is frequently by any criterion of excellence, the number of the editions this Work has passed through sufficiently attests its merits; for before his death the Author had the satisfaction of knowing that one hundred thousand copies had issued from the press. In the present edition every article has been carefully revised, and valuable communications from many of the leading ministers of the different sects have been made use of. The subject is one of permanent interest, and the view here exhibited of the various sects of Christians is no less admirable for its impartiality than for the comprehensive information it supplies."

Printed for Baldwin and Cradock, Paternoster Row.

By the same Author.

The Golden Century; or, One Hundred Testimonies in behalf of Candour, Peace, and Universalism, by Divines of the Church of England, of the Kirk of Scotland, and among Protestant Dissenters, with their Biographies; being a Sequel to the Sketch. 4th edition, enlarged and improved, with a Frontispiece of Portraits, 8s. boards.

In 8vo. with Plates, price 16s. in boards, dedicated, by permission, to His Majesty.

LECTURES on the ELEMENTS of HEBREW, SYRIAC, and EGYPTIAN ANTIQUITIES. By the MARQUESS SPINELLI.

Printed for C. G. and F. Steinman, St. Paul's Churchyard, and Waterloo Place; and sold by Deighton, and Somerset, Cambridge; and Parker, Oxford.

Just published,

ENCHES BERLINER ASTRONOMIS. GIES JAHREBUCH für 1830. 8vo. 14s.

 Bradbury, Edinburgh.

In 3 vols. post 8vo. price 11. 4s. boards.

PRIVATE LIFE; or, Varieties of Charac-
 ter and Opinions.

By the Author of "Geraldine," &c.

"The character of the work before us is one of those talents
 and utility its author may be justly proud. The story is very
 interesting, and told in the most graceful language; and all
 that feminine taste which in a touch catches resemblance, is
 there in the portraiture of the characters. But, perhaps, it is
 in the dialogues that our writer is most particularly happy: they
 are actually animated conversations, only rather more clever and
 spirited than those of real life, and evince an originality of
 thoughts, an excellence of feeling, that render them as valuable as
 they are attractive."—*Literary Gazette*, Aug. 20.

Printed for T. Cadell, Strand, London; and W. Blackwood,
 Edinburgh.

Of whom may be had, by the same Author,
 1. Geraldine; or, Modes of Faith and Prac-
 tice. 3d edition, 3 vols. 8vo. 11. 1s. boards.

 Marchioness of Carmarthen, the Countess of Cavan, Lady

Charlotte Bury, Lady Belfast, Lady Normandy, &c. &c.
 Published by Whittaker and Co., Strand, and James
 Edinburg; and J. M. Leckie, Dublin.

THE MONTHLY MAGAZINE, New
 Series, price Half-a-Crown, for October, will contain:

I. The State of the Empire; Police, Press, Popery, and Foreign
 Relations—II. Personal Narrative of a Journey from Whitby to

Highgate Archway, by John Jeremy Joseph de Gennes—
 III. Father Wharcliffe, a Tale of the Reign of Mary—IV. Prose

by a Versifier, and Verse by a Proseman on Saint, Priesthood,
 and St. Margaret's Church, the Wellington Administration, Wren

Chamber, and the Liberty of the Press—V. Bat—VI. Memory
 VII. Our Protestant Colonies—VIII. Mr. Sadler's Speech—IX.

Notes of the Month, on Affairs in general—Reviews, Reports,
 Science, Fine Arts, &c. &c.

Whittaker and Co. London: Wagh and Linn, Edinburgh;
 J. M. Leckie, Dublin.

New Quarterly Series.
 On the 1st of October will be published (to be continued quarterly)
 No. 1. price 7s. 6d.

THE POLAR STAR OF ENTERTAIN-
 MENT AND POPULAR SCIENCE.

This Number will
 comprise upwards of 160 valuable and amusing Articles, selected
 from the English and American Reviews, Magazines, Journals,
 and New Publications, of lasting interest, which have been pub-

lished up to the Quarter ending at Michaelmas 1829—Illustrating
 I. Voyages and Travels—II. Tales, Legends, and Anecdotes—

III. Select Biography—IV. Sketches of Life and Manners—V.
 Remarkable Historical Facts—VI. Popular Medicine—VII. Inter-

esting Notes on Natural History—VIII. Curiosities in Nature
 and Art—and IX. Miscellanies. In the compilation of this Peri-

odic, upwards of 200 Publications have been consulted.
 London: H. Flower, 19, St. Martin's Lane, Snow Hill; and
 may be had of all Booksellers.

Shortly will be published, in 8vo. punctuated and adapted to the
 Use of Schools.

THE SCHOLAR'S INTRODUCTION to
 MERCHANTS' ACCOUNTS, upon a new and im-

proved Plan; comprising the Whole Book, with instructive Notes
 for Journalising, Posting, and Balancing the same, without the
 necessity of the Student having the Journal and Ledger before

him, for reference, and for the use of the Teacher.
 Also may be had, prepared and ruled for the Scholar's Use.

Two Sets of Blank Books, in 4to. each con-
 taining the Waste Book, Journal, Copy-Book, and Ledger. By

George Bagnall, Writing Master, Christ's Hospital.
 London: Printing by Hurst, Chance, and Co.
 65, St. Paul's Churchyard.

On the 1st of October will be published,
AN ACCOUNT of the MODE of PER-
 FORMING an LATERAL OPERATION of LITHO-

POMY, with Illustrations.

By ROBERT STANLEY,
 Lecturer on Anatomy and Physiology at St. Bartholomew's
 Hospital.

Sold by Longman, Neale, Orme, Brown, and Green, London.

On the 1st of October will be published, price 3s. 6d.
 The First Volume of

THE HISTORY OF SCOTLAND.
 By SIR WALTER SCOT, Bart.

This Work will form a Part of Dr. Laidlaw's "Cabinet
 Cyclopædia."

Printed for Longman, Neale, Orme, Brown, and Green,
 Paternoster Row; and John Taylor, Silver Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at
 the LITERARY GAZETTE OFFICE, 7, St. Paul's Churchyard,
 Waterloo Bridge, Strand, and 7, South Molton Street, Queen's

Street; also by J. Chappell, 55, Royal Exchange; R.
 Marlborough, Ave Maria Lane, Leadenhall Hill; A. Black,
 Edinburgh, Smith and Son, and Robertson and Aitchison,
 Glasgow; and J. Cunningham, Dublin.

J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

Journal of Belles Lettres, Arts, Sciences, &c.

AND

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 663.

SATURDAY, OCTOBER 3, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Venetian Bracelet; the Lost Pleiad; the History of the Lyre; and other Poems. By L. E. L., author of "the Improvisatrice," "the Troubadour," "the Golden Violet," &c. 12mo. pp. 310. London, 1829. Longman and Co.

An ingenuous preface, in a somewhat apprehensive and apologetical tone, introduces this publication* to the reader; and as it is the first time that the abstract of the three initial letters (L. E. L.) of great poetic potency and popular influence hitherto, has assumed a real and living form, we hasten to assure the fair author that neither need she fear criticism nor her works solicit favour. For we find in this new publication only another enchanting proof of female genius; original, varied, delightful, and exalted. That there may be marks of carelessness or haste in passages—or rather that the writer will not waste a systematic polish upon the treasures which her gifted mind pours so profusely forth—will not escape the microscopic regard of the minute examiner; but the splendid poetical imagery,—the superabundant evidence of true inspiration, the ever-recurring flashes of new thoughts, and the passionate bursts of noble strains, which prevail throughout the whole, will bear along the soul of every reader of taste and feeling; and all will be unnoticed, save the magic power of this extraordinary individual. We profess that we have no terms high enough to speak our admiration of many parts of the volume before us, alternating from depths of sentiment to the most pathetic touches of nature; and from simple ideas of perfect novelty and exquisite beauty, to prolonged themes of moral and philosophical grandeur, which seem rather the attribute of masculine understanding and profound reflection than the emanations of a young and feminine spirit, though endowed with that marvellous faculty which we know to be genius, and to be as different from talent or cultivated intellect, as the sun which lights is different from the reflected image of the lake or stream. And it is to this rare quality, after all, that the homage of fame is paid. The level and ordinary, though sweet and graceful, composition excites none of those strong emotions which genius raises at command; we are pleased and gratified, but the heart never gushes over in a flood of sympathy, struck from it by the master-stroke of the prophet's wand; the soul never rises with the sublime sentiment; the involuntary exclamation of wonder and rapture is never elicited by that irresistible appeal which wakens its response in the inmost cells of the human bosom. It is to genius, and to genius alone, that such an empire belongs; and without referring to the many preceding instances in which L. E. L. has asserted her rights to the throne, we are indeed deplorably mistaken if the following

selections will not cause it to be again acknowledged by common and universal assent.

Of the first of the poems, "the Venetian Bracelet," we shall, however, say nothing, except that, as an attractive story, it is perhaps more completely wrought out than any of the writer's former productions. The "Lost Pleiad" (from which Mr. Howard and Mr. W. Finden have painted and engraved one of the loveliest gems of a frontispiece that we ever saw) is also a tale of great and affecting interest: it is that of the Star which, according to heathen mythology, formed an earthly attachment, and lost its place in that heavenly constellation where the other six daughters of Atlas still continued to shed their celestial influence. From this poem we make our commencing extract.

"Oh pleasant is it for the heart
To gather up itself apart;
To think its own thoughts, and to be
Free, as none ever yet were free,
When, prisoners to their gilded thrall,
Vain crowd meets crowd in lighted hall;
With frozen feelings, tutor'd eye,
And smile which is itself a lie.
—Oh, but for lonely hours like these,
Would every finer current freeze;
Those kinder impulses that glow,
Those clear and diamond streams that flow
Only in crystal, while their birth
Is all unsull'd with stain of earth.
Ever the lover hath gamsay'd
The creed his once religion made,
That pure, that high, that holy creed,
Without which love is vain indeed;
While that which was a veiled shrine,
Whose faith was only not divine,
Becomes a vague, forgotten dream,
A thing of scorn—an idle theme.
Denied, degraded, and represt,
Love dies beneath the heartless jest.
Oh vain! for not with such can be
One trace of his divinity.
Ever from poet's lute hath flown
The sweetness of its early tone,
When from its wild flight it hath bow'd,
To seek for homage 'mid the crowd;
Be the one wonder of the night,
As if the soul could be a sight;
As all his burning numbers speak
Were written upon brow and cheek;
And he forsooth must learn its part,
Must choose his words, and school his heart
To one set mould, and pay again
Flattery with flattery as vain;
Till, mixing with the throng too much,
The cold, the vain, he feels as such;
Then marvels that his silent lute
Beneath that worldly hand is mute.
—Away! these scenes are not for thee:
Go dream beneath some lonely tree;
Away to some far woodland spring,
Dash down thy tinsel crown and wring
The scented unguents from thine hair:
If thou dost hope that crown to share
The laurel's bards immortal wear,
Muse thou o'er leaf and drooping flower,
Wander at evening's haunted hour;
Listen the stork-dove's plaintive song
Until it bear thy soul along;
Then call upon thy freed lute's strain,
And it will answer thee again.
Oh, mine own song, did I not hold
Such faith as held the bards of old,
That one eternal hope of fame
Which sanctifies the poet's name,
I'd break my lyre in high disdain,
And hold my gift of song as vain
As those forced flowers which only bloom
One hot night for a banquet-room."

"The History of the Lyre" is one of L. E. L.'s very powerful compositions; like Erinna, in her last volume, sweeping along the most elevated flight of poetical imagination—

dwelling on the glories and the sorrows that too surely pertain to the children of song, and yet vindicating the Lyre from all its worldly taints and wrongs. But we must reserve this fine subject for a separate Review; and proceed to give our miscellaneous examples of the author's various performances. "The Ancestress" presents us with the first opportunity, and exhibits her in a dramatic form. A note informs us that the hint for this was taken from a Review of the German Grillparzer's poetry, in *Blackwood's Magazine*; and departing widely from that writer, L. E. L. has displayed a tenderness and refinement which we can compare to nothing but the *Romeo and Juliet* of our immortal Shakespeare. Mighty as is the praise alleged by such a comparison, we quote the first scene, and are firmly convinced that it will bear us out in our opinion.

"The Ancestress."

Bertha.—It is in this we differ; I would seek
To blend my very being into thine—
I'm even jealous of thy memory:
I wish our childhood had been pass'd together.
Jaromir.—Bertha, sweet Bertha! would to Heav'n it
had!
What would'st thou with a past that knew thee not?
Bertha.—To make that past my own by confidence,
By mingled recollections; I would fain
Our childish sorrows had been wept together;
Our childish joys had been indulged together;
Our childish hopes had been believed together:
But as this cannot be, I speak of them—
The very speaking does associate us—
I speak of them, that, in those coming years,
When youthful hours rise up within the mind,
Like lovely dreams some sudden chance has brought,
To fill the eyes with long-forgotten tears,
My image may be with them, as of one
Who held such sympathy with aught of thine.
Jaromir.—Sweetest, no more of this: my youth hath
pass'd

In harsh and rugged warfare, not the scenes
Of young knights with white plumes and gallant steeds,
With lady's favour on each burnish'd crest,
Whose tournaments, in honour of fair dames,
May furnish tales to suit the maiden's ear.
—
I've had no part in such; I only know
Of war's terrible reality—
The long night-watch beneath the driving snow—
The unsought pillow, where the strong man lay
Like a weak child, by weary sickness worn
Even to weeping;—or the ghastly dead,
By the more ghastly dying, whose last breath
Pass'd in a prayer for water—but in vain,
—
Or their eager comrades hurry on
To slaughter others. How thy cheek is blanch'd!
I truly said these were no tales for thee.
Come, take thy lute, and sing just one sweet song
To fill my sleep with music.

Bertha. Then good night.
I have so much to say to my old nurse,—
This is her annual visit, and she waits
Within my chamber,—so one only song.
My lute is tuneless with this damp night-air.
Like to our own glad spirits, its fine chords
Are soon relax'd.

Jaromir. Then sing, love, with the wind,
The plaining wind, and let it be thy lute.
Bertha.—How wildly round our ancient battlements
The air-notes murmur! Blent with such a wind
I heard the song which shall be ours to-night.
She had a strange sweet voice the maid who sang,—
But early death was pale upon her cheek;
And she had melancholy thoughts, that gave
Their sadness to her speech: she sat apart
From all her young companions, in the shade
Of an old tree—a gloomy tree, whose boughs
Hung o'er her as a pall: 'twas omen-like,
For she died young,—of gradual decay.
As if the heart consumed itself. None knew
If she had loved; but always did her song
Dwell on love's sorrows.

Sleep, heart of mine,—
Why should love awake thee?

* Yet we can hardly call it so; for it is, we believe, announced for the 8th inst., and we are indebted to a first copy for this Review.—Ed.

Like yon closed rosebud,
To thy rest betake thee.
Sleep, heart of mine,—
Wherefore art thou beating?
Do dreams stir thy slumbers,
Vainest hopes repeating?
Sleep, heart of mine,
Sleep thou without dreaming:
Love, the beguiler,
Wearth such false seeming.
Sleep, heart of mine;
But if on thy slumbers
Breathe one faint murmur
Of his charm'd numbers,
Waken, heart of mine,
From such dangerous sleeping:
Love's haunted visions
Ever end in weeping.

But now no more of song. I will not lose
Another legend of my nurse's store.
A whole year must have added to her list
Of ghastly murders, spiritual visitings:
At least, 'twill make the ancient ones seem new.

Jaromir.—And you will listen like a frightened child.

I think I see you:—when the turret clock
Has toll'd the night hour heavily; the hearth
Has only flickering embers, which send forth
Gleams of distorting light; the untrimm'd lamp
Exaggerates the shadows, till they seem
Flung by no human shape; the hollow voice
Of that old crone, the only living sound;
Her face, on which mortality has writ
Its closing, with the wan and bony hand,
Rais'd like a spectre's—and yourself the while,
Cold from the midnight chill, and white with fear,
Your large blue eyes darker and larger grown
With terror's chain'd attention, and your breath
Suppress'd for very earnestness. Well, love,
Good night; and if our haunted air be fill'd
With spirits, may they watch o'er thee like love!

Bertha.—Good night, good night!—the kind Madonna
shed

Her blessings o'er thee! [*Exit Jaromir.*]
'Tis his last footfall,—I can catch no more.
Methinks he pass'd too quickly. Had I left
This room, I should have counted every step,—
Have linger'd on the threshold; but he went
Rapidly, carelessly. Now out on this,
The very folly of a loving heart!
O Jaromir! it is a fearful thing
To love as I love thee; to feel the world—
The bright, the beautiful, joy-giving world—
A blank without thee. Never more to me
Can hope, joy, fear, wear different meanings. Now
I have no hope that does not dream for thee;
I have no joy that is not shared by thee;
I have no fear that does not dread for thee.
All that I once took pleasure in,—my lute
Is only sweet when it repeats thy name;
My flowers, I only gather them for thee;
The book drops listless down, I cannot read,
Unless it is to thee; my lonely hours
Are spent in shaping forth our future lives
After my own romantic fancies.
He is the star round which my thoughts revolve
Like satellites. My father, can it be
That thine, the unceasing love of many years,
Doth not so fill my heart as this strange guest?
I loved thee once so wholly,—now methinks
I love thee for that thou lovest Jaromir.
—It is the lamp gone out,—that dreams like these
Should be by darkness broken! I am grown
So superstitious in my fears and hopes,
As if I thought that all things must take part
In my great love.—Alas, my poor old nurse,
How she has waited!

The nature, the pathos, the beauty, of this
extract, require no comment—for there is not
a heart that must not feel and confess them.
In the preface, to which we have adverted,
there is a playful allusion to the silly cavil
about a young lady's writing on Love; and it
is hardly worth while to add a grave remark to
this lively exposition of the folly of identifying
the poet with what he, or she, has written.
According to L. E. L. (and most truly), if she
is individualised in this fashion, she must have
been not only distraught with Lord knows what
unfortunate attachments, but literally broken-
hearted, dead, and buried!—seeing that she
has been but too apt to lay her heroines
in the grave. But she might have gone much
farther; and, if the rule is to be applied, have
contended for being shot as a deserter, left for
dissection in an hospital, and a hundred other
casualties, such as her graphic pencil has
so forcibly delineated. The whole argument,
however, is an absurdity. It is *genius* which
makes, on the instant, the oak of an acorn—

which, out of a vague fancy, an idle hint, a
word, a whisper, conjures up those glorious
fantasies that last for ever—fantasies that
gather strength as they grow, till even in the
breast of their creator the mere germ whence
they sprung is as utterly forgotten as if it had
never been—and as untraceable as the knowledge
of grosser foundations is, to them, so purely
endowed, the grossest of fictions. In short,
the idea is so laughable, that we would under-
take, admitting it to be the reverse and a just
canon, to prove Sir Walter Scott a bandit, a
thief, a hair-brained enthusiastic lover, a vil-
lain, and a murderer. He has admirably sung
in a few memorable lines, that Love is the
sweetest theme that ever waked a minstrel
dream; and wretched is the critic that would
banish it from the catalogue of any true bard,
young or old, male or female. To the pure,
its warmest descriptions are pure—to the gro-
veller, its least impassioned painting is impure:
—and so, to end this discussion, we quote a
soliloquy of Bertha.

"The sound of festival is in my ear,
Haunting it with faint music; the red lights
Shine fitfully reflected in the lake,
Where I have never seen aught but the moon
Mirror'd before, or the bright quiet stars.
A weight is on the air, for ev'ry breeze
Has, bird-like, folded up its wings for sleep.
It is like mockery of the silent night
To choose her hours for merriment; but thus
We struggle with all natural laws, and make
Our life a strange disorder. Yet how sweet
Comes up the distant music!—though 'tis sad.
A few brief moments, and those notes will be
But echoes to the dancer's joyous steps.
Why should they rouse in me such mournful thoughts?
Recalling snatches of familiar songs
I've sung to those sweet airs, all sorrowful.
I see the youthful warrior with his head
Pillow'd upon his shield, but not for sleep;
The maiden with her face upon her hand
Bow'd in its last despair. What are the words?
[Sings a few words in a low tone to herself.]

And fitfully the embers raised
A faint and passing flame;
They mis'd her from her father's hearth,
But call'd not on her name.

They knew that she was weeping
For the loved and for the dead;
In silence and in solitude
Must such heavy tears be shed?

And can these notes, so long associate
With love and sorrow, thus be turn'd to mirth,
And we shall dance to what brought tears before?

[*Learning from the casement.*]

How beautiful it is! though on the air
There is the stillness of a coming storm,
And on the sky its darkness. On the west,
Like a rebellious multitude, the clouds
Are gather'd in huge masses; but the moon,
Like a young queen, unconscious, brightens still
A little clear blue space; though rapidly
Her comrades, the sweet stars, sink one by one,
Lost in the spreading vapours. Yet the lake
Has not a shadow. Well may the young moon
Forget her danger, gazing on the face
Its silver waters mirror—all beyond
Is like the grave's obscurity; more near
All is most tranquil beauty and repose.
The garden flowers are paler than by day,
And sweeter. What an altar of perfume
Is the musk-rose, beneath my casement twined!
Dipping its golden tresses in the lake,
Leans the laburnum; and beneath its shade
Sleep my two swans, as white, as still as snow.
—The wind is rising, and a yellow haze,
Like a volcano's smoke, makes heaven less dark
To be more fearful. I can now discern
Our ancient avenue of cedar-trees,—
How black they look, and with what heavy strength
The giant branches move!—the weary air
Like a deep breath comes from them.—Ah, how dark!
It is the first cloud that has touch'd the moon:—
Her loveliness has conquer'd,—oh, not yet!
One huge cloud, and another. I could deem
The evil powers did war on high to-night.
And are there such that o'er humanity
Hold influence,—the terrible, the wild,—
Inscrutable as fear,—the ministers
To our unholy passions? These are they
Who dandle with unrighteous wealth, and make
Our sleep temptation; they who fill its dreams
With passionate strife and guilt, until the mind
Is grown familiar with the sight of blood.
I do believe in them:—by those strange crimes
Man's natural heart would shrink from,—by the fear
That comes with midnight,—by that awful face,

Which, though they say it was a fantasy,
I know I saw,—I do believe in them."

"The Ancestress" is succeeded by six "Poetical Portraits;" meaning, we presume, ideal por-
traits, drawn with a poetical fancy. No matter
—they are at once brilliant and natural; and
indeed, if vigour and originality are consistent
parts of poetry, poetical to the farthest limit
of the term. In the subjoined two there is
enough to make a poet's reputation and popu-
larity.

"O no, sweet lady, not to thee
That set and chilling tone,
By which the feelings on themselves
So utterly are thrown:
For mine has sprung upon my lips,
Impatient to express
The haunting charm of thy sweet-voiced
And gentlest loveliness.
A very fairy queen thou art,
Whose only spells are on the heart.
The garden it has many a flower,
But only one for thee—
The early grace of Grecian song,
The fragrant myrtle tree;
For it doth speak of happy love,
The delicate, the true.
If its pearl buds are fair like thee,
They seem as fragile too;
Likeness, not others; for love's power
Will watch his own most precious flower.

Thou art not of that wilder race
Upon the mountain side,
Able alike the summer sun
And winter blast to bide;
But thou art of that gentle growth
Which asks some loving eye
To keep it in sweet guardianship,
Or it must droop and die;
Requiring equal love and care,
Even more delicate than fair.

I cannot paint to thee the charm
Which thou hast wrought on me;
Thy laugh, so like the wild bird's song,
In the first bloom-touch'd tree.
You spoke of lovely Italy,
And of its thousand flowers;
Your lips had caught the music breath
Amid its summer bow'ns.
And can it be a foreign like thine
Has braved the stormy Apennines?
I'm standing now with one white rose
Where silver waters glide:
I've flung that white rose on the stream,—
How light it breasts the tide!
The clear waves seem as if they loved
So beautiful a thing;
And fondly to the scented leaves
The laughing sunbeams cling.
A summer voyage—fairy freight!—
And such, sweet lady, be thy fate!"

"His hand is on the snowy sail,
His step is on the prow,
And back the cold night-winds have flung
The dark curls from his brow;
That brow to which his native heaven
A something of itself has given.
But all too mid'd with earthly stalks,
The nameless shadowy case,
Which tells, though Heaven gave it birth,
Its home has not been there;
And here the earth and heaven seem meet
In one discordant element.

It wears our nature's nobler part;
That spirit which doth spur
The weary bondage of our world,
And show what man can earn;
Where, led by honourable pride,
Hero and sage are defied:—
Those high imaginings which make
The glory which they hope;
Fine-wrought aspirations, lofty aims,
Which have in youth such scope;
Like tides which, haunted by the moon,
Rise but, alas! to fall too soon.
Vain are these dreams, and vain these hopes;
And yet 'tis these give birth
To each high purpose, generous deed,
That sanctifies our earth,
He who hath highest aim in view,
Must dream at first what he will do.
Upon that youthful brow are traced
High impulses like these:
But all too purposeless, like gales
That wander o'er the seas;
Not winds that bear the vessel on,
Fixed to one point, and only one.
And meaner workings have deform'd
His natural noble mind;
Those wretched aims which waste the eye
For happier use design'd.

And petty wishes, life praise,
 Destroy the hopes of better days.
 And hath no earlier vision taught
 A more exalted creed?
 Alas! that such a mind should waste
 Its powers away, to feed
 That wretched vanity which clings
 To life's debasing, paltry things.
 The worthlessness of common praise,
 The dry-rot of the mind,
 By which its temple secretly
 But fast is undermined.
 Alas! the praise given to the ear
 Ne'er was nor e'er can be sincere—
 And does but waste away the mind
 On which it preys.—In vain
 Would they in whom its poison lurks
 A worthier state attain.
 Indifference proud—immortal aim,
 Had aye the demigods of fame.
 The dew of night falls cold around,
 Yet can it not allay
 The fever burning on thy cheek,
 That eats thy life away:
 For thou dost know thy birthright sold
 For even less than his of old.
 Thou know'st what thou hast power to be,
 Thou know'st too what thou art;
 And heavily does discontent
 Sit pining at thy heart;
 And thou dost mark thy grief the while
 With scornful sneer, and bitter smile.
 But yet thou art too indolent
 From such weak bonds to free
 Thy better self, and urge thy strength
 To be what thou might'st be.
 These dost reprove the past, and blame,
 And yet thy future is the same.
 Ay, leave thy rudder to the wave,
 Thy sail upon the wind,
 Leave them to chance, and they will be
 Fit likenesses to thy mind:
 Unguided sail, unmaster'd prow,
 Are only emblems,—what art thou?"

The Miscellaneous Poems are of many a kind and many a verse;—the effusions of the hour, and partaking, we hardly like to say so, of the apparent moods of their author,—accomplished by an innate or heaven-born principle, which has not always that glorious direction of which it is susceptible; but is occasionally marred by a frivolity that it spurns and mourns in its nobler hours. We are no friends to the nourishing of sickly aspirations, by solitudes and moon-lights, and all the accessories of mediocrity; but we firmly hold, that even a Byron has been in a high degree made by circumstances, and that the same mind thrown upon the gauze-trammels of fashionable life, and the miserable charms of gay society, would have been, at best, the passport of a (perhaps rather superior) coxcomb and reveller. In "the world" it would be affectation to differ far from the herd; but there is so reproachful a sentiment of self-condemnation running through this volume, that we cannot help wishing it were a mere imagining, and not a censure (almost justified by the inequalities of some of these, in truth, immortality-giving poems) for yielding to paltry things a mind capable of the most undivided and glorious effort.

We have, however, been tempted by the extraordinary character of this volume into more than our allotted medium of observation; and we hasten to redeem our own prosing by the verse of one on whom future critics will expend a thousand times our extent of investigation, if they only quote those proudly distinctive proofs of genius, which a line, an epithet, or a word, convey. We will not garble a piece called "a Night in May;" we could point out a flaw or two; but, altogether, it is a charming poem.

"Light and glad through the rooms the gay music is waking,

Where the young and the lovely are gather'd to-night;
 And the soft cloudless lamps, with their lustre, are making
 A midnight hour only than morning less bright.

There are roses,—the flowers within them are breathing
 Sighs almost as sweet as the lips that are near;
 Light feet are glancing, white arms are wreathing,—
 O temple of Pleasure! thou surely art here.

I gazed on the scene; 'twas the dream of a minute;
 But it seem'd to me even as fairy land fair:
 'Twas the cup's bright inside; and on glancing within it,
 What but the dregs and the darkness were there?
 —False wave of the desert, thou art less beguiling
 Than false beauty over the lighted hall shed:
 What but the smiles that have practised their smiling,
 Or honey words measured, and reckon'd as said?
 Oh, heart of mine! turn from the revellers before thee:
 What part hast thou in them, or have they in thee?
 What was the feeling that too soon came o'er thee?—
 Weariness ever that feeling must be.

Praise—flattery—oplates the meanest, yet sweetest,
 Are ye the fame that my spirit hath dream'd?
 Late, when in such scenes, if homage thou meetest,
 Say, if like glory such vanity seem'd?
 O for some island far off in the ocean,
 Where never a footstep has press'd but mine own;
 With one hope, one feeling, one utter devotion
 To my gift of song, once more, the lovely, the lone!

My heart is too much in the things which profane it;
 The cold, and the worldly, why am I like them?
 Vanity! with my lute chords I must chain it,
 Nor thus let it sully the minstrel's best gem.
 It rises before me, that island, where blooming,
 The flowers in their thousands are comrades for me;
 And where if one perish, so sweet its entombing,
 The welcome it seems of fresh leaves to the tree.
 I'll wander among them when morning is weeping
 Her earliest tears, if such pearls can be tears;
 When the birds and the roses together are sleeping,
 Till the mist of the daybreak, like hope fulfill'd, clears.
 Grove of dark cypress, when noontide is flinging
 Its radiance of light, thou shalt then be my shrine;
 I'll listen the song which the wild dove is singing,
 And catch from its sweetness a lesson for mine.

And when the red sunset at even is dying,
 I'll watch the last blush as it fades on the wave;
 While the wind, through the shells in its low music sigh-
 ing,
 Will seem like the anthem pealed over its grave.
 And when the bright stars which I worship are beaming,
 And writing in beauty and fate on the sky,
 These, mine own lute, be the hour for thy dreaming,
 And the night-flowers will open and echo thy sigh.
 Alas! but my dream has like sleep's visions vanish'd—
 The hall and the crowd are before me again:
 Sternly my sweet thoughts like fairies are banish'd;
 Nay, the faith which believed in them now seems but
 vain.

I left the gay circle:—if I found it dreary,
 Were all others there, then, the thoughtless and glad?
 Methinks that fair cheek in its paleness look'd weary,
 Methinks that dark eye in its drooping was sad.
 —I went to my chamber,—I sought to be lonely,—
 I leant by the casement to catch the sweet air,
 The thick tears fell blinding; and am I then only
 Sad, weary, although without actual care?

The heart hath its mystery, and who may reveal it;
 Or who ever read in the depths of their own?
 How much we never may speak of, yet feel it,
 But, even in feeling it, know it unknown!
 Sky of wild beauty, in those distant ages
 Of which time hath left scarce a wreck or a name,
 Say, were thy secrets laid bare to the sages,
 Who held that the stars were life's annals of flame?
 Spirit, that ruleth man's life to its ending,
 Chance, Fortune, Fate, answer my summoning now;
 The storm o'er the face of the night is descending,—
 Fair moon, the dark clouds hide thy silvery brow.

Let these bring thy answer, and tell me if sadness
 For ever man's penance and portion must be;
 Doth the morning come forth from a birthplace of glad-
 ness?
 —Is there peace, is there rest, in thine empire or thee?
 Spirit of fate, from yon troubled west leaning,
 As its meteor-piled rack were thy home and thy shrine,
 Grief or our knowledge, 'twill teach me thy meaning,
 Although thou but speak'st it in silence and sign.

I mark'd a soft arch sweep its way over heaven;
 It spann'd as it ruled the fierce storm which it bound;
 The moonshine, the shower, to its influence seem'd given,
 And the black clouds grew bright in the beautiful
 round.

I look'd out again, but few hues were remaining
 On the side nearest earth; while I gazed, they were
 past:
 As a steed for a time with his curb proudly straining,
 Then freed in its strength, came the tempest at last.
 And this was the sign of thy answer, dark spirit!
 Alas! and such ever our pathway appears;
 Tempest and change still our earth must inherit,—
 Its glory a shade, and its loveliness tears.

The "Nameless Grave," and some sportive
 "Fairy" lines addressed to Mr. Crofton Croker,
 are favourites with us, among the concluding
 poems; but we think the "Dying Child" is
 deserving of selection, on account of its con-
 trast.

"Her cheek is flush'd with fever red;
 Her little hand burns in my own;
 Alas! and does pain rack her sleep?
 Speak! for I cannot bear that moan."

Yet sleep, I do not wish to look
 Again within those languid eyes;
 Sleep, though again the heavy lash
 May never from their beauty rise.

—Aid, hope for me?—now hold thy peace,
 And take that healing cup away:
 Life, length of life, to that poor child!—
 It is not life for which I pray.

Why should she live for pain, for toil,
 For wasted frame, and broken heart;
 Till life has only left, in death,
 With its base fear of death to part!

How could I bear to see her youth
 Bow'd to the dust by abject toil,
 Till misery urge the soul to quit,
 From which its nature would recoil?

The bitterness of poverty,
 The shame that adds the worst to woe,—
 I think upon the life I've known,
 Upon the life that I shall know.

Look through yon street,—a hundred lamps
 Are lighting up the revels there,—
 Hark! you can hear the distant laugh
 Bleeding with music on the air.

The rich dwell there, who know not want;
 Who loathe that wretchedness whose name
 Is there an unfamiliar sound:—
 Why is not my estate the same?

I may have sinn'd, and punishment
 For that most ignorant sin incur;
 But be the curse upon my head,—
 Oh, let it not descend to her!

Sleep, dear one! 'tis a weary world;
 Sleep the sweet slumber of the grave!
 Vex me no more with thy vain words;
 What worth is that you seek to save?

Tears—tears—I shame that I should weep;
 I thought my heart had nerved my eye!—
 I should be thankful, and I will,—
 There, there, my child, lie down and die!"

We spoke of the philosophical (say meta-
 physical) properties of some of these produc-
 tions; and though we would rather have feel-
 ing, nature, and the simple affections, we can-
 not refuse our eulogy to the following:—

"Out on our being's falsehood!—studied, cold,
 Are we not like that actor of old time,
 Who wore his mask so long, his features took
 Its likeness?—thus we feign we do not feel,
 Until our feelings are forgotten things,
 Their nature warp'd in one base selfishness;
 And generous impulses, and lofty thoughts,
 Are counted folly, or are not believed:
 And he who doubts or mocks at excellence
 (Good that refines our nature, and subdues),
 Is rivetted to earth by sevenfold chains.
 O, never had the poet's lute a hope,
 An aim so glorious as its present one,
 In this our social state, where petty cares
 And mercenary interests only look
 Upon the littleness of to-day, and shrink
 From the bold future, and the steadily past,—
 Where the smooth surface of society
 Is roll'd by deceit, and the warm heart
 With all its kind affections' early flow,
 Flung back upon itself, forgets to beat.
 At least for others:—tho' the poet's gift
 To melt these frozen waters into tears,
 By sympathy with sorrows not our own,
 By waking memory with those mournful notes,
 Whose music is the thoughts of early years,
 When truth was on the lip, and feelings wore
 The sweetness and the freshness of their morn.
 Young poet, if thy dreams have not such hope
 To purify, refine, exalt, subdue,
 To touch the selfish, and to shame the vain
 Out of themselves, by gentle mournfulness,
 Or chords that rouse some aim of enterprise,
 Left and pure, and meant for general good;
 If thou hast not some power that may direct
 The mind from the mean round of daily life,
 Waking affections that might else have slept,
 Or high resolves, the petrified before,
 Or rousing in that mind a finer sense
 Of inward and external loveliness,
 Making imagination serve as guide
 To all of heaven that yet remains on earth,—
 Thine is a useless lute: break it, and die."

And here we must conclude. If we have
 spoken in the warmest language of panegyric,
 we are sure we have justified that language by
 the beautiful and magnificent poetry which we
 have quoted;—poetry which, indeed, we can
 only sum up in that word already used to ex-
 press all that is lovely and exalting—GENIUS.

Annals and Antiquities of Rajast'han, or the Central and Western Rajpoot States of India. By Lieutenant-Colonel Tod, late Political Agent to the Western Rajpoot States. Vol. I. royal 4to. London, 1829. Smith and Elder; and Calkin and Budd.

It is rarely that an historian possesses so many concurrent advantages as Colonel Tod commanded for the accumulation of authentic materials. Clothed with an official character, familiar with the language of the Rajpoots, and addicted by taste as well as habit to the cultivation of their literature, his popularity, arising from benefits conferred upon the principal state (Mewar), at a period when misrule and Mahratta oppression had disorganised its society,—afforded a free scope to inquiries which, under less favourable circumstances, might have excited insurmountable jealousy.

Rajpootana, or the country of the Rajpoots, is a part of India almost untrodden by the geographer and the historian. The events of the great Mahratta war of 1818, which opened Central India to the British arms, brought us into contact with this singular people. Sir John Malcolm gave to Europe the first distinct details respecting the Rajpoot states: but Sir John touched only the confines of Rajast'han; and for many of his facts he was indebted to the author of this work. From his first appointment as political agent (an office analogous to that of *chargé d'affaires* in Europe), Colonel Tod devoted himself, with an ardour and application which seem to have prejudiced his health, to the examination of documents of all kinds, in the public archives and in private hands, and to the collection of every fact which could elucidate the history and institutions of the Rajpoots. The result is, a substantial proof that, with due diligence, the imputation of barrenness which rests upon the historic muse of India may be effectually removed.

The volume before us consists of several distinct portions. An essay on the geography of the country is accompanied by a magnificent original map, from the author's own surveys. "It is a duty owing to himself to state," says Col. Tod, "that every map of India, without exception, printed since 1815, has its foundation, in regard to Central and Western India, in the labours of the author." The succeeding portion is a history of the Rajpoot tribes; which is followed by a dissertation on a feudal system in Rajast'han. Then follows the history of Mewar, with a detailed account of its religious establishments, festivals, and customs. A narrative of the author's journey into that country closes the volume. Appendices, containing original documents, fac-similes, and, above all, some exquisite plates, illustrate the different subjects treated of by the author.

Works relating to Indian topics, generally speaking, are not popular in England; they mostly demand a certain degree of previous knowledge, which the mere reader for passing the time has had no opportunity or inducement to acquire. But this aversion ought not to extend, and perhaps does not extend, to works of an historical character, which necessarily presume the reader's ignorance, and contain the very elements of knowledge, in that particular branch of study. The history of a new country, wherever situated, must be a source of pleasure to all classes; and there is no apparent reason why a history of Rajpootana should not be as interesting to an English reader as a history of America. We therefore do not participate in the apprehensions which Col. Tod indulges, in his introduction, from the "apathy which

dooms to neglect almost every effort to enlighten this country on the subject of India."

The essay on the Rajpoot tribes, and the dissertation on a feudal system in Rajast'han, are of an antiquarian complexion: they are curious, no doubt, as well as instructive, to persons thoroughly conversant with Hindoo literature; but do not possess so much interest to an English reader. The latter, which is an attempt—we may venture to call it a successful attempt—to identify some of the martial customs and institutions of the Rajpoots with those of the feudal tribes of Europe, is, however, well worthy of perusal. There are abundant reasons for suspecting that the Scandinavian and other northern races, by whom Europe was overrun in the dark ages, derived their origin from the East. Traces of affinity appear between their religion and military government, and those of eastern people—two very important branches of the social system. The details of the analogy, in respect to the latter branch, were never demonstrated with so much minuteness and precision as in Col. Tod's dissertation.

The annals of Mewar, the chief of the Rajpoot states, commence, like those of all ancient nations, in fable. The Rajpoots, by virtue of their designation, consider themselves "sons of kings" (Rajapootras); and the pedigree of their princes they trace to the sun or moon;—nay, on failure of that source, they are content to claim a descent from a *dyte*, or demon. These puerilities, Col. Tod, however, considers to be of modern fabrication. He makes the point of outset the emigration of Keneksen, the founder of Mewar, from the most northern of the provinces of India to the peninsula of Saurashtra. This took place A.D. 145. By the aid of manuscripts, ancient inscriptions, and synchronisms, Col. Tod conducts us, with great skill, through the "dark ages" of these annals, down to the birth of the hero Bappa Rawul (A.D. 728), since whom fifty-nine princes, lineally descended from him, have sat on the gadi or throne of Mewar.

To lay before the reader any thing approximating to a compendium of the events of these 1100 years would be utterly inconsistent with the space we can devote to the notice of a single work. Wars without, and intrigues within, form the sum of them. The narrative is agreeably diversified with biographical sketches, and incidents which illustrate the Hindu character, and that of the Rajpoots in particular.

The reign of Lakumsi, who succeeded A.D. 1375, was "a memorable era in the annals, when Cheetore (the capital), the repository of all that was precious yet untouched of the arts of India, was stormed, sacked, and treated with remorseless barbarity, by the Pat'han Emperor, Alla-o-din." The incentive to the attack was rather romantic. He was inflamed with the extraordinary beauty of the Princess Pudmani, wife of Lakumsi's uncle, Bheemsi. The person of the latter, who was protector during the Rana's* minority, was secured, and made dependant upon Pudmani's surrender. The valiant Rajpoots opposed craft to craft. They pretended to consent; and the supposed princess proceeded from Cheetore to the camp of Alla, accompanied by her attendants in seven hundred covered litters, in each of which was a brave Rajpoot. On a sudden they issued from the litters; but Alla was too well guarded. They released Bheemsi, who reached Cheetore in safety; but the devoted band perished

to a man, in covering his retreat. Subsequently, however, the Pat'han prince obtained possession of the city; but not till the major part of its brave defenders had died before its walls, and the women had sacrificed themselves by an awful ceremony, the terrible rite called *johur*, in which preservation from pollution or captivity is sought in the flames. "The funeral pyre was lighted within the 'great subterranean retreat,' and the defenders of Cheetore beheld, in procession, the queens, their own wives and daughters, to the number of several thousands. The fair Pudmani closed the throng, which was augmented by whatever of female beauty or youth could be tainted by Tartar lust. They were conveyed to the cavern, and the opening closed upon them, leaving them to find security from dishonour in the devouring element."

In about half a century, Mewar not only recovered its former state, but was exalted, by Prince Hamir, to a high degree of splendour. He retaliated the wrongs of his ancestors upon the Mahomedan princes of India, some of whom he made captives; and before he died, was almost the sole Hindu prince, of considerable power, in India. For two centuries after his death, Mewar continued prosperous, in spite of the inroads of the Mussulmans. Succeding years brought weaker princes to the direction of affairs; and Cheetore underwent another and a third sack, or *saka*, as the people term it; in which thousands of Seesodias (the name of the Mewar race), male and female, perished by self-destruction in the field of battle, or in the dreadful *johur*.

Pertap, the idol of the Seesodia Rajpoots, the hero of Mewar, succeeded his father Oody Seng towards the latter end of the sixteenth century, when the affairs of the state were almost desperate, and when it had to sustain a contest with the great Akbar. The history of this prince is quite romantic: he was oftentimes driven into the mountains with his family, and when perishing with hunger had to dispute with the wild animals his casual supply of food. Still, with heroic fortitude, he withstood, not the force merely, but the solicitations and the wiles, of the Mogul emperor. The closing scene of his life deserves to be recorded.

"A premature decay assailed the pride of Rajast'han; a mind diseased preyed on an exhausted frame, and prostrated him in the very summer of his days. The last moments of Pertap were an appropriate commentary on his life, which he terminated, like the Carthaginian, swearing his successor to eternal conflict against the foes of his country's independence. But the Rajpoot prince had not the same joyful assurance that inspired the Numidian Hamlicar; for his end was clouded with the presentiment that his son Umra would abandon his fame for inglorious repose. A powerful sympathy is excited by the picture which is drawn of this final scene. The dying hero is represented in a lowly dwelling; his chiefs, the faithful companions of many a glorious day, awaiting round his pallet the dissolution of their prince, when a groan of mental anguish made Saloombra inquire what afflicted his soul that it would not depart in peace? He rallied: 'It lingered,' he said, 'for some consolatory pledge that his country should not be abandoned to the Toork;' and, with the death-pang upon him, he related an incident which had guided his estimate of his son's disposition, and now tortured him with the reflection, that for personal ease he would forgo the remembrance of his own and his country's wrongs. On the banks of the Pethola, Pertap and his

* The princes of Mewar were entitled formerly *Ranas*; their present title is *Rana*.

chiefs had constructed a few huts* (the site of the future palace of Oodipoor), to protect them during the inclemency of the rains in the day of their distress. Prince Umra, forgetting the lowliness of the dwelling, a projecting bamboo of the roof caught the folds of his turban and dragged it off as he retired. A hasty emotion, which disclosed a varied feeling, was observed with pain by Pertáp, who thence adopted the opinion that his son would never withstand the hardships necessary to be endured in such a cause. 'These sheds,' said the dying prince, 'will give way to sumptuous dwellings—thus generating the love of ease; and luxury, with its concomitants, will ensue, to which the independence of Mewar, which we have bled to maintain, will be sacrificed: and you, my chiefs, will follow the pernicious example.' They pledged themselves, and became guarantees for the prince—by the throne of Bappa Rawul—that they would not permit mansions to be raised till Mewar had recovered her independence. The soul of Pertáp was satisfied, and with joy he expired."

We hasten, however, over the succeeding portion of the history, which exhibits many remarkable circumstances and striking traits of the peculiar character of this people, to the period when the firm and decisive policy of Lord Hastings expelled the Mahrattas from their hold in this part of India, and led to alliances with the Rajpoot states and the British government. Col. Tod is by no means favourable to this system; he advocates a different kind of connexion between the Rajpoots and ourselves: the existing system by which the several states, to a certain extent, renounce their independence for the sake of British protection, in his opinion, formed from an exact study of the Rajpoot character, is injurious to the interests of both parties. A restoration of these states to independence, whilst it would present no chance of a combination against England, owing to their discordant feelings and prejudices, would enlist their affections and gratitude—the point of honour amongst them—in favour of the paramount power, and establish a really efficient political barrier against any invasion in that quarter, whether from Asiatics or Europeans. We subjoin a brief picture of Mewar at the period when the Mahrattas had sway in this quarter.

"In the spring of 1806, when the embassy entered the once fertile Mewar, from whose native wealth the monuments which the pencil will portray were erected, nothing but ruin met the eye—deserted towns, roofless houses, and uncultivated fields. Wherever the Mahratta encamped, annihilation was ensured; it was a habit; and twenty-four hours sufficed to give to the most flourishing spot the aspect of a desert. The march of destruction was always to be traced for days afterwards by burning villages and destroyed cultivation. Mewar was rapidly approaching dissolution, and every sign of civilisation fast disappearing: fields laid waste, cities in ruin, inhabitants exiled, chieftains demoralised, the prince and his family destitute of common comforts."

This is one side of the picture: the other is of a different character. Notwithstanding the innumerable obstacles encountered by the British agent, arising from the encroachments of subordinate chiefs, and the evils of a long-disordered state, between 1818 and 1822 the population had almost trebled. The number of ploughs had more than trebled; cultivation

had quadrupled. No fewer than one thousand towns and villages were united to form the fiscal demesne of the Rana, whereby his revenue, which in 1818 was 40,000 rupees, in 1821 was upwards of 1,000,000 rupees; the commercial duties having increased from a nominal sum in 1818, to 217,000 rupees in 1822. The progress of prosperity is most decisively shewn in the following statement of the number of houses, in 1818 and 1822, in the principal towns:—

	In 1818.	In 1822.
Oodepoor (the modern capital).....	3,500	10,000
Bhillwara	not one	2,700
Poorh	200	1,200
Mandel	80	400
Gosconda	60	350
	3,840	14,650

To this may be added, that, under the improved police, insurance, which was formerly eight per cent in a space of twenty-five miles, was reduced to one-fourth of a rupee per cent, or nearly nominal, from one frontier to the other. These are benefits conferred by British administration, which are sufficiently apparent and substantial.

Amongst the customs of the Rajpoots, Col. Tod touches upon the *Sati* rite. "To arrive at the origin of this rite," he says, "we must trace it to the recesses of mythology, where we shall discover the precedent in the example of Sati, who to avenge an insult to Iswara, in her own father's omission to ask her lord to an entertainment, consumed herself in the presence of the assembled gods. With this act of fealty (*sati*) the name of Dacsha's daughter has been identified; and her regeneration and re-union to her husband as the mountain nymph Mera, or Parvati, furnish the incentive to similar acts. The chief characteristic of *sati-ism* is its expiatory quality; for by this act of *faith* the *sati* not only makes atonement for the sin of her husband, and secures the remission of her own, but has the joyful assurance of re-union to the object whose beauty she procures. Nothing short of the abrogation of the doctrines which pronounce such sacrifices exculpatory, can be effectual in preventing them; but this would be to overturn the fundamental article of their creed, and the return of metempsychosis."

The personal narrative of the author's journey into Mewar presents us with a living picture of Rajpoot manners and character, as well as with anecdotes of ancient times, deduced from tradition or from the bards. We close our Review with an extract from this portion of the work, where the author describes the martial manners of the Mairs, or Meeras, and gives a passage from the celebrated bard Chund, the Homer of the Rajpoots, which exhibits a striking analogy with the style of Osian.

"Unail espoused the daughter of a Mena chieftain, by whom he had Cheeta, whose descendants enjoy almost a monopoly of power in Mairwarra. The sons of Cheeta, who occupied the northern frontier near Ajmer, became Mahomedans about fifteen generations ago, when Doodoh, the sixteenth from the founder of the race, was created dawat khan by the hakim of Ajmer; and as Athoon was his residence, 'the khan of Athoon' signified the chief of the Mairates. Chang, Jhak, and Rajosi, are the principal towns adjoining Athoon. Anoop also took a Mena wife, by whom he had Burrar, whose descendants have continued true to their original tenets. Their chief places are Burrar, Bairaawra, Mundilla, &c. Though the progeny of these Menas may have been improved by the infusion of Rajpoot

blood, they were always notorious for their lawless habits, and for the importance attached to them, so far back as the period of Beesildeo, the celebrated prince of Ajmer, whom the bard Chund states to have reduced them to submission, making them 'carry water in the streets of Ajmer.' Like all mountaineers, they of course broke out whenever the hands of power were feeble. In the battle between the Chohans of Ajmer and the Purihars of Mundore, a body of four thousand Mair bowmen served Nahur Rao, and defended the pass of the Aravulli against Pirthiraj in this his first essay in arms. Chund thus describes them:—'Where hill joins hill, the Mair and Mena thronged: the Mundore chief commanded that the pass should be defended: four thousand heard and obeyed, each in form as the angel of death—men who never move without the omen, whose arrow never flies in vain—with frames like Indra's bolt, faithful to their word—preservers of the land and the honour of Mundore, whose fortresses have to this day remained unconquered—who bring the spoils of the plains to their dwellings. Of these, in the dark recesses of the mountains, four thousand lay concealed: their crescent-formed arrows beside them. Like the envenomed serpent, they wait in silence the advance of the foe. Tidings reached the Chohan that the manly Mena, with bow in hand, stood in the mountain's gorge. Who would be bold enough to force it? His rage was like the hungry lion's when he views his prey; he called the brave Kana, and bade him observe those wretches, as he commanded him to clear the pass. Bowing, he departed, firm as the rock on which he trod. He advanced; but the mountaineer (Mair) was immovable as Soomair. Their arrows, carrying death, fly like Indra's bolts—they obscure the sun. Warriors fell from their steeds, resounding in their armour as a tree torn up by the blast. Kana quits the steed—hand to hand he encounters the foe—the feathery shafts, as they strike fire, appear like birds escaping from the flames. The lance flies through the breast, appearing at the back, like a fish escaping through the meshes of a net—the evil spirits dance in the mire of blood—the hero of the mountain encountered Kana, and his blow made him reel; but, like lightning, it was returned, and the mountaineer fell: the crash was as the shaking of Soomair. At this moment Nahur arrived, roaring like a tiger for his prey: he called aloud to revenge their chief his brother, and fresh vigour was infused into their souls. On the fall of the mountain chief the Chohan commanded the hymn of triumph to be sounded: it startled the mountaineer, but only to nerve his soul afresh. In person the Chohan sought his foe: the son of Somesa is a bridegroom. His streaming standards flutter like the first falls of rain in Asar; and as he steps on the bounds which separate Mundore from Ajmer, victory! victory! is proclaimed. Still the battle rages: elephants roar, horses neigh,—terror stalks every where. The aids of Girnar and of Sindé now appeared for Mundore, bearing banners of every colour, varied as the flowers of the spring. Both arrays were clad in mail: their eyes and their finger-nails alone were exposed—each invoked his tutelary protector as he wielded the dodharra—Pirthiraj was refulgent as Indra—the Purihar's brightness was as the morning star—each was clad in armour of proof:—immovable as gods in mortal form, the sword of the Chohan descended on the steed of the Purihar; but as he fell, Nahur sprang erect, and they again

* This magnificent lake is now adorned with marble palaces. Such was the wealth of Mewar even in her decline.

darted on each other, their warriors forming a fortress round the persons of their lords. Then advanced the standards of the Pramur like a black rolling cloud: while the lightnings flashed from his sword, Mohuna, the brother of Mundore, received him. They first examined each other: then joining in the strife, the helm of the Pramur was cleft in twain: now advanced Chaond, the Dahami: he grasped his iron lance—it pierced the Purihar, and the head appeared like a serpent looking through the door in his back: the flame (*sate*) united with the fire from which it sprung, while the body fell on its parent earth. By his devotion the sins of his life were forgiven. Nobly did the tiger (Nahur) of Mundore meet the lion of the world. He called aloud,—"Hold your ground, as did Bul Raja of old!" Again the battle rages—Doorga gluts herself with blood—the air resounds with the clash of arms and the rattling of banners—the Aswar rains on the foe—Khetral sports in the field of blood—Mahadeva fills his necklace—the eagle gluts itself on the slain—the mien of the warriors expands as does the lotos at the sunbeam—the war-song resounds: with a branch of the tools on the helm, adorned in the saffron robe, the warriors on either side salute each other."

Our Review affords but an imperfect notion of the contents of this interesting and splendid work. The decorations, by E. Finden, are beautiful. Amongst the engravings, the view of the Palace of Oodipoor—the Palace of Rana Bheem and Pudmani—an interior view in Cheetore, Rajmahal—Island and Palace of Jagmurdur, in particular, are exquisite:—some of them perfect Mahometan paradises. They exhibit not only the scenery but the arts of India in a very advantageous point of view: and they will, it is to be hoped, recommend the work to that share of public patronage which it claims upon higher grounds—namely, its intrinsic excellence, as one of the most curious publications regarding India which has ever appeared in England.

The Son and the Ward, or Selfishness Corrected: a Tale for Youth. By Marianne Parrott. 12mo. pp. 192. London, 1829. Longman and Co.

THIS is a very charming little volume, with a story as interesting as it is gracefully told. Selfishness is a weed of such wide and evil growth in the present age, that it cannot be too carefully eradicated; or feelings of kindlier and better growth too sedulously implanted in its stead. A little story of this kind is not very well adapted for quotation; but the following anecdote is too curious to be omitted.

"It was customary for those in our vicinity who had cattle to send to the London markets, to drive them to a certain spot, a few miles on the road, where the salesman who was to dispose of them received them from their owners, and took charge of them for the rest of the journey. On one of these occasions I rode to the spot, accompanied by a favourite dog, whose claims to my regard, however, rested rather on his fidelity than on his beauty. By some chance he got separated from me; and, meeting with the salesman whom he was accustomed, in his occasional visits to my family, to see, he followed him towards London. On their arrival at the Angel at Islington, where my friend generally stopped, he had the dog tied up with his horse, to be left till he returned from London the following day. When he came back, to his great dismay, the animal was gone. His inquiries among the servants

of the inn were for a long time fruitless. At length, however, by alternate bribes and threats, he elicited from one of them, that the poor dog had been violently assailed by one of its own species, who claimed a prior right to the possession of the stable, and that, having been, after a severe struggle, completely vanquished by its more powerful antagonist, it had retired from the yard much discomfited. Despairing, therefore, of seeing it again, my friend returned into Warwickshire; and so much was he grieved at our loss, that he rode round several miles, though the day was far advanced, to inform us of it. But a pleasurable surprise awaited him. Our faithful friend had arrived about two hours before, looking hungry, fatigued, and dirty. The next morning, however, it had again disappeared, and was this time accompanied in its flight by the yard-dog, a larger and much more powerful animal. They were gone several days, and then returned, both of them much in the same state as above described. When our friend again called at the Angel, he was informed, that, a few days after his last visit, the two dogs had entered the yard together, and falling on the former assailant, had torn it in pieces."

We agree with our author in deprecating this spirit of revenge even in a dog; but it is a most singular circumstance. The school-adventures of the two heroes are particularly well told; and we cannot do better than recommend this work most cordially to all whose care it is to provide amusement and instruction for the youthful mind.

Dr. Doddridge's Diary and Correspondence.

[Second notice.]

WE are sorry to hear from an "orthodox" correspondent that he blames our last week's notice of Doddridge's letters, as offering strong temptations to dissent. He declares, that if these ministers are allowed more than Roman Catholic privileges among the fair dames of their communion, he sees no protection for the true church,—the palinode of which he sings in a very melancholy strain. All that we can answer is, that it is no business of ours: we simply shew what the book is, which, after all, is in our opinion the most characteristic mode of writing reviews, (however great the authorities and examples are the other way; i.e. that of mentioning a work at the head of an article, and never by any chance alluding to it again); and if ill consequences result from it, the author, editor, compiler, or whatever he may be, is responsible;—nobody ever thought of whipping or hanging an echo! therefore we (in security) revert to the dear Doctor, whom, we believe, we left much in love with Kitty Freeman: witness his hand.

"To Miss Kitty.

"London, August 6, 1794.

"It is with a great deal of pleasure that I sit down to converse for a few moments with my dear and charming mistress, whose company is more to me than the whole world besides; and without whom I seem to be half alone, even in London, that seat of entertainment and improvement, although surrounded by a circle of the kindest and most agreeable friends. I have a thousand tender things in my heart, which I should be very desirous to transcribe upon this occasion. But it is my misfortune, that instead of a whole delightful morning, it is but a few minutes that are allowed me to converse with you; and if I am not upon my guard, I shall spend the whole of

my time in describing and lamenting its shortness. I will not, my dear creature, throw away these precious moments merely in saying that I love you. I have told it you already a thousand times, and you have had the justice to acknowledge that you believe it; indeed, if I had never given my passion utterance, your own merit and my disposition, joined with our intimate acquaintance, might have prompted you to suspect it. You have sometimes been pleased to express your apprehensions that some of the polite ladies about London might make a more powerful impression upon my heart; and I would fain remove such ideas, which as they are very unreasonable in themselves, may be equally prejudicial to me; and I hope I shall now be able to succeed,—for I have within these few days conversed very freely with a great variety of the most agreeable women whom I have the pleasure of knowing, and have been very curious in remarking their behaviour, and examining their characters; and, upon the whole, I have not found any one of them that could have made herself mistress of my heart, though it had been entirely disengaged, much less for whom I could be contented to exchange you. Indeed, I cannot but feel surprised to think, that I have found a dear girl at Burton, who so far exceeds the most celebrated among them, not only in beauty, seriousness, sincerity, and good nature, which seem the more natural growth of the country, but even in good sense and politeness, which they are ready to challenge as their distinguishing prerogative. I therefore once more positively assure you, and I give it you under my hand, that I neither will nor can entertain any thought of a change, but that you may be as secure of the constancy as of the sincerity of my affection. I heartily wish I could have the same confidence in you. But indeed, madam, you must pardon me, when I say, that I have a great many tormenting fears, as to the effect which may be produced in your mind, which was never over-resolute, by an absence of so many weeks; and these apprehensions are very much increased, when I consider that there are some persons about you, who, though they may be my friends in every thing else, are yet my enemies in that one great affair, in which I have the most occasion for their kind assistance. I hope they will not be so injurious as to assault me while I am at so great a distance, and utterly unable to defend myself. But if they should insinuate any thing to my disadvantage, I do most earnestly entreat you to remember, that as my worldly happiness is centred in you, so in all human probability they are pleading for the ruin of one who is, with too great an excess of tenderness, dear lovely creature, your most affectionate lover and most obedient servant."

August 22.

"These long weeks, I had almost said these years of absence, are drawing on to their end, and if I live till next Friday, I hope to see you at Burton. I entreat you, my dear, that if it be possible you will contrive to be at home that evening; for otherwise I foresee, by an infallible prognostication, that I shall be in great danger of a violent fit of the vapours. And yet, madam, I will presume to remind you, that though I am so earnestly desirous of the sight of you, as that to obtain it I can quit all my friends, and all the entertainments of this polite and agreeable town, not only with content, but with pleasure,—yet still as you may order it, the meeting may be very little to my satisfaction; for it is possible my charmer may receive me with those marks of indifference in

her countenance which I have sometimes discerned after a much shorter absence, when some of my kind and judicious neighbours have been expressing their astonishment at the strange news!—and intimating that the addresses of a gentleman of my profession are to be received with scorn rather than with indulgence. I question not, but at this favourable conjuncture they have been repeating their wise remonstrances, and I heartily wish that my lovely creature may not have been too much impressed by their officious advice. It is even possible that while I am counting the tedious hours of separation, and longing to clasp her in my impatient arms, with all the warmth of a lover, as well as with all the tenderness of a friend, she may be deliberating whether she shall not break off the correspondence, or has perhaps already determined upon that step, and is only searching out the most decent method of doing it.”

This extraordinary lover, nearly about the same time, writes to his sister:—

“From a sense of the uncertainty of human affairs in general, and of this in particular, I study the government of my passions, and apply closely to my business; and, between friends, I find the retirement of a student an admirable remedy against the extravagant transports of a lover: so that though I maintain a constant habitual friendship for that dear creature, who indeed well deserves it, yet really I cannot say that I am violently in love above half an hour in a day, and that is generally between nine and ten in the evening.”

The worthy divine also writes thus prettily to a friend—

“As for my rose, it continues to flourish in its native beauty; and I have frequently the pleasure of exhaling, with due precautions, by the by, its heart-reviving fragrance. But as lovely as it is, I must confess that I have been in some danger of being torn by the thorns. In short, I am grown so fond of that blooming trifle, that I am afraid if I am not permitted to wear it for life, I am spoiled for a florist.”

And again—

“My China idol, as you are pleased to call her, returns her acknowledgments for the gallantry with which you remember her. And I, sir, most sincerely thank you for the reasonable caution you so elegantly insinuate, and hope it will teach me to correct that excessive fondness, that more than human affection, with which I am ready to cleave to the dust of the earth, merely because it is refined to so uncommon a degree of lustre.”

Alas! for the Roses and the China Idols of our boyhood and girlhood—that brilliant epoch of life which anticipates an Eternity in a Hope! Witness, O Cupid! our next quotation.

“To Miss Kitty.

June 4th, 1725.

“Dear Madam,—I have so little opportunity of conversing with you alone, that I am forced to take this method of expressing my concern, and indeed my amazement, at what has just passed between us. I knew you to be a lady of admirable good sense, and I wish you would find out the consistency of your behaviour yesterday and to-day. Yesterday you expressly assured me you loved me as well as I did you, which you know is to a very uncommon degree; and that it grieved you that you had given me so much uneasiness, adding, you would take care to avoid it for the time to come. To-day you have been telling me you could not bear the thought of not being so rich as your sister; that you do not know why you may not expect a good man, with a good estate! I

leave you to judge whether it be possible I should hear this remark without uneasiness. And, if it be not, whether it were fit for you to make it. Consider, madam, I am a rational creature; and though too much transported with love, yet, blessed be God, not absolutely distracted! How then do you imagine I can put any confidence in the assurances you give me of your love, when you are so continually contradicting them? For do you not contradict them when you talk of discarding me for the sake of money? I always thought, my dear creature, you had been remarkable both for good sense and religion. But I own, I do not see how it is reconcilable with either, to throw aside those entertainments of a rational, a friendly, and a religious nature, which you yourself think you may find in me, merely that you may eat and drink more sumptuously, and wear better clothes, with some of those people whom the word of God already brands as fools. Madam, I must presume so far as to say that is is neither the part of a Christian, nor a friend, to keep me in such a continual uneasiness. You unfit me for business, devotion, or company, and in short make my very life burdensome by the inconsistency of your behaviour. Let me therefore most earnestly entreat you—not entirely to dismiss me, which God forbid, but resolutely to remember your promises, and not to allow yourself those unbounded liberties of saying every thing that the vanity of your own dear excellent heart may sometimes prompt you to utter, without considering how I am able to bear it. As for what you said at parting, that I have ‘a relish for the vanities of life,’ I own that I regard them too much. But, I bless God such is not the governing temper of my mind; and that I can say with a full assurance that I know how to postpone them, not only to my duty to God, but to my affection for you. And I think you may easily believe it, when I now give it under my hand, as you had it yesterday from my mouth, that I will willingly and thankfully take you with what your father and mother will give you, if by any means there be a prospect of the necessary comforts of life.—I remain, dear madam, your sincere lover and respectful servant.”

It is, we fancy, a mistaken notion, that lovers’ (or any) quarrels lead to more gracious reconciliations and warmer regards: on the contrary, every difference causes a diminution of affection, though it may be imperceptible in the first stages, and only become apparent when repetition has made doubts and opposite opinions frequent and habitual. Coldness, dislike, and even hate, are often grafted thus upon the fondest (married and single) attachments—and so it happened to Philip and his Kitty. His love was (though somewhat too prudential) certainly fervent; for he tells her in very natural language, though we cannot approve of the religious mixture:—

“My heart for a considerable time had been so entirely swallowed up with affection for you, that you became in a manner my all. In every moment of leisure you engrossed my thoughts and my discourse. Even when you were absent, you mingled yourself with all my studies. You determined by your smile or your frown whether I should be either sprightly and cheerful, or distracted with care and anxiety, unfit for devotion, for study, for conversation, or usefulness; nay, God forgive me, when I confess, that where his blessed self, and the most important objects of religion, and the brightest hopes a creature can form, had one thought, you at least had ten. The

hope of obtaining you, and the fear of losing you, affected me more sensibly than the thoughts of a happy or a miserable eternity. And was this, madam, the temper of a Christian or a minister? Was this a proper course to engage the favourable interposition of Providence to determine this dear affair according to my wishes? When I read Mr. Baxter’s excellent treatise on Self-Denial, and being crucified to the world, and examined my temper by it, though, I bless God, I found a great deal to be thankful for upon other accounts, yet when I turned my thoughts to you I could not but continually condemn myself; not that I loved you better than any other friend—not that I rejoiced in every thing that looked like an excuse of your love to me, and made you the greatest of my creature-comforts;—that, madam, I always allowed, and I allow it to this moment. But I condemned myself for this, that I put you almost in the place of heaven, and thus clouded the evidences of my own sincerity, and sacrificed the pleasures of an habitual communion with God to at best an inferior happiness, and too frequently to those tormenting agonies that arose from the suspicion of your love to me, or the fear of being otherwise deprived of you. This, madam, was one of the greatest faults I found to charge upon myself in my self-examination before the last sacrament; and this was what I solemnly engaged to endeavour to reform. And will you then condemn me if I have not entirely forgotten an engagement of so sacred a nature? May God forgive me, that I have forgotten it so far! If, upon the whole, you have less of my thoughts than you had some time ago, it is only that God, and my Redeemer, and heaven, may have more, and that the divine Being might not be provoked to take away a friend of whom I had made an idol. Once more, madam, I do seriously assure you (and as I have often done before, I profess in the presence of God,) that I love you with greater tenderness than I can express; and that I have never permitted any friend upon earth to rival, or even approach you in my regard. I am daily praying that if it be the good pleasure of God, I may be so happy as to enjoy you; and that it may be my daily and delightful care to make your life easy and pleasant, to promote your present and your future happiness. May God say Amen to this petition; and may you, madam, join your consent! But if you will barbarously and ungratefully despise my love, and banish me from your heart and from your sight, though I have never deserved it from you, I shall own it as a just punishment from God for the excessive fondness I have bestowed upon you. I cannot certainly say I should have strength and virtue to undergo so severe a trial; but I must submit myself to the determination of Providence; and this I can confidently affirm, that if I were to lose not only you, but every other friend whom I have in the world, many of them deservedly dear and valuable, though not one of them equally beloved with yourself; yet while I have a sense of the Divine favour, the present entertainments of a scholar, a minister, and a Christian, and the future hopes of everlasting glory, it will be my folly and my crime if I am utterly inconsolable: and yet I cannot but often fear that I may be found so foolish and so wicked, if I am brought to the trial. My dear creature, let your goodness prevent it, and restore the peace of your anxious lover and faithful servant.”

The lady seems not to have been propitiated by this and similar adjurations—for her hapless

swain thus communicates his distress in various letters to confidants of both sexes.

"She is a woman of very good sense, a most obliging temper, and admirably fitted for a minister's wife. I am thoroughly assured that she loves me; but then she loves herself too well to plunge herself into strait circumstances with me.

"I have seriously to look back upon an amour of about twenty-eight months; and I find that, at the expense of a great many anxious days and restless nights, fond transports, passionate expostulations, weak submissions, and a long train of other extravagances, which I should be ready to call impertinent, if they were not too injurious to admit of so soft a name, I have only purchased a more lively conviction that all is vanity! On the whole, I bless God that it is not such an intolerable vexation as I was once ready to imagine it would have been. But the warning I had of this dreadful blow gave me an opportunity of summoning up all my philosophy to my assistance. I am just now come from the sacrament, where I have been renewing the dedication of myself to God, and leaving all my concerns with him. I have so often been referring this dear business to his wisdom and goodness, that I dare not dispute his determination. Kitty has left me, and a thousand fond schemes are vanished with her; and it was just that I should lose this creature, of whom I knew in my conscience I had sometimes made an idol."

And at length—

"To my Brother.

"March 10th, A.D. 1796.

"Restoration! Peace!! and Liberty!!

"Dear brother,—These few lines come to let you know that I am well, and that I lost my mistress yesterday about twenty minutes after four in the afternoon,—and that I am, &c."

How Kitty, like a true woman, wheedled him back again, that she might enjoy the triumph of turning him off; how he defended himself (lamely enough) against her charges of his being a very general lover;*—and other remarkable matters, will reward the inquisitive reader through some 200 pages of Vol. II.: but we cannot find room for the progress of the plot. The *dénouement* must, however, be consolatory to all persons who happen to be distractedly and unchangeably over head and ears in love. Doddridge says—"My late mistress is gone to Nottingham; and my heart is already in such good repair, that, if a more secure tenant could be found, it would be fit to let."

And when he comes to address another, which he soon does, he thus describes himself:

"When I lost my mistress, I bore it the more decently, in the hope that in some future amour I might meet with more equitable and generous usage. But, alas! with what confidence can I pretend to offer my heart to another charmer when she may so readily and unanswerably conclude that it is inconsistent because it is alive! If this be a new way of deciding the question, which is universally received, I am afraid I have lost the whole sex;—and if such be the case, it would be more likely to break my heart than to lose any one of its agreeable members. If such a catastrophe should really happen, I shall at least

have this consolation in my dying agonies, that even upon your own severe principles I have proved myself constant to woman, whatever I may have been to my late tyrant of awful memory."

We daresay we shall be tempted to resume these most characteristic—ay, and, in a social and moral view, most important volumes.

SIGHTS OF BOOKS.

Mohamed; or, the Illustrious! An Apology for the Life and Character of the celebrated Prophet of Arabia. By Godfrey Higgins, Esq. 8vo. pp. 109. London, 1829. R. Hunter; Hurst and Co.; Ridgway and Co.

SUCCESS to chivalry!—the "age" is not yet gone; and it is amusing to trace its permanency in one of the illustrious name of Godfrey, though a little depreciated by the adjunct of Higgins. At the moment when the glorious Crescent has waned into almost an imperceptible indication of semicircular light—when the barbarous wick's and bich's* are defiling the Sublime residences in the oples and the opolist—at this moment of humiliation and distress does our author step bravely forward in honour of Mohamed and his disciples. What effect his prowess may have on the fate of Turkey, we cannot predicate; but we cheerfully award him the praise of being a very liberal and a disinterested author, as he is a worthy and independent man. Yet his volume seems to take things by the wrong end—for he writes to "abate the mischievous spirit of intolerance which has hitherto existed between the followers of Jesus and those of Mohamed";† and yet he addresses the Christians as if their intolerance had ever gone farther than doctrinal and polemical opinions, while that of the Mussulmans has ever been in practice, throughout a vast empire, the most bigotted and inveterate personal persecution. On one side it has been words, on the other blows; and without entering upon the merits of the controversy,‡ all this difference alone shews that Mr. Higgins has begun with putting the cart before the horse. Upon a perusal of his book, it does seem that our author is more inclined to the Mohamedan than to the Christian faith; though we are unable to say whether he has been regularly initiated. Throughout, he decidedly prefers the former to the latter, and not only speaks very irreverently of, but sneers most profusely at, the gospel, its professors, and the church. Such being the case, the *Literary Gazette* can have no vocation to canvass his heterodox opinions; and we leave his book (the most anti-Christian we have ever met from a professed Christian writer,) to the world, with the single notice, that he asserts the traveller Burckhardt to have been truly (not fictitiously) converted, and to have died a firm believer in Islamism.

Reynolds's Book-Keeping. 8vo. pp. 119. *Key to the Same.* Pp. 38. Hurst and Co.

THE only kind of book-keeping with which we happened to be acquainted was that very common practice among one's friends of borrowing volumes and forgetting to return them (witness many a sad hiatus in our library!); and whenever we have seen a publication with the title of "The Book-Keeper's Assistant," we have thrown it aside, as a work of supererogation. But Mr. Reynolds's having a different name, we were led to look into them, and to

* See names of the Russian generals.

† Ditto, of Turkish cities.

‡ Upon, by the by, a most untenable assumption,—that "both religions, however unfortunately changed by time, are the same in their original foundation and principles!"

our surprise found that they furnished very excellent instructions for the keeping of mercantile accounts. As such, we commend them heartily to the commercial world, and particularly to the young Inkles of the day, who will discover nothing in them like a waste-book, except the lessons how to enter their transactions in that oddly-denominated memorial. Among the fictitious entries given as examples of the method, we were amused with one, charging "Thomas Hood, Esq., Adelphi," as the purchaser of 1000lb. of thread, at 24L 9s.; and surprised to see the poet credited for having paid the same in ready cash. In another place the same gentleman is charged with two butts of sherry, which is more in character;—but he also figures as an exporter of £250 of scarlet cloth to Smyrna! The introduction of his well-known name puzzled us awhile; but at length we learnt that the judicious author of these works was his near relative; and this accounted for his figuring in such accounts instead of the Epping Hunt.

Examination of the Principles and Policy of the Government of British India, &c. By a Gentleman in the Service of the Company. 8vo. pp. 184. London, Hurst and Co.

THE government of India becomes every hour a question of greater importance. It is widely assailed, and we are surprised not to see a well-organised defence of it by those whose interests are most concerned. If they do not look about them, the unanswered press will overturn their power; and they will find, too late, that nobody's business has been the ruin of their everybody. The present work is an insulated but able production. It suggests, and we cordially concur with the author, the anxious dissemination of education and European literature among the natives of India, as the surest way to preserve the empire to Great Britain. There is, besides, much interesting intelligence in the writer's descriptions and remarks; though we are not competent to decide on the value of his views with regard to the tenure of lands, nor on the justice of his strictures on the foolish conduct of the lawyers and judges adverse to the Company's rule, and leading to a belief that the King and the Company are opposed to each other.

Historical Recollections of Henry of Monmouth, and other Eminent Characters. By the Author of "Memoirs of James II.," &c. &c. 12mo. pp. 237. Baldwin and Cradock.

SKETCHES of several memorable characters are contained in this volume, in the usual garb in which favourable historians present them; and therefore it may be considered an amusing work, to allure the young into the graver study of general history. It might be wrong to look for much discrimination and philosophical reasoning in a production of its class; a portion of both, however, might have been added with advantage.

ORIGINAL CORRESPONDENCE.

Rome, Sept. 13, 1829.

THE story of the geese of the Capitol, which were reported to have been discovered in the neighbourhood of the Campidoglio, is a mere fable. There has been no excavation near its site for more than a twelvemonth past. Some years ago, excavations were made under the directions of Signor Nibby, a zealous antiquary, who discovered the Temple of Concord; but no sarcophagus containing the geese of the Capitol was at that time mentioned. They continued their search in the vicinity of the Roman

* The correspondence on this topic extends to great length. The lady, it seems, got hold of, and read, her sweetheart's private memoranda; and his explanation of the items are, to say the least of them, more curious than satisfactory. See p. 95, Vol. II. of seq.

Forum, and having opened a great part of the Via Sacra, they discovered behind the Temple of Peace some rooms with mosaic pavement, which are supposed to have been baths; but of their origin we have no authentic account.

Count Hawks le Grice is making excavations on the side of Mount Palatine (the site of the palace of the Cæsars and baths of Livia, &c.), the property of Signor Filippini, a gentleman much devoted to antiquarian pursuits. The object is to discover the ground-plan of the Theatre of Caligula, said to contain many costly marbles. Part of a bust of very rare alabaster-a-rosa has just been found.

I have seen a cameo of most exquisite Greek workmanship, found a few months back in a sarcophagus near Naples. It is in a most perfect state; the subject, an hermaphrodite, with infantine figures bearing symbols of love. This precious antique is in the possession of the Rev. Dr. Nott, who has formed, during his long sojourn in Italy, a fine collection of cameos and gems.

Mr. S. Gibson, architect, has produced a plan for the restoration of the Trajan Forum, in which he has shewn great research and knowledge of its supposed ancient grandeur. The design is very defective in drawing and perspective; but it is hoped the author will make a new plan of a work of so interesting a character.

Mr. Gibson, the classic sculptor, (so called for his close adherence to the Greek school), has lately modelled a recumbent figure, representing Narcissus enamoured of the reflection of his own person. Although the subject is not new, yet, it is so poetically treated, and so exquisitely formed, as to be a *chef-d'œuvre* of art. It is to be executed in marble for Lord Barrington.

In the Dead Christ, by J. Hogan, (an Irish sculptor) we admire the expression of resignation, the calm sleep of death, the laxity of the limbs and muscles, which are conceived with great feeling, and portrayed with striking truth. This statue is intended (it is said) to embellish one of the new Catholic churches in Ireland.

We cannot pass over in silence the works of Mr. Scouler the sculptor, whose modest and retired habits estrange him from his countrymen visiting Rome, and have veiled the productions of his chisel from the eye of the amateur. This artist received the highest prizes from the academies of Edinburgh and London, and in the year 1825 was sent to Rome, under the auspices of the Royal Academy. Since his arrival here he has produced many admirable works in model, as well as in marble. Among the models in gesso, is a group representing the Deluge. Though the subject is not considered to be of a sufficiently classic character, yet it is a very striking composition. The figures, which are finely formed, are also handled in a bold and masterly style. The strongly marked muscles of the male, the round and voluptuous form of the female, and the drooping youth, furnish pleasing contrasts, and are qualified to shew the abilities of this artist in a very strong light. Mr. Scouler has produced, in marble, a Narcissus in the act of contemplating the charms of his figure; a female in an Italian costume, with guitar; and has just given the *coup de grace* to a group of Adam and Eve, a work much admired for accuracy and beauty.

We have seen the first number of a work just published, entitled the Monuments of Greece, reduced to a regular scale of measurement; to which are added, Observations on Ancient Architecture, adapted to the Archi-

ture of our own times, by Girolamo Romani, architect and civil engineer. In this work the author has, with great precision, reduced the antique edifices to a graduated scale, and given a brief but clear and erudite information of their history. In the index of calculations, he has developed with accuracy the hypotheses of the art, and proves, by actual comparisons, that the doctrines of Vitruvius are applicable to the architecture of the present day. The same author published, in 1826, an illustration of the celebrated problem of the Ionic volute of Vitruvius; and, in 1828, an explanation of the *seamilli impares*, and the three orders of Vitruvius. The Academy of St. Lucca has testified its approbation of his works, and declared them indispensable to the study of architecture.

ARTS AND SCIENCES.

EXPEDITIONS.

New Guinea.—The King of the Netherlands having directed a survey of the northern parts of New Guinea, the Triton, commanded by the late Captain Steenboom, and accompanied by the brig Isis, proceeded on that service, and to take regular possession of the coast in the name of his majesty. Several official and scientific gentlemen accompanied the expedition, and, in steering along the shore, discovered in 3° 42' south latitude, and 133° 57' longitude east of Greenwich, a bay, which received the name of Triton Bay, and which they considered favourable for their plans. With the assistance of the natives, whom they found very mild and tractable, they constructed a fort, which they named Bus, and where the flag of the Netherlands was hoisted on the 24th of August, 1828—the anniversary of the king's birth-day. The expedition has (it is stated from Brussels) ascertained several interesting facts for geography, natural history, and nautical science. The permanent establishment of a European factory at New Guinea, will, no doubt, lead to further important discoveries, amongst which will be that of a thorough examination of the river Dourga, which will probably be found to be a strait, forming an island of the southern part of New Guinea.—*Gazette of the Netherlands.*

A letter dated Chippawa, Upper Canada, February 17, 1829, has lately been received by Mr. Hulbert, of Shrewsbury, from Mr. John Murree Willis, who, some four years ago, delivered a course of lectures in Shrewsbury on the science of geography, &c. Mr. Willis, we may mention, had formerly travelled in Russia, and experienced great politeness from the Russian government, and the literati of that country. In the letter above alluded to, he mentions the kind reception he met with from Mr. Brandt, chief of the six nations of Indians; and particularly speaks of the hospitality with which he was treated during three months residence with a tribe of Pagan Indians, totally unacquainted with any European language or custom. Mr. Willis consulted the tribe on the possibility of travelling west to the Russian settlement on the Pacific. They at first endeavoured to dissuade him from the enterprise, but finding him steady in his purpose, two of them kindly offered to accompany him to the Columbia river. Mr. W. anticipates an interesting, though dangerous and dreary, journey of 2000 miles across the American continent, through immense forests, inhabited by numerous wild beasts and savage tribes, without the chance of meeting a civilised being to direct or cheer him during his perilous route. Should he reach the mouth of the Columbia river, he

intends to pass over to Kamschacka, and, with the aid of his old friends the Russians, to reach St. Petersburg before the winter sets in; afterwards, he purposes to return to England. He promises Mr. Hulbert an account of his "travels and adventures," for a future edition of the Museum of the World.

Mr. Willis's letter is accompanied by a beautiful drawing of the Falls of Niagara. A short time before he made the drawing, a large piece of rock, near the centre of the Falls, fell with a tremendous crash. The part detached he supposes to be of the extent of an acre of ground; it had, consequently, changed the appearance of the Falls. His opinions of the Yankees are not very favourable to their moral character or liberality of feeling. Mr. Willis laments not having heard from his family since he left Europe.

ANCIENT AND MODERN EGYPT.

M. Champollion's Twelfth Letter—concluded.

BUT I have found and copied, in two of the halls of the palace, a still more interesting series of bas-reliefs, relative to the founder himself. I add a few words respecting the principal ones. The god Thoth announcing to Queen Tmauhemva, consort of the Pharaoh Thoutmosis IV. that Ammon-generator has granted her a son: the same queen, whose state of pregnancy is visibly expressed, led by Chnouphis and Hathor towards the lying-in chamber (the *mammisi*): the same princess lying on a bed: the birth of King Amenophis: women supporting the queen, and divine genii ranged below the bed, raising towards the infant the emblem of life: the queen suckling the young prince: the god Nile painted blue (the season of low water), and the god Nile painted red (the time of the inundation), presenting the infant Amenophis, as well as the infant god Harka and other divine children, to the great divinities of Thebes: the royal infant in the arms of Ammon-Ra, who caresses him: the young king taught by Ammon-Ra; the goddesses, protectresses of Upper and Lower Egypt, offering him crowns as emblems of his dominion over the two countries; and Thoth choosing for him his great name, that is to say, his royal prænomen—"Sun, lord of justice and truth"—by which he is distinguished on the monuments from all the other Amenophis. One of the last halls of the palace, of a more religious character than all the others, and which probably served for a royal chapel or sanctuary, is adorned only with representations of acts of adoration to the two triads of Thebes by Amenophis; and in this hall, the ceiling of which is still entire, there is a second sanctuary, the following dedication of which clearly fixes its date, which is very recent in comparison with that of the great sanctuary:—"Restoration of the edifice made by the king (beloved of Phré, approved by Ammon), the son of the sun, lord of the diadems of Alexander, in honour of his father Ammon-Ra, guardian of the regions of the Oph (Thebes), he has caused the new sanctuary to be built of good and hard stones, in the room of that which had been erected under the majesty of the king, sun, lord of justice, the son of the sun, Amenophis, moderator of the pure region." Thus this second sanctuary is no older than the origin of the dominion of the Greeks in Egypt, the reign of Alexander, son of Alexander the Great, and not the latter, as is proved also by the infantine countenance of the king, who is represented, both on the interior and exterior of this little edifice, adoring the Theban triads. In one of these bas-reliefs, instead of the goddess Tha-

moun, we have the city of Thebes personified under the figure of a woman, with the following legend:—"This is what Thebes (Toph), the great governess of the world, says: 'we have placed in thy power all the countries (the nomes); we have given thee Keme (Egypt), the fostering country.'" The goddess Thebes addresses these words to the young king Alexander, to whom Ammon-generator says at the same time—"We grant that the edifices which thou buildest shall be as durable as the firmament." This is the only modern part to be found in the ancient palace of Amenophis; for it is not worth while to mention the following circumstance, except for its singularity. In a hall which precedes the sanctuary, there is a stone of an architrave, which, having been restored in the reign of a Ptolemy, and adorned with an inscription, produces, on reading, a strange inscription, because no regard has been paid to the old stones of the architrave next it, which retain the original dedication, as follows:—

1st modern stone. "Restoration of the edifices made by King Ptolemy, always living, beloved of Ptaha." 2d ancient stone. "World! the sun, lord of justice, the son of the sun, Amenophis, has caused these buildings to be erected, in honour of his father Ammon," &c.

The old stone which was in the place where that of Ptolemy now is, had the following inscription:—"Aroeris, the powerful, &c., lord of the world, &c." It was not considered whether the new inscription had any connexion with the old one.

It is at the fourteen great columns of Luxor that the works of the reign of Amenophis end, under whom, however, the second and the seventh of the two rows, as you go from south to north, were decorated: the bas-reliefs belong to the reign of Horus, son of Amenophis, and the last four to the following reign.

All the north part of the edifices at Luxor is of another period, and formed a distinct monument, though connected by the great colonnade with the Amenophium, or palace of Amenophis. This north part was built by Rhameses the Great (Sesostris), whose intention was, not to embellish the palace of Amenophis, but to build a separate edifice; as evidently appears from the following dedication, sculptured in large hieroglyphics below the scroll (cartouche) of the pylon, and repeated on the architraves of all the colonnades, which the modern huts have not yet hidden.

"Life! Aroeris, child of Ammon, the master of the upper region and of the lower region, twice amiable, the Horus, full of strength, the friend of the world, the king (sun, guardian of truth, approved by Phré); the son preferred by the king of the gods, who, seated on the throne of his father, rules upon earth, has caused these buildings to be erected in honour of his father Ammon-Ra, king of the gods. He has built this Rhamseion in the city of Ammon, in the Oph of the south. This was done by the son of the sun (the beloved of Ammon-Rhameses), vivifier for ever."*

This, then, is a separate monument, distinct from the Amenophium; and this accounts for the two buildings not being in the same line, which has been remarked as a gross fault by all travellers, who supposed them to form one whole, which is not the case.

It is before the pylon of the Rhamseion of Luxor that the two celebrated obelisks of rose-coloured granite stand, which are so remarkable

for the purity of the workmanship, and their fine state of preservation. These two enormous masses,—real jewels, above seventy feet in height,—were erected in this place by Rhameses the Great, to adorn his Rhamseion, as is expressly stated in the hieroglyphic inscription on the middle column of the north face of the obelisk on the left, which is as follows: "The lord of the world, sun, guardian of truth (or justice), approved by Phré, has caused this edifice to be erected in honour of his father Ammon-Ra, and he has erected to him these two great obelisks of stone before the Rhamseion of the city of Ammon."

I possess accurate copies of these two beautiful monolithes: I have taken them with extreme care, correcting the errors of the engravings already known, and completing them by digging down to the base of the obelisks. Unfortunately, it is impossible to procure the end of the east face of the right-hand obelisk, and of the west face of that on the left hand: to obtain these, we must have pulled down some dwellings built of earth, and dislodged several families of poor Fellahs.

I do not enter into longer details of the contents of the inscriptions of the two obelisks. It is already known that, far from containing, as was imagined, great religious mysteries or sublime philosophical speculations, the secrets of occult science, or, at least, lessons of astronomy, they are merely dedications, more or less pompous, of the edifices before which such monuments were set up. I proceed, then, to the description of the two pylons, which are far more interesting.

The immense surface of each of these is covered with sculptures in a very good style, all military subjects, composed of several hundred figures: that on the right represents the king, Rhameses the Great, seated on his throne in the middle of his camp, receiving the military chiefs and foreign envoys; details of the camp—baggage, tents, &c. &c.; the Egyptian army drawn up in order of battle; war-chariots in front, in the rear, and on the flanks; in the centre the infantry regularly formed into squares. On the left side a bloody battle—the defeat and pursuit of the enemy—the passage of a river—the taking of a town: afterwards the prisoners are brought.

This is the general outline of the subject of the two representations, each of about fifty feet: we have very accurate drawings of them, and copies of the few inscriptions mixed with the military scenes. The principal inscriptions relative to this campaign of Sesostris are below the bas-reliefs. Unfortunately, a part of the village of Luxor must be pulled down to get copies of them: I was obliged, therefore, to content myself with learning from the upper lines which are still visible, that this war took place in the fifth year of the reign of the conqueror, and that the battle was fought on the 5th of the month of Epiphi. These dates prove to me that this is the same war as that, the events of which are sculptured on the right wall of the great monument of Ypsamboul, and which are likewise dated in the fifth year. The battle represented in the latter temple is also of the month of Epiphi; but the 9th, not the 5th: it is evident, therefore, that these are two affairs of the same campaign; and the people whom the Egyptians had to combat are Asiatics, who may be recognised by their costume as Bactrians, Medes, and Babylonians. The country of these last is expressly named Naharsina-kah (the country of Naharsina, Mesopotamia) in the inscriptions at Ypsamboul, as well as the countries of Séhôt, Robechi,

Schbatous, Marou, Bachous, which must of course be sought in the primitive geography of Western Asia.

The obelisks, the fourteen columns, the pylon, and the vast peristyle, or court, surrounded by columns, are all that remain of the Rhamseion on the right bank; and we read every where the dedication of Rhameses the Great, with the exception of two points only of this great edifice. It seems, in fact, that about the 8th century before the Christian era, the ancient decoration of the great portion between the two walls of the pylon was, through some cause or other, in very bad condition, and was entirely rebuilt. Instead of the bas-reliefs of Rhameses the Great, new ones were placed there, which still exist, and represent the chief of the 24th dynasty, the Ethiopian conqueror Sabaco, or Sabakon, who for a long series of years governed Egypt with great mildness, making the usual offerings to the gods, protectors of the palace and of the city of Thebes. These bas-reliefs, in which we see the name of the king, which is written Schabak, and which may be read very plainly, though pains have been taken to hammer it out at a very ancient period: these bas-reliefs, I say, are also very curious with respect to the style. The figures are robust, and very distinctly designed, with the muscles strongly marked, but free from the heaviness which is observed in the sculptures of the times of the Ptolemies and of the Romans. They are, too, the only sculptures of this reign that I have met with in Egypt.

A second, but unimportant, restoration is also to be seen in the Rhamseion of Luxor; and three stones of an architrave, and the capital of the first left-hand column of the peristyle, were renewed under Ptolemy Philopator; and accordingly the following inscription, as usual, placed over the architrave. "Restoration of the edifice, made by King Ptolemy, always living, beloved of Isis and Ptaha, and by the governesses of the world, Arsinoe, gods Philopators, beloved by Ammon-Ra, king of the gods."

I do not reckon among the restorations some sculptures of Rhameses-Meamoun, which are to be seen on the exterior of the Rhamseion, on the east side, because they may have belonged to a contiguous edifice, not really connected with the monument of Sesostris.

Here I terminate for this time my monumental accounts: in my next letter I shall speak of the tombs of the Theban kings, on which we are actually employed. Farewell.

P.S. April 2d. Nothing new since the 25th. We are still in good health and spirits. I give to my companions this evening a *fête* in one of the handsomest apartments of the tomb of Osirei.

LITHOTRITIE.

THE notice of medical literature is, with a few exceptions, out of our province; and the importance of the subjects it embraces, as well as their peculiarity, limits the discussion of them, generally speaking, to the professional journals which are at this day so numerous and so ably conducted throughout Europe. But there are subjects, in themselves purely, strictly professional, on which it is right not only that the practitioner should be taught, but that the public should be informed. Had the practical application of Jenner's great discovery, and the incalculable benefit it has entailed on the whole human race, depended solely on the efforts of the medical world, divided as it was at the period of the introduction of vaccination by the conflicting prejudices and interests of its

* The words between parentheses indicate the contents of the scrolls, the pronomen, and proper name of the kings.

members, not all the weight of character and talent which advocated it, could have succeeded in procuring its general reception and adoption. Jenner, with the good sense for which he was so distinguished, saw the necessity of convincing the public mind of the value of his discovery; of accustoming the public mind to reason on it; of apprising the public that means of safety and protection were within their reach. Now, though we do not mean to place this discovery of our French neighbours, of which we are about to give an outline, on a footing of equal importance with that of our Jenner, the benefactor of all mankind, yet there are strong features of analogy between them, which lead us to introduce to our readers a subject which we should otherwise have passed over without notice. The stone, a disease common throughout Europe, and the most painful of all maladies, hitherto relieved only by a formidable operation, of which death was too often the result, is, by this novel process—a process of perfect safety and great simplicity—rendered susceptible of cure in its most advanced stages; and surgery is furnished with means of preventing its growth at an earlier period. The value of this treatment therefore induces us to depart from our general rule, and to assist in making known the revolution which is in progress for the relief of the greatest of human sufferings.

The Baron Heurteloup, a French surgeon of great ingenuity and attainments, to whom the world is indebted for the perfection to which this department of his art has now arrived, has been some weeks in London, demonstrating publicly the nature and practice of this most extraordinary process, which has been named by the French faculty *lithotritie*. It consists in breaking the calculeous concretions which form within the bladder into powder or particles so minute that they are readily discharged by the natural passage through which the mechanism necessary for the destruction of the foreign body is introduced, without subjecting the patient to the terrors or dangers of incision. During the last five years this process has occupied the attention of several ingenious French surgeons, amongst whose researches those of Baron Heurteloup are the most prominent, having procured him "the grand prize of surgery" for the year 1827, from the Institute, for the perfection of the instruments he then suggested. Before his inventions, the destruction of these concretions was accomplished by repeated perforations, the result of which was their division into fragments, which fragments underwent in succession a subdivision by the same perforating instruments: but the baron saw the necessity of devising some means more rapid, and consequently less fatiguing to the organ in which they were employed; and he succeeded in obtaining them.

His instruments are introduced in a tube of small diameter, and developing themselves in the bladder, are so adapted, that the foreign body places itself within the branches which open opposite its neck, and, subsequently included within them, is retained firmly. The mechanism of this part of the apparatus, which consists of four branches, movable at will, together or separately, is peculiarly ingenious, and of very extensive application in various circumstances, which may modify its use; but it would exceed our limits to detail them. Suffice it to say, that the stone, firmly embraced by these four branches, placed in the centre of the bladder, which has been previously filled with tepid water, is submitted to the action

of what the baron calls the *evidour*, by the progressive, though rapid, eccentric motion of which its interior is completely excavated; and the exterior falls into the bladder in fragments resembling portions of shell, having a convex and concave surface. For the reduction to powder of these portions, Baron Heurteloup uses an instrument which he appropriately calls *brisecoque*, or shell-breaker. It consists of two branches, enclosed in a tube of small diameter also, which by a very simple mechanism extend and seize these fragments; and with extraordinary power (yet perfect protection against injury to the bladder) grind them into fine powder, which being voided as well as the detritus resulting from the action of the *evidour*, is passed off with the warm water previously introduced, and so terminates the operation.

We were much pleased with the candour and liberality with which the baron, in the demonstration at which we were present, noticed and appreciated the inventions of his countrymen who had preceded him in this department of surgery: he stated to us that he continues to make use of the three-branched instrument invented by M. le Roy (D'Étiolles), with which this ingenious surgeon, as well as M. Civiale, have effected several cures in France,* in cases where the stone was small; but we have above shewn that the obvious objections to its use were its tediousness and insufficiency, which the system of M. Heurteloup so admirably remedies. We should not omit to mention an important invention auxiliary to the baron's operation,—a species of bed, or great chair, on which the patient reposes, furnished with a mode of fixing the instrument (after the stone is seized), enabling the operator to dispense with the clumsy and embarrassing apparatus (chevalet) held by an assistant, previously in use.

Such are the important labours, for which we think not his profession only, but also humanity, owes a great debt to Baron Heurteloup: and we have been induced to exceed the limits we proposed in this article, to manifest how cordially we are disposed to forward the philanthropic views of this distinguished individual. We must not omit to mention that we have ourselves witnessed the benefit of this invention in the person of a gentleman aged sixty-six, many years a sufferer from this terrible malady, on whom the baron operated at the residence of Mr. A. White, the eminent surgeon of Parliament Street. As Mr. White is about to give the details of the case to the profession, we shall merely observe, that the individual in question is perfectly cured, and suffered so little inconvenience as to be able to walk home after the application of the instruments. Mr. Wattie, of 78 Upper Ebury Street, Pimlico, permits us to state that he is the gentleman to whom we refer.†

RUSSIA.

ALTHOUGH we have given some details of the statistics of this mighty empire on former occasions, we owe it to our readers not to withhold

* The history of the earlier inventions for the same purpose, which have ultimately led to the present improved practice, would be curious and interesting.

† We observe that at a recent sitting of the Royal Academy of Sciences at Paris, a M. Rigal read a paper relative to several instruments which he has produced for performing this operation with ease and safety. Another gentleman submitted to the Academy an invention for dissolving the stone in the bladder; and a report was ordered to be made upon it. We have ourselves carefully examined the baron's instruments, and it is impossible to conceive any contrivances more ingenious and skillfully adapted to the purposes for which they are required.

further elucidations of so engrossing a subject, at a period when it must be peculiarly desirable to them to possess data of a correct and authentic character. And such, we can assure them, is the nature of the information which we now proceed to lay before them.

The empire of Russia takes precedence of every other nation in Europe, as regards its extent and population. The numbers of the motley race by which it is tenanted amounted, at the close of 1828, to 62,592,000 souls, of whom the following is a classification by distinct nations:—

1. Slavonians	64,000,000	of 7 grades.
2. Finlanders	3,000,000	11
3. Tartars	2,500,000	10
4. Caucasians	1,010,000	6
5. Germans	800,000	2
6. Mongolians	320,000	3
7. Esquimaux	90,000	7
8. Samojeeds	70,000	14
9. Mameurs	65,000	3
10. Indians	25,000	3
11. Kamtschadales	12,000	3
12. Unknown origin	1,000,000	14

62,592,000, of 63 various grades or races of human beings.

In respect of the *religious creeds* professed by this parti-coloured multitude, it falls under the subsequent heads, according to an estimate made two years ago:—

Greeks	46,300,000	Lamaites	210,000
Catholics	6,000,000	Reformed Church	84,000
Mahometans	3,300,000	Armenians	79,000
Lutherans	2,600,000	Herrnhuthers	19,000
Shamanese	700,000	Mennonites	6,000
Jews	600,000	Filipponese	3,000

The population of Russia in Europe, independently of her Polish possessions (which in 1827 contained 3,850,658 souls), amounted in that year to 44,603,600, which is double that of Great Britain. Relatively to the other states of Europe, it is extremely thin of inhabitants, and stands inferior even to Norway and Sweden in density of population.

In *financial* respects, the following present general results for the year 1827:—

Revenue (Poland inclusive)	£138,333,333	= £17,291,600
Expenditure	£135,484,990	= £16,935,620
National Debt	£300,000,000	= £37,500,000

The *military force* consists—in infantry, of 23,800 guards and 294,600 of the line; in cavalry, of 63,520; of 24,000 irregulars; 300 pieces attached to the horse, and 732 pieces attached to the foot artillery, forming a total of 47,038. This is the amount of the regular establishment; but, in time of war, like the present, it is greatly augmented by levies under the imperial ukase. The Polish army consists of 50,000.

The *Russian navy*, at the beginning of 1828, comprised 50 ships of the line, 35 frigates, and above 100 other large vessels, besides floating-batteries, gunboats, galleys, &c.—the whole manned by somewhat more than 50,000 sailors. This establishment has of late been considerably increased.

The whole empire does not present above 1840 cities and towns, 1219 strong places, and 227,400 villages and hamlets. Among the first mentioned are Petersburg, 325,000; Moscow, 260,000; Warsaw, 126,443; Kiev, 40,000; Sandomir, 50,000; Odessa, 40,000; Riga, 47,000; Tula, 36,000; Kaluga, 25,000; Kasan, 50,000; Astrachan, 36,000; and Irkutsk, 30,000.

LITERARY AND LEARNED.

LONDON UNIVERSITY.

THIS important Institution has, it seems, adopted the plan, some time in agitation, of rendering itself a guide to the tyro, as well as to the so-far instructed youth. We have only seen an outline of the plan in the newspapers; but it appears to embrace the principle of a first-rate day-school, to prepare boys for the

more advanced labours of the University in its lectures and finishing instruction. As the King's College has proclaimed an intention of the same kind, we presume that such *doings* will be very injurious to the boarding-schools for young gentlemen in and about the metropolis. They will also probably lead the way to establishments like the Edinburgh free-school, and others, where the children attend so many hours a-day, &c.; and their parents are shareholders and directors. Similar schools are spreading fast; and the example of Edinburgh has been most successfully followed at Plymouth, &c. &c.; and, finally, so near London as Brompton.

PUBLIC LIBRARIES OF EUROPE.

WE are unable to state the exact number of these useful establishments, though, on a superficial enumeration, they cannot amount to fewer than between seven and eight hundred; the contents of which have been estimated by Malchus at 19,847,100 volumes. Of these contents there are preserved in

The Austrian States	2,280,000 vols.
Prussian	907,000
Remaining States of Germany.....	3,524,500
The whole of Germany	6,651,500
France.....	6,427,000
Great Britain.....	1,533,000
Russian Empire	880,000
Italy.....	2,139,000

The six most considerable, and, at the same time, most valuable libraries in Europe are the following:—

Royal Library, Paris.....	450,000 vols.	76,000 MSS.
Bodleian, Oxford	420,000	30,000
Royal Central, Munich.....	400,000	9,000
Vatican, Rome	100,000	40,000
University, Göttingen	300,000	5,000
British Museum, London	300,000	

FINE ARTS.

NEW PUBLICATIONS.

The Literary Souvenir for 1830.

WE have received proofs of the twelve prints which are to illustrate the *Literary Souvenir for 1830*. They are at least equal in merit to those which have appeared in the former volumes of this interesting and popular publication; and we do not know any terms of higher praise. "Mrs. Siddons, in the character of Lady Macbeth," engraved by C. Rolls, from a painting by G. H. Harlowe, is placed at their head, and richly deserves to be so. It gives us an additional reason to lament the premature death of an artist, who, like poor Bonington, had he lived a few years longer, would have done honour to his country. The figure is replete with Siddonian grandeur, and the expression perfectly embodies the feeling of the animated apostrophe to the absent Thane:

"Hie thee hither,
That I may pour my spirits in thine ear;
And chastise, with the valour of my tongue,
All that impedes thee from the golden round,
Which fate and metaphysical aid doth seem
To have thee crowned withal."

Nor must we omit to express our warmest admiration of the powerful and mellow manner in which Mr. C. Rolls has performed his part of the work—"The Sale of the Pet Lamb," engraved by C. Rolls, from a painting by W. Collins, R.A. An interesting subject, delightfully treated in the Flemish style of art; but with much more of sentiment than is usually to be found in the pictures of the Flemish school. In the engraving, Mr. C. Rolls has again distinguished himself. The effect of sun-light, especially, is most happily preserved.—"Viscountess Belgrave," engraved by R. Graves, from a painting by Sir T.

Lawrence, P.R.A. Finely executed by Mr. Graves (who is rapidly verifying our prediction last year respecting him) from one of the President's most simple and charming heads.—"Jacob's Dream," engraved by E. Goodall, from a painting by W. Allston, A.R.A. The subject is beautifully managed by the painter, and the engraving is a perfect gem; although its size is much too small for the variety of matter which it embraces.—

"The Tournament," engraved by J. T. Willmore, from a drawing by J. Martin. The last remark which we made on the last article is equally applicable to the present; in which, nevertheless, an admirable idea is conveyed of extensive space, and of condensed masses of human beings.—"La Fille bien gardée," engraved by C. Rolls, from a painting by A. E. Chalon, R.A. A fine specimen of Mr. Chalon's tasteful pencil, to which great justice has been done by Mr. Rolls.—"Childe Harold and Ianthe," engraved by E. Portbury, from a drawing by R. Westall, R.A. We like the engraving better than the design, which has somewhat of a theatrical and affected air: yet the figure of Ianthe is very sweet and sylph-like.—"Oberon and Titania," engraved by J. C. Edwards, from a painting by H. Howard, R.A. There is a delightful expression in the countenance of Titania, on whose eyelids the fairy king is squeezing the flower, which, on her waking, is

"To make her full of hateful fantasies."

Mr. Edwards is advancing with great strides in his profession; and has, in this instance, been most successful in transferring Mr. Howard's elegant and classical composition to steel.—"The Sisters of Scio," engraved by H. Rolls, from a picture by A. Phalipon. A simple and pathetic conception, sweetly engraved.—"A Portrait," engraved by W. Danforth, from a painting by C. R. Leslie, R.A. Full of life and individuality, as every portrait ought to be. Were we possessed of barbequin's magic sword, however, we would transform the insignificant bird on the lady's hand into a noble falcon.—"The Discovery," engraved by J. Goodyear, from a picture by F. P. Stephanoff. Although the exact parallelism of the two heads and necks is somewhat injurious to the composition, it is very graceful and interesting; and has afforded Mr. Goodyear a good opportunity of shewing his command of the tool.—"The Brigand's Cave," engraved by C. Rolls, from a painting by T. Uwins. The pity in the face of the brigand's wife, as she contemplates the innocent sleeper in her lap, will, we trust, have its due influence on her ruffian husband. The print is perhaps a little hard and liny, but it is very characteristic. Having thus glanced over the whole of this miniature gallery, we conclude, as we began, by bestowing upon it our hearty commendation.

Illustrations to the Iris.

THE engravings for this Annual have been placed before us too late for a specific notice in this Gazette; and all we can say on a cursory glance, is, that several of them from Carlo Dolci, Murillo, Baroccio, Cignani, and other ancient masters, are very finely executed. There is a remarkable production, the Raising of Lazarus, from J. Lievens, a painter of a former age: it is dated 1631.

Fountain of Tophana. Fountain of Bob Houmayon. From drawings by Page.

At a time when every thing Constantinopolitan has a peculiar interest, we are obliged to

Mr. Ackermann for these two large coloured prints of two of the most picturesque and remarkable objects in the city, about to be—who can tell what? We doubt not, however, whoever are masters will be prone to take care of these splendid fountains, so precious in eastern climes. For ourselves, we are contented to drink at them in imagination from these showy and characteristic pictures.

Engraved Illustrations of Ancient Arms and Armour. After the Drawings, and with the Descriptions of Dr. Meyrick; by Joseph Skelton, F.S.A. Part XX.

THE plates which embellish the twentieth part of Mr. Skelton's work are among the most beautiful that have hitherto appeared. They consist of "Musketeer's Armour, A.D. 1603;" "Spur, Boes of a Bit, and Stirrups;" "Indian and Albanian Weapons;" "Target of Steel embossed, A.D. 1568;" "Maces, Mazuelles, &c.;" and "Russet Armour, A.D. 1558."

The Right Hon. Lady Anne Beckett. Engraved by T. Wright, from an original Miniature by Mrs. Mee. M. Colnaghi.

WE have seldom seen a countenance exhibiting more feminine delicacy and sweetness of expression. This little print is the fifty-eighth of the Series of Portraits of the Female Nobility, published in "La Belle Assemblée."

Great Britain Illustrated. From Drawings by W. Westall, A.R.A.; engraved by E. Finden. Nos. 14 and 15. Tilt.

OF the several picturesque views which ornament these Numbers, those of "Lancaster" and "Durham" are our favourites.

Fisher's Illustrations of England. Nos. 10, 11, 12, and 13.

THE noble towns of Liverpool and Manchester have furnished the subjects for these four Nos. of Mr. Fisher's publication. Most of them are very picturesque, and all of them are very prettily engraved.

Fisher's Illustrations of Ireland. Nos. 6 and 7. THERE is much architectural magnificence and beauty in the plates which embellish these two Numbers.

GREEK VASES.

[The following is the Extract of the Letter of a distinguished Antiquary from Naples, to which we alluded last week.]

"WE have had, in the Roman states, a most extraordinary discovery of the Necropolis of Vulci, or Vulcia, in which already no fewer than 2000 vases, of the best workmanship and preservation, have been found: one-third of these vases are inscribed—all, however, with Greek characters, Greek personages, and by Greek artists, who are often named,—such as Andocides, Sosthenes, Phitias, Eschylus, Megacles, Glaucou, and Phidippos—all of whom either *egraphē* or *epoiesen* some of the paintings. These discoveries will be continued in the winter. About 400 plates, not unlike modern plates in shape, but in red terra cotta, with black figures, have also been found, which I imagine served for the funeral feast—probably only corn and raisins.

"The price of Greek vases is expected to fall in consequence; but at present they sell as well as ever. The collection here, which was the best in the world, is, of course, much diminished in value."

SKETCHES OF SOCIETY.

[At the present time, from which we take our colour, it will be seen that we prefer in these Sketches, and also in other parts, the subjects that are most interesting to the generality of readers. Among these, accounts of Russia and Turkey consequently take the lead; and we only beg to state, that our intelligence respecting these countries is not copied from unauthentic sources, but carefully extracted from rare and important works of the first authority.]

PASKEWITCH AND DIEBITSCH.

A FRENCH officer, who was present at a splendid ball given to the late Emperor Alexander at Moscow, in 1821, speaks in the following terms of these celebrated characters. "In the group of officers who at times assembled in his suite, I observed Paskewitch: his stature was lofty, his hair scanty, and his look melancholy. His eye shone like lightning; and deep meditation had rendered him bald. Diebitsch, too, was one of the circle: I met with him on several occasions, and, amongst others, at Taganrog, at the time of Alexander's death. He is of diminutive stature; his complexion sunburnt, and he walks with his head bent downwards: his look is chilling; but he has a busy, fiery eye; his forehead is high, like Buonaparte's; his back somewhat bent, and his features remind me of Chateaubriant's, allowing for disparity of years. His age at the present moment must be from five to seven and forty. His person betrays great vivacity of thought, and presents a striking combination of elegance and military spirit. He is said to be a man of pleasure; and we were accustomed to predict the distinguished station to which he would ultimately attain. Count Paskewitch, a man of a graver mood and more varied acquirements, is the mirror of German enthusiasm. I saw him a second time at the University of Charcoff, to which place he had brought his son."

SPECIMENS OF TURKISH LEGISLATION.

[Extracted from the *Mukhatta* (or Political Code), and the Book of Civil Jurisprudence.]

The Sultan's Power.—The chief of the Moslems must be a disciple of Mahommedanism, and have attained his majority; must be of sound mind, of noble race, and of the male sex. As Mahomet's representative and imam in chief, the sultan is conservator of the sacred code of laws, and guardian of the canonical enactments. As possessor of the Imametz, he is privileged to attend public prayers on Fridays and celebrate the two Bairams; and as the national guardian, he is endued with unlimited power over the faithful. In the sultan alone is vested the right of appointing to offices, whether of a judicial or executive character: to him alone appertains the uncontrolled disposal of the revenue and expenditure of the state, the command of the national forces, the right of making peace or war, and the watching over the public safety and tranquillity; on him alone, in short, devolves, and in him alone centres, the entire government of the state. The sultan's power is indivisible—his person sacred and inviolable—his judicial powers extend over all persons and things—and he is consequently placed beyond the reach of any penal laws. Conquest has given him military suzerainty; and hence arises his right to command the army. Yet he has no power of interference with the canon law, much less if such interference should be prejudicial to the condition of his subjects or the well-being of the servants of God; for both are recommended as special objects of his paternal care.

Foreign Residents.—The stranger during his sojourn in Moslem countries is entitled to the

protection of the laws, provided he reside by permission of the sovereign or his representative. This permission is confined to two, six, or eleven months, and is never extended to a whole twelvemonth. If a foreigner remain in the country beyond the period appointed him, he becomes a taxable subject, is obliged to pay the capitation tax, and forfeits the right of quitting the country without impediment. Strangers of the female sex incur similar liabilities upon their marriage with the sultan's subjects. But the residence of a foreigner who has become chargeable with taxes, does not entitle him to the protection of the Moslem laws as respects his property in other countries: the female also, with her children and every description of property, is in time of war subject to the laws which attach to the enemies of Islamism. If either quit the country after becoming taxable, they are deemed to have removed themselves surreptitiously, and incur the penalty of proscription, which places them beyond the pale of the law. If slain or taken prisoner whilst fighting under the enemy's colours, their property is confiscated by the act, and becomes lawful booty to the conqueror.

Marriage.—A man can marry four wives; and at marriage both incur the obligation of remaining true to each other for the duration of their lives. A Mussulman is prohibited from marrying, amongst others, his mother, grandmother, daughter, aunt, or niece; his wife's kindred; his own slave, or the slave of another, if the husband be already possessed of a lawful wife; a female of another faith; or a woman who is betrothed to another. And a Moslem woman is forbidden to intermarry with an infidel. The milk which a woman affords to a stranger child gives the child the same rights as if it were of her own blood. Even if the child sip but a drop of other milk, or what is still more extraordinary, if but the smallest possible drop of her milk fall accidentally into the child's nostril, or if it taste it by the merest chance, even without having been taken to the breast, it acquires an inalienable right to a mother's care. The husband must place all his wives on the same footing as to food, apparel, and rank; and may choose for himself, if he cannot take all of them with him on a journey, though his more prudent course is to let them draw lots for the right of accompanying him. He possesses an almost despotic power over them, but forfeits it if he refuse to return her the marriage-gift she brought him! On the other hand, if she rebel against his slightest caprice, or refuse perfect obedience to him, he is entitled from that moment to suspend her maintenance.

Divorces in Turkey.—According to the Turkish law, the husband alone is the arbiter of a separation *à mens et toro*; and he can sever the connubial tie at his own good pleasure, provided always that he be of age and sound in intellect. The sentence of divorce is laconic enough, the Turk probably opining that, on such occasions, the less said the sooner mended, and either of the following formulæ suffices to erect the partition-wall between man and wife. "Thou art cast off;" or, "Carry thy fecundity far away from my presence;" or, "Go, count thy months;" or, "I cast thee away from me, with 'thy lap, thy breast, thy head,' or thy countenance." But from the moment the doom has passed his lips, he himself forfeits all personal claim on his spouse; whilst the latter is compelled to isolate herself from all society throughout the succeeding three months, during which period such conjugal rights as affect

the laws of inheritance and the husband's powers over the wife remain unimpaired. He is, however, entitled within this space to take her back again, even though she may prove contumacious, and to incarcerate her until she consent to live with him once more. During her confinement he is also at liberty to visit her at intervals, for the purpose of endeavouring to pave the way to a reconciliation: but his visits must be limited to the mere intercourse of the tongue—any endearment or familiarity whatever is rigidly excluded and prohibited; and so be to him if he be caught transgressing against the prescribed observances; a breach of them arms the wife with the right of employing even poison to send him into the other world. The dissolution of the marriage-vow is consummated upon the expiration of the three legal months; and if after that period the couple are inclined to resume their conjugal relations, the nuptial ceremony must be celebrated *de novo*. A similar course becomes requisite if a second divorce should result in a second homage to the laws of attraction and cohesion; but after a tertian relapse, the husband cannot resume possession, excepting the wife have been married to another.

DRAMA.

DRURY LANE.

THIS house opened on Thursday with a bumper audience. The play was *Hamlet*; and Miss Faucit made a very promising *début* in *Ophelia*. So late in the week we cannot enter into particulars.

COVENT GARDEN.

THIS theatre opens on Monday with *Romeo and Juliet*, cast in a style of uncommon interest. Abbott, an actor who did more to make second parts *first* than any performer we ever saw, plays *Homeo*; and we anticipate he will not make a *first* part *second*, though C. Kemble is to be the *Mercutio*, and Warde the *Friar Laurence*. Meadows (for whom no fair opportunity has ever occurred, or been created, to exhibit his fine comic talent) is only the *Apothecary*; but the grand attraction of the night is the first appearance of Miss Kemble (the daughter of Mr. C. K.) as *Juliet*; and Mrs. Kemble, her mother, as *Lady Capulet*. The attraction is so strong, that in the better time of the Drama we should have thought of securing a place as soon as the doors were opened.

ENGLISH OPERA.

THE season closed last night; and as we have noticed its deserved success as it went on, we need only recapitulate the causes.

Middle Temple, a Farce by Peake; Music by Rodwell, 23 nights.

Sister of Charity, a Melo-Drama by Benini; Music by Hawes, 33 nights.

Inoc. "What's in a Name," a Farce, Anon.; Music selected, 2 nights.

Robber's Bride, a Grand Opera, translated by E. Ball; Music by Ries, arranged and adapted by Hawes, 19 nights.

Witness, a Melo-Drama by T. H. Bayly; Music by A. Lee, 7 nights.

Spring Lock, a Melo-Drama by Peake; Music by Rodwell, 26 nights.

Der Vampyr, a Grand Opera, translated by Planché; Music by Marchner, arranged and adapted by Hawes, 14 nights.

Sold for a Song, an Operetta by T. H. Bayly; Music by A. Lee, 16 nights.

Recruits, a Melo-Drama by C. W. Hallett; Music by Hawes, 6 nights.

In addition to the rapid production of nine new pieces, several successful revivals have taken place. Dibdin's *Waterman*, which gave Wood an opportunity of singing the beautiful ballads in a pure and delightful style. The

fares of *Master's Rival* (sent to the tomb of the capulets by Liston, at Drury Lane,—but brought to life again by the clever little practitioner Keeley, who infused a new spirit into the defunct, and made it run for fourteen nights at Covent Garden) has been also revived with distinguished success, and performed no fewer than ten times during the English Opera season. Mr. Bartley spoke an appropriate address; for which we regret we have not room.

ADELPHI.

THIS pleasantest of pleasant places opened on Tuesday; but we have not yet had an opportunity of visiting it. *Monsieur Mallet* was a sure card to play out; and there would be, of course, a great deal in the house, packing in the best sense, and no packing in any other.

SURREY THEATRE.

It is, for guides of public taste, a shameful confession to make, but we so seldom think of visiting the minor theatres, unless seduced by some uncommon occurrence, that it was somewhere about the *hundredth* repetition of *Black-eyed Susan* at this house when we witnessed the performance on Tuesday last. Having seen it, we do not wonder at the extraordinary popularity of this piece; for if admirable acting and a well-constructed drama can insure success, the requisites are here. T. P. Cooke is the best sailor that ever trod the boards—in frolic and in affliction he is always true to nature, and to the peculiarities of the seaman. His hitch, his swing, his back-handed wipe, his roll—in short, his every look, gesture, and motion, are redolent of the blue water and the lower deck; and all this is qualified by great ability, and a degree of feeling which is far more like truth than acting:—can we wonder that such a man should draw and delight crowds for hundreds of nights? We are not, however, going to criticise the Surrey; and all we shall say of our experience there is, that the entertainments were most gratifying, and far superior to any expectation we had formed. Vulgarly, the vice of the smaller theatres, was shunned by the sound discretion of the leading, and very clever, actors; so that, without expecting an aristocratic company, there was nothing which the best society might not witness with pleasure. Cooke made every man in his ship a sailor as well as himself; and Vale (in three parts) displayed a versatility of talent (kept quietly down below the buffoonery of actors, who often obtain much applause by their tricks) that obtained our hearty approbation. We were also much pleased with the performances of Mr. Forrester, Mr. Rogers, Mr. Buckingham, and others; and have no hesitation in advising our readers to go forthwith, and enjoy a night's amusement at the Surrey.

CHESTER MUSICAL MEETING.

It is said, that after defraying the expenses of the late "Festival," upwards of a thousand pounds will be appropriated to charitable purposes. The manner in which national, and particularly provincial, talent has been encouraged, reflects the greatest credit upon the committee of management. A Manchester gentleman, of the name of Bennett, (said to be the private pupil of that admirable master Crevelin,) is spoken of highly in the Chester papers; and is considered by the critics as one of the most promising *tenors* of the day. His performance of a song from the "Redemption" excited an extraordinary sensation in the audience.

VARIETIES.

Moulds.—A complete manual of the art of making moulds of all the various materials which are used for that purpose has been published at Paris, and is spoken of by the French reviews with great praise, as throwing every light upon the subject of which it is susceptible.

Improved Candle-wicks.—A M. Hebuta, a candle manufacturer at Paris, has invented a new wick for tallow candles, which is hollow. It is said to give a better light than the ordinary wick, and to prevent guttering.

Stereotype Printing.—Holland possesses far more substantial claims to the merit of this invention than to the glory of originating the noble art of typography. Besides a quarto Bible, published in 1711, there exists a Dutch Bible, stereotyped in folio at the commencement of the eighteenth century. These are indisputable proofs that stereotype printing was employed in Holland long before it was even known in France. In a note to No. 1316 of Barbier's Catalogue, it is also recorded, that Johann Müller, pastor of the German church at Leyden, had devised, in the year 1701, a novel method of printing, which much resembles the process of stereotyping as now practised. This method consisted in composing the page in the usual manner, correcting it accurately, securing the type with iron ties, turning it over on its face, and then cementing it into a solid mass by means of a metallic composition, or, preferably, of mastic. The first trial of this process was made with a book of prayers, entitled, "Gebede-Bockjen van Johan Haverman," and printed by W. Müller, the inventor's son, in 1701. The invention was subsequently transferred to Halle; and Müller, in a letter of the 28th June, 1709, mentions that he had applied it in the publication of a Syriac New Testament, conjointly with a Lexicon.—*De Reiffenberg*, Louvain.

Literary Rewards.—The King of Prussia, who in 1813 wrote a very flattering letter, accompanied with a gold medal, to M. Julien, at Paris, the author of "the Spirit of Pestalozzi's Method of Education," has recently addressed to the same gentleman another letter, accompanied with a second gold medal, in return for a copy of the fourth edition of his "Essay on the Employment of Time." Such notices, from crowned heads, are among the best encouragements to literary and useful exertion; and we sincerely wish they were more usual.

Hungarian Universities.—In the Royal Academy of Presburg there are 433 students; viz. 236 of philosophy, and 197 of law; added to which there are in the Archiepiscopal Lyceum of Turnau 78 students of philosophy, and in the Episcopal Lyceum of Waitsen 60. At the Royal University of Pesth, there have been, during the present year, 1,710 students; viz. 73 of theology, 381 of law, 401 of medicine, and 609 of philosophical science. Of this number, 1,243 are Roman Catholics, 142 Greeks, 68 Protestants of the Augsburg confession, 140 *Reformés* of the Swiss confession, and 153 Jews.

Meditations upon Nature.—At a late sitting of the Paris Royal Academy of Sciences, M. Meckel was unanimously elected Corresponding Member in Germany, to fill up the vacancy in the section of medicine and surgery.—M. Geoffroy St. Hilaire read a memoir, entitled "Meditations upon Nature;" and made some observations on this new branch of science, cultivated in Germany, and which has specially

received the name of philosophy of nature. The principles which its partisans profess, are the pretension of uniting the *ensemble* of the phenomena of nature; of arriving at conceptions, not by deductions *a priori* drawn from the observation of particular facts, but from primitive views. M. St. Hilaire stated the difficulties of such an hypothesis, but admitted that a man of genius might make progress in such a science. Kepler, he said, pursued his astronomical studies according to the inspirations of his genius, without the aid of knowledge and observation; and Newton had, by similar means, established one of the most important propositions—that planetary bodies attract in direct proportion to the inverse masses of the square of the distance. One of the principles professed by these philosophers is, the unity of organic composition; and that all organised beings are divided into two distinct classes, according to whether they breathe in the midst of air or water. Vertebrated animals, they contend, are constructed under a double point of view. Their embryo presents two respiratory organs, and if one of them dominates over the other, the result is, that the animal becomes either an aerial one or a fish. The author professes to have paid much attention to monstrosities, and endeavours to prove that though they were formerly considered as contrary to nature, yet, in fact, they only furnish new proofs of the constancy of her laws. M. de St. Hilaire, in conclusion, said, that, if we believed in the determinate existence of certain organic materials, in that of a very few laws for their disposal, in a prescribed and necessary order of arrangement, and, consequently, in the philosophical resemblance of beings;—and, finally, that if we had made these propositions, extended to all their identical cases, the subject of an abstract and general principle, we had, at least, not conceived that principle before the examination of the facts; but, on the contrary, had adopted it only after long-continued investigation.

LITERARY NOVELTIES.

The Fourth and last Part of the History and Antiquities of Luton Chapel is on the eve of publication.

LIST OF NEW BOOKS.

The Borderers, by the author of "the Spy," 3 vols. post 8vo. 12. 11s. 6d. bds.—Stewart's Practice of Conveyancing, Vol. II. royal 8vo. 12. 1s. bds.—The Heraldry of Crests, royal 18mo. 10s.; large paper, 13s. bds.—Tammlyn's Reports in Chancery, Part I. 8vo. 6s. sewed.—Norton's London, by Tyrrell, 8vo. 12. bds.

CHARLES H. ADAMS.

TO CORRESPONDENTS.

We are glad to find that a copious Glossary is preparing for the new edition of the Waverley Novels, as suggested in our last; but it had been previously advertised, and escaped our notice.

We really (on Thursday night) cannot tell C. H. whether we received "Night," a poem, or not.

Our readers will please to correct the following ERRATA: in our last, p. 632, col. 1, line 20, for "commercial" read "communal;" and in the same page and col. insert this heading to the subsequent statement of the "Superficial Extent of Europe." Also in our notice of the Haymarket, near the end, for "brother" read "wonder;" Sir J. Franklin being Mrs. Vernon's uncle.

T. GANDY, Secretary.

LITHOGRAPHY. In answer to a Reply by Mr. Coindet to a Pamphlet lately circulated by me, I beg to observe, that the statement in a fair and satisfactory way one single statement that I have made.

Mr. Coindet states that Mr. Engelmann's "yellow facing is good for nothing." How are we to conciliate this avowal with the manner in which the honour of having discovered facing is claimed for Mr. Engelmann in the "History of Lithography?" The claim sets forth how Mr. E. "was the first to discover the presence of iron in lithographic stones," and how from one string of reasoning to another he was led to use facing; and yet all this claim for the priority of the idea is about a process which is "good for nothing." Mr. Coindet asserts that a faced stone "may succeed in one instance, and fail in twenty," by which assertion he charitably insinuates, since I have declared that I continue to use facing, that this must still be the case with drawings which are sent to my establishment to be printed. Mr. Coindet, in his answer to my pamphlet, bewails himself in his own reasoning; for he admits that the "History of Lithography," and Engelmann did communicate to me the process of facing; and yet, as his answer, he supposes that Engelmann might not have communicated it to me because it was "good for nothing." He says that "he has some reason to suppose that my facing is the same as Engelmann's," but how can he doubt its being the same, since he maintained at first that Engelmann gave me the process? Mr. Coindet says, that out of twenty-one drawings, only one succeeds, when done on faced stones. This does not look as if, to use his own words, "he who knows how to treat a preparation in one instance, and fail in twenty," was a man in business in Mr. Coindet's manner. I must surely be a man of moderate blood to go on using this dreadfully uncertain process; and artists and publishers must be very stupid to go on sending their drawings to me, when they lose twenty drawings out of one and twenty, and to wonder that, when informed Mr. Coindet (a French artist) that "it was impossible" (Mr. Coindet has put this word in italics) that any one but myself could etch his drawing, on account of the facing. This, to use Mr. Coindet's expression, is "a fibber;" and as he has quoted Mr. Coindet, to him I appeal whether I did not inform him simply, that the success of his lithography was entirely dependent on the facing, and that, as I myself, as stones sent out from my establishment required a peculiar treatment; but I never used the word "impossible." I considered myself bound to warn Mr. Coindet against the risk of the failure of his drawing; for I knew that several drawings, done on stones which were in the first instance obtained from my establishment, had been spoiled when placed in the hands of other printers; and Mr. Coindet himself cannot deny, that when this has happened to him, he has invariably attributed the failure to my "curious facing."—I am using his own words; Mr. Coindet has plucked his fingers in his own way, and need no better defence for the caution I gave to Mr. Coindet than quoting Mr. Coindet—that, in his opinion, "twenty drawings fall out of twenty-one." Messrs. Moon and Boys, on Mr. Coindet's own saying, may congratulate themselves on the narrow escape they have had with Mr. Coindet's drawing. To all this I must add, that what I said to Mr. Coindet could not have been spoken in enmity to Mr. Coindet, since he did not know himself where the stone was gone to be printed; all he knew on the subject was, that he had sold it to Messrs. Moon and Boys.

It appears then that I was, in asserting that Mr. Croker the author of the "History of Lithography" was a partner of the firm of Engelmann, Coindet, and Co. I have to apologise to Mr. Croker for the mistake; but if this latter gentleman, as is affirmed, is not a partner in the business, Mr. Coindet well knows that at no distant period Mr. Croker was not very far from being received as one; I was, therefore, not deviating much from the truth in what I advanced.

Mr. Coindet says, "I have seen with pleasure that Mr. Hullmandel declares that he was willing to break his agreement with the house of Engelmann, and that he has destroyed a report which has been extensively circulated—that our agreement was formed contrary to the said agreement." If by this Mr. C. wants to insinuate that I am the author of these reports, he says that which is unfounded and false. I defy him to trace such a report to me, or to show me any one in my employment; for never have I said such a thing as to break my agreement; for, if he, an individual to whom I have asserted, or even hinted such a thing.

I maintain that all that I have advanced is true; and if some of these assertions are injurious to one of Mr. Coindet's partners, he has drawn this attack upon himself, by his conduct in contesting from me, contrary to his agreement, processes he claims as his discovery. Mr. Coindet rejects Mr. Harding's testimony with regard to my process and my printing, on the ground of this gentleman's having had no drawings printed elsewhere. I may perhaps be allowed to mention the fact of Mr. Lane having confided again to me the printing of those drawings of his which he considers of most importance, after having had many plates printed by Mr. Coindet.

Mr. Coindet's determination to answer my pamphlets no more. Nothing will give me more pleasure than to see, in part, that to put a stop to my complaints; let him carry on his business in a fair and honourable way towards me—let him not speak to every one as he has done, and is continually doing, of me, and of my establishment, so as to harm me as much as he can; let him oppose me in an open and straightforward manner, by trying to send forth better work than me—let him not backbite and slander me to all who will listen to him—let him not, as far as concerns myself, advance as facts things which he knows to be false, or which he knows nothing about—and I will most willingly remain silent. If, very far from my trying to throw myself before the public; but Mr. Coindet has compelled me to do so. I cannot conclude better than by using Mr. Coindet's own words:—"Let the public decide who is the best Lithographic Printer from the works produced by their respective Partners."

at Great Marlborough Street. C. HULLMANDEL.

PREPARATORY SCHOOL, RICHMOND. THE MISSSES HARRISON invite the Attention of Parents and Guardians to their Select Establishment for Young Gentlemen on Richmond Green. The House is airy and commodious, with an excellent Garden, and the greatest attention is paid to the Health, Improvement, and Happiness of their Pupils.

Terms, for Board and Instruction, Thirty Guinea per Annum; Two Vacancies will occur after Michaelmas.

Part VII. and last of
JACKSON'S DESIGNS FOR VILLAS, on a
moderate Scale of Expense, adapted to the Vicinity of the Metropolis. Price 5s.

Part III. of
Wetten's Designs for Villas in the Italian
Style of Architecture. Price 6s.
To be completed in Six Numbers.
Printed for James Carpenter and Son, Old Bond Street.

BROOKESIAN MUSEUM. The remaining Part of Mr. Brooke's Anatomical and Zoological Museum, comprising Preparations illustrative of the Anatomy and Pathology of the Human Body, with a considerable as well as splendid Collection of Zoological Subjects; and in the Department of Natural History, of a choice Assemblage of Animals, both British and Foreign, will be on view for Sale by Auction, about the latter end of October, when Catalogues may be obtained, price 2s. 6d. at the Theatre of Anatomy, Blenheim Street, (until further notice) and of Messrs. Bessange and Co. Booksellers, Paris.

The Lease of the Premises will be sold at the same time; likewise the Pictures, and some of the Furniture. Mr. Brooke having, altogether declined Anatomical Tuition, intends removing to a more eligible Situation for Private Practice.
N.B. Neither Servants in Livery, nor other Persons unless dressed in decent Apparel, can be admitted.

MUSIC.

A N EMINENT PROFESSOR OF MUSIC
has now a VACANCY for a YOUNG LADY as a PROFESSIONAL PUPIL, who will be instructed in every necessary Branch of the Musical Profession, and (if desired) in the duty of an Organist. It is requisite the young Person should possess some previous knowledge of Music, as also a natural talent—as the Terms will be moderate.
For particulars, with the Name and Address of the Party, apply by Letter (post-paid), to J. V. Messrs. Chappell and Co. No. 50, New Bond Street.

BOOKS PUBLISHED THIS DAY.

Second edition, post 8vo. 8s. 6d.
NARRATIVE OF A JOURNEY FROM CALCUTTA TO EUROPE, by way of EGYPT, in the Years 1867 and 1868. By Mr. CHARLES LUSHINGTON.
Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of appreciation.—*Oriental Herald*.
John Murray, Albemarle Street.

On the 1st October was published, price 2s. (to be continued monthly), No. 1.
THE EDINBURGH JOURNAL OF NATURAL AND GEOGRAPHICAL SCIENCE

Conducted by an ASSOCIATION OF NATURALISTS.
Illustrated occasionally with Maps, Charts, and Engravings.
Contents:—Art. I. A Description of the Landes of Acajutla; by W. Ainsworth, Esq.—Art. II. Description of Five New British Species of Shells, with Figures; by Captain Thomas Bristow, F.R.S.E.—Art. III. On the Electricity of the Simple and Compound Galvanic Circles; by K. T. Kemp, Esq.—Art. IV. Account of the Island of Jersey, by Alexander Sutherland, Esq.—Art. V. Notice of a Caviary worm, with a Plate; by W. Rhind, Esq.—Surgical Art. VI. On the Influence of the Origin of the Gorge; by Capt. Ayton.—Sir Rufus Doft's Description of the Course and Termination of the Niger, Lond. 1829.—Polydore Poen's *Crustacés de la Méditerranée, et de son Littoral*, Paris, 1829.—Ellis's *Polymetris Researches*, Lond. 1829.—Transactions of the Philia Society, Edin. 1829.—Dr. Holland's *Experimental Inquiry into the Laws of Life*, Edin. 1829.—Accounts of the Voyage of the Atalante and of the Chevrete—Caillie's *Voyage—Travels of Champollion—The Scientific Voyage to the Morée—Establishment of the New Colony on the Swan River—Notice of Dr. Kroyer's Theory of Hermaphrodites*—Capt. Brown's Observations on Mr. Kenyon's Paper on British Shells.—Discovery of two Oviducts in a Fowl.—On the different Causes of the Coloration of Snow and Ice, &c. &c.

Abstract Notices of New Works and Papers on Geography, Natural History, &c.—Recent Discoveries in General Science and the Arts.—Proceedings of Scientific Institutions.
Daniel Lizars, No. 5, St. David Street, Edinburgh; Whittaker, Treacher, and Co. London; and William Curry and Co. Dublin; to be had also of the Booksellers of the United Kingdom.

Price 5s. boards,
HISTORICAL RECOLLECTIONS OF
HENRY OF MONMOUTH, the Hero of Agincourt;
and other eminent Characters.
By the Author of "Memoirs of James the Second," &c. &c.
London: Printed for Baldwin and Crocker.

On the 30th September was published, price 6s. the
THE BRITISH CRITIC, QUARTERLY
THEOLOGICAL REVIEW, and ECCLESIASTICAL RECORD.

Contents:—Church Reform—Cox's Memoirs—Wingham's Prolegomena—Oliver on the Antiquities of Beverley—Memoirs of Lady Fanshawe—Dr. Ure's System of Geology—Life and Times of Archbishop Laud—Rice and Pusey on Rationalism—Le Bee's Sermon: Festival of the Sons of the Clergy—Count Forno on the Emancipation of the Protestant Vandois of Piedmont—Bather's Sermons—State of the Dioceses—Proceedings of the Universities.
Printed for C. J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

The First Five Volumes may now be had complete, price 12s. each, in boards.

Also,
The Four Volumes of the Quarterly Theological Review, for the Years 1823 and 1826, price 2s. 6d. boards, or any Number at 6s.

The New School Question Book.
 In a clear bold type, on handsome paper, and handsomely printed, 12mo. price 4s. 6d. neatly bound.

GUY'S GENERAL SCHOOL QUESTION BOOK; in which each Question, in a regular Series, is followed by its appropriate Answer, not only in Ancient and Modern History, in which the whole is arranged in chronological order, but also in Biography, Astronomy, Heathen Mythology, Classical Phraseology, and a great and interesting variety of miscellaneous subjects; the whole tending to enlarge the boundaries of Juvenile Knowledge, by increasing its stores; and thus, by blending such a course of general information with sound classical or liberal learning, to raise a better superstructure of school education.
 By JOSEPH GUY, Formerly of the Royal Military College, and Author of a Chart of General History, Pocket Cyclopædia, School Geography, Elements of Astronomy, British Spelling Book, &c. &c.
 London: Printed for Baldwin and Cradock.

To supply youth with a compendium of general history has been the chief object of this manual; so much it exhibits not a confused and unprofitable assemblage of ill-arranged questions, but a well-digested abstract of both ancient and modern history and biography, from the creation to the present time, in a regular series, with the dates affixed, embracing the most prominent features of Ten Ancient and Eighteen Modern Kingdoms and States, with the principal revolutions of the most illustrious nations; and perhaps such a body of historical matter has seldom been compressed in so moderate a volume. The Miscellaneous portion includes the Human Structure explained—the Mental Powers—Productions for Food—Wines, Spirits, &c.—Gums, Spices, &c.—Mineralogy, Earth, Gems—Woods, Vegetables—Titles and Distinctions—Great Offices, Government, Law, &c.—Tithes, Corporations—Trade and Commerce—Poetical and Literary Terms—The different Denominations of Christians, &c.

Price 7s. 6d. the 9th edition of
THE OMNIPRESENCE OF THE DEITY; a Poem.
 By ROBERT MONTGOMERY.
 Dedicated, by permission, to His Grace the Archbishop of Canterbury.

Also, the 3d edition, price 7s. 6d.
A Universal Prayer; Death; a Vision of Heaven; and a Vision of Hell. By the same Author.
 London: Printed for S. Maunders, 10, Newgate Street.

Price 2s. 6d. No. I. of
THE LONDON UNIVERSITY MAGAZINE. Contents.—A Young Head, and, what is better still, a Young Heart—A Tale of the Irish Rebellion—On a General Judgment, and the Effects which a Belief therein produces on the Human Character—Sketches of the Irish Courts—the Exchequer—On a new System of communicating Scientific Information, in a tabular form—On the Study of the Law—On the best Mode of Studying Medicine in the University of London—On Apoplexy—Demonstration of the Base of the Cranium, with a Plate—The Metamorphosis of Plants, by Goethe, with Three Engravings—Prizes and Honours—Examination Papers for the Medical Classes—A Selection from the Answers of the Medalists in the Classes of Practical Anatomy and Materia Medica—A Table exhibiting the Nature, Prices, and Periods, of the Lectures to be delivered at the University of London during the ensuing Session—Notes, &c. &c.
 London: Hurst, Chance, and Co. 65, St. Paul's Churchyard; and Curry, Jun. and Co. Dublin.
 Advertisements and Communications (post paid) will be received by the Publishers.

Dr. Palmer's Illustrations of Medicine.
 In 8vo. price 10s. boards.
POPULAR ILLUSTRATIONS OF MEDICINE.
 By SHIRLEY PALMER, M.D.
 Printed for Baldwin and Cradock, Paternoster Row.

"The agents which destroy man, or excite permanent or temporary disorders in the functions of his various organs, are treated of in the work, and arranged under the seven following heads, viz.—1. Moral and Intellectual Agents—Physical—Injurious—Respiratory—Cutaneous—Atmospheric, and External Injuries. In preparing the work, principally for the dissemination of popular knowledge, the author has not deemed it improper to relax somewhat from that unbending severity of style which so signally benefits the character of purely scientific writings, and sheds life and grace on their most intricate discussions: it may, therefore, it is hoped, instruct the popular reader, while the young professional student will find it useful in conveying a correct outline of the subjects of his future practice."

2d edition, 2 vols. 8vo. with Map and Plans, 34s.
BURCKHARDT'S TRAVELS IN ARABIA, comprehending an Account of those Territories which the Mohammedans regard as Sacred.
 "A valuable legacy from one of the most laborious, learned, and amiable of modern travellers."—*Athenæum*.
 "Many curious and novel descriptions of Arabian manners are contained in this interesting volume."—*Literary Gazette*.
 "It comprises the fullest account of the ceremonial of the Mohammedan religion that has ever been given to the English reader."—*Edinburgh Evening Post*.
 "It contains the best account extant of Arabia bordering upon the Red Sea, including the cities of Mecca and Medina."—*Morning Chronicle*.
 Printed for Henry Colburn and Richard Bentley, 8, New Burlington Street.

BOOKS IN THE PRESS.
 At the end of October will be published, price 12s. by R. Ackermann and Co. Strand, London,

No. 664.

SATURDAY, OCTOBER 10, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Alpenstock; or, Sketches of Swiss Scenery and Manners, 1825-26. By C. J. Latrobe. 8vo. pp. 388. London, 1829. Seeley.

THIS is an amusing volume, written by a young traveller, who throws over all his perils, by land and water, that spirit of enjoyment "which only boyhood can,"—we beg pardon, we mean youth just verging upon manhood. We shall make a miscellaneous collection of what strikes us as most amusing.

"The lake of Morat was the scene of a very singular phenomenon during the earlier months of this year, 1825. I remember the report reaching Neuchâtel—through the medium of the market people passing from one lake to the other (some time during the winter)—that the waters of the lake of Morat had suddenly become the colour of blood, though I could meet with no one whose testimony was sufficiently clear and unequivocal to establish the fact. This, joined to my not having the leisure then to come (go?) and see for myself, caused the matter to slip my memory entirely, till I found myself in the neighbourhood. Here the circumstance was fully confirmed to me in a manner not to be questioned; and having since met with a paper, written by M. Decandolle, of Geneva, on the subject, I shall take what is there stated as my best guide in mentioning the facts as they occurred. It appears that this singular phenomenon began to excite the attention of the inhabitants of Morat as early as November last year, and that it continued more or less observable during the whole of the winter. Mr. Trechsel, a gentleman resident at Morat, to whom M. Decandolle applied, on hearing the report, for information and specimens of the colouring matter, stated—that during the early hours of the day no extraordinary appearance was observable in the lake; but that a little later, long parallel lines of reddish matter were seen to extend along the surface of the water, at some short distance from the banks. This being blown by the wind towards the more sheltered parts of the shore, collected itself about the reeds and rushes, covering the surface of the lake with a light foam; forming, as it were, different strata of various colours, from greenish black, gray, yellow, and brown, to the most delicious red. He adds, that this matter exhaled a pestiferous odour during the day, but disappeared at the approach of night. It was further observed, that during tempestuous weather it vanished altogether. Many small fishes were seen to become intoxicated while swimming amongst it, and after a few convulsive leaps, to lie motionless on the surface. The naturalists of Geneva decided, from the specimens sent, that it was an animal substance, which if not the *oscillatoria subfusca*, was nearly allied to it. Soon after the beginning of May it disappeared entirely. It is not known that this phenomenon has appeared before on the lake of Morat within the memory

of man. Tradition states the same to have happened the year preceding the great battle."

On a visit to Lauterbrunnen, the author relates:—

"While commencing my ascent of the first stage of the opposite mountain, which is sprinkled with cottages, I remarked that the approach of a stranger had put their inmates in motion, each pouring from the door-way the younger members of the family. These beset the devious foot-way leading up the hill-side, in a long scattered line to a considerable height, just like a train of gunpowder, which only awaited my approach to explode. And so it was: for, as I advanced, one after the other set up her, or his, pipes in succession; offering me little bouquets of roses, or the *orchis nigra*, and begging a *batz* in return. Had it been a fine warm day, I might have looked upon this preparation for my entertainment with a good-natured desire to be entertained; but it was terribly raw and cold, I had had a ducking, which still made my teeth chatter in my head, and I own I looked upon this preconcerted plan of attack upon my ears and my pocket with a very jaundiced eye. Besides, a dear-bought night's lodging and refreshment had tended to induce a passing economical, if not parsimonious, humour. So there was but a poor look-out for these songsters. Accordingly, the first two applicants I passed without noticing. The third screamed most vociferously, holding her petticoat ready for the *batz*. She sung so loud, that I could not avoid looking her full in the face, and by way of stopping her song, gave her a chuck under the chin, which she received with a low courtesy. Somehow or other this softened my heart considerably. The next, a bright-faced little girl, was the gainer by it, as she held the flowers so near my fingers, that I was absolutely obliged to take them, and of course to give her the *batz*. Seeing the success of the last, and that importunity had gained the day, the following insisted upon my taking her rose. I stopped and asked: 'Which of us was the poorer?' She answered, without hesitation: 'That she was;' and there was something in the ready simplicity of her answer, and the glance she threw down to her naked feet, which made me ashamed of the sophistry, or whatever it was, which had dictated the question, and of course I satisfied the demand. The last and highest cottage turned out a party of five, a great boy, three little girls, and a sharp black-eyed urchin. These all made music. After giving once, it becomes very difficult to refuse. This I felt as I approached the rear-guard. The boy I put to flight by saying I thought he was old and strong enough to earn his bread in a different manner, and, turning to the rest, added, that begging was not originally a Swiss trade, and that that they were abusing the beautiful flowers of their mountains, and the old and simple customs of their forefathers, when they made them the excuse for an idle life and desire after the *batzen* of the stranger. Per-

haps they did not understand me; but the mother did, and came forward from the cottage door, with her youngest still at the breast. She pleaded poverty, and a large family, and the bad weather, which obliged the elder children to remain idle at home. She said she was a Swiss born, and did not like to see her children beg; but the bad custom had crept in, no one knew how."

Further on, we meet with the following:—

"The *vacher* had been absent from the *châlet* about two hours, his cows being in a shed upon another part of the alp, and had just returned, it being then about seven o'clock P. M. In the course of the evening, he had directed my attention to a small flock of sheep, on one of the above-mentioned green patches of pasture, situated on the ledge overhanging the precipices, about half-way up the lower part of the mountain. To an observation of wonder at their exposure, in a situation apparently so dangerous, he had replied, that they were the property of a private person at Lauterbrunnen, who ran the risk, for the sake of the extraordinary luxuriance and richness of the grass on that slope; and added, that, moreover, being situated under a high rock, with a deep ravine on either side, the danger was not so great, when once fairly lodged there. Half an hour after his return, just as the shades of approaching evening began to render the dull light from the *châlet* door barely sufficient for me to guide my pen upon my paper, I was roused from my seat by a distant rumble, and hastened to the door-way. The sound continued to increase, but for some short time nothing was to be seen in motion. At length we saw the avalanche emerge, like a rolling cloud of dense smoke, from the fogs resting upon the mountain. It rushed forward like a whirlwind down the last stage of the glaciers, and approached the edge of the precipices. My breathless attention was naturally directed towards the advancing mass; when it was diverted, by hearing the *vacher* cry out, from the little elevation to which he had run—"O God! the sheep, the poor sheep!" My eye instantly glanced at the little green slope, and had hardly time to take cognisance of its situation, before, dashing high over the precipice above, the snow, ice, and rock, poured down upon it, swept like lightning over its surface, and then hurried down out of sight into the depths of the Trümletenthal, leaving the spot of green a patch of dingy brown. There could be no doubt but the sheep, whether few or many, were instantaneously overwhelmed. No living animal could be seen any where on the precipices; down which, by the regular channels, the snow and ice, disturbed and set in motion by the great avalanche, continued to thunder for several minutes after."

The traveller having started for the Grimsel narrates:

"I took advantage of a fair sunset to stroll into a by-path leading down the valley close under the woody hills to the right of the church. This led me through some delightfully varied scenery, till it joined the main road, leading

towards the village, from the lower bridge over the Aar. I had hardly set my foot upon it before I heard the tinkling of the goat-bells behind me, and wishing to see this animal under the multitude of varieties which a large herd presents, I stopped short till they should overtake me. They soon appeared in sight, having left their mountain pasture at sunset to return to be milked in the village, where they always pass the night. Most of the larger Swiss villages have an individual, employed by the inhabitants conjointly, to take care of their goats during the day. This goatherd, who is often an idiot, makes his appearance in the main street at day-break; he sounds his horn, and each peasant turns his goat or goats out of the stall. The animals then herd instinctively together, and are led on to the mountains, where they feed during the day, and are brought back, as just mentioned, at night-fall. They came forward, trotting across the bridge over the Aar, pushing and skirmishing with one another, with every sign of saucy impatience. The goatherd, who walked after them with his coat hanging over a stick upon his shoulder, and a great pair of dun heels peeping out of his clogs at every step he took in the mire, was a true modern specimen of this class; perfectly unpoetical and unphilosophical in appearance, in spite of the poetry of his profession. Instead of 'tuneful quill,' his lips were busy with a short black tobacco-pipe. In the herd of above one hundred goats, which seemed to be conducting him to his home, there was a great variety of colour, from milk-white, through all the shades of yellow and brown, to black. There was equal difference in the quantity and quality of their coats, some being covered with a long and shaggy hair, and others with a short and smooth fur. Most of them had beards, though all female; and some of them, in addition, two little tufts at each side of the throat, which looked, for all the world, like cap or bonnet strings. When we approached the village they became much more clamorous and quarrelsome, and I could see and hear that there was strong skirmishing in the van. Immediately on entering it, we were met by a crowd of children, many not above three or four years old. They came forward to meet us, and mingling with the herd, began to seek and pick out their several pets. When found, they grasped their horns, or put their little arms round their necks, and directed them home. Many of the goats stopped short at the door of their owner's cottage, and, bleating, demanded admittance; while others, of their own accord, set off at a canter up the by-lanes leading to their homes, and were out of sight in an instant. The first welcome of a master or mistress for their goat, as well as the cow, is a handful of salt; and it is amusing to see with what eagerness they follow and lick the hand that allures them with it."

Having been present at the performance of the service in the church of Unterwalden, the writer remarks:

"It appeared to me to have been a high day for the Virgin; for her effigy, in the form of a great doll dressed à la mode, had been brought forth, placed upon a movable stand, and evidently carried about in procession. However, it soon appeared that her day was at an end, for, while I was standing beside the high altar, in comes the sacristan, or some other officer attached to the church. He advanced unceremoniously up to the figure, unstrapped her from the pedestal, and then inserting his hands between her shoes (one of which I had seen a woman kiss a few minutes before), unscrewed a peg which kept her upright, let her fall upon

his shoulder, and carried her pick-a-pack out of the church into the vestry: so that the figure which one moment was deified, and prayed, and hymned to, and not approached even by the consecrated priest without reverence, was the next taken on the back of the unsanctified valet and shut up in a dark box. On returning to the village inn to reclaim my travelling equipage, I found the entrance, passage, tap, and bed-room all crowded with peasants in their shirt sleeves, just as they had come out of church. Instead of *bete für uns!* (Pray for us!)—*beer!* was now the universal cry, and all without exception seemed to agree, by the eagerness with which they seized their mugs, that the mass had been dry work."

[To be continued.]

The New-Year's Gift, and Juvenile Souvenir.
Edited by Mrs. A. Watts. 18mo. pp. 240.
London, Longman and Co.

THE earliest of the Annuals for the ensuing year which has reached us is, appropriately enough, one of those addressed to readers of early age; anticipating the new year in October, as they may forestall something for after life in childhood. It is a pretty little volume of prose and verse, consisting of about thirty-five various pieces, and embellished with eleven pleasing engravings, of amusing or interesting subjects, well suited to the tastes and feelings of youth.

The preface asserts the superiority of the useful over the fanciful, in the task of writing for children, and quotes Miss Edgeworth against Dr. Johnson on this point. It is a subject into the discussion of which we may be inclined to enter fully when brought before us by the appearance of Mrs. Watts's contemporaries; but at present we shall merely say, that the extreme of either rule appears to us to be faulty; and that those who wish the young to be (as the young should be) natural and intelligent, ought to aim at the happy medium of instruction and excitement, nor endeavour to make infant utilitarians and baby philosophers, any more than they would fill the mind with giant wonders and fairy superstitions. There is, says a great and ancient authority, a time for all things; and we are not sure that precocious wisdom is not as destructive to the future happiness of a human being, as a foolish belief in ghosts and hobgoblins. Having, however, thrown out these hints generally, it is only justice to our fair Editress to state, that though she has rejected all stories of dragons and elfs, and such-like imaginary creations, as being calculated to inflame and mislead the "small deer" to whom she addresses her volume, she has not by any means offered them a grave and dry code of lessons; on the contrary, most of the narratives, whether invented or founded on fact, are miscellaneous and entertaining, according to their capacities, and many of the little poems are playful, while others are moral and affecting. With this praise we shall conclude these brief remarks, and select a specimen or two of the contents which have pleased us most; reserving criticism, as we have intimated, to another opportunity.

Our first extract does honour to the fine talent of a young lady, whose name and abilities are also further illustrated in this sheet, as they have been in preceding *Literary Gazettes*: we allude to Miss Mary Anne Browne, who has produced the following charming lines on an engraving of a girl leading her brother, a blind and wandering minstrel.

"Oh, pity for this helpless boy!
Dear child, withhold it not;
Sad is his fate, and youth's bright joy
Hath never been his lot!
He cannot in the meadows run,
And crop the daisy flowers;
He cannot see the pleasant sun,
And the stars at evening hour!
For him in vain the mountain path
Is by the sunlight kissed;
For him in vain the purple heath
Shines like an amethyst.
In vain the glittering butterfly
Across his path may flit—
He ne'er beheld it, or the sky
By the gentle moonlight lit.
I lead him at the morning hour
Down the green woodland glade;
But he cannot see the woodbine flower,
Nor the quivering light and shade.
But he can hear the falling stream
Within the distant dell,
And scent where the purple violets gleam,
And the simple heather-bell!
Yet weep not—let thy pity be
Still mixed with joy for him;
For though the world he cannot see,
And his eyes are seared and dim,
Still he can hear the wind's low sigh
In the holy twilight time—
Still drink the wild-bird's melody,
In the summer's glowing prime!
And though he never yet hath gazed
On Nature's lovely face;
Though vainly have the bright stars blazed,
And the moon adorned heaven's space,—
The hand that those dear eyes could seal,
And o'er their beamings fall,
Hath opened his spirit's eyes to feel
That God hath ordered all!"

"May Maxwell," by Mary Howitt, except the sad rhyme in the first stanza, and the poor conclusion in the last, is just such a ballad as should adorn a juvenile new-year's gift.

"O'er the broad hills of Lammernuir,
In the gray peep of the dawn,
Lord Maxwell and his children fair
Rode out with bound and horn.
Lord Maxwell and his little May,
With her young brethren three,
And away they rode o'er the heathy hills,
A merry company!
With hawk and hound good sport had they,
Those heathy wilds among;
And home they rode at eventide,
When the woodlark's song
The next eve, when the woodlark's song
Was poured from the leafy spray,
All deathly pale, on her stately bed,
The little maiden lay,
With her white cheek pillowed mournfully,
And a death-look in her eye,
And her mother sitting at her head,
And her father standing by!
And those loving boys, her brothers three,
With their faces dim with sorrow;
For they knew their little sister May
Would die before the morrow!
'Now bring to me,' she meekly said,
And raised her heavy eye,
'My hawk and hound, that I once more
May see them ere I die.'
They brought her hawk, and the gentle bird
Perched on her slender wrist,
And drouped his head, and nestled close
To her white lips to be kissed.
'Now fare ye well, my bonny bird,
We two no more shall ride
On the broad green hills of Lammernuir,
By my noble father's side!'—
They brought her hound, that evermore
Was fleetest in the chase;
And the creature raised a piteous moan,
As he looked into her face.
'Now fare ye well, my gentle hound,
I loved ye well, ye know;
But never more at cheer of mine,
To the lone hills shall ye go!
My milk-white steed in his stable stands,
And may stand in his stall;
For I never more in life shall go
From out my father's hall.
My hawk and hound and little stud,
A fair and noble three!
My gentle brothers, shall be yours,
And love them tenderly;
And when ye ride to the Lammernuir,
Have pleasant thoughts of me.
Farewell! to me you have been
A father kind and dear;
I little thought but yesterday
Our parting was so near!

Oh, mother! let me hold thy hand—
 We two have gone together
 Through the leafy woods, and up the glens,
 In the pleasant summer weather.
 And more than this—on winter nights
 I have sat beside thy knee,
 And heard thee read in holy books,
 With low solemnity.
 I heard the words that were not meant,
 Dear mother, for my ear;
 And I pondered on them night and day,
 And God has made them clear.
 So farewell all, and do not grieve
 For me, when I am gone;
 There is a home for me in heaven,
 And kind friends many a one!
 And so she died: and six fair girls
 Bore her, on her burial day,
 To the chapel vault, where, side by side,
 The old Lord Maxwells lay.
 And for many a day, in that old hall,
 Great mourning was there made;
 And her brothers three did sigh for her
 In the greenwood when they played.
 And never again to the broad green hills
 Did her noble father ride,
 But he sighing wished his little May
 Were riding by his side!
 And ne'er did her lady-mother sit
 In her chamber, reading low,
 But the tears fell fast on the open page,
 And her soul was dark with woe!
 Now ye who go to the Maxwells' hall,
 Go into the chapel gray,
 And ye'll see the tombs of the grim old lords,
 And the tomb of little May.
 And think upon this tale of mine,
 And drop a tear of sorrow;
 And so may life, as it passeth on,
 Bring ever a bright good morrow!"

The "African Ant-Eater," by T. Pringle, is another excellent performance; but as we cannot make this our Number almost all verse, we must be content with commending it to our young friends as a nice picture of natural history. Of the prose contributions, the "Deserter" is a striking and pathetic story; and the "Widow's Friend," and other pieces, by the author of "Recollections of the Peninsula," are of deep interest. Miss Jewsbury has a smart and clever allegory, called the "Birds and the Beggar of Bagdat." The "Restless Boy," by Mrs. Opie, and the "Passionate little Girl," by Mrs. Holland, are good studies, and excellent morals. "Amy and her Dog," (poetry) very neat and natural; "Little Goody Two Shoes," (also verse, and applied to another of the engravings), a sweet composition, by J. F. Hollings. The conclusion is so poetically beautiful, that it might well grace any of the more pretending volumes of this class.

"A wealth is hers,
 Better than the world confers;
 Hope untied, and always new—
 Innocence of spotless hue—
 And those treasures of the mind
 Which the lowliest heart shall find
 If its search be rightly bent—
 Golden mirth, and light content!"

And here we close, heartily wishing success to Mrs. Watts's appropriate and valuable present for the rising generation.

The Works of George Peele: collected and edited, with some Account of his Life and Writings, by the Rev. Alex. Dyce, B.A. 2 vols. small 8vo. London, 1829. W. Pickering. (Second Edition, with Additions.)

We are rejoiced to see this publication in a second edition, because it is a proof that there is some encouragement given to the production of desirable works, and especially when they are, as in the present instance, much indebted to the literary judgment of the editor, and to the taste of those who are concerned in the superintendence of their mechanical parts. We have now on our table many volumes of Mr. Pickering's issuing, the peculiar character of

neatness in which is extremely pleasing to the eye; while the subjects treated by most of them have strong claims to the attention of the antiquary, the scholar, and the general reader. These we shall duly notice as our limits permit; and have merely to excuse our not doing so as promptly as is our use with the majority of other works, because they are rarely of only temporary interest, and, like all sterling books, can better bear the delay than the ephemera of the hour.

Every notice relating to the dramatic poets who preceded Shakespeare is deeply attractive; and among these Peele and his friends and associates, Greene, Marlowe, and Nash, figure in the foreground. But it would be superfluous to enter upon any particulars about persons of whom so much has been written, and we shall content ourselves with one or two extracts from the memoir which are most novel and curious. Of these, the following letter (now printed for the first time) from Peele to Lord Burleigh, with his "Tale of Troy," and preserved among the Burleigh papers in the Lansdowne collection,* is an interesting specimen.

"Salve Parens Patriæ, tibj plebs, tibj Curia nomen hoc dedit, hoc dedimus nos tibj nomen Eques."

"In these termes (r. honorable) am I bolde to salute yo^r Lordship, whose highe desertes in o^r Englandes greates designes haue earned Large praises euen from Enui's mouthes. Pardon, greates Patrone of Learninge & Vertue, this rude encounter, in that I presume, A Scholler of so meane merit, to present yo^r wisdom wth this small manuell, by this simple Messenger my eldest Daughter & necessities seruât. Longe sicknes hauinge so enfeebled me maketh bashfullnes almost become impudency. Sed quid Psitaco suâ *χρησι* expediuit, Magister artis ingenij; Largitor Venter?† The subject wherewth I presume to greete yo^r honor, is the history of Troy in 500 Verses sett downe & memorabile accidents thereof. Receiue it (noble Senator of Englandes Councell-house) as A schollers duties significacon & liue longer in Honor & prosperitie as happie as Queene Elizabeths gracious countenance can make yo^r

Ecco tibj nihilum magno pro munere mitto,

Easè potest aliquid (te capiente) nihil

Yo^r honors most
 bounden

GEORGE PEELE."

It is directed—

"To the r. honorable
 & worthie Patrone
 of Learninge the L.
 Burleigh. L. highe
 Treasurer of England
 and one of hir Mies
 most honorable
 Priuie Counsell."

The endorsement—

"17 Jan 1595
 Georg. Peele m^r of Arts
 Presents yo^r tale of Troy
 in 500 Verses by his
 eldest daughter, necessities
 seruante."

It is worthy of remark, that this application to Lord Burleigh is endorsed 17th Jan. 1595; six years after the publication of the poem; so that, in fact, it appears to have been simply a mode of soliciting the aid of the Lord Treasurer

* Mr. Dyce says in a note: "This relic was most obligingly pointed out to me by N. H. Nicholas, esq. It is worthy of notice, that the volume in which it is bound consists almost exclusively of letters from insane persons, or on subjects of an unusual nature, such as challenges, abusive or threatening communications, &c."

† "From the Prologue to the Satires of Persius;

"Quis expedit psitaco suum *χρησι*,
 Picasque docuit verba nostra conari?
 Magister artis, ingenique largitor
 Venter, negatæ artificis æquil vocem."

to the author in distress. Indeed, from their manner of life, the literary adventurers of those times were almost always steeped in poverty, and, with occasional glimpses of prosperity, which were speedily overcast by riot and dissipation, liable to the most deplorable vicissitudes of wretchedness. Of this condition there is a heart-rending description in an epistle of Robert Greene's, who died in 1692, cut off, it is said, by a surfeit of pickled herring and rhenish wine; and soon after his death his 'Groats-worth of Wit bought with a Million of Repentance' was given to the public by Henry Chettle. It contains the address we have mentioned to his brother poets: 'To those gentlemen, his quondam acquaintance, that spend their wits in making plays, R. G. wisheth a better exercise and wisdom to prevent his extremities.' He first addresses Marlowe, next Lodge, and then proceeds as follows: 'and thou [Peele] no less deserving than the other two; in some things rarer, in nothing inferior; driven (as my selfe) to extreme shifts, a little have I to say to thee: and were it not an idolatrous oath, I would swear by sweet St. George, thou art unworthy better hap, sith thou dependest on so meane a stay. Base-minded men, all three of you, if by my misery yee bee not warned: for unto none of you (like me) sought those burs to cleave; those puppets (I mean) that speak from our mouths; those anticks garnisht in our colours. Is it not strange that I, to whom they all have been beholding; is it not like that you, to whom they all have been beholding, shall (were yee in that case that I am now) be both of them at once forsaken? Yes, trust them not: for there is an upstart Crow beautified with our feathers, that with his Tygers heart, wrapt in a Players hyde, supposes he is as wel able to bombast out a blank verse as the best of you: and being an absolute Johannes fac totum, is in his owne conceit the onely Shake-scene in a country.'—Sig. E 3. ed. 1629. The expressions 'upstart crow beautified with our feathers,' and 'the onely Shake-scene in a country,' seem plainly to point at Shakespeare: by 'our feathers' are meant certain plays written by Greene, Peele, Marlowe, or Lodge, which he had new modelled, most probably 'The First Part of the Contention of the two famous houses of York and Lancaster,' and 'The tragedie of Richard Duke of Yorke,' out of which old dramas the great poet formed 'The Second and Third Parts of Henry the Sixth.' 'His Tygers heart wrapt in a Players hyde,' is a parody on the following line,

'O tiger's heart, wrapped in a woman's hide!

found both in 'The tragedie of Richard duke of Yorke,' Sig. K 3. ed. n. d. and in 'The Third Part of Henry VI.' act i. sc. iv. Greene concludes his address thus: 'Let me heartily intreat you to be warned by my harmes. Delight not (as I have done) in irreligious oaths, for from the blasphemers house a curse shall not depart: Despise drunkennes, which wasteth the wit, and maketh men all equal unto beasts: Flie lust, as the deathman of the soule; and defile not the temple of the Holy Ghost. Abhor these epicures, whose loose life hath made religion loathsome to your eares; and when they sooth you with termes of mastership, remember Robert Greene, whom they have often so flattered, perishes now for want of comfort. Remember, Gentlemen, your lives are like so many light tapers, that are with care delivered to all of you to maintaine: these with wind-puff wrath may be extinguished, with drunkenness put out, with negligence let fall: for mans time of it selfe is not so short but it is

more shortned by sinne. The fire of my light is now at the last anuffe, and the want of wherewith to sustaine it, there is no substance for life to feed on. Trust not then (I beseech yee) left to such weake stayes: for they are as changeable in minde, as in many attires. Well, my hand is tyred, and I am forc't to leave where I would begin: for a whole booke cannot containe the wrongs, which I am forc't to knit up in some few lines of words. Desirous that you should live, though himselfe be dying,

ROBERT GREENE.

This solemn exhortation, spoken, as it were from the grave, unfortunately produced no effect on Marlowe and Peele: Lodge, it is believed, was untainted by the vices of his comrades.

But for all this apparent recklessness of genius, let us remember the valid excuse found by W. Gifford in his excellent *Memoirs of Ben Jonson*: "Domestic entertainments were, at that time (he justly observes), rare: the accommodations of a private house were ill calculated for the purposes of a social meeting, and taverns and ordinaries are therefore almost the only places in which we hear of such assemblies. This undoubtedly gives an appearance of licentiousness to the age, which, in strictness, does not belong to it."

But the gifted have ever been the scoff, and, what is harder still, the prey of the worldling who scoffed at them. In them heedlessness has been crime, though in them what was so severely visited as heedlessness has not, in truth, been even the slight offence which it is in the more systematic and better-regulated order. Whether for better or worse, it matters not—their minds are not constituted like the elephant's instinct, to pick up pins as well as to attempt stupendous acts: they fail in the little things of this world, which they regard not, and too often they also fall in the great but visionary things at which they aim. And then is their destiny certain: the envious observers of every trifle are their superiors, and poor-souled creatures rejoice in an affected pity of the wretch, who is indeed, if the soaring bird brought mortally hurt to the earth be a subject of compassion to the crawling reptile, in the common, many, relations of society, liable to this galling sentiment—ten times more bitter than scorn. "It is and it always hath been (saith Anthony Wood—a drudge, though a useful plodder,—speaking of the uncertainty of the date of Peele's death)—it always hath been that most poets die poor, and consequently obscurely, and a hard matter it is to trace them to their graves!" But we should grow very dull if we went into the reflections suggested by this "vein"; and, while the weather is fine, we hasten to conclude, by warmly recommending this edition of one of our oldest and ablest bards to the favour of the public.

The Life and Remains of Wilmot Warwick.

Edited by his friend Henry Vernon. Vol. II. pp. 314. London, 1829. J. Ridgway.

THERE is considerable variety of amusement, passing from "gay to grave, from lively to severe," in these pages, ushered in by a playful preface, where our "ungentle craft" receives a smart defiance from the young author. Perhaps part of the "Odd Gentleman's Last Will and Testament," both as a clever *jeu d'esprit*, and not too long, will just do for our columns.

"One hundred pounds a-year to the said Phoebe Brightly, 'with the proviso that, while she may remain mistress of her own house, she shall duly and liberally provide suitable and sufficient fare, with all things appertinent, as

by good old custom established, for the several festivals of Twelfth Day, Shrove Tuesday, Michaelmas, and Christmas; in consideration of the expense attendant upon which (viz. such as may be incurred in the provision of cakes, characters, pancakes, geese, musicians, magic-lanterns, snap-dragons, yule-logs, and mistletoe), ten pounds per annum are added.' * * *

To people in general I leave my congratulations in respect to their having lived later than their grandfathers, whereby they are enabled truly to appreciate the progressive improvements of time and experience. Let them, however, therewith, receive my earnest injunctions, that they admit of no modern innovations which have a tendency to destroy simplicity, or impoverish mirth: but, while they oppose the tyrannical aggressions of sophisticated manners, let them rejoice at the present emancipation of their heads from *hairy* castles, fortified with powder and pomatum. To John Bull, individually, I bequeath my discrimination, trusting, that it may aid him not less in the pursuit of his pleasure than in the dispensation of his patronage. If he well exert it, he will discover, that there is something to be seen in his own country, before he talks of nothing but the banks of the Rhine, the palaces of Genoa, and the bay of Naples. It may bring him to acknowledge that we have in England noble buildings, beautiful rivers, and fine bays, as well as bull-dogs, race-horses, and prize-boxers. It may induce him to pay his poor-rates and shoemaker's bill, with as much alacrity as he now exhibits in satisfying the exorbitance of a Parisian dancer, or an Italian opera singer. It may urge him to give the lie to Stephano, who asserts, that an Englishman withholds his charity from 'lame beggars,' that he may satisfy his thirst for beholding 'dead Indians.' Averse to the usual mode of 'worldlings,' who give their 'sum of more to that which hath too much,' I bequeath whatever portion of the under-mentioned virtues, &c. I may possess, in manner following; that is to say:—To philosophers, my common sense; to wits, my feeling; to philanthropists, my ambition; to merry-andrews, my cheerfulness; to rope-dancers, my rheumatism; to poets, my prudence; to authors, my indifference; to critics, my imagination; to readers, my patience; to members of the fine arts, my modesty; to scientific men, my pride; to duellists, my honour; to civil officers, my civility; to lawyers, my brevity; to tavern-keepers, my moderation; to whist-players, my temper; to travellers, my taciturnity; to sectarians, my tolerance; to deists, my humility; to politicians, my liberality; to ministers of justice, my sense of equity; to pick-pockets, my politeness; to scandal-mongers, my asthma; to courtiers, my conscience; to editors, my *ego-tism*; to shoe-makers, my punctuality; to candle-snuffers, my steadiness; to lamp-lighters, my alacrity; to the laureate, my independence; to liars, my memory; to the single my susceptibility; to the married, my forbearance; to prudes, my passions. All former bequests being fully answered, I reckon upon an overplus of between one and two hundred pounds, to be disposed of as follows:—unto such old maids in this village as shall allow that they have, at any time, been agreeable to marriage, the sum of five pounds. Likewise, unto such as have never hesitated to avow their age, the sum of five pounds. Also, unto such old maids in the said village as will frankly avow that they have never received an offer, the sum of ten pounds. Likewise, unto such as shall ac-

knowledge that they have loved without return, the sum of fifteen pounds. And, further, unto such as may have refused an offer, eligible on the score of rank and fortune, the sum of twenty pounds."

We much doubt the appearance of any claimants for the latter legacies. The first story, the Monk of Benevento, is interesting; and perhaps, on the whole, we think the most highly of our author's talent for more serious subjects.

The Venetian Bracelet, &c. By L. E. L.
(Second Notice.)

AGREEABLY to the promise in our last Number, we resume the notice of this delightful volume, in order to pay though but a brief tribute to one of its highest inspirations—the poem entitled a "History of the Lyre." Here the admirable author is upon her own peculiar and impassioned theme; painting in language of deep and touching pathos the feelings and the sufferings of those who are gifted with the dangerous love of song; and here she sweeps, with exquisite spirit and truth, over chords to which the heart of every bard, or young or old, or male or female, that ever longed for fame and immortality, will as surely and sensitively respond as human nature is human nature. Eulalia, a Roman girl,—something of the Improvisatrice of that volume which first established the celebrity of the writer,—is the heroine of this beautiful poem; and the scene in which she is introduced is worthy of her own loveliness and destinies.

"We stood beside a cypress, whose green spire
Rose like a funeral column o'er the dead.
Near was a fallen palace—stain'd and gray
The marble shew'd amid the tender leaves
Of ivy but just shooting; yet there stood
Pillars unbroken, two or three vast halls,
Entire enough to cast a deep black shade:
And a few statues, beautiful but cold—
White shadows, pale and motionless, that seem
To mock the change in which they had no part—
Fit images of the dead. Faintly enough,
Whatever aspect desolation wears;
But this, the wrecking work of yesterday,
Which somewhat still more touching: here we trace
The waste of man too much. When years have past
Over the fallen arch, the ruin'd hall,
It seems but course of time, the one great doom
Whose influence is alike upon us all;
The gray tints soften, and the ivy wreath
And wild flowers breathe life's freshness round: but here
We stand before decay: scarce have the walls
Lost music left by human step and voice:
The lonely hearth, the household desolate,
Some noble race gone to the dust in blood;
Man shames of his own deeds, and there we gaze,
Watching the progress, not of time, but death."

Need we point out the new and original thoughts which abound even in this brief passage? We quote the congenial description of Eulalia:—

"Her eyes were like the moonlight, clear and soft,
That shadowy brightness which is born of tears,
And raised towards the sky, as if they sought
Companionship with their own heaven; her cheek—
Emotion made it colourless, that pure
And delicate white which speaks so much of thought,
Yet flushes in a moment into rose;
And tears like pearls lay on it, those which come
When the heart wants a language."

Then follows the affecting picture of a superior nature thrown away in the mere nothings of common life; unable to expand in its nobler sphere, and filled with regrets at its own want of energy to resist or escape the trifling world. In this also the comparisons are new and powerful.

"Yet still our meetings were mid festival,
Night after night. It was both sad and strange
To see that fine mind waste itself away,
Too like some noble stream, which, unconfin'd,
Makes fertile its rich banks, and glads the face
Of nature round; but not so when its wave
Is lost in artificial waterfalls,
And sparkling eddies; or coo'd up to make
The useless fountain of a palace hall.
One day I spoke of this; her eager soul

Was in its most unearthly element.
We had been speaking of the immortal dead.
The light flash'd in her eyes. "Tis this which makes
This triumph intellect has over death—
Our words yet live on others' lips; our thoughts
Actuate others. Can that man be dead
Whose spiritual influence is upon his kind?
He lives in glory; and such speaking dust
Has more of life than half its breathing moulds.
Welcome a grave with memories such as these,
Making the sunshine of our moral world!"

Eulalia is reproached with the weakness of
suffering less worthy pursuits, or rather occupa-
tions, to engross her faculties; and she an-
swers—

"Speak not of this to me, nor bid me think;
It is such pain to dwell upon myself,
And know how different I am from all
I once dream'd I could be. Fame! stirring fame!
I work no longer miracles for thee.
I am as one who sought at early dawn
To climb with fiery speed some lofty hill:
His feet are strong in eagerness and youth;
His limbs are braced by the fresh morning air,
And all seems possible!—this cannot last.
The way grows steeper, obstacles arise.
And unkind thwartings from companions near.
The height is truer measured, having traced
Part of its heavy length; his sweet hopes droop.
Like prison'd birds that know their cage has bars,
The body wears, and the mind is worn—
That worst of lassitude!—hot noon comes on;
There is no freshness in the sultry air,
There is no rest upon the toilsome road;
There is the summit, which he may not reach,
And round him are a thousand obstacles."

We shall now add a picture of a young poet's
fate (especially in the intercourse of society),
than which we have read nothing more splen-
did and pathetic in English verse.

"All time attests the miracles of man:
The very elements, whose nature seems
To mock dominion, yet have worn his yoke.
His way has been upon the pathless sea;
The earth's dark bosom search'd; bodiless air
Works as his servant; and from his own mind
What rich stores he has won!—the sage, the bard,
The painter, these have made their nature proud:
And yet how life goes on, its great outline
How noble and smother'd!—but within
How mean, how poor, how pitiful, how mix'd
With base alloy: how Disappointment tracks
The steps of Hope; how Envy dogs success;
How every victor's crown is lined with thorns,
And worn mid scoff! Trace the young poet's fate:
Fresh from his solitude, the child of dreams,
His heart upon his lips, he seeks the world,
To find him fame and fortune, as if life
Were like a fairy tale. His song has led
The way before him; flatteries fill his ear,
His presence courted, and his words are caught;
And he seems happy in so many friends.
What marvel if he somewhat overrate
His talents and his state? These scenes soon change.
The vain, who sought to mix their name with his;
The curious, who but live for some new sight;
The idle,—all these have been gratified,
And now neglect stings even more than scorn.
Envy has spoken, felt more bitterly
For that it was not dress'd in of; worldliness
Has crept upon his spirit unawares:
Vanity craves for its accustomed food;
He has turn'd sceptic to the truth which made
His feelings poetry; and discontent
Hangs heavily on the lute, which wakes no more
Its early music:—social life is fill'd
With doubts and vain aspirations; solitude,
When the imagination is dethroned,
Is turn'd to weariness. What can he do
But hang his lute on some lone tree, and die?"

And such, it may be anticipated, is the des-
tiny of Eulalia:—but before we close, we are
tempted to give a part of her lament over dis-
appointed anticipations of what life might be.

"Perhaps I said too much:
Yet let me say, what firmly I believe,
Love can be—ay, and is. I held that Love
Which chooseth from a thousand only one
To be the object of that tenderness
Natural to every heart; which can resign
Its own best happiness for one dear sake;
Can bear with absence; hath no part in Hope,—
For Hope is somewhat selfish, Love is not,—
And doth prefer another to itself.
Unchangeable and generous, what, like Love,
Can melt away the dross of worldliness;
Can elevate, refine, and make the heart
Of that pure gold which is the fitting shrine
For fire, as sacred as e'er came from Heaven?
No more of this: one word may read my heart,
And that one word is utter weariness.
Yet sometimes I look round with vain regret,

And think I will restrain my lute, and nerve
My woman's hand for nobler enterprise;
But the day never comes. Alas! we make
A ladder of our thoughts, where angels step,
But sleep ourselves at the foot: our high resolves
Look down upon our slumbering acts."

As a variety, to contrast with these affecting
images, we select the fanciful and playful lines
called "Fantasies," and addressed to Mr. Crof-
ton Croker, the estimable author of "Fairy
Legends," and other justly popular works.

"I'm weary, I'm weary,—this cold world of ours:
I will go dwell afar with fairies and flowers.
Farewell to the festal, the hall of the dance,
Where each step is a study, a falsehood each glance;
Where the vain are displaying, the rapid are yawning;
Where the beauty of night, the glory of dawning,
Are wasted, as Fashion, that tyrant, at will
Makes war on sweet Nature, and exiles her still.
I'm weary, I'm weary,—I'm off with the wind:
Can I find a worse fate than the one left behind?
—Fair beings of moonlight, gay dwellers in air,
O shew me your kingdom! O let me dwell there!
I see them, I see them,—how sweet it must be
To sleep in you lily!—is there room in't for me?
I have flung my clay fetters; and now I but wear
A shadowy seeming, a likeness of air.
Go harness my chariot, the leaf of an oak:
A butterfly stud, and a tendril my yoke.
Go swing me a hammock, the poles mignonette;
I'll rock with its scent in the roosemar net.
Go fetch me a courser: you need is but slight,
Yet far is the distance 'twill bear me to-night.
I must have a throne,—ay, my mushroom may stay,
It has sprung in a night, 'twill be gather'd next day:
And fit is such throne for my brief fairy reign;
For, alas! I'm but dreaming, and dreams are but vain."

And we would now close our grateful task,
were it not that a composition doing equal
honour to the poetical genius and the liberal
feelings of the fair author claims our suffrage.
It is addressed to a yet younger ornament of
our bright galaxy of female talent, and breathes
a degree of plaintive and boding apprehension,
while it pours out a measure of affectionate
council, which are eminently calculated to exalt
both the author and the object of her poetic
solicitude in the esteem of every reader whose
esteem is worth enjoying.

To M. Anne Browne.

"Thy hands are fill'd with early flowers,
Thy step is on the wind;
The innocent and keen delight
Of youth is on thy mind;—
That glad fresh feeling that bestows
Itself the pleasure which it knows,
The pure, the undefined;
And thou art in that happy hour
Of feeling's uncurb'd, early power.
Yes, thou art very young, and youth,
Like light, should round thee fling
The sunshine thrown round morning's hour,
The gladness given to spring:
And yet upon thy brow is wrought
The darkness of that deeper thought
Which future time should bring.
What can have traced that shadowy line
Upon a brow so young as thine?
'Tis written in thy large dark eyes,
Fill'd with unbidden tears;
The passionate paleness on thy cheek,
Belying thy few years.
A child, yet not the less thou art
One of the gifted hand and heart.
Whose deeper hopes and fears
Are omen-like the poet's dower
Is even as the prophet's power.
Thy image floats before my eyes,
Thy book is on my knee;
I'm musing on what now thou art,
And on what thou wilt be.
Dangerous as a magic spell,
Whose good or evil none may tell,
The gift that is with thee:
For Genius, like all heavenly light,
Can blast as well as bless the sight.
Thou art now in thy dreaming time:
The green leaves on the bough,
The sunshine turning them to gold,
Are pleasures to thee now;
And thou dost love the quiet night,
The stars to thee are a delight;
And not a flower can grow,
But brings before thy haunted glance
The poet days of old romance.
With thine 'own people' dost thou dwell,
And by thine own fireside;
And kind eyes keep o'er thee a watch,
Their darling and their pride.

I cannot choose but envy thee;
The very name of home to me
Has been from youth denied:
But yet it seems like sacred ground,
By all earth's best affections bound.

"Tis well for thee! thou art not made
Struggle like this to share;
Ill might that gentle, loving heart
The world's cold conflict bear:
Where selfish interest, falsehood, strife,
Strain through their gladiatorial life;
Save that the false ones wear
Seeming and softness and a smile,
As if guilt were effaced by guile.
I dare not speak to thee of fame,
That madness of the soul,
Which flings its life upon one cast,
To reach its desperate goal.
Still the wings destined for the sky
Will long their upward flight to try,
And seek to dare the whole,
Till, space, and storm, and sunshine past,
Thou find'st thou art alone at last.
But love will be thy recompense,
The love that haunts thy line;
Ay, dream of love, but do not dream
It ever will be thine.
His shadow, not himself, will come;
Too spiritual to be his home,
Thy heart is but his shrine;
For vainest of all earthly things
The poet's vain imaginings.

Go, still the throbbing of thy brow,
The beating of thy heart;
Unstring thy lute, and close thy page,
And choose a humbler part;
Turn not thy glistening eyes above,
Dwell only in thy household love,
Forgetting what thou art;
And yet life like what this must be
Seems but a weary lot for thee.
Or trust thee to thy soaring wing,
Awake the gifted lay;
Fling life's more quiet happiness
For its wild dreams away.
'Tis a hard choice: on either side
Thy heart must with itself divide,
Be thy doom what it may.
Life's best to win, life's best to lose,—
The lot is with thee, maiden, choose.
Ah no!—the choice is not thine own;—
The spirit will rebel;
The fire within the poet's heart
Is fire unquenchable.
Far may its usual course depart,
And light, but not consume, thy heart!
Sweet minstrel, fare thee well!
And may for once the laurel wreath
Not wither all that grows beneath!"

An example like this, of generous regard for
a rising and emulous aspirant in her own bril-
liant course, and the effort to advance her fame,
in our opinion entitles L. E. L. to the warm-
est praise. In conferring a chaplet upon an-
other, she has enriched the glory of her own
resplendent crown.

*Historical and Miscellaneous Questions, for the
Use of Young People; with a Selection of
British and General Biography, &c. By
Richmal Mangnall. Improved edit. Pp. 460.
London, 1829. Longman and Co.*

In no department of literature has there been,
of late years, so signal an improvement as in
that which is devoted to the instruction and
amusement of the young. In former periods,
the writers who applied themselves to the com-
position of books contemplating these objects
commonly ran into opposite extremes. They
either contented themselves with providing the
elements of instruction in the simplest forms,
of dry and often repulsive exercises for the
memory; or else addressed their writings al-
together to the imagination and the feelings;
being more intent on delighting the fancy, and
gratifying the juvenile taste for the marvellous,
than on communicating to the mind the mate-
rials of real knowledge. Modern writers on
school literature have pursued a more beneficial
course. At the same time that they have pre-
served the captivating interest by which the
fictitious narratives of their predecessors were
wont to chain the youthful attention, they have
combined with that interest something that

was solid and useful. In seeking to amuse, the paramount aim to instruct has been steadily kept in view, and entertainment and knowledge have been judiciously blended together.

Among the writers who have contributed to this important reformation, the enlightened and accomplished author of the publication before us holds a distinguished place. She carried to the work the high qualifications of a mind richly furnished from the various treasures of knowledge—a judgment and discrimination at once clear, solid, and correct—a pure and cultivated taste—and a familiar acquaintance with the capacities and wants of those whose improvement she was solicitous to promote. Thus endowed, she has been able to embody in her book a rich store of useful information, which she has disposed in the most natural and intelligible order, and clothed in the language and style best adapted to instruct, to delight, and impress the youthful understanding. This work, though bearing a modest and unpretending title, is of a very comprehensive character. Under several heads, which have been multiplied for the greater facility of instruction, the author has drawn up an excellent compendium of universal history, together with a more detailed and circumstantial account of the principal nations of ancient and modern times. The portion allotted to ancient history traces, rapidly but clearly, the origin and progress of the eastern states of Asia, whilst it presents a fuller and more finished sketch of the annals of Greece and Rome. This part contains also a compendious summary of sacred history. In the division assigned to modern history, the chief attention has properly been devoted to Europe; and among the states of Europe, France and Great Britain have had allotted to them a large space, proportioned to their greater interest and importance to the English reader. The sketch of English history is composed with great care and accuracy, and is occasionally interspersed with brief notices of remarkable objects of British antiquity. To this portion of the work, and serving for its illustration, has been appended a fair and impartial sketch of the British constitution, by which the English student is made acquainted with the most important civil and political institutions of his country, on which mainly rest its greatness and its fame. Next to the historical chapters, those on biography are the most interesting and valuable. They comprise notices of the most celebrated characters of ancient and modern times, and in every walk of life. Though necessarily brief and general, these sketches exhibit the chief features, and most memorable characteristics of the individuals they delineate. The selection of persons and of facts is made with the author's accustomed judgment and taste; and the representations evince a creditable impartiality, with a scrupulous regard to historical truth. The other contents of this volume are, an abstract of heathen mythology, a translation of some Latin words and phrases frequently found in the best English writers, and a short elementary treatise on astronomy. But the most important part of the appended matter is what the author modestly designates, "Questions on common Subjects." This chapter comprises a great body of valuable information on various topics of natural history, comprehending an account of the natural productions, with their numerous combinations, which are in common use in the arts of life.

From this enumeration it will be seen that this work takes an extensive range through a wide and diversified field of intelligence. The

matter of which it is composed is in general of the most valuable kind; the facts are judiciously selected, and stated with perspicuity and accuracy; and the whole is admirably fitted for its professed object. We know no book of this class which we can so cordially recommend as a safe, pleasant, and efficient guide to the knowledge of those useful matters which it was the author's aim to teach.

We close this article with the painful remembrance that the amiable and accomplished author of the publication which has afforded us so much pleasure in the perusal, is no longer conscious of praise or of censure. She has herself, however, erected to her memory a durable monument. Her writings will transmit her name with honour and applause through many generations, who will owe to them much of the instruction that conduces to their credit and usefulness in the world. We are pleased to find, too, that the publishers have taken the surest method to perpetuate the practical good of this work, by intrusting the revision of it to careful hands, to introduce the alterations rendered necessary by the progress of time and the change of events; and thus to make every successive edition a faithful transcript of the actual knowledge of the existing period.

M. DE BOURRIENNE'S MEMOIRS.

FROM a volume of this very interesting work, which has not yet been published even in Paris, we are enabled to make the following curious extracts; which we may preface by observing, that such Memoirs seem to be more than ever the rage in France, or, as Goldfinch would say, "the thing, the go, the gape, the stare." It rains biography. Every clerk in office who may have occasionally received a hastily traced official note from some great man, or who may have remarked something peculiar in the mode adopted by the said great man of introducing a pinch of snuff into his noble nose—every such clerk can now make out his half-dozen, or so, of snug octavos; ay, and enrich his "shreds and patches" with *fac-similes* from the hand-writing of the illustrious subject of his twaddle—such as, in our days of Cocker and Butterworth, we would not for cogent reasons have dared to exhibit as specimens of penmanship. The Memoirs of M. de Bourrienne, however, we think deserving of a more favourable mention than the generality of their contemporary brethren. The author has deserted the beaten track pursued by the biographers of Napoleon; and notwithstanding the apparent futility of his minute details, we prefer them to the volumes of hyperbole, enthusiasm, or calumny, which, on the subject of the ex-emperor, the ignorance of book-makers has inflicted on the public. The numerous absurdities, *soi-disant* memoirs, anecdotes, &c., that by turns debase or exalt the character of Napoleon, as best suited the momentary views of the respective writers, have most of them already lived out their little day, and seem destined rather to load the booksellers' shelves than to enrich the readers' memory. In the Memoirs now before us there is much original matter; and if useful and novel information, conveyed in a simple, unpretending style, can ensure to a work something more than ephemeral existence, we may predict that the pages of M. de Bourrienne will often be consulted by the general reader, and occasionally by the historian who would

"Nothing extenuate,
Nor set down aught in malice."

There is one species of eulogium to which

M. de Bourrienne possesses an undoubted claim. If not an elegant, he is at least a rapid writer—no mean title to celebrity in the art of authorship as at present laid down. Modern genius, like a modern dandy, piques itself on celerity of motion; whereas the wits of former days, like their precise and powdered beaux, moved with becoming deliberation, and were content to climb, with painful and elaborate effort, "the steep where fame's proud temple shines afar." In the present instance, some thousands of pages have been presented to the public in a proportionably short space of time, and probably much yet remains to be told. Indeed we can scarcely require the merit of brevity in the history of a career such as that of Napoleon, crowded with events, and replete with life, activity, and interest.

The fourth series of M. de Bourrienne's Memoirs—whence these selections are made—has not yet (as we have observed) appeared in Paris, but is announced as on the eve of publication. Our first extract gives a more particular account than we have before seen (in Rapp's or Rovigo's Memoirs) of the attempt made at Schoenbrunn upon the life of Napoleon, by a German fanatic named Staps. The author relates the narrative on the authority of General Rapp, who witnessed the occurrences.

"About this time a youth conceived the design of assassinating Napoleon, in order to deliver Germany from the yoke of one whom he considered as the scourge of nations. Rapp and Berthier were both near the person of the emperor when the culprit was arrested; a circumstance that enables me to furnish the following exact and authentic statement of this event. 'We were at Schoenbrunn,' said Rapp, 'where the emperor had just reviewed the troops. I had already remarked a young man at the extremity of one of the columns, when, just as the troops were about to file off, I observed him advancing towards the emperor, who was then between Berthier and myself. The prince de Neufchatel, imagining that he was desirous of presenting a petition, made a slight movement forwards, for the purpose of intimating to him that his request should be preferred through me, I being that day the aide-de-camp on service. The young man declared that he wished to speak to Napoleon himself; and Berthier repeated that his petition must be presented through me. The stranger retreated to a short distance, still evincing a strong anxiety to speak to Napoleon. Again he advanced, and approached rather close to the emperor: I, however, compelled him to retire. Accosting him in the German language, I desired him to wait till after the parade, adding, that should he have any claim to urge, he would then be heard. I continued to observe him attentively, his pertinacity having inspired me with suspicions by no means to his advantage. I remarked that he kept his right hand placed inside his great-coat near the left breast-pocket, from which the corner of a paper was rather studiously displayed, as if to divert attention from his real object. Perceiving an officer of gendarmes, I beckoned to him to advance, and recommended him to seize the person of the young man, but without violence or noise, and to detain him privately at the chateau till the parade should be over. The crowd assembled were so occupied with the movements of the troops, that the scene which I have just described passed wholly unnoticed. Immediately after the review, I was informed that an enormous kitchen-knife had been found upon the stranger, whose name, as it afterwards appeared, was Staps. Sending instantly

for Duroc, I accompanied him to the room where Staps had been confined. We found him seated on a bed: his air was that of sadness, but by no means of terror. In his possession were found the portrait of a female, a pocket-book, and a purse containing two pieces of gold. I questioned him as to his name, with which he refused to acquaint me, saying that he would tell it only to Napoleon. I then asked him to what purpose he had destined the knife found upon his person? Still the same answer—"I can tell it only to Napoleon." "Is it possible," replied I, "that you can have meditated an attempt upon his life?" "Yes." "And why?" "I can tell it only to Napoleon." The singularity of this adventure induced me to inform the emperor of all that had passed. My statement finished, he appeared rather thoughtful; for ideas of assassination were continually floating in his brain. He ordered me to conduct the young man into his cabinet. Conformably to the instructions which I transmitted them, two gendarmes escorted the stranger into the presence of Napoleon. Notwithstanding the atrocity of his intended crime, Staps had something interesting in his countenance—an expression of benignity which it was difficult to resist. The emperor asked him if he could speak French? "Not very well," replied Staps: upon which I was desired to interrogate him in German. I shall now proceed to an accurate detail of the examination which he underwent by order of the emperor, whose anxiety on this occasion was such that he himself dictated the questions, my office being simply that of interpreter. Accordingly, the following dialogue may be considered to have passed between Napoleon himself and Staps. "Whence come you?" "From Nuremberg." "What is your father?" "A Protestant clergyman." "Your age?" "Eighteen." "What use did you intend to make of your knife?" "I intended to kill you with it." "Young man, you are mad: you are one of the *Illuminés*." "I am not mad: I do not even know what an *Illuminé* means." "You must be ill." "I am not ill: I never in my life was better." "Why did you desire to kill me?" "You are the source of my country's misery." "Have I ever injured you?" "Me, in common with my countrymen." "Who can have urged you to this crime? who are your accomplices?" "I have none: the intimate conviction that your death would be a blessing to Europe and my country has alone armed my hand against you." "And yet you now see me for the first time?" "I saw you at Erfurth, on the occasion of your interview with the Emperor of Russia." "Did you at that time intend to assassinate me?" "No: I then imagined you would not make war upon Germany: I was then one of your most ardent admirers." "How long have you been at Vienna?" "Ten days." "Why then have you so long delayed your attempt?" "I came to Schoenbrunn eight days ago, with the intention of killing you; but on my arrival I found that the parade was over: I therefore postponed the execution of my project till to-day." "You are mad, I tell you; or else you are ill." At this stage of the interrogatory the emperor gave orders that Corvisart should be summoned to his presence. Having asked who he was, and being told that he was a physician,—"I have not the least occasion for him," said Staps. Immediately on the entrance of Corvisart, Napoleon ordered him to feel the young man's pulse, which he instantly did; Staps all the time displaying the most inconceivable phlegm, and at length observing to the doctor, with *sang froid*, "They tell me

I am ill; but you see they are mistaken—are they not?" "He is quite well, sire," replied Corvisart, addressing himself to the emperor. "I told you so," said Staps, in a tone of evident triumph and satisfaction. I was thunderstruck with the German's imperturbable phlegm; and the emperor himself seemed wholly confounded at his audacity. After a few moments, Napoleon again accosted Staps. "Your imagination is heated: you will be the ruin of your family. I grant you your life on one condition: instantly ask my pardon for your atrocious intention, which you now must certainly regret." "I want no pardon: my most poignant regret arises from the failure of my design." "It seems then that crime is nothing in your eyes." "To kill you is not a crime: it is a duty." "What portrait is that found in your possession?" "It is that of a young girl to whom I am devotedly attached." "Your attempt will doubtless plunge her into the deepest affliction." "She will be afflicted at its ill-success: her abhorrence for you equals mine." "Would not a pardon inspire you with gratitude?" "Though you should pardon me, I would again attempt your life." Napoleon was stupefied with amazement. The answers and the unalterable resolution of Staps appeared absolutely to overwhelm him. He ordered the prisoner to be led away; and when he was gone, "These are your *Illuminés*," said the emperor:—"fine principles, fine lights, that transform the youth of Germany into hardened assassins!" After a fruitless endeavour, at a subsequent examination, to elicit some confession from Staps, the order was given for his execution, which accordingly took place on the 27th October, at seven o'clock in the morning. The attempt for which he suffered had been made on the 23d, and from that period up to the morning of his execution he refused to taste a morsel of food. "I have still strength enough," said he, "to march to the scaffold." On his arrival at the fatal spot, and the preparations of death being terminated, his last cry was for liberty and Germany: his dying prayer, or rather exclamation, invoked destruction upon her tyrant.

The volumes already published contain many anecdotes of Napoleon. The author has devoted an entire chapter to what may be called the portrait of his hero—to his physical and moral analysis—to a description of his habits, his tastes, and even of his caprices. M. de Bourrienne, with a resolute spirit of impartiality, wages a most inveterate warfare against the popular prejudices that magnify Napoleon into a sort of miraculous being, who, unlike the rest of his species, scarcely ate, drank, or slept. On the contrary, according to our author's account, Buonaparte ate and drank as heartily as any of Sir Walter Scott's heroes—slept habitually seven hours per day—walked and rode like other men—drank coffee in moderation—and, "prodigious!" took snuff from a box, instead of imitating the Great Frederick, who is said to have used his waistcoat-pocket as a dépôt for that commodity. The length of the circumstantial details on the subject of Napoleon's private habits obliges us to confine ourselves to a few brief fragments.

"Buonaparte was not inclined by nature to esteem mankind: the more intimately he knew them, the more heartily he despised them. This unfavourable opinion of the human heart, to which experience often gives birth, was in his case justified by some striking examples. His severity was the result of a maxim which he frequently repeated:—"There are two levers that act most powerfully on mankind—interest and fear." Perhaps one of Buona-

parte's greatest misfortunes was a disbelief in the existence of friendship. How often have I heard him say—"Friendship is but an empty word:—I love nobody;—no, not even my brothers:—Joseph perhaps a little; and yet if I love him, it is merely from habit,—because he is the eldest. Then, Duroc:—yes, I like him too:—but why? His disposition suits mine;—he is cold, harsh, and unbending,—he never weeps. To me the friendship of others is a matter of indifference:—I know that I have no real friends:—as long as I am what I am, I shall have no scarcity of seeming ones. Mark my words, Bourrienne,—leave women to weep and whine;—it is their business. I hate sensibility:—man should be firm;—his heart should be firm:—he that is otherwise, must meddle neither with war nor government."

"Buonaparte cherished the most rooted aversion for the sanguinary leaders of the revolution, and particularly for regicides. I have frequently heard him say to Cambaceres, while he gently pinched his ear, as if to soften the bitterness of the jest by this playful and habitual familiarity,—"My poor Cambaceres! I fear I can do nothing for you;—but if ever the Bourbons come back, your business is settled:—you will certainly be hanged!" A forced smile would on such occasions contract the ghastly features of Cambaceres, imparting to them an expression that it would be no less difficult than disagreeable to portray. This smile was generally the sole reply hazarded by the second consul, who, notwithstanding, once in my presence answered with a movement of pettish anger—"Come, come,—have done with your ill-timed jests."

"Buonaparte was one day walking in the gardens of Malmaison with Madame de Clermont Tonnère (now Madame de Talarie), whose lively and shrewd remarks always afforded him infinite pleasure. Suddenly interrupting her, he bluntly accosted her in the following manner:—"Madame de Clermont Tonnère, what is your opinion of me?" This unexpected address rendered the answer a matter of some delicacy as well as difficulty. "General," replied the lady, after a moment of hesitation—"I may compare you to a skillful architect, who does not allow his construction to be examined till entirely finished. Precisely so with you: you build behind a scaffolding, which you will dash to the ground when your work is done."

"Among other peculiarities, Buonaparte could never endure the sight of a coloured gown,—particularly one of a dark shade. A fat woman was also one of his sovereign antipathies. He rarely invited to his fêtes or dinners females in a state of pregnancy, to whose society he always evinced the most decided repugnance. Politeness to the fair sex was not habitual to his character: he was but little calculated for the utterance of those soft nothings which custom has familiarised to female ears. His compliments were often of the most uncouth description. At one time he would say to a lady—"Good God! how red your arms are!" To another—"What an abominable head-dress!" Or—"Who can have trussed up your hair in that manner?" Or—"How soiled your dress is! Do you never change it? I have seen you in that at least twenty times." Spite of this bluntness, he possessed every requisite for forming what in the language of the world is termed a man of amiable manners,—with the exception of the will.

"Amongst the private instructions given

to me by Buonaparte, the reader will probably be struck with the following rather singular order: 'At night,' said he, 'you will enter my bed-chamber as seldom as possible. Never awaken me when you have good news to announce. With good news there is no necessity to hurry. When, on the contrary, you are the depositary of evil tidings, rouse me instantly; for on such occasions there is not a moment to be lost.' Buonaparte frequently found the beneficial results of this calculation, which, though differing from that generally adopted, was really just."

Of Marshal Lannes there are some anecdotes and characteristic traits: we select the following for the sake of its brevity. "A colonel had one day punished a young officer, just arrived from the college at Fontainebleau, for having manifested fear on a first engagement. Lannes, who so justly appreciated the courage of a soldier, and who in this instance probably knew his man, severely reprimanded the disciplinarian. 'Colonel,' said the gallant marshal, with emphatic energy—"none but a coward dares to boast that he has never known fear!"

The French critics object, and probably with some appearance of reason, that M. de Bourrienne's style is by no means "*academique*;" and that his narrations are very diffuse and unconnected. Be this as it may, we repeat, that the memoirs before us throw more light upon the occurrences of Napoleon's reign than has ever been afforded by the journals or official documents of his time;—records which served merely to gloss over unworthy or oppressive measures,—to gild the pill presented to an enduring people. M. de Bourrienne places in their true point of view many of the actions of Napoleon which have been the objects of unsparing and injudicious commendation; and where slander has been busy with his fame, the simple unadorned fact is the antidote opposed to the envenomed poison. The author is alike a foe to gross misstatement and absurd embellishment. He has represented Napoleon neither as a demon nor a demigod; he has clothed him with the attributes of man, and nothing more.

Dr. Doddridge's Diary and Correspondence.

[Third notice.]

THE amusement to be derived from these memoirs, both as a genuine picture of a celebrated man, and as affording characteristics of an important sect, and studies of human nature, induces us to continue our review.

Previous to addressing the lady whom he ultimately married, our amatory divine was very pressing in his suit to a girl of some fifteen or sixteen, of the name of Jennings,—in the good graces of whose mamma, as appears from the letters, he stood upon familiar terms. The epistles to these parties are among the most remarkable in the publication; and we shall select them as striking proofs of that interference in domestic and family affairs which we had hoped was confined to confessors of the Inquisition. To the daughter Mr. Doddridge writes:—

"Dear Jennings,—You will probably be surprised, that in the midst of the familiarity of daily conversation I have recourse to the formality of a letter; and still more, when you find it is to tell you seriously that there are some things in your behaviour which I am so far from admiring, that I think it worth my while to spend half an hour on a Saturday morning to engage you, if I can, to reform them. To come directly to the point, there

are some particular seasons, which have occurred oftener within this last month than in all the other fourteen I have been at Har-borough, in which you seem to imagine that you have a dispensation to treat me just as you please, without any regard to the considerations not only of friendship, but of common politeness! I have not time to tell stories with pen and ink, and so will not enter into particulars; besides, the instances are individually so trifling as not to deserve mention, though when ten or twenty occur in a day, they amount to something that cannot be seen without observation, nor borne without some resentment; at least, where there is not a perfect indifference, which, by the way, they have a great tendency to produce. I appeal, my dear, to yourself, whether it be decent entirely to disregard many instances of kindness and respect, which though in themselves very little, are such as evince a mind disposed to please you; whether even so very a trifle as a cup of tea, when offered with civility and good humour, ought not either to be received or refused with a smile or a nod. Or if an air of pettishness in the whole behaviour be the most agreeable and equitable way of refusing those innocent freedoms which you know at the worst are but the errors of excessive tenderness. After all, my dear, I own that these are but little faults; yet when they recur frequently, they throw a blemish upon a character that would be otherwise very agreeable. I have been something more surprised at such behaviour to me, as I know that since I came into the family I have loved you most heartily, and treated you not only with constant civility, but with tender friendship. It is with pleasure that I have discovered any opportunity of serving or pleasing you. I have spoken of you with the most affectionate respect in your absence, and almost quarrelled with some of the wisest and best of my friends for charging you with that negligence and affectation of which I have now reminded you; and you yourself know, that when you have been disposed to quarrel and find fault, you could fix on nothing but an excess of fondness. Forgive me this wrong! And yet, on the other hand, I can never believe that you apprehend that I offer myself as a lover, and that it is therefore necessary to treat me with an air of coldness and scorn, that I may not take too much encouragement. I know not whether your late *complaisant* refusals were in jest or earnest; but of this I am sure, that if they were in jest, they had not so much wit or humour as to excuse their repetition thrice; and if they were in earnest, they were very unnecessary! However, to prevent such dreadful apprehensions, I do seriously assure you that I have at present no such thought; and I here give it you under my hand, that if I ever offer any thing of that nature, I will proceed in form. I will acquaint mamma in the first place, and will never plead your indulgence to my friendship as any engagement upon you to accept my love. With this precaution, I think I may safely tell you that I do still esteem you beyond any other person in the world of your age; and do really think that when you are in a good humour, you are, without a compliment, one of the most agreeable creatures I know. I must further do you the justice to acknowledge that you have frequently, perhaps I may say generally, treated me with an air of tender friendship, which to a man of my temper is engaging and endearing in a very uncommon degree; and I need not look back farther than yesterday to recol-

lect some very agreeable instances. But, after all, my dear, I must add, that it is this mixture and uncertainty of temper and behaviour that perplexes me more than any thing else. There is an epigram in the *Spectator*, which, though not made upon your sex, so exactly expresses my sentiments, that I cannot forbear transcribing it, and would by all means advise you to let your memory imbibe it:

In all thy humours, whether grave or mellow,
Thou'rt such a wayward, testy, pleasant fellow,
Hast so much wit and mirth and spleen about thee,
There's no existing with—nor e'en without thee.

Therefore, my dear, I have one favour to beg of you, and all that I have already said was only intended as its introduction; and that is, that you would reflect a little upon my character in general, and upon my behaviour to you in particular, and then come to a resolution to treat me in a constant manner. Be always kind and obliging, or always negligent and rude; and though I cannot say it is a matter of indifference which you choose, yet I am persuaded I shall in either case be easier. If you can resolve upon the latter of these expedients, which yet methinks I am unwilling to suppose, my friendship is ended, but my civility will continue. I am not humble enough to make any fresh complaint either to yourself or your mother, nor spiteful enough to attempt to injure or tease you. Nay, I have so much regard to the friendship of your excellent mother, whom I know to be most tenderly concerned for your interest as well as to the obligations of common humanity, that I will do my utmost to promote your improvement in religion and in other accomplishments as far as may be in my power. But as to what you think of me, or the humour you are in with me, I shall be as utterly unaggravated as I am about honest Frank's being in the vapours, or the crying of Nanny Parsons when she is out of my hearing! But if, according to my firm expectation, you take this friendly admonition as kindly as I mean it; if you make it your future care to treat me with civility and good humour, and rather to bear with any tolerable infirmity than to quarrel when I have given you no affront; in one word, if you will treat me just as you did twelve months ago, bating the article of so many kisses, which I will willingly resign, I assure you, my dear, that nothing which may have past shall impair the sincerity of my tenderness and esteem."

To the mother of this girl, the young minister, at the same time, writes in this manner:—

"Dear Madam,—I have been seriously considering what you said to me yesterday upon the road. I am sensible that some things were entirely just; and though perhaps others were mistakes, yet I do believe that the whole was kindly intended, and I am sure that if it be not my own fault, I may be the better even for those reflections, which, so far as I know my own temper, and can recollect my former behaviour, had not in fact any solid foundation. I then hinted that there were some things, even in your behaviour, which might bear amendment; but I did not particularly mention them, because I was not fully master of my temper, and because whatever I said under the first smart of reproof would have looked like recrimination, which is so silly a method of defence that I should even then have been ashamed of it. And as I know that conversation on these delicate subjects is very seldom supported with decency and good humour on both sides, and sometimes on neither, I thought it would be the best way to give you my sentiments upon paper, and the rather because what

is written may be more accurately weighed and more cautiously grounded than it could be if it were spoken. It is with the most awkward air that I go about to point out the defects of a character that I admire, and of a person whom I love—I had almost said beyond any other in the world, I am sure equally with any one; but you yourself would readily tell me that you spoke to me so directly of my faults, not because you did not love me, but because you did, and because you desired to see me as perfect as possible. I further observe that I am not going to complain of your treatment of me; on the contrary, I think nothing can be more kind and obliging than the main course of it has generally been, especially since I have resided with you at Harborough, and hardly know that one friend of yours in the world, to whom I think you have behaved in a more engaging and agreeable manner. Nor would I intimate that these defects, whatever they are, do daily appear in your conversation; on the other hand, I have known whole weeks together in which they have lain dormant. These were weeks of perfection, and I think it so probable that this may be one of them, that I take some time from my sleep to finish this grave despatch, lest, if it be delayed a few hours longer, the admonition should seem out of date, and I, in the transport of fond admiration, should forget that I have ever seen the least mixture of human infirmity. With all these precautions I will venture to add that I have been the time when Mrs. Jennings herself, the philosophical and complaisant Mrs. Jennings, has made some very pettish and morose answers to things which to my certain knowledge have been said without any design of affronting her, and that merely because some other accident has put her out of humour. If you should maintain that you had some reason to be displeased with the person to whom you made such a speech (which, though unknown, was abundantly sufficient to justify the change in your behaviour, which you intimated yesterday morning), the answer is obvious: a reason which is unknown to any one in the company is, to such a person, no reason at all; and ill humour founded on such a reason will appear to him utterly irrational, and consequently is not likely to do him good, unless it be doing good to lessen his esteem for a person whom it is hardly possible to admire within moderate limits. I have further observed some perverse moments, in which you are so exceedingly prone to contradict those with whom you are at all displeased, though on the most trifling occasion, that you will in plain terms rather contradict yourself than fail of paying them that compliment! When you are censuring the faults of those whom you most sincerely love, you are apt to treat them with too great severity, and sometimes with an air of contempt, which leaves a sting behind it for a considerable time. To shew people that you are displeased with them, may be prudent, for it is your happiness to see many very agreeable persons, who have no manner of dependence upon you, hurt, merely by your saying that you are displeased; but to shew them, in any instance, that you despise them, is carrying the matter to an outrageous extremity, and may probably throw them into such despair as may prevent their taking proper measures for their amendment. What you said to dear Kitty about my offers of matrimony was a most grating instance of this, and not to be remembered without something of indignation, even while my heart is overflowing, as it now is, with the tenderest sentiments of friendship towards you.

It was to a surprising degree hasty, and terribly spiteful and unjust, and the very recollection of it makes the veins of my forehead swell so high that I resolve never to trust myself to mention it again; and I should be much happier if I could engage never to think of it. The last thing, madam, which I have to mention is, that you seem so prejudiced in favour of your own notions, that it is one of the most difficult things in the world to fix a conviction upon you, or to procure an acknowledgment that you have been mistaken; nor do you seem to take it very kindly when people interest themselves in your affairs so far as to intimate that they think you have in any instance been to blame. I heartily wish that this letter may not furnish a new proof of the justice of these suggestions! If it should, I beg that you will redress upon your rising displeasure; for in short, madam, I will not enter into a dispute with you. If I were, I do verily believe that the subtilty and acuteness of your wit would puzzle me upon many of these heads, although it would be a poor excuse. Rather, madam, be persuaded to look into your own heart, as one that would impartially examine, and by the amendment of an error triumph over herself; and to make you the more suspicious and impartial in the examination, I would further remark, that these are not merely my own desultory reflections (which, with the opinion you have of my incapacity of judging people's characters, you might perhaps despise), but that several persons whom you acknowledge to have a great deal of good sense, and who most intimately know you, and most sincerely love you, are entirely of my opinion as to every one of these matters, and have themselves pointed out many instances which the excessive fondness of my friendship might otherwise have overlooked. However, I hope, madam, that whatever you may think of the justice of this censure, you will have no inclination to doubt its kindness. It would be an injury to your good sense to question whether you had seen that, in the midst of all other failings and mistakes I have been chargeable with in respect to others, I have always treated Mrs. Jennings with the tenderness of a brother and the respect of a son; or, if in any degree I have failed in what I thought the most exact decorum, that it has been owing to an uncommon degree of esteem which, in conjunction with the natural warmth of my temper, has made every instance of unkindness or slight from her not only grievous but intolerable. My entire affection for you is above being expressed by any of those little compliments which in the sincerity of my heart I address to others. Let it suffice to say, that I acknowledge your society and friendship as one of the greatest comforts of my life, and that every thing that is mine is as entirely at your service as if it were your own; and that every thing that is yours is as dear to me as if it were mine. You are the only person in the world to whom I write 'dearest madam,' and when I have written that—I need write no more."

And to a Mrs. Wingate also at the same period—but this must be reserved for Saturday next.

SIGHTS OF BOOKS.

The Pleasures of Anarchy, a Dramatic Poem; &c. &c. By the Rev. F. Newnham, Mercet-citizen of London. 8vo. pp. 213. London, 1829. G. Taylor.

THIS volume enjoys the distinction of being the greatest and most unqualified nonsense which we ever read. It is too absurd for

laughter, and seems more like a production to prove a writ de lunatico inquirendo unnecessary, than really a publication which could by any chance find its way before the world.

A Compendious View of the Principal Events in the History of Great Britain and Ireland in relation to the Roman Catholic Question. By J. Bedford. 8vo. pp. 420. London, 1829. Simpkin and Marshall.

A REVIEW of the principal events of this vitally important measure, with a brief sketch of the state of the countries from the period of Elizabeth. The writer is highly favourable to the ministry, and the whole of their proceedings, which in his opinion are eminently calculated to promote the best interests of the United Kingdom.

ORIGINAL CORRESPONDENCE.

Netherlands' Summer, 1829.—Prices, Rents, and Taxes.—New Method of Treating Cows.—Notabilia.—The greatest Man of the present Day.

Chemt, 6th Oct.

MR. EDITOR.—I find the whole country, from the borders of the ocean to this neighbourhood, in a state of frightful humidity, if not of inundation. Where I have been accustomed to luxuriate in the contemplation of verdant pastures, smiling meadows, and lands rich in the bounty of nature, and proud of the ingenious skill of human industry, a wide and chilling waste of waters arrests my eye in every direction. But I must not proceed further with this melancholy subject; though I would have you and my countrymen to believe out of that which I could picture from what is before me, that there is no condition under heaven's canopy so miserable but that it might be worse; and with this, that there are climes where the deluge of the summer of 1829 has been more intense and wasteful than that which has blasted the prospects of hundreds of our own husbandmen.

Among the other objects of my inquiries, I have been anxious to arrive at a satisfactory comparison of prices and outgoings between Flanders and our own country; and I send you the following as a partial result of those inquiries:—A Flemish horse, of the first breed, fetches from 16*l.* to 20*l.*; a bullock, in full condition, weighing circa 800*lbs.* about 25*l.*; a sheep, plump and perfect, twenty-five to thirty shillings for 80*lbs.*; fine pork is worth forty to fifty shillings per hundred weight, and veal from forty-five to fifty shillings for seven score pounds. Potatoes, which are the chief food of the lower orders, and in common years sell for three shillings and sixpence to four shillings per two hundred weight, have, under the distressing circumstances of the prevalent humid weather, risen to thirteen and fourteen shillings! In fact, the crops of this staff of indigent life have, at least in this neighbourhood, been utterly destroyed. Fine pasture land is worth forty to fifty guineas an acre, and is rented at fifty to sixty shillings. Wheat fetches twenty shillings per sack. Hay twenty-five shillings per 1000*lbs.* Among the outgoings (a price paid for the superintendence of a really paternal and enlightened government) are a capitation tax of five shillings per head for all the component parts of the human household; a duty of five and forty shillings for all horses kept for sport or recreation, and of twelve shillings for every horse used in posting; a tax on bread of twenty-pence per hundred pounds weight; on dogs, not used on

farms, of eleven shillings and sixpence; and on windows of fivepence each. Besides these, there are duties payable on ground used for building purposes, on every hearth in use, and a variety of other objects, with which I shall not detain you, in order to shew that Flanders is not the cheapest land on earth to dwell upon.

Having given you these scraps of notices on agricultural and fiscal heads, I shall conclude them with a new feature in rural economy,—an improvement in the system of feeding cows. A grazier in this neighbourhood has recently adopted, with much success, a new method of rearing this invaluable animal, and, at the same time, of increasing the productive powers of his land. He has found that by keeping the animal constantly in the stable, and maintaining the temperature at an equal warmth throughout the year, he has obtained twice the quantity of milk. During the last seven years he has treated twelve cows in this manner; and not only has their health and thriving continued uninterrupted good, but he has been enabled to devote to other purposes three-fourths of the soil formerly required for their maintenance. It should be added, however, that as soon as the grass is cut and cleared, he has very sensibly irrigated the soil with the liquid which runs off from his stables (or stalls) and dungheaps. This very summer, after four consecutive cuttings, his meadows were in far better condition than adjoining pastures, which had only been cut once, though naturally of the same quality as his own. He is extremely careful in keeping his land clean of weeds, and removing every description of herb which is not of a wholesome and nourishing nature.

But I must close this "oïla podrida" with a natural and sublimating wonder. The greatest man of the present day is a young man, a native of Pitva, in Sweden. He is in his nineteenth year; his stature, though his growth is not yet completed, is nine feet three inches and three lines! and even at eight years of age, he had attained a height of three feet four inches!

Yours, &c. G.

P.S.—The Musée Canova of Bianchi is exposed here for sale. It consists of beautiful and very correct imitations of Canova's master-pieces, and the finest antique statues in marble-plaster; an invention by which Bianchi has succeeded in closely reproducing the most splendid productions of the chisel. The price of a series of eight Canovas is 15*l.* 13*s.*—of the series of antiques, 17*l.*—but for single statues, it varies from 2*l.* to 4*l.*

ARTS AND SCIENCES.

THE KING.

HIS MAJESTY, ever anxious to promote the arts and sciences, has lately presented to the British Museum a most valuable collection of minerals. Some of the articles in this collection were obtained from the Hartz Mountains, with great care and expense, and are most rare and curious; particularly those which compose the series of silver ores, which is quite complete. What adds much to the interest of these specimens is, that the Museum collection was before deficient in this branch.

EXPEDITIONS.

THE Møller and Siniavin corvettes have, according to late accounts, arrived at Cronstadt, after their three years' voyage round the world. We have frequently noticed them on their way, at Alashka, Kamchatka, Behring's Straits, the Caroline Islands, &c. &c., and

shall now look for the regular details of their services to geography and discoveries in science.

Accounts from Orkney state that Captain Ross in the Victory, steamer, had touched at Icelandburgh on his northward course; and that, with "all well," he had found the season unusually open.—(*Newspapers.*)

THE PLAGUE.

M. DE LASTEYRIE has received the following letter from M. d'Arœt, jun.:

Tripoli in Syria, June 14th, 1839.

The concern which you take in every thing which is interesting to humanity, induces me to communicate to you the result of some experiments which we have just made here with the chlorurets of oxides, in order to determine their action upon the virus of the plague.

We had hardly returned to Cairo from our voyage in Upper and Middle Egypt, when we learned that the plague was raging at Tripoli, in Syria. Though it was our duty to remain in Egypt, we could not resist the desire of going to Tripoli, in order to make some trials, the result of which was doubtful until the plague should manifest itself at Cairo or at Alexandria, which is not the case every year; and which, indeed, sometimes only appears at long intervals.

We consequently set off for Damietta, and from thence for Beirut and Tripoli. We have been at this latter place a fortnight; and our experiments relative to the disinfection of clothes are finished.

The most important point was to convince ourselves whether the pestilential virus would resist the action of chlorurets; and in order to leave no doubt upon the matter, it was necessary to make trial of the chlorurets upon clothes covered with perspiration, pus, and blood, left at their death by the persons attacked with the plague.

We requested the vice-consul to procure us six coats, which he bought of the relations of six individuals who had died of the plague the previous evening and the evening before that. With respect to the infection of these clothes there could be no doubt; they were spotted with blood, matter, and perspiration. After the vice-consul had made a *procès verbal* of the state in which they were, I immersed them for sixteen hours in a solution of chloruret of soda at 0.5 of the chlorometer of M. Gay Lussac; and when they were dry, each of us put on a shirt next to the skin, and then the rest of the clothing. The spots still remained; but they were by no means so dark: we went to bed in this clothing, and wore it eighteen hours. The experiment was made eight days ago, and none of us have experienced the least attack from it.

That the mode of disinfection adopted has completely answered the intention, is, I think, proved by these facts in a positive manner. As each of us has a different constitution, this is another proof of the efficacy of the solution.

We are going to make another attempt to-morrow, by administering to persons attacked with the plague the chloruret of soda internally, and also by friction, in lotions, &c. We dare not, however, hope for success from this remedy as a medicament against a disorder so terrible, and which for three years past has unceasingly ravaged the population of Tripoli.

To-morrow we shall also begin to perform dissections, which, however, will present the greatest difficulties, in consequence of the fanaticism of the Turks; though we have some hope that, sooner or later, the use of chlorurets of oxide will be adopted by this people, who be-

gin to abandon fatalism, and to follow the example of Europeans, by performing quarantine.

HEADS.

HAVING in two recent *Gazettes* paid our passing tribute to the subject of phrenology, it will be no inconsistent appendage to quote "a comparative estimate respecting the dimensions of the head of the inhabitants in several counties of England."

The male head in England, at maturity, averages from 6½ to 7½ in diameter; the medium and most general size being 7 inches. The female head is smaller, varying from 6½ to 7, or 7½, the medium male size. Fixing the medium of the English head at 7 inches, there can be no difficulty in distinguishing the portions of society above from those below that measurement.

London.—The majority of the higher classes are above the medium, while amongst the lower it is very rare to find a large head.

Spitalfields Weavers have extremely small heads, 6½, 6½, 6½, being the prevailing measurements.

Coventry.—Almost exclusively peopled by weavers, the same facts are peculiarly observed.

Hertfordshire, Essex, Suffolk, and Norfolk, contain a larger proportion of small heads than any part of the empire; Essex and Hertfordshire, particularly. 7 inches in diameter is here, as in Spitalfields and Coventry, quite unusual. 6½ and 6½ are more general; and 6½, the usual size for a boy of six years of age, is frequently to be met with here in the full maturity of manhood.

Kent, Surrey, and Sussex.—An increase of size of the usual average is observed; and the inland counties, in general, are nearly upon the same scale.

Devonshire and Cornwall.—The heads of full sizes.

Herefordshire.—Superior to the London average.

Lancashire, Yorkshire, Cumberland, and Northumberland, have more large heads, in proportion, than any part of the country.

Scotland.—The full-sized head is known to be possessed by the inhabitants; their measurement ranging between 7½ and 7½ even to 8 inches; this extreme size, however, is rare.

LITERARY AND LEARNED.

SIR WALTER SCOTT'S WORKS.

[The renovated attention which the works of this celebrated person have excited at the present period, will render the following notices even more interesting than they are in their intrinsic character, and we insert them with much pleasure.—Ed.]

To the Editor, &c.

SIR,—It is somewhere said, that if all the monuments of the human race were annihilated except the works of Shakespeare, beings of another sphere descending upon our globe might from them learn what man had been. With equal justice may the remark be applied to the delineation of Scottish manners, and the Scottish peasantry of a by-gone age, in the works of the Author of Waverley. Yet it is only by persons who retain a recollection of those distant days, that the accurate and deep-toned intensity of such portraiture can be duly and feelingly appreciated.

In his day and generation Andrew Gemmells was not one of the least conspicuous of his tribe; and it may probably gratify many of your readers to learn a few particulars of the prototype of Edie Ochiltree, with which his biographer appears to be unacquainted.

Andrew Gemmells was not a *Blue-jean*: he had served in Queen Anne's wars, fought

at Sheriff-Muir in the subsequent reign, and was not a little proud of his military exploits. On this last occasion he had taken from the dead body of a foreign trooper a watch, which he constantly wore and was delighted to exhibit. It was encased in yellow metal, pinchbeck perhaps, and of larger dimensions than even the clumsy horologe of that period. Though the most familiar haunts of Andrew were amidst the hills and dales of the Scottish Border, his wanderings were not confined to those districts alone. With the Highlands he was intimately acquainted; and often attended Newmarket, where he was well known, and his judgment said to be highly estimated amongst the amateurs of the turf. He was tall, his countenance strongly marked—and his tread firm even in advanced life; but the present writer does not associate the idea of elegance with the attitudes of this itinerant;—his motions might perhaps, however, be more free and agile in youth. Andrew was not only an adept at games of hazard, but reckoned one of the best draught-players in Teviotdale; and few of the Border aristocracy of that day thought it a degradation to engage in a contest of skill with the mendicant at his favourite game, even without the intervention of a *window-sill*. In the farm-steadings, the ingenuity of Gemmells oft supplied the want of a *dam-brode** by drawing checkers with soft *keel* (chalk) on any piece of wood which might be in the way, and employing chucky-stanes (pebbles) and baubees (halfpence) as draught-men. Of the powers of his mind, the writer was then too young and too ignorant to judge; but the late Lord Kaimes used to be delighted with the keenness of his sarcasms, and to observe, that at a *knock-down* argument Gemmells might match the General Assembly itself. The last time the writer saw this wonderful man was at Hassendean Burn, in Teviotdale. Among the visitors was the late Mrs. Scott of Wauchope, the friend and correspondent of Burns. With this clever and somewhat eccentric female, who delighted to see human nature in all its phases, Gemmells was a great favourite; and at her desire he was ushered into the parlour. Though at this period far on his descent in the down-hill path of life, he had recently got a set of new teeth. They were of a pearly whiteness, but small, thin planted, and in every respect resembled the first or milk-teeth of infancy; and when the old man smiled, imparted a ludicrous, or rather a somewhat hideous, expression to his weather-beaten countenance.

The supposition of the Author of *Waverley* regarding his death, though strictly in keeping with his erratic habits, is widely at variance with the manner in which his days actually terminated. He had been in the habit for several years, probably finding his strength somewhat diminished, of spending his winters in the house of a widow at Dunse. His winter stores consisted of a small keg of whisky, a ten-pint barrel of twopenny, and his hoarded *avmous* of oatmeal and cheese. Each week he purchased a quantity of meat, which he cooked at once; and thus in ease and comfort passed the dreary period of frost and snow, amusing the old and delighting the young with a repetition of his adventures;—for Andrew always had a numerous circle round his cheerful ingle in the cold winter nights.

When the snows melted, and the voice of the cuckoo was heard in the fields, the old man recommenced his wanderings; but from his last excursion he returned earlier and more

enfeebled than usual, and shortly afterwards resigned his life at the advanced age of 106.

Andrew Gemmells might be termed a rich man: he was a bachelor, or at least had no child; but he used to talk of a nephew, whom he had put up in a snug little farm, the writer believes somewhere amongst the Lammermuir hills.

In addition to the foregoing reminiscences of Andrew Gemmells, the writer has since been informed by a friend, who recollects him well, that this nondescript in the field of Scottish mendicancy, not only for many years regularly visited Newmarket, but betted high, and for the most part successfully. He was also, it seems, a constant attendant at Millfield and Caverton-Edge races, and familiar with many of the distinguished members of the Caledonian Hunt. He usually travelled with considerable sums about his person, as noticed by the Author of *Waverley*; but so cunningly concealed in some part of his grotesque habiliments, as to elude casual detection. He was once seen seated in a secluded nook in the grounds belonging to Sir James Nasmyth, forming his treasure into a clue, or roll, by ingeniously enveloping it in a covering of worsted yarn. While thus engaged, some idlers passing through a hedge beheld him dispose of guinea after guinea in this way, till they reckoned nearly seventy; when one of them roared out—“Whar gat ye a’ thae guineas, Andrew?” “Guineas! ye rogues!” quoth the beggar; “they’re a’ *baubees*, new *baubees* every ane o’ them!”

For several seasons during the latter period of his life he had relinquished his trusty staff, and performed his perambulations on a white pony. One eye protruded so as to rest on his cheek,* and the vision of the other was greatly impaired; but his spirit of sarcasm was untamed, and he used not only to decant on the badness of the times towards the members of his craft, but to prophesy the downfall of the farmers, from the gaiety and love of finery which about this period began to creep in amongst their wives and daughters. Could Andrew look up now, the Border would seem to him like fairy-land;—but enough, the times change, and we change with them.

London, October 1st, 1839.

A. C. HALL.

Skene's existing Localities of the Waverley Novels.

AMONG the numberless illustrations of the *Waverley* Romances, we think this little series of Sketches has not yet attracted much notice. Mr. Skene, of Rubislaw in Aberdeenshire, is well known in the North as a Scottish antiquary and amateur artist of great distinction: the life-long friendship between him and Sir Walter Scott is immortalised in one of the charming epistles dedicatory of *Marmion*. It will surprise no one who has read those beautiful lines, to hear that it was in the company of Mr. Skene that Sir Walter performed most of the youthful peregrinations which qualified him to be, in the sequel, the national poet and novelist of his country. What he was viewing with the eye of a poet, his friend was not less indefatigable in recording with his pencil; and the present etchings are faithfully executed after these drawings, made long ago, when probably neither of the fellow-wanderers dreamt of any thing but their personal amusement. To our view, no illustrations, so called, the work of artists drawing from their own fancy, can be so well entitled as

these to be bound up with Sir Walter's new edition, to the size of which they are exactly adapted. They are accompanied with a few pages, in which Mr. Skene simply and modestly describes the circumstances under which the originals were traced in the days of other years; and which therefore form, in fact, supplementary notes to the author's prefaces, and may be very advantageously added to the end of each successive volume.

We have no doubt what we have said will be quite sufficient to cause the immediate consumption of these *etchings*; and little more, that Mr. Skene would do well to have them re-outlined on steel. The spirit and elegance of the performances are not less remarkable than their fidelity; and they are given, as the best things now-a-days must be, very cheaply.*

PINE ARTS.

NEW PUBLICATIONS.

Illustrations to the Iris, from Paintings by ancient Masters. S. Low; and Hurst, Chance, and Co.

THESE illustrations are eleven in number, (including the titular vignette). We briefly adverted to them in the last *Gazette*, and we now proceed to notice a few of the most striking. In the front rank of these is “The Raising of Lazarus,” engraved by A. W. Warren, from a picture by J. Levens. This is the celebrated picture which Mr. Fuseli, in his *Lectures on Painting*, justly points out as a singular example of simplicity and sublimity, both in composition and in expression. It is difficult to retain such high qualities in so small a compass; but Mr. Warren has done all that could possibly be expected; and has been especially successful in preserving the Rembrandt-like grandeur of the general effect. We believe that the picture is at present in the possession of Mr. Knowles, of the Navy Office.—“Madonna and Child,” engraved by R. Graves, from a picture by Murillo. The original of this print is well known as one of the sweetest ornaments of the Dulwich Gallery. Mr. Graves has engraved it with great skill. The playfulness of line, and lightness of effect, in the Madonna's drapery are very charming.—“St. John in the Wilderness,” engraved by W. Ensom, from a picture by Carlo Cignani. We have seldom seen the tone and texture of flesh,—one of the greatest difficulties of the art,—more happily rendered upon either copper or steel.—“The Flight into Egypt,” engraved by W. R. Smith, from a picture by Claude. One of Claude's richest compositions, sweetly engraved by Mr. Smith.—“Head of Christ,” engraved by W. Humphrys, from a picture by Carlo Dolci. Mr. Humphrys has done great justice to the meekness and veneration which characterise this fine work of Carlo Dolci's.—The remaining plates of this pleasing little collection, all of which have more or less merit, but do not call for particular commendation, are, “Christ expounding the Law,” engraved by E. Smith, from a picture by Leonardo da Vinci; “Christ in the Garden of Gethsemane,” engraved by

* Sir Walter Scott's forthcoming History of Scotland, from the earliest historic records down to the union of the crowns, is not, like the series of *Tales of a Grandfather*, avowedly selected and adapted for young persons,—but undertaken with a different view, and for a different class of readers. It is intended to form a part of the History of England, Scotland, and Ireland, in six small octavo volumes, which we have already mentioned in our Literary Notices: Sir James Mackintosh doing England, and T. Moore, Ireland. The History of Scotland is announced for publication in November; and we are informed that the History of England is in the press: both are portions of Dr. Lardner's Cabinet Cyclopædia.

* The vernacular term for a draught-table.

* Probably in consequence of the disease termed by surgeons *ophthalmia*.

T. S. Engleheart, from an antique in the collection of C. Alders, Esq.; "Infant Christ with flowers," engraved by S. Sangster, from a picture by Carlo Dolci; "the Incredulity of St. Thomas," engraved by W. Raddon, from a picture of L. Caracci; "Hagar and Ishmael," engraved by E. Smith, from a picture by F. Baroccio; and "a Magdalen," engraved by S. Sangster, from a picture by Carlo Dolci.

The Juvenile Forget-Me-Not. By Mrs. Hall. Pp. 228.

ANOTHER of the younglings of the Annual flock has just reached us, but too late for farther notice than to say, that it seems, on a hasty glance, to be superior to its predecessor from the same hand—certainly in its pictorial, and apparently in its literary features. It has long been the fashion for us elderly people to wish ourselves young again; and these pretty and pleasing books supply another inducement to the natural desire.

The Illustrations of Friendship's Offering are before us, and consist of much variety and beauty of subject. We shall notice them in our next.

Mock Election, King's Bench; No. 1., High-Sheriff; Study for his Majesty's Picture. Drawn on stone by B. R. Haydon. Dickinson.

THE great advantage of the lithographic process, in enabling an artist to multiply the productions of his genius, without the slightest diminution of their original qualities, were never more strikingly manifested than in this highly characteristic print; in which the chalk is handled with a freedom and a vigour which at once denote that the porte-crayon has been held by a master.*

ANTIQUITIES IN ETRURIA.

THE following is a more detailed account of some of the monuments of antiquity discovered among the tumuli and ruins of the Etruscan cities of Tarquinii and Vulci, a day and a half's journey from Rome, along the sea-coast: to which the finding of extensive fresco paintings of three tombs in the city of Tarquinii gave rise, in the summer of 1827. Two of them had already been opened by a private individual of the city of Corento, when Baron von Stackelberg and Mr. Kestner, Hanoverian chargé d'affaires, were induced to exert themselves for the preservation of these valuable remains. The two uncovered tombs were surrounded by a frieze covered with paintings highly attractive, from their various representations of ancient manners, Etruscan fights, games, repasts, &c.; but still more interesting in consequence of the perfection which they display in a hitherto almost unknown branch of Etruscan paintings. One of the frescoes is in a style which, every where out of Etruria, is denominated the old Greek; the other, though inferior to the former, is excellent, and exhibits a rich contribution of Etruscan inscriptions. The opening of a third tomb, the remarkable drawings of which are not equal in point of art, was a subsequent

prize of Messrs. Kestner and Von Stackelberg, who, though less attracted by the charms of new acquisitions than by the importance of those which lay within grasp and had not yet been turned to account, exerted their utmost endeavours to preserve and make known the three great fresco paintings. Their excellent drawings are, we hope, to be (if not already) published, especially as the account given of these discoveries in the *Journal des Savans* is very imperfect.

The opening of these tombs led to the knowledge of the important collections of painted vases and remarkable bronzes which were in the possession, partly of the town of Corento, and partly of private persons. Among the amateurs at Rome was the Prussian aulic counsellor Dorow, who not only laid the foundation of an extensive collection of antiquities of his own, but, as usually happens on the appearance of foreign collectors in that country, gave occasion for new and very successful researches. These were prosecuted with peculiar activity in the spring of 1828, in the territory of the ancient town of Vulci, near Canino. Clandestine excavations, undertaken by a steward of the Prince of Canino, who has since absconded, brought to light a mass of painted vases, in the style of those of Magna Græcia, which nobody had suspected to exist in the neighbourhood of Rome—and which were purchased by counsellor Dorow. Subsequent excavations have been made, by order of the Prince of Canino and Messrs. Candellori, Campanari, and Feoli, which, on a rough estimate, have brought to light, within the course of a year, about eight hundred of these painted Greek vases. None of these collections, however, contain so many distinguished specimens, even of the finest style of Greek art, as the first mentioned; which, after satisfying Lucien Buonaparte, who complained of the irregular manner in which it was purchased, remains in the possession of M. Dorow.

If we consider that all the Etruscan paintings hitherto known, though their number is indeed considerable, consisted only of bas-reliefs on sarcophagi, most of them belonging to an age when the arts were on their decline, and of a considerable number of bronzes, among which there were very few of much merit—it is evident how important these beautiful paintings, and this extraordinary number of antiquities, obtained in a few months from a classic soil where no trace of any thing of the kind had before been seen, must be to the antiquary and lover of ancient art. It would be hazardous to affirm that Etruscan skill and ingenuity appear to greater advantage in consequence of these discoveries; but we certainly see that an important branch of the art was exercised either by Etruscan or Greek artists in flourishing provinces of ancient Etruria, and frequently employed in ornamenting their sepulchres.

In the great fresco painting in one of the tombs at Corento, numerous inscriptions of beautiful single figures perfectly correspond with the Etruscan characters with which we are already acquainted by sarcophagi and bronzes; and if we never meet with this writing on the numerous vases of Tarquinii and Vulci, but Greek inscriptions very frequently, we may suppose that all these monuments of art in the coast of Etruria originated with Greek artists—and still farther, considering the great number of vases and the genuine Greek style of the first fresco in Corento, that they were probably Greeks who colonised in Etruria.

SKETCHES OF SOCIETY.

PRESENT STATE OF CONSTANTINOPLE.

[The following, from a private friend residing at Constantinople, gives the most particular and picturesque account we have any where met with of the state of that city on the near approach of the enemy. We could hardly have a more interesting sketch of living society; but some of the facts further indicate matters of considerable national importance.]

Constantinople, Sept. 4, 1829.

AGAINST the opinion of most people here, from the events of the last month, the Russian army has stopped short of this place; and the emperor appears to be inclined to moderation. The fulfilment of the treaty of Ackermann is, I believe, what he demands. The question of Greece is of course to be settled, and the *frais de la guerre* to be paid: this last will press heavily on the Sultan,—not so much, I should imagine, on his purse, as on his avarice; for he must have treasures—since, for ages, the wealth of the empire has merged in the seraglio. If the Pashas, by oppression, extort riches, the Sultan, who argues that all their profits are derived from his favour, retakes his own; if the Armenian bankers become wealthy, the Greek princes opulent—by virtue of the bow-string, or exile, he is their heir; in short, Turkey is his appanage, and its inhabitants his property; and, excepting the great Asiatic families of Oglou, no man can call the purse in his pocket his own, nor depend upon the land he has cultivated descending to his children. General Diebitsch is encamped round Adrianople (of which place he is the master), with about 40,000 troops; his advance occupies Demotio, a town on the Marizzo (ancient Hebrus), six hours to the southward of the former: and in other garrisons, this side of the Balkan, he may have 16,000 more men: reinforcements are crossing the mountains. His army, *on dit*, is superb, and its discipline exemplary; every thing is paid for, and the Cossacks are not permitted to proceed on the advanced guards, for fear of their marauding propensities. The various towns are perfectly tranquil, the pashas or mousseleims are allowed to act as civil governors; and were it not for the circumstance of being disarmed, the Moslems would hardly know the presence of an enemy. They welcomed them as friends, and, without a murmur, gave in their arms,—those sure pledges of a warlike nation. For the last week Constantinople exhibits a reign of terror: what the sword of the enemy, plague, and famine spare, the executioner removes. Nightly, hundreds are strangled, and thrown into the sea of Marmora; and every day numbers of the better class are beheaded in the streets, and left where they fall, for a public example. At every turn one sees an execution, or beholds a headless corpse. This is characteristic: the sufferer, unbound and unbanded, kneels to receive the fatal blow—the body is then stretched on its back—the head placed under its right arm, and on the breast the sentence is laid. The causes of this well-timed and necessary severity are as follow:—On the rapid approach of the Russians, the janizaries every where shewed their untameable spirit; they rose in various parts of the kingdom, and in this city formed a plot to fire it from end to end, assassinate the guards of the Sultan, depose him, and elevate his youngest son on the ruins. Their mutinous feelings were too openly declared not to be observed. The news of the capture of Adrianople, and the complete evidence of the conspiracy, were known on the same day; the Sultan immediately took his measures,—sent plenipotentiaries (the *teftadar* and an *ulema*) to the Rus-

* We have been sorry to see our advertising columns occupied for a week or two with a dispute on the subject of lithography; and we trust that as Mr. Hullmandel (the able lithographer of this spirited print) has replied to the statement which Mr. Colinet thought himself called upon to make in defence of his absent partner, there will be no more last words between them. It is pity to see artists at the head of their profession engaged in controversy; and this art is gathering ground so fast, that we are sure no jealousies need be excited among them, especially such as are so extensively employed as Engelmann's house and Mr. Hullmandel's.

slan camp, and unsheathed the sword of justice. His officers, in disguise, frequent the places of public resort, and wo. to the wretch on whom suspicion attaches,—his head rolls! Inconceivable is the panic impressed on Constantinople, and fearful the anticipation of the slaughter of the janizaries which must take place. They shew that no terms can be kept with them, and they must receive another severe lesson: 30,000 heads fell the last time—another such weeding may quell their turbulence.

BONAPARTE'S LOVE-LETTERS.

THE following is the translation of a letter, dated "Albenga, 16th Germinal (6th of April), 1796, written by Buonaparte to a favourite fair in Paris. He had left Paris on the 4th of March, thirty-three days before the battle of Montenotte took place on the 12th of April, and that of Millesimo on the 14th.

"It is an hour after midnight, a letter has just been brought to me, the contents are afflicting, my soul is affected by them,—they announce the death of Chauvet. He was chief commissary-general of the army; you have seen him with Barras. Sometimes, my dear friend, I feel the necessity of consoling myself by writing to you, the thoughts of whom have so powerful an influence on the moral state of my ideas, to whom I can pour out my troubles. What is the future? What is the past? What are we? What magical fluid surrounds us, and hides from us the things which it behoves us to know? We are born, we live, we die, amidst wonders. Is it astonishing, that priests, astrologers, and quacks, have profited by this singular circumstance, to take the direction of our opinions, and to direct them in conformity to their own passions?—Chauvet is dead. He was attached to me; he had rendered essential services to the country. His last words were, that he was setting off to join me. Yes; I see his shade, it wanders about me, it sighs in the air. His soul is in the clouds; it will be propitious to my destiny. But, fool that I am! I weep over friendship; and who can tell me that I may not have already to shed inconsolable tears? Soul of my existence, write to me by every courier; I cannot otherwise live. I am very much occupied here. Beaulieu is moving his army; we are in each other's presence. I am a little fatigued; for I am every night on horseback. Adieu! adieu! adieu! I am going to devote myself to thee in sleep. Sleep consoles me; it places me by your side; I lock you in my arms. But, on awaking, alas! I find myself three hundred leagues from you! Say every thing for me to Barras, Tallien, and his wife."

DRAMA.

COVENT GARDEN.

ON Monday this theatre opened, and Miss Fanny Kemble, as we announced, made her *début* in *Juliet*. It was, we rejoice to say, one of those great and auspicious hits which form an epoch in the Drama; an event at a critical period which is very likely to do much towards restoring the circumstances of this theatre. The young lady possesses every qualification for the stage,—a countenance capable of varied expression, a graceful person, a fine voice, elegance of action, and, above all, intelligence of mind and enthusiasm of character. So gifted, it is not surprising that her performance of Juliet should create the strong sensation it has created with the public, and that every tongue should proclaim her the

rising Siddons of the day. Indeed she is not only a creature of the highest promise, but already fills that void which has for years been lamented on the stage. Covent Garden is crowded to witness this gratifying sight, and every thing seems to contribute to render the extraordinary success of Miss Kemble a matter of general delight. As the play offers no subject for critical remark, we shall only add, that in Mr. and Mrs. Charles Kemble, Abbott, Warde, Duruset, Meadows, Keeley, and Davenport, the parts of *Mercutio*, *Lady Capulet*, *Romeo*, *Friar Lawrence*, *Paris*, the *Apothecary*, *Peter*, and the *Nurse*, lost none of their wonted attractions.

On Tuesday the *Provoked Husband*, extremely well cast, brought another overflow to this no longer to be called *un-fortunate* house; the novelties being Miss Ellen Tree as *Lady Townly*, Miss Lawrence (from Manchester) as *Lady Grace*, and Miss Nelson (of *Country Girl* celebrity) as *Miss Jenny*. The play was altogether so well performed as to remind us of the better times of the better comedies. In the after-piece of *Therese*, Miss Kelly, who has kindly volunteered ten nights gratuitously in aid of the Covent Garden fund, personated the heroine most affectingly. On Wednesday *Romeo and Juliet* was repeated with prodigious *éclat*; and on Thursday the *Clandestine Marriage* introduced Mr. Jones, from Edinburgh, as *Lord Ogleby*. The character is too artificial to allow us to estimate an actor's abilities from it: as far as we can judge, Mr. Jones is a clever, but not first-rate, comedian. M. Drouet, who has contributed his services to the fund,* played the "Huntsman's Chorus," on the flute, with wonderful execution. To-night a musical comedy in two acts is to be performed.

DEURYLANE.

IN this theatre, as in the other, great activity has prevailed, and novelties are the order of the hour. On Monday Miss Fancit made her second appearance in *Ophelia*; and gave additional proofs of high talent and capacity. She is a charming actress; and will occupy a distinguished place in the profession she has chosen. On Wednesday she acted *Jessy Oatlands* in the most pleasing manner. Mr. Incedon, the son of our old favourite, has left the farm for the stage, and come out very appropriately in Young Meadows. His voice is sweet and flexible, and his reception has been of a flattering description. Mr. Ducrow has also been astonishing the audiences here by assuming the shapes of ancient statues: it is a curious and interesting study. We are happy to observe Mr. Sinclair announced for last night (*Trumore*, in the *Lord of the Manor*): and to-night a new tragedy, called *Epicharis*, from the pen of Mr. Lister, the successful author of several good novels, is announced.

ROYAL ACADEMY OF MUSIC.

THE first monthly concert for the season took place at the rooms of this Institution on the morning of our last publication. The progressive improvement of many of the young musicians appeared to have given much satisfaction to the committee of management. In Miss Childe it was peculiarly striking, and especially in her execution of the recitative which precedes the first finale to *La Clemenza di Tito*. Seguin also keeps up to his promise of being a first-rate singer: Crevelli has, in-

* The performances at the King's Theatre, on Friday, in which Miss Paton and Malibran sang, produced above 500*l.* to this subscription.

deed, reason to be proud of his pupils. We think this establishment does not meet with that encouragement which it merits.

VARIETIES.

Opium.—The white poppy is cultivated with great success in the neighbourhood of Seville: a Spanish gentleman, named Olivera, last year produced from his garden two pounds of very fine opium.

The Liver.—Various experiments made by M. Piorry, the inventor of the *plessimètre*, have led him to attribute to the liver the office of being a reservoir for the blood.

Improved Candle-wicks.—The invention of the hollow candle-wick, which in our last *Gazette* we ascribed to M. Hebuba, a candle-manufacturer at Paris, ought, we believe, to be attributed to the Rev. Hans Sloane, of Cork. Nothing can be more simple than this invention, which is merely to produce a current of air through the candle;—of course a candlestick so constructed as to admit the air is required. Mr. Soane has made some experiments as to the relative quantity of light produced by candles of various descriptions made with the hollow and with the ordinary wick; and the result has been in all cases in favour of the latter in an extraordinary degree. Another advantage is in some cases the economy of this invention, as candles manufactured with the hollow wick from the worst kind of kitchen-stuff will burn without guttering.

Exotics.—Most of the exotics which were selected by M. Boursault at Kew, in 1827, are now in a healthy state at Paris. Other plants have also been propagated from the seeds and cuttings.

Antiquities.—The *Bulletin des Sciences Historiques* contains an account of the discovery of some antiquities at Vienne, in France. Amongst other things, were two figures in bronze representing Atlas and Mercury: they have been deposited in the Museum. Not far from the spot there were found a glass urn and some phials, which have also been sent to the Museum. A gold ring was near the latter; but it was taken away by the workmen. A few years ago, M. Vernay found in his garden a square piece of marble of nine or ten inches, on which was cut the following inscription:—

L. VALERIUS VITALIS VIVOS SIBI ET SVIS FECIT.

Paris.—The Provisional Chamber of Deputies in Paris is to be ready by the 20th of December. It is to be built for 114,000 francs, which is 36,000 francs less than the government architects estimated. The contract for the building was by tender. The estimate for the new chamber is two millions of francs.

Royal Travelling.—A French paper (*La Tribune des Départemens*) gives the following calculation of the posting expenses of the visit of the King of Naples and family to France. At each relay (the relays are three hundred and five in number) there are to be 100 horses and fifty postilions, which will cost, in going and returning, 3,750 francs per relay; making a total of 1,143,750*fr.*—a pretty large sum for a king with an almost exhausted treasury.

Rewards.—The University of Paris has lately distributed a great number of silver and bronze medals, by way of encouragement to the candidates of different heads of public and private schools.

New Melon.—The small sweet melon of

Cyprus, which was introduced into France thirty-five years ago, but which has been until lately cultivated in very few gardens, is now grown by many persons in the environs of Paris, and accounted by them very superior to any other sort of melon.

Major Laing.—M. Rousseau, the ex-French consul at Tripoli, has arrived at Marseilles, where he was performing quarantine: it is to be hoped that he will be commanded publicly to clear away the heavy imputations under which he labours with respect to the murder of Major Laing, and the possession of his papers.

Ship Property and Life Preserver.—It must now be a mistake, to say there is nothing new under the sun. An artist of the name of Gent declares that he has invented, manufactures, and sells an "instrument," the use of which, to use his own (not very grammatical) language, is "such, that should a ship or vessel at sea spring a leak, and cannot be got at, on account of the cargo not being able to be moved in time to save the ship from sinking, which is so frequent the case, any one on board can be with safety let down, and examine the whole of the ship's bottom, from head to stern, then with ease is able to stop the fracture in a short time, and more effectually than it could be stopped from within, and the ship, lives, and cargo saved; for this purpose I have a swinging-stage, so contrived, that a man can sit and work with safety; and further, should the accident happen at night, I have invented a lantern, with a light in it, that will burn for many hours, and give a very strong light, for the man to take down with him, by which means he is able to work at any time; and still further, should a ship founder, and go down in any common depth of water, then, by the use of this instrument, one or more of the men will be able to recover the whole of the cargo, which without it must be for ever lost."—And also that "if a person, or any thing of value, fall over-board in dock or river, they can be recovered in the course of a few minutes at furthest; and is so portable, that a child may carry it, and a small box or bag will hold it." Now that we may walk on the top or at the bottom of the water, and travel by steam over land or sea—we repeat it, it must be a mistake to say there is nothing new under the sun.

Roman Crookedness.—Many of the women in Rome, of the middling and lower classes, have one shoulder higher than another. This is attributed to a custom among the Roman mothers of thumping the backs of their young female children, in order to make them grow.

Assassinations.—It is said that in the papal states, under the reign of Pius VI., from 1775 to 1800, there were no fewer than eighteen thousand persons assassinated; being, upon the average, about two a-day!

Italian Noblesse.—At Naples, Florence, and Rome, the noblesse, being indisposed by laziness to look into their own affairs, have been ruined by their men of business. At Venice they are in a state of beggary. Long before 1797, the Venetian nobles were able to maintain themselves only by an abuse of their power. For example, they paid no taxes.

The Blind.—A paper on a system of nocturnal writing, for the use of persons deprived of sight, by M. Barbier, has been submitted by the French Academy to the consideration of a committee. The same system is applicable to persons whose sight is weakened by age.

To Preserve Grapes.—Take a well-bound cask, from which the head is to be removed, and place at the bottom a good layer of bran.

On this place a layer of grapes, then bran and grapes alternately until the cask is full, taking care that there is sufficient bran between each layer of grapes to prevent their touching each other. Put on the head, which is to be cemented, and the grapes will keep well for a year. When used, in order to restore their freshness, cut the stalk of each bunch, and place it in wine, as flowers are placed in water. —*Journal des Connaissances Usuelles.*

Calculating Child.—A child, seven years old, named Vincent Zuccaro, has lately been exciting public astonishment at Palermo. Born of poor parents, and uninstructed, he possesses an extraordinary facility in calculation. He comprehends, and works quickly, and as if by instinct, all the combinations of numbers which depend on arithmetic. What was related of him appeared so little credible, that it was deemed necessary to make a public experiment, with a view to establish the truth of the alleged facts. This experiment took place in the palace of the Accademia del Buon Gusto, at Palermo, in the presence of above four hundred of the most respectable and intelligent inhabitants of the city. Two professors of mathematics were placed close to the child, to prevent any imposition, and to take notes of the questions put to him, and his answers. A great number of problems were proposed, all of which Vincent Zuccaro resolved with the most admirable ease. Several might be quoted, the solution of which shewed singular clearness of conception in a child. We will confine ourselves to two of the most simple—for the others would require a multiplicity of details.

Question: "A vessel set off from Naples for Palermo at noon, and sailed at the rate of ten miles an hour. Another vessel, which sailed at the rate of seven miles an hour, set off at the same moment from Palermo for Naples. Supposing the distance between the two places to be 180 miles, at what hour would the two vessels meet, and how many miles would each have advanced?" Vincent Zuccaro promptly replied: "The first vessel will have advanced 108½ miles; the second 71½." It was observed to him that he had resolved only a part of the problem, and that it remained to tell at what hour the meeting would take place. "That is evident; at 10½ hours after their setting off," was his reply. This, in fact, was in some sort comprehended in his first answer; and the child, who was aware of the connexion of the two circumstances, thought that it had been equally obvious to his interrogators, and therefore that it was useless to mention it.

The second question was: "In three successive attacks, there perished, first the fourth, then the fifth, then the sixth of the assailants, who were thereby reduced to the number of 138. How many were there originally?" Answer: "360." Question: "How did you find that?" Answer: "If there had originally been sixty, there would have remained twenty-three after the attacks; but twenty-three are the sixth of 138; therefore the assailants were originally six times sixty; that is to say, 360." Question: "But why did you suppose the number sixty, in preference to fifty or seventy?" Answer: "Because neither fifty nor seventy is divisible by either four or six."—It is evident that he did not avail himself of any of the mechanical processes (if they may be so called) employed by all arithmeticians. The Marquis Schiso, who was the first to discover the singular faculty of this child, has joined several of the principal inhabitants of Palermo in soliciting from the government the means necessary for his educa-

tion, on which subject they will consult scientific and professional men; every body being of opinion that such a phenomenon ought not to be subjected to the ordinary course.—*Revue Encyclopédique.*

LITERARY NOVELTIES.

The Editor of the Circle of the Seasons announces that he is preparing an enlarged edition of that work, to appear about the same time as the Annuals.

The Athenaid, or Modern Grecians, a Poem; with Notes characteristic of the Manners and Customs of the Greeks and Turks, by Henry J. Bradsfield.—is promised. Life on Board a Man-of-War, a narrative of the adventures of a British Sailor, and embracing an account of the battle of Navarino, &c.—is announced by Messrs. Blackie and Co. of Glasgow.

The Second Series of the Romance of History will shortly appear.

The Life of Lord Byron, by T. Moore, is nearly completed; and Mr. Moore's next work will be (in 1830) a History of Ireland from the earliest authentic records to the emancipation of the Catholics.—See our note, p. 667.

In the Press.—Travels in Mexico, in 1826, 7, and 8, by Lieutenant R. W. H. Hardy, R.N.—Dr. Calamy's Historical Account of his own Life, with Reflections on the Times in which he lived (from 1671 to 1731).—Stories of Waterloo.

LIST OF NEW BOOKS.

Wind variable, prevailing N.E. and S.W.

Except the 1st, 4th, and 6th, generally raining.

Rain fallen, 1 inch and 4/5 of an inch.

* On the afternoon of the 7th, from one to two, an incessant and rapid fall of snow, in remarkably large flakes, which covered the trees and fields till near four o'clock—the thermometer having fallen in the first half hour from 39° to 35°.

The amount of the fall of rain during the months of June, July, August, and September, for twenty years past, will be given with our next Meteorological Report.

Barometer—Highest.....	30.40
Lowest.....	29.65
Mean.....	29.6985

Number of days of rain, 19.

Quantity of rain in inches and decimals, 4.4855.

Winds.—0 East—7 West—2 North—4 South—2 North-east—3 South-east—4 South-west—8 North-west.

General Observations.—On nineteen days rain fell, and the whole quantity was greater than in the three last years. The mean temperature below any one in September since 1820, and the maximum lower than ever noticed by the Journalist in the same month: a corresponding depression of the barometer was observed, the mean being lower than for thirteen years. Thunder heard on the 12th and 15th. The evaporation 0.3125 of an inch.

TO CORRESPONDENTS.

Can any of our readers, especially any one intimate with the contents of Circulating Libraries, put us in the way to see or obtain a novel published some twenty years ago, and called *The Witch of the Woodlands*?

We do not know any thing of the plaster model of Corcoran, at Sandhurst.

The correction suggested by Mr. Humphreys in our Review of Dr. Doddridge is so slight as hardly to require notice. He informs us that he considers the liberal portion of the Church of England, as well as the Nonconformists, to be the best supporters of the Christian faith.

We are sorry that circumstances force us to decline C. H.—C. S. P.—Cantabrigiense—Albus—S. G.—M. T. 10—J. D., and other obliging poetical correspondents.

ADVERTISEMENTS

Connected with Literature and the Arts.

DR. ASHBY SMITH will begin his next COURSE OF LECTURES ON DISEASES OF THE SKIN, at his House, 12, Bloomsbury Square, on Tuesday, Oct. 27th. These Lectures, illustrated by Drawings, and founded on the Arrangement of the late Dr. Willan, form a Practical Course of Instruction in Eruptive Complaints, and comprise a full detail of the Nature, Symptom, and Treatment of these Diseases. For Particulars, apply at his Residence.

EDINBURGH REVIEW. Advertisements, Notices, &c. to be inserted in the general Advertising Sheet of the forthcoming Number of the Edinburgh Review, are requested to be sent to Longman and Co. Paternoster Row, by the 17th of October; and Prospectuses, Catalogues, Bills, &c. to be attached in the Number, not later than the 24th. Advertisers will perceive the great advantage of sending their Advertisements and Bills early, as they are placed in the exact order they are received by the Publishers.

This day is published, **ELVEN'S HERALDRY OF CRESTS**, improved, price 10s. bound, or 12s. on paper prepared for colouring, containing upwards of 2000 different Crests, illustrative of the bearings of most of the private Families of Great Britain, and of all the Peers and Barons, neatly engraved on 104 Plates, with copious Indexes, and Remarks Historical and Explanatory.

Also, the eleventh edition of **Clark's Introduction to Heraldry**, much enlarged and improved, royal 16mo. price 21s. coloured, 9s. 6d. plain, and 12s. 6d. on paper prepared for colouring. A few are printed similar to the presentation copy, price 11s. 6d. in half Morocco.

Printed for Washbourn, Salisbury Square; and sold by all Booksellers.

MUSIC.

New Musical Annual, for 1830. On Monday the 8th of October, 1829, was published, price 2s. **FIRE-SIDE LYRICS; a New Musical Annual**, consisting of Vocal Music, Quadrilles, and Waltzes, composed by F. J. Mose; embellished with highly finished Lithographic Engravings, from Original Designs. The Poetry by the late Lord Byron, Mr. Knight, &c. &c. Handsomely bound in elegant Swiss bindings. Published by S. Chappell, 185, New Bond Street; and M. Trevellick, 205, Piccadilly.

This day, price 2s. **THE HARMONICON, a Popular Journal** of Music. Contents of this Month's Number. Part I. Music.—I. A Lament, (Impromptu). Composed and presented to the Harmonicon by Henry B. Bishop.—II. Romance, "Le Trompette amoureuse." Blumel.—III. Duet, "Gather your Roserose," and IV. Rondeau; both by James Naras, Mus. Doc. &c.—V. Ranzane; Haydn.—VI. Song, "The Three Roses" I. Spahr; the Words imported from the German.—Part II. Musical Literature.—I. Memoir of James Naras, Mus. Doc.—II. On the Power of Amusement in Works of Art; by M. Quatremer de Quincy.—III. Dr. Franklin's Opinions of Music.—IV. State of Music in London; by M. Fetis. Letters V. and VI. with Notes.—V. Review of New Music.—VI. Extracts from the Diary of a Dilettante.—VII. Ware and Chester Musical Festivals.—VIII. On Triptlet and the sextuple.—IX. Foreign Musical Report.—X. The Drama.—English Opera House, &c. &c. London: Published by Samuel Leigh, 18, Strand; and sold by all Booksellers, Music-sellers, and Teachers, in Town and Country.

BOOKS PUBLISHED THIS DAY.

Second edition, post 8vo. 2s. 6d. **NARRATIVE of a JOURNEY from CALCUTTA to EUROPE, by way of EGYPT, in the Years 1827 and 1828.**

By Mrs. CHARLES LUSHINGTON. "We have no hesitation in recommending Mrs. Lushington's Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of approbation."—*Oriental Herald*. John Murray, Albemarle Street.

Price 7s. 6d. the 1st Quarterly Volume of **THE POLAR STAR of POPULAR SCIENCE and ENTERTAINMENT**, commencing upwards of 150 perfect engravings, and containing selections from every Periodical, Foreign and Domestic, published during the last Quarter. London: H. Flower, 13, Skinner Street, Snow Hill; and sold by all Booksellers.

SOUTER'S NEW SERIES of CATECHISMS, by G. IRVING, LL.D. F.R.S., Dr. BUSBY, the Rev. T. CLARK, C. MACKENZIE, J. G. GORDON, and A. GOMBERG. Price 6s. each, neatly bound, or 1s. bound.

1. The History of England
2. The Geography of England and Wales
3. The History of Ireland
4. The Geography of Ireland
5. The History of Scotland
6. The Geography of Scotland
7. History of France
8. The Geography of France
9. The History of Greece
10. The Antiquities of Greece
11. The History of Rome
12. The Antiquities of Rome
13. Sacred History
14. Universal History
15. General Geography
16. Jewish Antiquities
17. Classical Biography
18. Botany
19. British Constitution
20. English Grammar
21. French Grammar
22. General Knowledge
23. Practical Chemistry
24. Music
25. Mythology
26. Natural Philosophy

The whole, in 4 thick vols. neatly half-bound, 38s. may be had of J. Bower, School Library, 73, St. Paul's Churchyard, London; of J. Cumming, Dublin; and of all Booksellers in the United Kingdom.

Octavo edition; with 20 Engravings, in 2 vols. price 31s. 6d. **TRAVELS to CONSTANTINOPLE**, in the Years 1826 and 1827. By Captain CHARLES COLVILLE FRANKLAND, R.N. "His volumes term with interest and instruction, because it is impossible not to perceive what strong and new lights they throw upon the present seat of war between the Turks and Russians."—*Sun*.

"One of the most picturesque and attractive of modern tours."—*Morning Journal*. "This intelligent traveller journeyed through Hungary and Transylvania, crossing the Danube at Giurgievo and Raschack, and passing the Balkan at Shumla; taking the route by Carnabat and Kist-Kiosan, arrived at the shore of the sea of Marmora at Belyria; and thence proceeded to the Turkish metropolis. He likewise visited the Greek Islands, Athens, and the Holy Land; crossed Mount Lebanon, and, like Mr. Madden, paid his devotions to Lady Hester Stanhope, of whom he gives some very interesting particulars. There are no fewer than 28 embellishments to the work, from accurate sketches, many of them extremely beautiful, especially the vignettes."—*Globe*. Printed for Henry Colburn and Richard Bentley, 8, New Burlington Street.

Actual Size of Turkey. Octavo edition, in 2 vols. 24s. **TRAVELS in TURKEY, EGYPT, NUBIA, and PALESTINE, in 1824, 1825, 1826, and 1827.** By R. R. MADDEN, Esq. M.R.C.S.

Among other topics of leading interest treated of in this work will be found,—Present State of Constantinople—the Reigning Sultan—Turkish Manners, Customs, Religion, and Prejudices—Turkish Ladies—Interior of the Harem—Arabian Fashions—Climate and Diseases of Egypt—the Pyramids—Mohammed A.—the Plague—Process of Embalming—Arab Poetry—the Bedouins—Belief of Magic in Syria—Visit to the Sites of Troy, Memphis, Thebes, and Jerusalem.

"Mr. Madden's volumes are replete with entertainment. The details respecting Constantinople, in which the eye of the whole civilised world are just now directed with extraordinary interest, are full, lively, and descriptive."—*Sun*.

"One of the most amusing and instructive books of travels that we have ever perused."—*Morning Journal*. "They combine an interest excited by the romantic adventures of a Crusade, with the deep researches of a Humboldt."—*Medico-Chirurgical Review*.

"The incidents of the journey are full of interest."—*London Medical Gazette*. "We strongly recommend Mr. Madden's Travels to our readers."—*Sun*. Printed for Henry Colburn and Richard Bentley, 8, New Burlington Street.

Handsomely printed in 1 vol. 8vo. with a Portrait, 14s. **MEMOIRS of LADY FANSHAWE**, Wife of the Right Hon. Sir Richard Fanshawe, Bart. Ambassador from Charles II. to the Court of Madrid. Written by herself. First published from the original MSS. to which are added, Extracts from the Correspondence of Sir Richard Fanshawe.

"A very delightful volume."—*Literary Gazette*. "A charming piece of autobiography."—*New Monthly Magazine*.

"The eventful life of these two excellent persons, their perils by land and by sea, their imprisements, flight, travels, their relaxations, their domestic pleasures and griefs, as well as their subsequent splendour and distinction in the embassies of Portugal and Spain, are all narrated by Lady Fanshawe with a delightful and elegant simplicity. They will probably take their place by the side of Mrs. Hutchinson's Memoirs, a praise which the admirers of the latter will know how to estimate."—*Speaker*. Printed for Henry Colburn and Richard Bentley, 8, New Burlington Street.

Waterbury Novels.—New Edition. **THE ANTIQUARY, Vol. I. forming Volume V. of the new edition, price 5s. in cloth.**

This volume, besides an Introduction and Notes, is embellished by a frontispiece by C. Stanfield, engraved by A. Vignette by A. Cooper, R.A. engraved by Ambrose Warren. Printed for Cadell and Co. Edinburgh; Simpkin and Marshall, London; and every Bookseller in Great Britain and Ireland.

Volumes I. II. III. and IV. of this edition, comprising Waterbury and Guy Mannerings, are again reprinted, and may be had of all Booksellers.

Beck's Medical Jurisprudence, new edition. In 8vo. price 18s. 3d. edition of **ELEMENTS of MEDICAL JURISPRUDENCE.**

By THEOPHILUS ROMEYN BECK, M.D. Lecturer on Medical Jurisprudence in the College of the Western District of New York, &c. &c. Brought down to the present time by JOHN DARWALL, M.D. London: Printed for Longman, Rees, Orme, Brown, and Green; N. Highley, Simpkin and Marshall; Whitaker, Treacher, and Co.; and W. Blackwood, Edinburgh.

In 1 vol. with Portrait, **LORD KING'S LIFE and CORRESPONDENCE of JOHN LOCKE**, comprising Letters of Lord Shaftesbury, Sir Isaac Newton, the Earl of Sunderland, Pembroke, Monmouth, Peterborough, &c. &c. "A delightful addition to the literature of our country; a work which must ever remain a standard book in English libraries."—*Literary Gazette*.

2. The Empress Josephine's Memoirs, the third and concluding Volume, comprising her private Correspondence with Napoleon, her Family, and Friends. 10s. 6d.; French, 8s.

"An extremely amusing book, full of anecdotes and traits of character, of kings, princes, nobles, generals, &c."—*Morning Journal*.

3. Memoirs of the King of Sweden, by William George Meredith, Esq. A.M. of Brasenose College, Oxford. In 8vo. 12s.

4. The Loves of the Poets, by the Authoress of the "Story of an Hour." In 2 vols. post 8vo. "Very delightful volumes."—*Blackwood's Magazine*.

Professor Hufeland's celebrated Work. Just published, a new edition, price 2s. 6d. boards. **THE ART of PROLONGING HUMAN LIFE**, in which the Subject is fully considered, both philosophically and practically. By C. W. HUFELAND, M.D. First Physician in the King of Prussia's Chancery of State, and Professor of Medicine in the University of Berlin, &c. "We recommend the work strongly. The valuable information it contains is conveyed with a felicity of style and illustration that no reader is exceedingly popular."—*Agriol and Men- nery of the Age*, 1st October. Published by Simpkin and Marshall, Stationers' Court, London; and sold by all Booksellers.

Of whom may be had, 2d. edition, price 2s. 6d. 2. A Treatise on Indigestion. By Dr. Graham. Illustrating the Symptoms, Varieties, Causes, and correct Treatment, of the prevailing Disorders of the Stomach and Liver, with Practical Observations on some painful Complaints originating in those Disorders, as Tic Douloureux, Gout, Fulness of Blood in the Head, &c. "We sincerely recommend it, and have long been convinced that such a work was imperatively called for."—*London Medical Journal*.

In 8vo. 16s. boards, the 4th edition, much enlarged, of **THE ELEMENTS of PHYSIOLOGY**, translated from the Latin of the 4th edition of Professor BLUMENBACH, and supplied with copious Notes. By JOHN ELLIOTSON, M.D. Cantab. Fellow of the Royal College of Physicians, and Physician to, and Lecturer on the Practice of Medicine in, St. Thomas's Hospital. Printed for Longman, Rees, Orme, Brown, and Green.

In 12mo. price 7s. **A GLANCE at some of the BEAUTIES and SUBLIMITIES of SWITZERLAND**, with Mar- curative Remarks on the various Objects of interest presented during a Tour through its Picturesque Scenery. By JOHN MURRAY, F.R.S. &c. &c. "This is a delightful little volume, which none will regret having purchased."—*Magazine of Natural History*. "A Glance at Switzerland" is really deserving the notice of a traveller in that country; it can recommend itself to a great deal of information and pleasant description."—*Monthly Review*, July 1829.

"Mr. Murray is entitled to take an honourable place among the scientific travellers of the day."—*Edinburgh Literary Journal*, Aug. 28. "This is the work of a gentleman who has evidently travelled with a scientific and intelligent eye."—*Court Journal*, May 8. Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had, by the same Author. **A Manual of Experiments illustrative of Chemical Science.** In 12mo. price 6s. boards. **Experimental Researches on the Light and Luminous Matter of the Glow-worm.** 4s. 6d. boards.

In 1 thick vol. 8vo. price 18s. **COMMENTARIES on the CAUSES, FORMS, SYMPTOMS, and TREATMENT, Moral and Medical, of INSANITY.** By G. M. BURROWS, M.D. Member of the Royal College of Physicians, &c. &c. Printed for T. and G. Underwood, 35, Fleet Street.

Just published, **HISTORY of RUSSIA and of PETER the GREAT.**

By GENERAL COUNT PHILIP DE SEGUR. Author of the "History of Napoleon's Expedition to Russia." Handsomely printed in 1 vol. 8vo. Price 10s. 6d. in boards;

also in French, in 2 vols. 8vo. "Count Segur has here done for the general reader what the latter would scarcely have done for himself. He has gone over the lengthy volumes of Karamzin, Levesque, and others, and presents us with the essence of Russian history in a brief but spirited abridgment, which even a busy man might peruse with matches of interest he can find in a single week. It is executed, we think, with care and judgment. The matter is well selected, and the reflections intermixed show penetration and good sense. The style displays vivacity and taste, but is not quite free of the false brilliancy into which the example of Montaigne has seduced many French writers. We confess that a work like this gives us just as much information on the subject of Russian affairs as we desire, or have time to make use of; and we are well pleased to have it presented in so attractive a form. The translation seems to be upon the whole most accurate."—*Scotsman*.

"If it is the republic of letters in all its details were yet to be written, Count Segur is not exactly the person we should choose for that task. But when it is desirable to condense those details, to strip them of all that is obscure or doubtful, to pass lightly over that which lacks sufficient interest, and to present in matches of interest he can find in a single week. It is executed, we think, with care and judgment. The matter is well selected, and the reflections intermixed show penetration and good sense. The style displays vivacity and taste, but is not quite free of the false brilliancy into which the example of Montaigne has seduced many French writers. We confess that a work like this gives us just as much information on the subject of Russian affairs as we desire, or have time to make use of; and we are well pleased to have it presented in so attractive a form. The translation seems to be upon the whole most accurate."—*Scotsman*.

"Count Segur's candid and liberal narrative of Napoleon's Expedition to Russia in 1812, has made his name familiarly known to the republic of letters. The work now before us, which is on a subject of far greater extent and difficulty, will not diminish his reputation."—*Edinburgh Literary Journal*.

"Count Segur professes to give a rapid sketch of the rise and progress of Russia, of the character of the men that conducted her alternate decadence and elevation—he has redeemed his pledge, leaving those who would seek for a minutest description to consult the pages of more verbose authors. The style of Segur, as will readily be conceded by those who have read his History of the great Russian campaign, is full of vigour and animation; his own nature is a character in a sentence, gives a sense of stir and bustle, breathing a reality and freshness, in half a page; then passes rapidly on to a new subject, casting abroad considerations of a fervid, acute, and elastic spirit. The author's account of Peter is very beautifully written."—*Weekly Telegraph*.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 665.

SATURDAY, OCTOBER 17, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Traditions of Lancashire. By J. Roby, M.R.S.L. 2 vols. in royal 8vo. (proofs and etchings), royal 8vo. (India proofs), and demy 8vo. London, 1829. Longman, Rees, Orme, Brown, and Green.

THAT this work should be given to the public with several forms of embellishment, is a matter of gratulation to the lovers of the fine arts; for, as we intimated in our slight notice of the impressions of the plates, (*Literary Gazette*, No. 661), the engravings by E. Finden, from drawings by G. Pickering, are of a character to attract no common share of popular favour. And to these, if we add the spirit and beauty of some head-pieces designed by Frank Howard, and admirably cut in wood by S. Williams and Branstons, we tell a tale of such ornaments as few volumes with which we are acquainted can boast.

In other, and, to the literary world, more important respects, we are very much pleased with this performance, which we trust is only the beginning of a long series of traditions of a similar kind; being convinced public encouragement will always reward (as it has even already done in the present instance) such spirited undertakings to illustrate the olden legends of our forefathers, the interesting events that do not find their way into common history, and the local circumstances that, though they constitute the wonders of particular places and circles, are not the less deserving of being generally known and appreciated. There is indeed a delightful novelty in Mr. Roby's plan. Imbued with a taste for the picturesque scenery, the antique buildings, and the ancient lore, with which his native county abounds, he has set himself to rescue their remains from the oblivion into which, it is strange enough, the fast advance of information is only the more rapidly plunging them. With a little light we see the objects of previous darkness; but pour in a full flood, and they are utterly dissipated. And we are of those who would preserve the recollections of such objects; and we cordially thank the author for what he has here done in this respect. But he so well explains his purpose in his preface, that we take leave to quote it, instead of pressing our own argument.

"In the northern counties," he says, "and more particularly in Lancashire, the great arena of the Stanleys during the civil wars,—where the progress and successful issue of his cause was but too confidently anticipated by Charles Stuart, and the scene especially of those strange and unholy proceedings in which the 'Lancashire Witches' rendered themselves so famous,—it may readily be imagined that a number of interesting legends, anecdotes, and scraps of family history, are floating about, hitherto preserved chiefly in the shape of oral tradition. The antiquary, in most instances, rejects the information that does not present itself in the form of an authentic and well-attested fact; and legendary lore, in particular, he throws aside, as worthless and unprofitable.

The author of the 'Traditions of Lancashire,' in leaving the dry and heraldic pedigrees which unfortunately constitute the great bulk of those works that bear the name of county histories, enters on the more entertaining, though sometimes apocryphal narratives, which exemplify and embellish the records of our forefathers. A native of Lancashire, and residing there during the greater part of his life, he has been enabled to collect a mass of local traditions, now fast dying from the memories of the inhabitants. It is his object to perpetuate these interesting relics of the past, and to present them in a form that may be generally acceptable, divested of the dust and dross in which the originals are but too often disfigured, so as to appear worthless and uninviting.

"A work of this nature, embodying the material of our own island traditions, has not yet been attempted; and the writer confidently hopes that these tales may be found fully capable of awakening and sustaining the peculiar and high-wrought interest inherent in the legends of our continental neighbours. Should they fail of producing this effect, he requests that it may be attributed rather to his want of power to conjure up the spirits of past ages, than to any want of capabilities in the subjects he has chosen to introduce. To the local and to the general reader, to the antiquary and the uninitiated, to the admirers of the fine arts and embellishments of our literature, he hopes his labours will prove acceptable; and should the plan succeed, not Lancashire alone, but the other counties may, in their turn, become the subject of similar illustrations. The tales are arranged chronologically, forming a somewhat irregular series from the earliest records to those of a comparatively modern date. They may in point of style appear at the commencement stiff and stalworth, like the chiselled warriors, whose deeds are generally enveloped in a rude narrative, hard and ponderous as their gaunt and grisly effigies. The events, however, as the author has found them, gradually assimilate with the familiar aspects and everyday affections of our nature,—subsiding from the stern and repulsive character of a barbarous age, into the usual forms and modes of feeling incident to humanity,—as some cold and barren region, where one stunted blade of affection can scarce find shelter, gradually opens out into the quiet glades and lowly habitudes of ordinary existence."

Pursuing this design, Mr. Roby has, upon legend, historical fact, and early record, founded twenty tales, of a very varied nature, but all coming under the well-understood denomination of polite literature. Slight antiquarian sketches precede them, and then rises the author's superstructure, embodying and expanding the romantic superstitions or simple data which he has chosen to build into modern narrative. As he has stated, he begins in chronological order; for his first story is of one Sir Tarquin, a gigantic and cruel knight, whose castle stood near Manchester, and who was

conquered by Sir Lancelot of the Lake—of whom we are told: "The name of Lancelot is derived from history, and is an appellation truly British, signifying royalty; *Lanc* being the Celtic term for a spear, and *lod* or *lot* implying a people: hence the name of Lancelot's shire, or Lancashire."

The next tale, of the "Goblin Builders," furnishes an amusing tradition of the erection of Rochdale church on a hill-top, to ascend to which there are a hundred and twenty-four steps; and connected with which a belief exists to this day, that "strangers prosper in the town of Rochdale, but the natives are generally unfortunate in their undertakings."

"Mab's Cross," "the Prior of Burscough," and other stories of early times, succeed—the origin of the "Eagle and Child," the crest of the Earls of Derby, being one of the most interesting, and interspersed by some good ballad poesy;—and we gradually descend to periods more flexible than those of stately dames and iron-clad beaux. The last tale in the first volume is a very entertaining picture of Dr. Dee, the celebrated astrologer of the age of Elizabeth. Of him the author well remarks:

"The character of Dee, our English Faust, as he is not inaptly called, has both been misrepresented and misunderstood. An enthusiast he undoubtedly was, but not the drivelling dotard that some of his biographers imagine. A man of profound learning, distinguished for attainments far beyond the general range of his contemporaries, he, like Faustus, and the wisest of human kind, had found out how little he knew—had perceived that the great ocean of truth yet lay unexplored before him. Pursuing his inquiries to the bound and limit, as he thought, of human knowledge, and finding it altogether 'vanity,' he had recourse to forbidden practices, to experiments through which the occult and hidden qualities of nature and spirit should be unveiled and subdued to his own will. Evidently prompted to unhalloved intercourse by pride and ambition, he deluded himself with the vain and wicked hope, that the God who spurned his impious requests would vouchsafe to him a new and peculiar revelation. He would not bow to the plain and humbling tenets already revealed, but sought another 'sign,'—a miraculous testimony to himself alone. Fancying that he was intrusted with a divine mission, he was given up to strong delusions that he should believe a lie. He aimed at universal knowledge and exhaustless riches; but he died imbecile and a beggar! That he was deceived by Kelly, there is no doubt; and that he was sincere, at least in seeking his own promotion and aggrandisement, is equally certain: but we would rescue his character from the ridicule with which it has been invested. His grasp was greater than his power; and he fell, like heroes and conquerors in all ages, unable to execute, and overwhelmed with the vastness of his own conceptions."

His whole life is a satire upon the superstitions of the age in which he flourished; and Mr. Roby's memoir of him is written in a more

philosophical spirit than marks his harsher observations on the follies of the succeeding reigns. For even as a dramatist we think him somewhat illiberal towards the unfortunate House of Stuart;—but as this is not history, we will only enter our protest on behalf of the fallen.

The second volume commences with a story of Kelly "the Seer," to Dee—the scene of which is laid in Manchester; but it does not otherwise fall very fairly into Lancashire Traditions; and the same criticism applies in some measure to "the Phantom Voice,"—and the "Bar-gaist;" (which last, by the way, owns a Yorkshire locale in a *Literary Gazette* several years ago,) though it is probable that the same wild and fantastic legends may equally belong to many different places. Yet wherever it is located, the Phantom Voice is a powerfully told and affecting relation of divine justice, by apparently supernatural means, yet, perhaps, rationally explicable, overtaking the commission of crime. But the most attractive pieces, which we have not yet named, are entitled "the Earl of Tyrone;" and "Hoghton Tower;"—the former a pathetic romance, and the latter a striking picture of the court of James I. in one of his progresses, the finale of which is peculiarly well imagined and forcibly told. Having said so much, we are, as is often the case, completely at a loss how to afford our readers the means of judging of these for themselves. Of all the tasks of a reviewer, one of the most difficult is to elucidate a closely connected narrative, which is too long to be exhibited entire. In truth, we can only touch the threshold.

"The dark and romantic history of the Earl of Tyrone would, of itself, occupy a larger space than these volumes afford. The following episode, connected with his concealment in the neighbourhood of Rochdale, the author does not presume to bring forward as a fact. Yet there are good reasons for supposing that it formed an important era in his life, and was followed very soon after by the queen's pardon."

The place of his (supposed) retreat is called Tyrone's Bed; it is near Rochdale, and forms one of the fine engravings of this work. Of Houghton Tower, also, we must be content with a mere snatch.

Sir John Finett, one of the king's favourites, and a master of revels, is commanded to sing, when in misery at the mysterious loss of his mistress: this is his song—

"They bade me sing, they bade me smile,
They bade my heart be gay;
They call'd my spirit forth, to while
The laughing hours away.

I've sung, I've smiled: where'er my path
Mirth's dazzling meteors shine;
All hearts have own'd its magic power,
And all are glad but mine.

I've soothed the darkest surge of wo,
And many a bosom blest;
Forbade the sufferer's tear to flow,
And brought the weary rest:

I've pour'd upon the bleeding heart
The balm of Hope,—the shrine
Where holier, happier thoughts shall dwell;
But who shall gladden mine?

Forgive; 'tis but one short complaint,
One pang I would reveal:
The wretch upon the torturing rack
Is not forbid to feel!

Then laugh,—let merry hearts to-night
Their brightest wreaths entwine:
The flowers that bloom on every breast
Will, withering, fade on mine!"

Upon which Mr. Roby says: "The music to these words is *traditional*, if we may be allowed the expression. It is one of the many wild and characteristic melodies floating about, perhaps unappropriated, on the popular breath,

varied indefinitely according to the humour of the performer. The author has listened to several of these ditties: some of them, he thinks, peculiar to this and the neighbouring counties. They are generally sung by the labouring classes, and would, in many cases, defy any attempt to commit them to writing, being apparently founded upon a ratio of tones and semitones at variance with our diatonic scale. From this we might almost be led to imagine some truth in the theory that the ancients had different scales peculiar to their different moods; a theory, which, however impossible it may be considered, is not without its advocates, who will perhaps not be displeased to find here some slight confirmation of their opinions. Yet in these songs the prevailing character of the minor key may generally be detected, which, from its being imperfect, and probably vitiated by the mistakes of these rustic melodists, may give a colour to the notion of a change in the scale."

The music itself is singular and touching; but we leave it to conclude with the end of Houghton Tower, when Grace Gerard, having escaped the snares and dangers of the licentious courtiers, thus parts from Finett, the man for whom she had begun to feel the affections of her innocent heart excited.

"After a sleepless night Sir John arose, feverish and unrefreshed. He threw open the window of his chamber, which looked into the court-yard. Near a side postern stood a gray palfrey, caparisoned for a lady's use, and impatiently awaiting its burden. The hour was too early for morning rambles, but the beast was evidently equipped for a journey. Two other steeds were now led forth, as if for the attendants. He caught a glimpse of Grace Gerard's maid, who seemed, by her dress, to be of the party whose movements he was so anxious to ascertain. He suspected this sudden departure was for the purpose of escaping without his observance. He hurried towards the stairs: just entering the corridor, he met Grace Gerard. She was evidently confused at his appearance. It was but for a moment: her spirit grappled with the occasion; and she replied firmly, and with becoming dignity, to his questions. 'Whither away, our beauteous queen?' said he, bowing almost to the ground.

'Are you bound for some isle of the Western Ind, getting the start of Phœbus in his nightly race to those gem-bearing climes? Methinks the sun is departing from us, though but just risen.' 'Tis my purpose to depart, Sir John. This clime is too bright, and its beams too fervid, for a lady's eye.' 'One word in sober speech:—Wherefore?' 'I know your question, Sir John. Time hastens, and I reply. Your knight of the silver mantle I proclaim a recreant, as treacherous as he is base. Sir John, for my—no, for your own sake—' 'Another stole into his place,' said he, interrupting her with great eagerness. 'A base-born changeling!—some villain, who, under this disguise, abused our honourable intent. But say, peerless princess, to whose prowess we owe your rescue?' 'Tis my first venture into the unhallowed limits of your licentious court; and through the grace that hath preserved me harmless, I here resolve it shall be my last. By your instructions, Sir John, I relied implicitly on the protection of your friend. He would fain have abused his trust, but I escaped from the offered insult. Struggling to free my hand from his grasp, by yonder hill-side, I lost my footing. I fell down the steep unhurt. Fear lent me unwonted strength, and I escaped unseen, round the narrow pathway. My

discourteous knight thought, doubtless, I had tumbled into the roaring abyss; for the night-mist hung below, and I heard a huge fragment of rock, loosened in my descent, plunge into the dimly-rolling waters. Now, hear me: my resolve is taken, and no earthly influence or persuasion shall stay me. I was bewildered, yet flattered by your follies: foolish and thoughtless enough to frolic and flutter on the very brink of a precipice. I was dazzled by the glittering but dangerous excitement. Conscience spoke; but I durst not listen. My course of life hitherto has been through scenes of gentleness and peace, and I could not look on your bustle and dissipation without alarm. Yet was I persuaded to mingle in your sports yesterday—that day hallowed by the last fiat of its Creator, wherein the soul, freed awhile from the cares of earth, may prostrate itself in homage before Him who said, 'It is mine!' Justly punished for trifling with my better thoughts, my escape shall not be without its acknowledgment." Sir John was silent. She stood before him like some purer, brighter thing than could be deemed akin to this polluted earth. "Those siren waves were bearing me on to the gulf, where——" She paused a moment, shuddering at the dark retrospect of the past. "Where all your pomp and pageantry will be overwhelmed, and yourselves, for ever, in the same irretrievable ruin!" Sir John looked uneasy, and his eye wandered, as if in search of some object wherewith to throw off these gloomy anticipations. The maiden again spoke:—"It seemed as though a veil, invisible heretofore, were suddenly withdrawn. The glory and the baseness, the splendour and the pollution, were at once revealed. The hand unseen had drawn it aside. I would now shun—I hope for ever—these paths of folly; and I bid farewell to your pleasures without a murmur or a regret." Sir John, courtier though he was, ardently and willingly rendering homage at the shrine of pleasure and dissipation, was awe-struck. Conscience echoed a fearful response; and he shrunk before the reproof he could not shun. "Without regret!" said he, faltering and abashed. "I had hoped—perhaps wished,—but it was too presumptuous. My purest thoughts would have sullied so pure a shrine." "Stay, Sir John; though the confession be humbling to a maiden's pride, yet my heart tells me 'tis the last time we meet; and it is the only acknowledgment,—I render it to your honesty and good faith." Her voice grew hesitating and tremulous. "There was a tendril twining about my heart; but it is wrung off, and I am again—alone!" Her heart was full, and her whole frame convulsed by some overpowering emotion. An adieu died upon her lips; but she resolutely refused any further communication. Hastening to the court-yard, she mounted her little white palfrey, and quitted for ever those fascinating and dangerous allurements, which, having once felt, few have had the power to withstand. We need scarcely add, that, amid the gaieties and splendours by which the lover was enthralled, the recollection of Grace Gerard sometimes mingled in the reveries of this votary of pleasure. It often came as a warning and a rebuke. By degrees the impression grew less powerful. Each succeeding wave from the ever-coasting ocean left the traces less distinct, until they were overwhelmed in the dull tide of oblivion."

And here we close our very inadequate notice of a work which must be seen to be estimated as it ought. In Lancashire it must be a particular favourite; but it is well calcu-

lated to adorn the libraries of every corner of the kingdom. As success will do it for us, we need not repeat to the author, "Go on, and prosper!"

The Amulet; a Christian and Literary Remembrancer for 1830. Edited by S. C. Hall. London. Westley and Davis.

THIS, the fifth volume of one of the most successful of our Annuals, has reached us too late for a detailed review. Of its embellishments we have spoken elsewhere; and of its literature need only say that it presents a very pleasing prose miscellany, and one poem of a striking character, among others of considerable beauty. The poem to which we allude is by Mary Howitt. We quote it entire; and though in parts it bears a rather too close resemblance to Coleridge's *Ancient Mariner*, all the sentiments that relate to the child, as well as many other passages, are so eminently pathetic and beautiful, that we have no hesitation in classifying this composition with the *Eugene Aram* of Mr. Hood, last year, as one of those productions which will survive long after the *mediocrities* which fill the larger proportion of the Annuals' pages are forgotten. Where the thoughts are so truly fine and poetical, it is almost invidious to regret a certain want of polish; yet the alteration of a few words and phrases would have greatly improved the effect of this spirited tale of the sea, whether well read or well declaimed. In other respects, Mary Howitt shines conspicuously in these miscellanies for the present year, and has highly raised herself in our admiration.

"An Old Man's Story.

There was an old and quiet man,
And by the fire sat he,
'And now,' he said, 'to you I'll tell
A dismal thing, which once befell
In a ship upon the sea.

'Tis five-and-fifty years gone by,
Since, from the River Plate,
A young man, in a home-bound ship,
I sailed as second mate.

She was a trim, stout-timbered ship,
And built for stormy seas,
A lovely thing on the wave was she,
With her canvass set so gallantly
Before a steady breeze.

For forty days like a winged thing
She went before the gale,
Nor all that time we slackened speed,
Turned helm or altered sail.

She was a laden argosy
Of wealth from the Spanish main,
And the treasure-hoards of a Portuguese
Returning home again.

An old and silent man was he,
And his face was yellow and lean;
In the golden lands of Mexico
A miner he had been.

His body was wasted, bent, and bowed,
And amid his gold he lay—
Amid iron chests that were bound with brass,
And he watched them night and day.

No word he spoke to any on board,
And his step was heavy and slow,
And all men deemed that an evil life
He had led in Mexico.

But list ye me:—on the lone high seas,
As the ship went smoothly on,
It chanced, in the silent second watch,
I sat on the deck alone;
And I heard, from among those iron chests,
A sound like a dying groan.

I started to my feet—and lo!
The captain stood by me,
And he bore a body in his arms,
And dropped it in the sea.

I heard it drop into the sea,
With a heavy splashing sound,
And I saw the captain's bloody hands
As he quickly turned him round;
And he drew in his breath when me he saw
Like one convulsed, whom the withering awe
Of a spectre doth astound.

But I saw his white and pained lips,
And the stare of his ghastly eye,

When he turned in hurried haste away.

Yet he had no power to fly;
He was chained to the deck with his heavy guilt,
And the blood that was not dry.

'Twas a cursed thing,' said I, 'to kill
That old man in his sleep!
And the plagues of the sea will come from him,
Ten thousand fathoms deep!

And the plagues of the storm will follow us,
For Heaven his groans hath heard!
Still the captain's eye was fixed on me,
But he answered never a word.

And he slowly lifted his bloody hand
His aching eyes to shade—
But the blood that was wet did freeze his soul,
And he shrank like one afraid.

And even then, that very hour,
The wind dropped, and a spell
Was on the ship, was on the sea,
And we lay for weeks, how wearily,
Where the old man's body fell.

I told no one within the ship
That horrid deed of sin;
For I saw the hand of God at work,
And punishment begin.

And when they spoke of the murdered man,
And the *El Dorado* hoard,
They all surmised he had walked in dreams,
And had fallen overboard.

But I alone, and the murderer—
That dreadful thing did know,
How he lay in his sin, a murdered man,
A thousand fathom low.

And many days, and many more,
Came on, and lagging sped,
And the heavy waves of that sleeping sea
Were dark, like molten lead.

And not a breeze came, east or west,
And burning was the sky,
And stifling was each breath we drew
Of the air so hot and dry.

Oh me! there was a smell of death
Hung round us night and day;
And I dared not look in the sea below
Where the old man's body lay.

In his cabin, alone, the captain kept,
And he bolted fast the door,
And up and down the sailors walked,
And wished that the calm was o'er.

The captain's son was on board with us,
A fair child, seven years old,
With a merry look that all men loved,
And a spirit kind and bold.

I loved the child, and I took his hand
And made him kneel and pray
That the crime for which the calm was sent
Might be purged clean away.

For I thought that God would hear his prayer,
And set the vessel free;—
For a dreadful thing it was to lie
Upon that charnel sea.

Yet I told him not wherefore he prayed,
Nor why the calm was sent;
I would not give that knowledge dark
To a soul so innocent.

At length I saw a little cloud
Arise in that sky of flame,
A little cloud—but it grew and grew,
And blackened as it came.

And we saw the sea beneath its track
Grow dark as the frowning sky,
And water-spouts, with a rushing sound
Like giants, passed us by.

And all around, 'twixt sky and sea,
A hollow wind did blow;
And the waves were heaved from the ocean depths,
And the ship rocked to and fro.

I knew it was that fierce death-calm
Its horrid hold undoing,
And I saw the plagues of wind and storm
Their missioned work pursuing.

There was a yell in the gathering winds,
A groan in the heaving sea,
And the captain rushed from the hold below,
But he durst not look on me:

He seized each rope with a madman's haste,
And he set the helm to go,
And every sail he crowded on
As the furious winds did blow.

And away they went, like autumn leaves
Before the tempest's rout,
And the naked masts with a crash came down,
And the wild ship tossed about.

The men to spars and splintered boards
Clung till their strength was gone,
And I saw them from their feeble hold
Washed over, one by one.

And 'mid the creaking timber's din,
And the roaring of the sea,
I heard the dismal, drowning cry
Of their last agony.

There was a curse in the wind that blew,
A curse in the boiling wave;
And the captain knew that vengeance came
From the old man's ocean grave.

And I heard him say, as he sat apart,
In a hollow voice and low,
'Tis a cry of blood doth follow us,
And still doth plague us so!

And then those heavy iron chests
With desperate strength took he,
And ten of the strongest mariners
Did cast them into the sea.

And out from the bottom of the sea
There came a hollow groan;—
The captain by the gunwale stood,
And he looked like icy stone—
And he drew in his breath with a gasping sob,
And a spasm of death came on.

And a furious boiling wave rose up,
With a rushing, thundering roar,—
I saw the captain fall to the deck,
But I never saw him more.

Two days before, when the storm began,
We were forty men and five,
But ere the middle of that night
There were but two alive.

The child and I, we were but two,
And he clung to me in fear;
Oh! it was pitiful to see
That meek child in his misery,
And his little prayers to hear!

At length, as if his prayers were heard,
'Twas calmer, and anon
The clear sun shone, and warm and low
A steady wind from the west did blow,
And drove us gently on.

And on we drove, and on we drove,
That fair young child and I,
But his heart was as a man's in strength,
And he uttered not a cry.

There was no bread within the wreck,
And water we had none,
Yet he murmured not, and cheered me
When my last hopes were gone;
But I saw him waste and waste away,
And his rosy cheek grow wan.

Still on we drove, I knew not where,
For many nights and days,
We were too weak to raise a sail,
Had there been one to raise.

Still on we went, as the west wind drove,
On, on, o'er the pathless tide;
And I lay in a sleep, 'twixt life and death,
And the child was at my side.

And it chanced as we were drifting on,
Amid the great South Sea,
An English vessel passed us by
That was sailing cheerily;
Unheard by me, that vessel hailed,
And asked what we might be.

The young child at the cheer rose up,
And gave an answering word,
And they drew him from the drifting wreck
As light as is a bird.

They took him gently in their arms,
And put again to sea:—
'Not yet! not yet!' he feebly cried,
'There was a man with me.'

Again unto the wreck they came,
Where, like one dead, I lay,
And a ship-boy small had strength enough
To carry me away.

Oh, joy it was when sense returned
That fair, warm ship to see,
And to hear the child within his bed
Speak pleasant words to me!

I thought at first that we had died,
And all our pains were o'er,
And in a blessed ship of heaven
Were sailing to its shore.

But they were human forms that knelt
Beside our bed to pray,
And men, with hearts most merciful,
Did watch us night and day.

'Twas a dismal tale I had to tell
Of wreck and wild distress,
But, even then, I told to none
The captain's wickedness.

For I loved the boy, and I could not cloud
His soul with a sense of shame;—
'Twere an evil thing, thought I, to blast
A sinless orphan's name!

So he grew to be a man of wealth,
And of honourable fame.

And in after years, when he had ships,
I sailed with him the sea,
And in all the sorrow of my life
He was a son to me;
And God hath blessed him every where
With a great prosperity."

A beautiful contribution by L. E. L., and a shorter but touching little piece by Crofton

Crocker, are among the other best poetical ornaments of the *Amulet*; which, without having room to exemplify its prose, we again recommend to the public as well entitled to favour.

Travels in Chaldaea, including a Journey from Bussorah to Bagdad, Hilah, and Babylon; performed on foot in 1827: with Observations on the Sites and Remains of Babel, Seleucia, and Ctesiphon. By Captain Robert Mignan, H.E.I.C. Service, &c. 8vo. pp. 333. London, 1829. Colburn and Bentley.

NOTWITHSTANDING all that has been written on the subjects of which this volume treats, they are so interesting in themselves, that, ever, the latest particulars concerning them are sure to be well received by the public. There is something powerfully gratifying to the human mind, in developing the mysteries, and enlightening the obscurity, which pervade our earliest world; in tracing the first arts that were resorted to by mankind on emerging from their post-diluvian cradle, and in discovering the dawns of science which began to streak that distant period of our race's history. It is these common feelings of our nature which make the growing pursuit of Egyptian lore so generally popular at this time; and which will always render Chaldean travels, and inquiries into the antiquities of such places as Babylon, Nineveh, and the like, deeply attractive. Captain Mignan has skirred the country, and, without expending much of labour, examined the most important objects which it presents, in so lively a manner, that we have perused his lucubrations with great pleasure,—whether in reference to his own remarks, or to his numerous illustrative quotations from preceding writers. He embarked in a boat on the Tigris at Bussorah (Oct. 22, 1827), escorted by six well-armed Arabs, and ascended that river on his way to Bagdad; the boat carrying the small quantity of luggage necessary in a warm climate, and the party usually threading the banks of the stream. Our first extract may afford an idea of the native inhabitants a little above Bussorah.

“Having bought a couple of sheep for my people, I was witness to some curious culinary operations. The entrails were ripped open, pieces of which, with the hoofs, dipped once or twice into the water, were eaten by them raw; the rest of the animal, unflayed and unshorn, was put into a vessel and half boiled, when they drank the soup, and voraciously devoured the scarcely-warmed carcass. They are a very filthy set of people, particularly in their food: had their prophet enjoined impurity, instead of cleanliness, his commandment could not have been more vigilantly regarded to the letter, for their nature is brutal and obscene; their morals are in a more vitiated and depraved state than Europeans can possibly imagine.”

At “daybreak we came up with a small encampment of huts, constructed with mats made of the date-leaf. Women covered with rags, men in old tattered cloaks, and children in a state of nudity, flying at my approach, were the objects that attracted my attention. One poor woman, bolder than her companions, ventured forward, and exclaimed to my guards, ‘Why, why! have you brought a wild man amongst us?’ As far as the appearance of a

beard not lately trimmed justified her inference, the woman's question was, perhaps, not ill-founded; I was wild as wandering palmer. On taking leave of these poor people, we threw dates among them, which, although it created a temporary confusion, gave them, ultimately, the usual delight of a successful scramble.”

Higher up it is stated: “At sunset I passed through an extensive camp of Arabs: they were as civil and as respectful as those I had hitherto met with, and appeared to be living in the most primitive state, chiefly employed in making a cloth from the wool of their sheep. They first spin it into yarn, winding the threads round small stones; these they hang on a stick fixed in a horizontal position, between some shrubs or trees, to form a woof; then passing other threads alternately between these, they thus weave the cloth with which they clothe themselves. None of these encampments afforded a drop of milk, or a single egg. Towards night, parties of both sexes were crossing the stream in a state of nudity, upon a stratum of rush, which is evidently of the same kind as the ‘vessels of bulrushes upon the waters,’ alluded to by Isaiah, in chap. xviii. ver. 2.”

On ascending still nearer to Bagdad, the Arabs are represented as being more fierce, and determined plunderers of all whom they dare attack, and can master. Speaking of Ctesiphon and Seleucia, Captain M. says:—

“I dug into the sides and bases of many of these mounds. Their foundations were invariably composed of the fire-burnt brick, while the sun-burnt formed the exterior or higher mass of each heap. I had the satisfaction of discovering a silver coin of one of the Parthian kings, a brass coin of Seleucus Nicator, and three talismanic perforated cylinders, which differ in no respect from the Babylonian. All are in an equally perfect state. There is no doubt that the natives often pick up coins of gold, silver, and copper; for which they always find a ready sale in Bagdad. Indeed, some of the wealthy Turks and Armenians, who are collecting for several French and German consuls, hire people to go in search of coins, medals, and antique gems: and I am assured they never return to their employers empty-handed. The riches contained within the venerable pile I have just described appear to have been immense. The sack of the palace by the Saracens, as related by Gibbon, took place in the A.D. 637. ‘The capital was taken by assault, and the tumultuous resistance of the people gave a keener edge to the sabres of the Moslems, who shouted with religious transport, ‘This is the white palace of Chosroes! this is the promise of the apostle of God!’ The poor robbers of the Desert were suddenly enriched beyond the measure of their hope or knowledge. Each chamber revealed a new treasure, secreted with art, or ostentatiously displayed. The gold and silver, the various wardrobes and costly furniture, surpassed (says Albulveda,) the estimate of fancy or numbers. One of the apartments of the palace was decorated with a carpet of silk, sixty cubits in length, and as many in breadth; a paradise, or garden, was depicted on the ground; the flowers, fruits, and shrubs, were imitated by the figures of the gold embroidery, and the colours of the precious stones; and the ample square was encircled by a variegated and verdant border.”

“Having examined the remains of Ctesiphon, I crossed over to the site of the once magnificent and populous Greek city, and at every step had new occasion to muse upon the

scene of desolation which presented itself as far as the eye could reach. Time, violence, and repeated inundations, have levelled every thing. I looked in vain for monuments, pillars, aqueducts, and buildings. Bricks of every kind, mixed up with layers of straw; varnished tiles, and pottery of every colour (the predominant one being blue); stones calcareous, sandy, and granite; flint-glass, shells, and a variety of vitreous and nitrous substances; these, and these alone, compose what remains of the once magnificent Seleucia. There is not a single entire building; nothing but a small remnant of a wall and a few portions of decayed brick-work is left to mark the foot of the spoiler, and bid us mourn in silence and solitude over fallen and departed grandeur. The traveller ought to visit Seleucia previous to passing over to Ctesiphon; by so doing he will not expect to meet with any thing half so grand as the arch which rivets him to the spot, which in this part of the world, in point of architectural beauty, is perfectly unique.

“Although former travellers who have visited this spot do not speak of any remains on the river, I have no hesitation in pointing to the fragments of a bridge which appears once to have connected the two cities, from the vast quantity of ruined materials lying in heaps on either bank, composed of fire-burnt bricks made of argillaceous earth, and a great quantity of detached brick-work beneath the water. The shallowness of the river afforded me an opportunity of observing this very particularly, and induced me to procure the aid of divers, who invariably brought up bricks broken and unbroken, remarkable for their hardness and solidity. Hence I would infer that these fragments now rearing on the river's bed could only have been appropriated to the purpose already mentioned. The reader will be better able to judge of the extent of the irregular mounds and hillocks that overspread the sites of these renowned cities, when I tell him that it would occupy some months to take the bearings and dimensions of each with accuracy. In this undertaking great interruption and much molestation would be offered by the Arabs who tend their cattle, sheep, and camels on the spot,—and who are so very suspicious, that no excavation can be made without their supposing some hidden treasure has been discovered. Consequently, these people would do all in their power to prevent the antiquary from continuing his researches, or even remaining here for any length of time. At this period it would be impossible to make the attempt, both from the disturbed and unsettled state of the country, which, I lament to add, is scarcely ever in a state of tranquillity, and from the spirit of rebellion and tyranny innate in the heart of all Moslemites, from Constantinople to the Erythrean Sea.”

On the river, a considerable distance below these ruins, at a place called by the natives Hoomania, we are told, that in March 1812, “the crew of a boat who were cutting wood for sale at Bagdad, discovered pieces of silver edging out of the margin of the bank, which was thus exposed from its having been washed down by the action of the current. On dividing their newly-acquired treasure they quarrelled among themselves; when one of the party hastened to Bagdad and informed the Pasha's officers of the circumstance, who instantly despatched people to the spot; and on examination found, and brought away, between six and seven hundred ingots of silver, each measuring from one to one and a-half

* “The fine, honourable, hospitable character generally attributed to the Desert Arabs is at present a fiction; it once may have been their just right; but alas! is now ‘hyperion to a satyr.’ For this change many reasons might be given; one will suffice—the great intercourse they are at present constantly enjoying with towns and cities.”

feet in length, and an earthen jar containing upwards of two thousand Athenian coins, all of silver. Many were purchased at the time by the late Mr. Rich, formerly the East India Company's resident at Bagdad, and are now in his valuable collection, since bought by government, and deposited in the British Museum. No coins were found of gold or copper; and the whole were lodged in the treasury of Abdalla Pasha."

And still a little farther down, the following extract is characteristic:—"The smell of wild animals was extremely offensive at this place; and as a heavy shower of rain had fallen during the night, rendering the soil moist, we traced the footsteps of a lion to an extensive patch of brushwood, where, very probably, he was concealed. Not one of my guards would approach or attempt to disturb the bushes, pretending not to see the thicket which was before them; nevertheless, they are very near-sighted. I have seldom met with a man that can distinguish with accuracy an object at the distance of half a mile; and many of them cannot fix their eyes on any given spot without causing much annoyance to their organs of vision."

This short-sightedness, like some that may be witnessed nearer home, seems to have its conveniences; for the Arabs are very quick to see any danger that threatens them, or any plunder that is offered, however far off; but very slow in vision where there is nothing to be feared or gotten. But it is time for us to ascend to Bagdad, which the author reached November 8th, and over which ancient city of the caliphs he throws a brief but entertaining survey. In conclusion he observes—

"The pleasure I derived from making these short excursions in and around the city, was greatly diminished at beholding the numbers of vagrants who were seen lying about the streets, victims of poverty, sickness, and famine. The women and children were truly piteous objects, and in a state of nudity. I never saw such miserable examples of human wretchedness. These poor creatures, I was informed, had migrated from Mosul in hopes of finding employment, and escaping that fatal scourge the cholera morbus, which raged to such a degree this summer, that there were not people to gather in the harvest. Those who found purchasers, sold their children to the highest bidder: while the remaining inhabitants who were less fortunate, were said to have been seen sacrificing their offspring to their own uncontrollable hunger. For the sake of human nature, I sincerely trust this is an exaggeration; I received it from scarcely dubitable authority, as a true and faithful picture of the suffering people of Mosul. Those children who were old enough fled from their parents, and one poor boy is now with me (an only son), who left his aged and forlorn mother, from the horrible apprehension of sharing a similar fate. In fact, two months ago, young and beautiful girls were publicly sold in this city for a sum equivalent to ten pounds sterling! and many of these hapless creatures were Christians!! Let us hasten from the contemplation of this mournful picture!"

From Bagdad to Babylon is but a short journey of about fifty miles, and easily performed in two days. Here the wonderful extent of ruins almost overwhelmed the imagination of the traveller; but he proceeded to examine the principal remains with steady perseverance. In the results we find little not previously stated by Mr. Rich and other authors; and therefore our extracts may be limited to a few of the

most novel statements or conjectures. Of the rivers Capt. M. says:—

"I was much struck with the force and rapidity of the Euphrates at Hillah, from having always heard it asserted that the Tigris flowed more swiftly. At this point the attribute is inapplicable; for, at the time I am writing, the stream is pursuing its course at the rate of three knots and a half an hour, while the Tigris flows at scarcely three.* From the house in which I lodged (about two furlongs from the bridge), I could at night distinctly hear the rushing of the water beneath the bridge; whereas it is never audible at Bagdad, not even to those who live on the brink, and opposite the floating bridge. Hence, I conceive that the epithet 'sluggish,' when applied to the majestic Euphrates, is improper."

At one spot where the ruins promised to reward his toil, our countryman tells us—

"I employed thirty men to clear away the rubbish, and we dug down along its western face to a depth of twenty feet, when we arrived at the bricks, where bitumen alone was found to be the binding material. Here I had no trouble of extracting them with an iron instrument something like a pick-axe. The arrow-headed or cuneiform writing was stamped on all, but differed as to the number of lines. They varied from three to ten lines; the first number was the commonest, or most abundant, and the latter the most rare. The writing was more deeply engraven on these bricks than on any others I had met with. I found one with the Babylonian writing both on its face and edge, but unfortunately it was broken. I regard it as a unique specimen, never having seen or heard of another like it. I discovered also an ornamental flat fragment of calcareous sand-stone, glazed with brown enamel on the superior surface, and bearing a raised figure in good relief (of which an engraving is given) and which proves that the Babylonians had perfectly acquired the art of enamelling."

Many other antiquities are represented, especially a remarkable gem and some cylinders, which the want of wood-cuts prevents us from noticing. We therefore leave this sad picture of ruin and desolation to conclude with two examples from a various and pleasing Appendix.

"*The Camel's Thorn.*—This lowly plant affords a beautiful exemplification of the merciful care of Providence. It abounds in the deserts of Arabia, India, Africa, Tartary, and Persia. In most of these wilds it is the only food of the camel, that valuable inhabitant of such unfriendly wastes. Its lasting verdure refreshes the eye of the traveller; and, from the property possessed by its deep-searching tough roots, of collecting the scanty moisture of these arid plains, well known to the Arab, it is converted to the essential purposes of aiding in the production of a grateful and healthy nourishment for man. The stem of the plant is in spring divided near the root; a single seed of the water-melon is then inserted in the fissure, and the earth replaced about the stem of the thorn. The seed becomes a parasite, and the nutritive matter which the brittle succulent roots of the melon are ill adapted to collect, is abundantly supplied by the deeper-searching and tougher fibres of the root of the camel's thorn. An abundance of good water-melons is thus periodically forced by the Arab from a soil incapable of other culture. This valuable native of the desert is the *hedysarum*

* "In May 1828 I again crossed these rivers, and ascertained their respective velocity. The Euphrates flowed past Hillah at seven knots an hour, and the Tigris at five knots and a half."

alhagi. It bears its small oval leaves but a few days early in spring. The beautiful crimson flowers appear later in the same season, and are succeeded by the short moniliform pod peculiar to this genus."

Arab Songs.

"The youth of the hero, though quenched in war,
Than old of the craven is dearer far.

Chorus.

A fair maid for the brave;
A deep brand for the slave,
Who can shun the death-strife,
For contemptible life."

"Why pause ye, friends! Our daughters urge
On, though their song our dying dirge.

Chorus.

Our charge the spring torrent,
The wild rushing current;
Our blade the red lightning,
Our havoc o'er-bright'ning.

"Nor spare thy noble blood,
Thou chieftain Arab free!
Thy boy but marks the flood,
That he may bleed like thee.

Chorus.

If war be thy feast,
If sloth be thy fast,
Then not thou the least,
Nor honoured the last."

"Welcome the cry of the foeman to war!
My brand shall gleam o'er him his fatal star.

Chorus.

Whose the desert couch
Ne'er to foe may crouch,
Thick though as the sands
Charge the rival bands."

"Strive nobly, martyr, and be free;
Heaven opens, and Houris strive for thee.

Chorus.

None shall wed the flying slave;
E'en dogs shall bay the dastard knave."

Capt. M. does not think the Birs Nemroud either the Tower of Babel or Temple of Belus; but his reasoning is not conclusive! Altogether, his book has a fresh and considerable interest.

Stories of Waterloo; and other Tales. 3 vols. 12mo. London, 1829. H. Colburn and R. Bentley.

THESE are three very amusing, *olla podrida* sort of volumes, made up of all kinds of military adventures, hair-breadth 'scapes, love affairs, deaths, marriages, &c. &c. &c. Some of the tales are very well told; others, as might be expected, are not quite so good; but all are agreeable or interesting. The frame-work is the worst part of the performance; for the public have been surfeited with military details; and we doubt whether the Gazette-like statements of battles, &c. will be so popular, but rather interfere with the amusement derived from those portions which are of pure invention. We shall only premise, that the officers who figure in the following extract, on passing through a town in Ireland have been requested to join the assembly by a Mr. Christopher Clinch.

"The attention evinced in his visit to the inn by Mr. Christopher Clinch, was not confined to a formal invitation; for he assured us on our arrival, that two ladies had been expressly kept disengaged for us. Captain Rattigan declined dancing, alleging that exercise hurried him, and he could not abide a red face,—it looked so very like dissipation. I, whose countenance was fortunately not so inflammable as my kinsman's, was marshalled by Mr. Clinch to the head of the room. 'He was going,' he said, 'to introduce me to Miss Jemima O'Brien—lady of first connexions—large fortune when some persons at present in possession dropped off—fine woman—much followed—sprightly—off-handed—fond of military men. Miss O'Brien, Captain Kennedy.' I bowed—she ducked—seized my offered hand, and in a few minutes we were going down the middle,

like two-year-olds starting for 'the Kirwans.' Nor had Captain Rattigan been neglected by the master of ceremonies: he was snugly seated in a quiet corner at cribbage, a game the commander delighted in, with an elderly gentleman, whom my partner informed me was her aunt. Miss O'Brien was what Rattigan called a *spanker*. She was dressed in a blue silk lute-string gown, with a plume of ostrich feathers, flesh-coloured stockings, and red satin shoes. She had the usual assortment of beads and curls, with an ivory fan, and a well-scented handkerchief. She was evidently a fine-tempered girl; for, observing my eye rest on an immense stain upon her blue lute-string, she remarked, with a smile, 'that her aunt's footman had spilled some coffee on her dress, and to save him from a scolding, she had assured the dear old lady that the injury was but trifling, and that it would be quite unnecessary to detain her while she should change her gown: it was quite clear she never could wear it again; but her maid and the milliner would be the gainers.' Amiable creature!—the accident did not annoy her for a second. The first dance had concluded, when the long gentleman whispered softly over my shoulder, how I liked 'the heiress?' *The heiress!*—I felt a faint colour rising in my breast, which made my cheek hoop like a peony. Rattigan's remorse for neglected opportunities rushed to my mind. Had my lucky hour come? and had I actually an heiress by the hand for nine-and-twenty couples? We were again at the head of the room, and away we went—she cutting and I capering, until we danced to the very bottom, 'The wind that shakes the barley!' I had placed Miss O'Brien, with great formality, on a bench, when Rattigan took me aside:—'Frank, you're a fortunate fellow, or its your own fault—found out all from the old one—lovely creature—great catch—who knows?—strike while the iron is hot,' &c. &c. &c. Fortune, indeed, appeared to smile upon me. By some propitious accident, all the men had been provided with partners, and I had the heiress to myself. 'She was, she confessed, romantic—she had quite a literary turn; spoke of Lady Morgan's Wild Irish Girl;—she, Jemima, loved it—doated upon it;—and why should she not? for Lieutenant-Colonel Cassidy had repeatedly sworn that Glorvina was written for herself;—' and she raised her fan

'The conscious blush to hide.'

Walter Scott succeeded. I had read in the Galway Advertiser a quotation from that poet, which the newspaper had put in the mouth of a travelling priest, and alleged to have been spoken by him in a charity sermon, which I fortunately now recollected and repeated. Miss O'Brien responded with that inflammatory passage—

'In peace love tunes the shepherd's reed.'

'And could she love?' I whispered with a look of tender inquietude. 'She could; she had a heart, she feared, too warm for her happiness; she was a creature of imagination—all soul—all sympathy. She could wander, with the man of her heart, from

'Egypt's fires to Zembla's frosts.'

There was no standing this. I mustered all my resolution—poured out an unintelligible rhapsody—eternal love—life gratefully devoted—permission to fall at her feet—hand—heart—fortune! She sighed deeply—kept her fan to her face for some moments—and, in a voice soft as the harp of Eolus, murmured something about 'short acquaintance,' and a gentle supplication to be allowed time, for ten minutes,

to consult her heart. Rat again rushed to my mind; procrastination had ruined him; and I was obdurate—pressed—raved—ranted. She sighed, and in a timid whisper told me she was mine for ever! Heavens!—was I awake?—did my ears deceive me? The room turned topsy-turvy; the candles danced a reel; my brain grew giddy. It was true—absolutely true; Jemima O'Brien had consented to become Mrs. Kennedy! Up came Captain Rattigan, as my partner left me for an instant to speak to her aunt. Rat was thunderstruck—cursed his fate, and complimented mine. 'But, zounds! Frank, you must stick to her. Would she run away with you? These damned lawyers will be tying up the property, so that you cannot touch a guinea but the half-year's rent—may be inquiring about settlements, and ripping up the cursed mortgages of Killnacoppal. At her, man—they are all on the move. I'll manage the old one:—mighty lucky, by-the-by, at cribbage. Try and get the heiress to be off—to-morrow, if possible—early hour. Oh! murder—how I lost my time!' All was done as the commander directed. Rat kept the aunt in play; I pressed the heiress hard; and so desperately did I portray my misery, that, to save my life, she humanely consented to elope with me at twelve o'clock next day. Rattigan was enraptured. What a chance for a poor lieutenant! He shrewdly observed, from the very unpretending appearance of Mrs. Cogan's mansion, that 'my aunt's' purse must be a long one. We settled ourselves joyfully at the inn fire—ordered two bottles of mulled port—arranged all for the elopement—clubbed purses—sum total not burdensome—and went to bed drunk and happy. Next morning—the morning of that day which was to bless me with fortune and a wife—Captain Ratty and I were sitting at an early breakfast, when, who should unexpectedly arrive but Cornet Bircham, who was in command of a small party of dragoons in Ballybunnion, and was an old acquaintance of my kinsman. 'How lucky!' whispered Rat; 'he has been quartered here for three months, and we shall hear the particulars of the O'Briens from him.' While he spoke the trooper entered. 'Ah! Ratty, old boy, how wags the world? Just heard you had been sent here to exterminate carders—cursed scoundrels!—obliged me to leave a delightful party at Lord Tara's; but, Rat, we'll make them smoke for it.' Mr. Bircham, my cousin Kennedy. Come, cornet, off with the cimeter, and attack the congo. Any news stirring?' 'Nothing but a flying report that you had determined on sobriety, and forsworn a drop beyond the third bottle;—but, damme, that shake in your claw gives a lie direct to the tale. And you were dancing, Rat, last night. How did the carnival or coterie go off? Any wigs lost, or gowns tattered? Any catastrophe?' 'Why, no—pleasant thing enough—some fine women there.' 'Were there, faith? Why, Rat, you're a discoverer; for such a crew as figured at the last, mortal eye never looked upon.' 'I only particularly noticed one—by Jove, a fine woman!—a Miss O'Brien.' 'Miss Jemmy O'Brien, as the men call her. Why, Rat, what inquiry of yours has delivered you into the hands of the most detestable harpy that ever infested country quarters?' 'Detestable harpy!' Rat and I looked cursedly foolish. 'Bircham—hem!—are you sure you know the lady?' 'Know the lady! to be sure I do. Why, she did me out of an ivory fan one unlucky wet day that the devil tempted me to enter Mrs. Cogan's den. Phoo! I'll give you what the beadle calls 'marks and

tokens.' Let me see. Yes, I have it. Blue dress cursedly splashed with beer—she says coffee; soiled feathers, and tricked out like a travelling actress.' I groaned audibly—it was Jemima to a T:—Captain Rattigan looked queer. 'My dear Bircham—hem!—you know among military men—hem!—honourable confidence may be reposed—hem! My young friend here danced with her. Represented as an heiress to him.' 'By a cursed hag who cheats at cribbage, and carries off negus by the quart.' 'True bill, by God!' ejaculated the captain. 'Complained eternally of thirst and the heat of the room, and did me regularly out of thirty shillings.' 'Ha! ha! ha!—Rat, Rat, and wert thou so soft, my old one?' 'But, Bircham,' said the captain, 'the devil of it is, my young friend—little too much wine—thought himself in honourable hands, and promised her.' 'A new silk gown. Ah, my young friend, little didst thou know the Jezebel. But it was a promise obtained under false pretences. She told you a cock-and-bull story about Lady Morgan—spoiled Watty Scott—dealt out Tom Moore by the yard—all false pretences. See her d—d before I would buy her a yard of riband. What a pirate the woman is!' Rat jumped off his chair, drew his breath in, and gulped out—'A gown! Zounds, man, he promised to marry her!' Up jumped Bircham. 'To marry her! Are you mad, or are you hoaxing?' 'Serious, by St. Patrick,' said Rat. 'Why, then, its no longer a joke. You are in a nice scrape. I beg to tell you that Jemmy O'Brien is as notorious as Captain Rock. She has laid several fools under contribution, and has just returned from Dublin, after taking an action against a little, drunken, one-eyed Welsh major, whom her aunt got, when intoxicated, to sign some paper or promise of marriage. The major, like a true gentleman, retrieved his error by suspending himself in his lodgings the day before the trial; and it is likely that *Jem* and her aunt will be *jugged* for the law expenses.' Rat and I were overwhelmed. We looked for some minutes in silence at each other. At last I told Bircham the whole affair. The dragoon was convulsed with laughter. 'So,' said he, 'at twelve o'clock the gentle Jemmy is to be spirited away. But come, there's no time to lose. Sit down, Rat, get a pen in thy fist, and I'll dictate and thou inscribe.'

'Madam,—Having unfortunately, at the request of his afflicted family, undertaken the case of Lieutenant Kennedy of the — Mayo regiment, I beg to apprise you that the unhappy gentleman is subject to occasional fits of insanity. Fearing, from his mental malady, that he may have misconducted himself to your amiable niece last night at the coterie, I beg, on the part of my poor friend, who is tolerably collected this morning, to say that he is heartily sorry for what has occurred, and requests the lady will consider any thing he might have said only as the wanderings of a confirmed lunatic.—I am, &c.

'TERENCE RATTIGAN, Capt. — M-Militia.'

For the sake of our readers' curiosity, we beg leave to state that the affair ends in an Irish duel—and Mr. Christopher Clinch, the lady's cousinly champion, loses his trigger-finger.

Though too long for extract, we prefer the serious pages in these volumes. "Mac Carthy" is really a finely-told story; and "Stephen Purcell" is also one of considerable feeling. The author is one of promise: if he will but learn to condense and curtail a very little, we will predict him a successful career.

The Juvenile Forget-Me-Not: a Christmas and New-Year's Gift, or Birthday Present, for the Year 1830. Edited by Mrs. S. C. Hall. London, N. Hailes, &c.

WE congratulate our young friends, and do lament over our own too speedy arrival in this weary world: we had no such elegant volumes destined for our especial illumination; we were obliged to be contented with sixpenny Goody Two Shoes, or the utmost extent of some grandfather's liberality reached half-a-crown for Rolando's Voyage round the World. But *nous avons changé tout cela*; and all we hope is, that we shall not live too long—for truly our children will be terribly clever. But we like the little book before us; it is what a child's book should be—simple, but interesting; amusing, but instructive: and we are free to confess that many of its tales have given us great pleasure. The "Shipwrecked Boy" is exceedingly pretty; but we prefer the following Irish anecdote, so well told by the fair editor. Two brothers, one not over wise, are at an Irish fair: during the temporary absence of the one, the other enlists—but let the author speak for herself:—

"When he had disposed of his merchandise, he walked to where he had left him: all was silence—the recruiting party had departed, and no one remained in the square; at last he espied an old woman, and asked her where the sergeant and his party were gone, thinking that his brother was still following the music that had so fascinated him. 'They are all down at Hoolaghawn's public,' she replied; 'and take an old woman's advice, my boy, and don't go near 'em—for they have caught older birds than you with chaff, which you'll find to y'er cost.' Away, nevertheless, went Larry, to look for his brother. A crowd was collected around the door of the dirty place where that inflammatory drug called whisky was dealt forth, in wooden noggin, to the soldiers, by a slipshod landlady and a half-tipsy landlord. Larry pushed his way in—and there, to his astonishment and dismay, he saw one of the soldiers pinning a cockade on his brother's hat, who stood, or rather leant, against a miserable sort of dresser, with a bewildered look that spoke too plainly of intoxication. 'Barney, Barney!' said the poor lad, while his voice trembled, 'Barney, come home, come home—this is no place for you—your mother—and sisters—and your wife, Barney.' As soon as Larry pronounced the word wife, Barney staggered forward, fell with his face in his brother's bosom, and burst into a flood of tears. 'Hullo! what's the matter there?' said the sergeant, coming forward; 'what's all this about? Come, stand back, my lad; your brother's a soldier now; fairly listed. Is it not so?' continued he, turning to his men. 'Yes, yes,' they replied, 'to be sure—a noble king's man.' 'It is false,' said Larry, as he stood erect, and passed his arm round his brother's neck; 'he never would list to leave his country—his mother—all. Speak out, Barney; say that bad man has declared falsely.' Poor Barney could not deny that he had been persuaded by the sergeant, who saw he was a simple, gentle creature, first to drink, and finally to enlist; for when men are intoxicated, they fling back, as it were, to the Almighty, the noble gift of reason, and become more senseless than the wild animals who hunt the mountains for their prey. Larry was petrified, and for a time unable to articulate: at last—'Sergeant,' said he, 'are you a man—a son—a husband—a father—and would you, who know right from wrong (for ye'r

bringing up must have been better than ours), would you take advantage of the drop you poured down his throat ye'rself, to force him, and he a half-natural, from his mother—his wife—and his child?' This affectionate appeal was answered by a rude, loud laugh; and when the unfeeling man had exhausted his mirth, he observed to one of the soldiers, 'I wish we had the young instead of the old one; he is a much cleverer fellow.' 'Say ye so?' exclaimed Larry, springing forward; 'say ye so?—then here—though I hate ye for ye'r wicked ways; yet take me in his stead; for, although I've a mother, I've neither wife nor child, and can be more readily spared.' The sergeant consented to the exchange; and just as the cockade was removed from his brother's into Larry's hat, the old woman, whose warning he had received, entered the house. 'So ye'r caught,' said she, looking mournfully at him; 'and the core of the mother's heart will be maybe food for the ravens and the hawks of a strange country. Larry, why didn't ye heed my bidding?' 'Tis to save me, he sold himself; fool that I am,' exclaimed Barney! 'Oh! if ever I taste a drop of that whisky again!' 'Easy—stop,' interrupted the old crone, 'easy, Barney; don't make so many promises all at once, but keep from the whisky; and indeed it's 'most the handsomest thing I ever heard tell of, for one boy to do for another! But God's blessing and my own be about ye, Larry, day and night, in the battle and out of the battle; and I'll pray for ye for nothing, to every one of the saints; and sure I am that you'll be well in the world, for the Almighty blesses the dutiful child and the affectionate brother, and will never desert the innocent.'"

Larry gets on very well, and at length leaves the army and enters the service of a merchant:—

"One morning, his master called him into his counting-house, and shewing him a large parcel that rested on the counter, informed him it contained not only money but jewels, and other valuables, to a large amount. 'I must request you to convey it yourself to its destination, as I know no one else to intrust it to,' added the gentleman; and Larry, with his usual cheerfulness, placed it on his shoulder, and proceeded to execute his master's wishes. When he arrived at Blackfriars Bridge he felt much fatigued, and rested his parcel (which was carefully wrapped in canvass and oil-skin) on the battlements; he has often declared that he knew not how it happened, but so it was, the parcel rolled off the bridge into the river. Larry, in a state of distraction, rushed into the first boat, procured drags, did all in his power to recover it, but in vain; in deep sorrow of heart, the poor fellow returned, and communicated his misfortune to Mr. Lambert, who never doubted the truth of his statement: not so, however, with the gentleman to whom the valuables belonged,—he declared the thing to be impossible; that it could not have occurred without somebody seeing it, and ended by delivering Larry to a constable, on a charge of robbery. The high and honest spirit of our brave soldier could ill brook such an accusation; 'I should have been heart-broken,' said he, 'when I entered the damp, dull prison-house as a felon, had it not been that I felt assured God would never desert the innocent.' It was in vain that Mr. Lambert expatiated on the excellence of Larry's former character; what is called *presumptive evidence* was strong against him; and the magistrate gave it as his opinion, that it was very unlikely any man in his senses would suffer so rich a parcel to rest

so carelessly on the balustrades of a public bridge; and thought it not unlikely, that his knowledge of the value of what he had been intrusted with, had tempted him to great dishonesty. When he was asked what he had to say in his defence, he replied, raising his eyes steadily to heaven, 'Nothing—except that I am innocent!' The solemnity with which he uttered this sentence caused an immediate silence in the office; this, however, was speedily broken, by a bustle at the door; and almost at the same moment, a weather-beaten sailor entered, and addressed the magistrate: 'I ask your worship's pardon,' said he, 'but, passing by chance, I heard that a poor fellow was accused of stealing a bundle that had fallen over a bridge; now, sir, it so happened that, yesterday morning, very near Greenwich, I picked up this (he unrolled a large package which he carried under his arm), so I thought it might be the one lost—' And so it was, Jemima, to the delight of every one in the magistrate's office. But this is not all: the first word the sailor uttered made our honest soldier start, as if a musket-ball had whistled at his ear; he fixed his gaze intently on him, and the instant the bundle was recognised, the two men were locked in a firm and long embrace; and words of recognition and exclamations of affection were heard from both. 'Larry! 'Barney! my dear brother!' And then Larry looked around, and said, with feelings that did honour to him as a man and as a Christian, 'I knew God would never desert the innocent!'"

The other component parts of this juvenile Annual, in prose and verse, are extremely appropriate, and well adapted to inform and amuse the youthful mind.

Dr. Doddridge's Diary and Correspondence. [Fourth Notice.]

THE following is the third lady letter, of which we spoke in our last, and were obliged, for want of room, to defer. Like the others, it bespeaks a strange mode of ecclesiastical interference with family and personal affairs.

"Dear Madam,—You were so kind yesterday morning as to tell me of some things which you thought amiss in my behaviour, many of which I own were very just, as upon a little reflection I plainly perceived, and am willing to believe the same of some others where I am more in the dark, and can as yet recollect nothing in my behaviour that could lay a just foundation for such charges. In most of the expressions of friendship it is my misfortune to rank inferior to yourself, but in this I am resolved to keep pace with you; and though I may not be able to find out so many defects in your character as you have found in mine, I am determined to do my best, and to tell you all that I know; to proceed any further would be calumny, and not friendship. In order to take off that air of rudeness which might otherwise appear in presuming to find fault with you, I must do myself the justice to own that I steadily esteem your character to be far superior to mine in many important instances; and that, as to the infirmities of temper which I am going to enumerate, I find them almost every one in myself, among many others from which you are entirely free. With this precaution I will go on to the enumeration of your faults, which I hope will neither be defective nor extravagant in any considerable instance, for I have endeavoured to recollect what I found out when I have been angry, and therefore more quick-sighted; but I have judged of them, and do now mention them to you in the most sedate composure and harmony

of mind, and with a heart full of the tenderest sentiments of friendship. The most considerable fault of my good friend, and that to which most of the rest are reducible, is vanity. Few people in the world have so many fair excuses for it as yourself; and yet, what is upon that very account the more surprising, few discover more in every circumstance of life. It even constantly appears when we are drinking chocolate, and has spoiled the pleasure of many a dish, at least to me, if not to the rest of the company; though, after all, whether my uneasiness arose from good sense, or a severity towards pride, is what I am to this moment very uncertain about. I own I rather suspect it was owing to the latter feeling; and here I would observe, that as pride is the most conspicuous fault of two persons with whom you most intimately converse, so you must expect but little quarter from us, though in justice it ought to be otherwise; yet it is a fact that Pride hates that pride in another which virtue and humility would only disapprove. This vanity, madam, makes you one of the most remarkable egotists that I have ever known; whatever is defective in the character of others is generally reprov'd by telling the company how careful you have been to guard against it! And whatever is commendable, you inform us, and often without any mystery, that you are a bright example of! Though you frequently mention former mistakes, it is only as a decent kind of preface, by which you may introduce a declaration of your being grown wiser than you formerly were! Indeed, nothing is easier than to accuse or even to insult former Self, if present Self may but receive an accession of honour. The inconveniences of this figure of speech are obvious enough; but there is one happy effect attending it, which people are not sufficiently sensible of—I mean that, by this means, vanity often talks itself into a consumption; for it effectually stops the mouths of others who would be ready to praise us, if we would leave the work to their care; or it produces such direct compliments as are tantamount to the keenest stabs of satire, and so are poisons to our vanity, rather than its food. An excess of jealousy is another imperfection which I have often observed in you as well as in myself; by which I mean only a disposition to be very much displeased with trifles which are not worth regarding at all. This, in a lady of so much good sense, is peculiarly remarkable, and an ill-natured world will be ready to gather arguments from every brighter part of your character to strengthen and aggravate this defect. The natural consequence of this morbid sensibility is a readiness to express the displeasure which arises upon mere trifles by fretful and impatient speeches. With due submission, madam, I think you are peculiarly obliged to be upon your guard against this, because I hardly know any body whose temper inclines them more keenly to resent any thing that looks like peevishness in others. Now it is obvious that if we cannot bear such kind of speeches, the best way to avoid hearing them is to take care never to indulge in them ourselves. Upon this occasion, madam, I must observe, that you have often displayed your wisdom in an instance wherein mine constantly fails me. When you have said a hasty thing, and another answers with some smartness, you have known how, if not entirely to keep your own temper, which is by no means in your own power, yet at least to smother that resentment which would naturally arise upon such a provocation. But, even while you are attempting this, your prudence does sometimes remarkably

fail you, for you cannot forbear triumphing over your antagonist by saying that he is hot and fierce, and that you will not talk any more because he cannot bear it! This, madam, may be very true, but yet you know it is more provoking than any thing that you could say; because it is glorying in your own superior wisdom, at the same time that you are exposing the imperfection of his temper in an important instance. However, you will have this consolation, that the rest of the company will perceive you are a sharer in the imperfection, though you do not know it; for they will naturally conclude that if you were not very angry, you would not have taken so unseasonable a time for reproving him. Another particular is, that though you seem to take a reproof with more patience and thankfulness than any person of your temper that I ever met with in the whole course of my acquaintance, yet you sometimes attempt to defend, or at least to excuse yourself, by charging the same failure upon the person who blames you. Methinks, madam, you should not stoop so low, unless it were to serve a particular friend; nay, even to such a one, I would not repeat such a condescension, for it is natural to imagine that reproofs which are given at such a time proceed from spleen and pride, rather than from wisdom and love; and then it is odds but your friend entirely despises your remarks,—at least it is certain he will not think himself at all obliged to you for them. Once more, madam, when you have contracted an aversion to any person, you are admirably ingenious in giving the most unlucky turn in the world to every thing that he says or does, and you are apt to allow yourself the liberty of censuring his character with the utmost severity. If such remarks come to the ear of a person who has the misfortune to fall under your displeasure, it certainly provokes him, and makes him your determined enemy. In the mean time, is not a negligent egotism the least agreeable way of entertaining a company which a lady of so much religion and good sense could possibly invent? Besides, when people imagine that your temper inclines you to aggravate faults to an excess, they will have the less regard for your judgment in those censures which are really equitable and rational. These, madam, are, so far as I can recollect, the only faults I have ever observed in your behaviour; and I am ready to conclude there is a rational foundation for each of these reflections, because I perceive that the wisest and best of your friends, and those who most intimately know you, all agree in these sentiments. I thought it a more candid and generous part to mention them to you, than to dwell upon them in the company of others, and am fully assured that you will take it kindly. Their enumeration has been both a difficult and unpleasant task, but I find a sweetness in any trouble which may be serviceable to you; and I hope that what I have been doing will not be entirely useless to myself, since what I have said upon each of these heads will lay me under an additional obligation to avoid the faults which I undertake to censure. There is one immediate satisfaction attending the review of what I have written, which I will presume to mention, though perhaps modesty would rather require me to conceal it. It is, that I am encouraged to hope that I shall never want matter upon any other subject, since I could write so large a letter upon a theme so barren in itself as the defects of Mrs. Wingate. I am, with the utmost sincerity and respect, &c."

Now, really, when it is remembered that these three letters are written in the space

of three weeks to three different women (two of them mother and daughter) by a young clergyman of twenty-five years of age,* they must give us a strange idea either of the character of the man or of the usages of the sect to which he belonged.

SIGHTS OF BOOKS.

Historical Miscellany; or, Illustrations of the most important Periods in Ancient and Modern History: with a particular Account of the British Constitution and Commerce; forming a Supplement to Pinnock's Grecian, Roman, and English Histories. By W. C. Taylor, A.M., Trinity College, Dublin. 12mo. pp. 352. London, 1829. Whittaker, Treacher, and Co.

THIS long title explains the character of a well-concocted miscellany, with a useful map, in which the leading divisions of ancient and modern geography are clearly defined. Some of the subjects seem to be rather introduced heterogeneously; or at least are such as we did not expect to meet in the present volume; for example, Grecian poetry and British biography. Still, however, they are well calculated to attract the attention of those classes for which such compilations are made, and to convey much general instruction to them.

A Manual of Heraldry for Amateurs. By Harriet Dallaway. 12mo. pp. 169. London, 1829. W. Pickering.

THIS, as far as it goes, may be considered a useful book of instruction, on a subject at once curious, and far more important than is generally thought; and we can recommend it to the tyros in heraldry. We protest, however, against one of the writer's positions—that it is inexpedient to copy heraldic forms from the rude and early state of the arts. By attempting to refine, we are convinced that much

* And who further writes thus also of another woman. Mrs. Ann White, at the same period:—"Some friends who were on a journey called upon me at Harborough. In their company was a young lady, who, as far as I could judge, was about twenty years of age, and, in every sense, one of the most agreeable creatures I ever beheld. Indeed, I thought her as beautiful as a full moon. To give you in mere prose an Arabian proverb which I very much admire. Yet a beauty which fired my heart at the first glance is the least ornament she can boast—for she is perfectly well bred; and the vivacity of her wit, and the easy, modest freedom of her behaviour, charmed me beyond expression. I have since heard that she is as remarkable for piety as for any other excellence in her character; and I am told that her fortune will be five hundred pounds, and may probably increase to a great deal more. I could have liked her for a wife, with five hundred pounds, beyond any other woman under the sun,—and Kitty's dismissal would have justified me in marrying whom I pleased; but I thought her so vastly superior to me in situation, that it never entered into my head to offer my services; though I own a few minutes of her conversation impressed me so deeply, that a forced application to study for hours could hardly erase her ideas. Now only last Monday night I heard that this dear creature is going to be married to a dissenting minister of no estate, and of a narrow income. Moreover, it is the opinion of some judicious friends who know me both very well, that there is a remarkable similarity in our tempers; and that had I offered my services before, they would probably have met with a very kind reception. Now is it not the most provoking chance in nature to know this when it is just too late,—and when the dear girl is on the point of surrendering those charms which are but just beyond one's reach? I do confidently believe that this was the very crisis of my fate! Had I embraced this opportunity, I had made my fortune and been the happiest man under the sun! and in possession of the most lovely flower upon which it shines. I have lost her beyond all hope of recovery! It is true, indeed, that Mrs. Jennings (wise as she is) tells me that there are many other Mrs. Ann Whites in the world, and that in a few years I may take my choice out of two or three of them! I allow there are other agreeable women—but she was a phoenix; and I am persuaded that it will be at least a century before her equal appears. Now it is very probable I may not live quite so long; and if I do, that I may not be quite so capable of relishing the charms of a fair lady then as I am at present in the twenty-sixth year of my age; so that the distant prospect gives but little relief to, dear madam, your afflicted brother and humble servant, P. Doddardson."

information will be lost, and many things mistaken. Indeed, we agree with Mr. Nicolas, "that heraldic taste has within the last century become so vitiated and corrupt, that the arms devised by heralds within that period are generally so complicated as to be inexplicable; and are like nothing in heaven or on earth, though all the elements are taxed to contribute to the concoctions. Turtle-doves, bears, lions' paws, heads, or tails; wolves, castles, gates, and Lord Mayor's caps; keys, bulrushes, the sun and moon, tridents, flag-staffs, and laurel-wreaths; crescents, badgers, and charts of the North Pole; sheep, medals, and inscriptions; landscapes, and portraits both of men and beasts; ships in action and out of action, swords and banners; and every thing in nature, animate and inanimate, radiant in all the colours of the rainbow, and mixed up with that vilest of all modern heraldry 'erminals,' are huddled together in one shield, in a manner which defies the rules of blazon, outrages all taste, and prevents the possibility of being described in an ordinary; and resembles only the fantastic combinations of the kaleidoscope."

Although the references might have been, advantageously, made more distinct and particular, yet we think this Manual the best modern work of its class on the subject with which we have met.

The Winter's Wreath for 1830. A Collection of original Contributions in Prose and Verse. Whittaker, Treacher, and Co., London; G. Smith, Liverpool.

There is much elegant taste, and marks of cultivated mind, in this little volume, which we may therefore pronounce to be very pretty. The average of the tales are not above commonplace; and the day of essay-writing is completely over;—we care little for truisms about pride, genius, &c., put into neatly rounded paragraphs,—and we the less forgive their present perpetrator for these school-boy themes, as his productions are generally great favourites with us. Moreover, despite its fine name, "the Myriologue," we do not much admire that article, and think, in a work like this, all the contributions ought to be English,—consequently could dispense with German, Spanish, &c., as unintelligible to so many readers. We must, at least for this week, abstain from quotation; and only mention, with much praise, a very pretty Letrilla from the Spanish by Mr. Chorley; and also the "Three Christmas Eves of Count Carl von Nordheim," as, to our taste, the most interesting prose tale in the book.

Tooke's Diversions of Purley. A new edition, revised and corrected by R. Taylor, F.S.A. F.L.S.; with numerous Additions from the copy revised by the Author for republication, &c. 2 vols. 8vo. London, 1829. T. Tegg; Cumming, Dublin; Griffin and Co. Glasgow. A REPUBLICATION of this curious work has been so long a desideratum, that we cannot suffer even its advent to pass without a congratulation; though we have not had leisure to examine its novelties, so as to speak of their importance. From a hasty glance, however, the new matter, which is enclosed in brackets, seems to us greatly to enhance the value of this remarkable book; in which, though there is much of hypothesis and conjecture, there is also much to fix the attention of every scholar and inquirer in Europe. Particularly at pre-

sent, when the investigation of ancient languages is so closely carried on, these volumes must be considered as very acceptable.

The Privy Purse Expenses of Henry VIII. from November MDXXIX. to December MDXXXII. By N. H. Nicolas, Esq. London. Pickering.

THIS work, so curious in itself, and so admirable as throwing light upon an interesting period of history and manners, has been published more than two years; and though often a source of pleasant reference to us, we have somehow or other always postponed the recommendation of it to our readers. We now do so very heartily, together with Mr. Nicolas's able introductory Essay and illustrative Notes.

Burke's Peerage and Baronetage of the British Empire. Third edition, considerably augmented. London, 1829. H. Colburn and Co. We notice this new edition of Burke's Peerage with much satisfaction, on account of the great and real improvements which have been made in the work, and the useful additions that have suggested themselves to the diligent compiler. Of such a publication it is the best praise to say, that we have not looked for any information such as it professes to furnish—and we have looked often—without finding, readily and accurately, what we sought.

The London University Magazine. No. 1. for October 1829. Hurst and Co.

A NEW magazine has just emanated from a party of the young gentlemen who are studying at the London University, and its first No. is before us. It is well known that we dislike offering opinions upon the productions of our fellows in the field of periodical literature; we will therefore content ourselves with announcing this publication, and observing that it displays talent and intelligence. There are, perhaps, some things which greater experience would have avoided; such, for example, as the Dedication; but, taken altogether, the undertaking promises to hold a fair rank among its contemporaries as a literary and scientific miscellany.

ORIGINAL CORRESPONDENCE.

Paris, Oct. 10th.

THIS great city is just trying to grin away *ennui* by sight-seeing, gambling, praying, and gormandising. One of the resources against yawning is the exhibition of the laureate works in painting, sculpture, and architecture, of this year, as also the productions in these arts sent from Rome by the *élèves pensionnaires*. With few exceptions, the specimens of rising genius are far from being of bright promise; at least the beau idéal of modern artists degenerates into a very ugly reality when traced on canvas. There is a figure of David holding Goliath's head, which, notwithstanding the approval of the infallible *Messieurs de l'Académie*, would disgrace a sign-board. The juvenile warrior resembles a half-starved rat-catcher, rather than a beautiful stripling; and instead of the expression of triumph on his youthful brow, he looks terrified at the sight of the bleeding head. The public, however, are indemnified for this very pitiable, though patronised, performance, by a statue of Mercury: the god is represented at the moment when, having formed a lyre with the horns of a heifer and a tortoise-shell, he first draws a sound from the instrument of his invention. The listening expression of his countenance, and the sensation of charm which animates his features, are admirably depicted;

indeed, in the whole of the composition there is a vivacity, grace, and life, seldom seen in the works of modern sculpture. M. Devet is the name of the artist, who has not yet counted his twenty-fifth year. From the style of the company which thronged the *salles* of the *beaux arts*, I presume that genius and talent are no longer *à la mode*: the amateurs were almost entirely composed of the lower orders.

Mademoiselle Saint Romain has pirouetted our young nobles into love, to the horror of mammas, wives, sisters, and matrimonial canvassers. Her grace, beauty, and movements, seem also to have decided in the affirmative the question which a dying dancing-master asked his confessor—"If angels danced in heaven?" Lord Seymour's *Lionel* has as yet been triumphant at our races.

Russian literature is becoming the mode, and no one is esteemed a fashionable book-worm who has not read "*Wygigine*," or *le Gil Blas Russe*, by Thadée de Bulgazine. A new work is also shortly to appear, written by a German, entitled *Moi-même et mes autres Moi-mêmes*. I cannot recollect the German title; but the author, whom I sometimes meet in society, pretends that he is now performing his *seventh* existence in *this world*. He is rather the worse for the wear, at least the uglier, for his face is scarcely human; therefore, for the sake of society, it is to be hoped the next may be his final exit.

ARTS AND SCIENCES.

EGYPTIAN ANTIQUITIES.

LETTERS have been received at Marseilles from M. Champollion, up to July 4th. At that date the researches in the tombs of the kings at Thebes were completed, and the results of five months' labour were of great interest. Among them is "a Table of the Rising of the Constellations of every Hour of the Months of the Year," with the influence of each constellation. This monument is both astrological and astronomical, and of the most remote Egyptian antiquity.

BARON VON HUMBOLDT.

IN a letter from Baron von Humboldt, read in the French Academy of Sciences, he gives an account of his visit to the rich mines in the Ural Mountains. He observes that it is always on the Asiatic declivity of those mountains that the auriferous sands lie, which contain pieces of gold, platina, and chromate of iron united with platina. He also discovered a piece of platina of a pretty large size, and presenting a crystallisation of platina towards the centre. These metals are often found a foot below the surface. The annual produce of these newly-discovered mines is 6000 kilos of gold. M. Humboldt found in these mines an analogy of position with the auriferous sands of the Cordilleras. He also observed in these mountains mines of osmium and iridium, each having separate beds. Thence he crossed the Kirghise steppe, along the frontiers of Chinese Tartary, and visited the ruins of the ancient city of Bulgardie, or Bolgari, formerly the capital of the Tartar empire, and the residence of the family of Tamerlane.

August 20th.—M. Humboldt has crossed Chinese Tartary, and visited rich mines of beryls and topazes, and also a silver mine, which produces annually above 40,000 pounds of auriferous silver. Lastly, he entered a Chinese town: the governor received the learned traveller in his tent, a point which he insisted

* Preface to a Roll of Arms of Peers and Knights in the Reign of Edward the Second.

upon, saying, that he would do the same if he were travelling in another country. He gave him a very polite reception, and sold to him an historical Chinese work, in five volumes, for some yards of velvet and red cloth. This town has a wretched appearance, and contains nothing remarkable but a temple and two mean towers, inhabited by Chinese soldiers.—The Russian government has behaved in the most handsome manner to Baron Humboldt. He is accompanied by a general and some superior officers, and also three carriages and thirty novices, with every thing requisite for his journey. He hopes to be in France next summer, laden with rich discoveries in geology, mineralogy, and botany.

OCCULTATION OF ALDEBARAN.

THE atmosphere last Thursday continued very dense in the direction of the expected phenomenon till 9hrs., the moon and the star being indistinctly perceived; 9hrs. 1min. the sky became more clear; 9hrs. 6min. the misty vapour had so far withdrawn, that the difference of colour between Aldebaran and the moon became apparent: just before immersion, at 9hrs. 12min., the star was evidently arrested.—It lingered, appeared reluctant to join in contact, and, from two to three seconds before it vanished, was visible in the edge of the moon's limb, though not satisfactorily seen within the disc,—the undulation of the bright edge of the moon rendered this uncertain; yet the impression is, that such was the case. The immersion from the dark limb at 9hrs. 49min. 30sec. was instantaneous, without any defectiveness of light in the star.

Depford.

J. T. B.

NEW PUBLICATIONS.

Hall's New General Atlas. Part XVI.
Longman and Co.

WE are always inclined to redouble our praises when we see a work published in Numbers or Parts, not only redeem, but excel its earlier promise; and on this account we must bestow an *extra* eulogy on this new Part of Hall's Atlas, which contains an extra and a very beautifully engraved map. Instead of three, the number given heretofore, there are four plates: 1. "The World;" really delightful to the eye as a picture, as well as excellent for reference;—2. "British Isles;"—3. "South America;" the scene of passing events of great interest;—and 4. "Western Africa," with the latest discoveries of the unfortunate explorers of that fatal continent. The next Part completes this admirable publication.

LITERARY AND LEARNED.

ANDREW GEMMELS.

OUR notice of this original of the fine creation of Edie Ochiltree has brought us several communications; and though very minute particulars of his real life are not important, yet, as we entered upon it, we shall devote a few further lines to that subject. The *Morning Chronicle* states, on the authority of a Scots newspaper (we believe the *Kelso Mail*), that Andrew died in the vicinity of Newcastle upon Tyne—neither the writer of that assertion, ourselves, nor Sir Walter Scott, being aware of the circumstantial account of his death and burial which appeared in *Constable's Edinburgh Magazine* for September 1817. We are inclined, from allusions in this interesting article, to attribute it to the pen of Mr. Thomas Pringle; and it derives an additional interest from being one of the early flights of an individual who

has since shone with so amiable a lustre in the field of literature. From this it appears that Gemmels was a regular visitor at the farm of the writer's grandfather; and that he died in the year 1793 at Roxburgh-Newton, near Kelso, at the age (as he stated) of 105 years. We reprint the rest of the story, as simply and characteristically related by a lady who witnessed the latter days of poor Andrew:—

"He came to Newton at that time in a very weakly condition; being, according to his own account, 105 years of age. The conduct of some of the country folks towards poor Andrew in his declining state was not what it should have been: probably most of his old patrons had died out, and their more genteel descendants disliked to be fashed and burdened with a dying beggar; so every one handed him over to his next neighbour; and he was hurried from Selkirk to Newton in three days, a distance of sixteen miles. He was brought in a cart and laid down at Mr. R.—'s byre-door, but we never knew by whom. He was taken in, and laid as usual on his truss of straw. When we spoke of making up a bed for him, he got into a rage, and swore (as well as he was able to speak), 'that many clever fellow had died in the field with his hair frozen to the ground—and would he submit to die in any of our beds?' He did not refuse a little whisky, however, now and then: for it was but cold, in the spring, lying in an out-house among straw. A friend who was along with me, urged him to tell what cash he had about him, 'as you know,' said she, 'it has always been reported that you have money.' Andrew replied with a look of derision, 'bow, wow, woman! women folk are aye fashing theirsels about what they hae nae business wi'.' He at length told us he had changed a note at Selkirk, and paid six shillings for a pair of shoes which he had on him; but not a silver coin was found in all his duddy doublets—and many kind of odd like pouch he had;—in one of them was sixpence worth of halfpence, and two combs for his silver locks, which were beautiful. His set of teeth, which he had got in his 101st year, were very white. What was remarkable, notwithstanding all the rags he had flapping about him, he was particularly clean in his old healsome-looking person. He at last allowed the servants to strip off his rags and lay him in a bed, which was made up for him in a cart in the byre. After he was laid comfortably he often prayed, and to good purpose: but if the servants did not feed him right, (for he could not lift a spoon to his mouth for several days before his death,) he would give them a passing ban. He lived nine days with us, and continued quite sensible till the hour of his decease. Mr. R.— got him decently buried. Old Tammy Jack, with the mickle nose, got his shoes for digging his grave in Roxburgh kirk-yard. Andrew was well known through all this country and great part of Northumberland. I suppose he was originally from the west country, but cannot speak with certainty as to that; it was, however, commonly reported that he had a nephew or some other relation in the west, who possessed a farm which Andrew had stocked for him from the profits of his begging."

Apologies: as we are speaking of Sir Walter Scott's Novels, we should like to know for what reason, or on what grounds, the royal name of *Stuart* has been altered into *Steward*, in the new and corrected edition of *Waverley*?

FINE ARTS.

NEW PUBLICATIONS.

Illustrations to the Keepsake for 1830.

THESE illustrations have reached us at rather a late period of the week; but they are so exquisite that we are unwilling to delay noticing them until our next publication.—Besides a very tasteful graphic niche for the reception of the names of the donor and the receiver of the volume, designed by T. Stothard, R.A., and engraved by S. Mitten, there are seventeen plates, embracing a pleasing variety of subjects. And first for "The Rt. Hon. Lady Georgiana Agar Ellis," engraved by C. Heath, from a drawing by Sir T. Lawrence, P.R.A. This, we conceive, is intended for the frontispiece of the volume, and a fairer one could no where be found. It has evidently been engraved from one of the President's most graceful and elegant drawings; and the well-known lightness, taste, and facility, with which Sir Thomas handles the porte-crayon, has been most successfully imitated by Mr. Heath. Although the delicacy of its tone prevents us from considering it as a specimen of the *black art*, it is not, in our opinion, the less magical on that account.—"Dorathia" (Dorothea?), engraved by F. Engleheart, from a picture by F. P. Stephanoff. Powerful and contrasted expression,—the passions of jealousy, anger, and grief—finely depicted.—"George of Aspen and Isabella," engraved by J. Mitchell, from a picture by F. P. Stephanoff. Another admirable specimen of Mr. Stephanoff's talents; the male figure, especially, is full of youthful energy. Both this and the last-mentioned plate are highly creditable to the artists by whom they are engraved.—"Isabella and Gertrude," engraved by F. Bacon, from a drawing by A. E. Chalon, R.A. "Look, where it comes again!" Such, if the terror-stricken beings here represented were capable of uttering a sound, would be their probable exclamation. The eye of the spectator follows the direction of theirs, with something like sympathetic alarm.—"Virginia Water," engraved by R. Wallis, from a drawing by J. M. W. Turner, R.A. Of this decorated and favourite retreat of royalty there are two views, both by the same artists. They are brilliant gems. Mr. Wallis has most happily preserved the splendour and fascination of Mr. Turner's pencil.—"Costandi," engraved by J. Goodyear, from a picture by F. P. Stephanoff. A simple, elegant, and affecting composition.—"Josephine," engraved by C. Rolfs, from a drawing by De Veria, Paris. It is a sense, not of the courtesy due to a stranger, but of the justice due to taste and talent, which elicits our praise of this playful little production. The chiaroscuro is very powerful; and it is engraved in a most masterly style.—"Princess Doria and the Pilgrims," engraved by C. Heath, from a picture by D. Wilkie, R.A. Most of our readers will recollect having seen the original in the last exhibition of the Royal Academy. Great justice has been done to it by Mr. Heath.—"Zella," engraved by C. Heath, from a drawing by H. Corbould. Another proof of the skill and spirit of Mr. Heath's burin.—"The Bride," engraved by C. Heath, from a picture by C. R. Leslie, R.A. A charming creature! We wonder she has remained so long unmarried. The broad but delicate half-tone which is thrown over the greater portion of the face and figure, reminds us of the celebrated *Chapeau de Paille*.—"Vernice," engraved by Freebairn, from a drawing by S. Prout. A fine view of the Ducal Palace and the adjacent buildings, exhibiting all the

usual clearness and precision of Mr. Prout's powerful and practised pencil.—"The faithful Servant," engraved by J. Goodyear, from a picture by A. Cooper, R.A. An exhibition of courage and self-devotion. Fierceness and terror are finely contrasted in the animals.—"Francis the First and his Sister." In whatever way considered, whether with reference to composition, to character, or to effect, this is a fascinating performance; but elegance and expression are its most prominent qualities. We could gaze at it for an hour.—"The Portrait," engraved by E. Porthury, from a picture by R. Smirke, R.A. We believe that a print was some years ago produced from this humorous composition; we are sure that we have seen a beautiful study from it, in miniature, by Mrs. Green. Mr. Porthury has engraved it admirably.—"The Castle Hall," engraved by J. Mitchell, from a picture by C. R. Leslie, R.A. A merry urchin playing the soldier; a plate of great richness and power.—"The Prophet of St. Paul's," engraved by C. Heath, from a picture by A. E. Chalon, R.A. Palmistry would be a most agreeable profession, if the usual subjects of it were such angelic creatures as the one here represented; to whose grace and loveliness the foils of her young and awestruck attendant, and the spectacled sage whose skill she is putting to the test, are quite unnecessary.—We have thus run rapidly through the whole of these beautiful productions, and have pointed out a few of their merits. To dwell upon them to the extent they deserve would require much more space than we are able to spare.

Illustrations to the Amulet for 1830.

WE very cordially congratulate the proprietors of the Amulet on the beauty of the plates which adorn their volume. They are eleven in number; and are all so admirable, that we feel a difficulty to which to give precedence in our notice. The pleasure which we experience, however, in once more seeing so excellent an artist make his appearance before the public, after too long a secession, induces us to begin with "The Pedagogue," engraved by J. Goodyear, from a picture by R. Smirke, R.A.; in which the skill and taste of the composition, both of form and of effect, is exceeded only by the admirable expression of the various personages of the scene. The tender interest of the mother, the awkwardness and awe of the boy, the alarm of the nurse, and the grinning complacency of the pedagogue, who appears to be anticipating the delight of tickling his young pupil's catastrophe, are all perfect. Mr. Goodyear has exerted himself with singular success in this charming little print. He has retained the character of every countenance in a surprising manner, and the even tone of his middle tints, the clearness of his lights, and the power and richness of his depths, leave nothing to be wished for.—"The Anxious Wife," engraved by F. Engleheart, from a picture by W. Mulready, R.A. The picture was in the exhibition of the Royal Academy, we believe, last year; and we remember being then of opinion that the colouring of the setting sun was rather too crude. That defect, however, if defect it were, is of course not visible in the print. The subject is exceedingly interesting. To a young wife and mother, who has just lulled her infant asleep in its cradle, her elder child is saying an evening prayer. She herself, seated at the window of the cottage, seems attentively listening for the approach of her husband, whose dry shoes and hot supper are waiting for him on the hearth. The print is sweetly engraved

by Mr. Engleheart.—"The Minstrel of Chamouni," engraved by J. H. Robinson, from a picture by H. W. Pickersgill, R.A. The graceful and elegant picture from which this print has been most ably engraved by Mr. Robinson, is also well known to the visitors of the exhibitions at Somerset House. The same remark is applicable to "The First Interview between the Spaniards and Peruvians," engraved by W. Greatbach, from a picture by H. P. Briggs, A.R.A.; and in which we do not know whether the talents of the painter or of the engraver are the more conspicuous.—"The Darty Bairn," engraved by J. Mitchell, from a picture by D. Wilkie, R.A. Our English readers may not know that "darty" is Scotch for "pettish." This sweet and mellow little plate reminds us of some of the finest prints from some of the finest works of Terburg or Metzu.—"The Gleaner," engraved by E. Finden, from a picture by J. Holmes. Mr. Holmes is remarkably happy in subjects of this description, imparting to them elegance, without destroying their rusticity. He has in this instance been most ably seconded by Mr. Finden.—"The Sisters of Bethany," engraved by M. J. Danforth, from a picture by C. R. Leslie, R.A. With the exception, perhaps, of a little stiffness and formality in the folds of the drapery, this is a very pleasing production.—"The Crucifixion," engraved by H. Le Keux, from a drawing by J. Martin. Who but Mr. Martin could have furnished the means of comprehending such a mass of objects in so small a compass? Our Saviour, the thieves, Mary Magdalen, the apostles, the centurion and soldiers, hundreds of spectators, the town and towers of Jerusalem, an extensive distance, the elemental shock which marked the event, and an air of sublimity pervading the whole,—all within the space of half a dozen square inches! Mr. Le Keux's eyes must have ached before the completion of his arduous undertaking.—"The Mandoline," engraved by F. Bacon, from a picture by T. Uwins. We noticed, with the praise to which it was entitled, the picture, when it appeared in the British Gallery. Mr. Bacon has done it great justice.—"Preparing for the Festa," engraved by H. Rolls, from a drawing by P. Williams. This characteristic and clever drawing was, we believe, in the last exhibition of the Society of Painters in Water-colours. Mr. Rolls has engraved it with his usual skill.—Although the last mentioned, by no means the least pleasing of this attractive little set of embellishments, is "The Fisherman's Children," engraved by C. Rolls, from a picture by W. Collins, R.A. It is highly creditable to both artists.

The Holy Family. Engraved by J. G. Walker, from a Picture by Sir Joshua Reynolds.

THIS is, we believe, the third engraving in line from Sir Joshua's celebrated picture. Of the first, which was engraved by Sharp, a memoir of that admirable engraver, inserted in the ninth volume of "The Annual Biography and Obituary," says: "The plate, when it came from Sharp's hand, was, in respect to light, shadow, brilliance, and the highest attributes of the art, inimitable. After a hundred proofs, and a few impressions, had been taken from it, however, Bartolozzi undertook, at the instance of Macklin, to improve it, by nearly obliterating the lines, and converting it into a dotted engraving. Not content with that, he had the presumption to alter the character of the head by Sir Joshua; substituting the feeble expression, and insipid gusto, of his own, for the originality and energy of that great painter's conception." A small copy was also engraved by

Sharp, as a frontispiece to Macklin's *New Testament*. The print, the title of which stands at the head of this notice, is of a size smaller still. We will not make any invidious comparisons; but it is only justice to Mr. Walker to say that his plate is very creditable to his talents. He has been particularly successful in that which must have been among his greatest difficulties; we mean in preserving the expression. The countenances of the Virgin and the Infant Christ are very faithfully rendered from the original picture.

National Portrait Gallery of Illustrious and Eminent Personages of the XIXth Century. No. VI. Fisher, Son, and Co.

THIS Number contains portraits and memoirs of Lord Grantham, Bishop Heber, and the Duke of Beaufort;—the former being engraved in a good style, and the latter sufficiently ample to illustrate the history of the personages whose likenesses are thus presented to us. We take a great pleasure in contemplating the lineaments of distinguished individuals preserved from former times; and surely it is not less gratifying to view the features of our great contemporaries, whether warriors, statesmen, orators, poets, scholars, artists, painters, or otherwise eminent, and to listen to those unambitious biographies which simply point out who they were, and by what they were raised to the height where they excite the interest of their fellow-men.

A Sketch of Mr. Gurney's New Steam-Carriage.

J. Doyle del. et lithog. Dickinson.

WE have no doubt that this is a correct representation; but the worst of it is, that the qualities of the carriage which we are most anxious to witness, namely, its motion and speed, are precisely the qualities which a print is necessarily incompetent to shew. When will the real carriages make their public appearance?

Goldsworthy Gurney, Esq. Drawn on stone by W. Sharp, from a Drawing by S. C. Smith. Dickinson.

A CHARACTERISTIC countenance.

The Princess Victoria. Drawn from Life, at Kensington Palace, by R. J. Lane, A.R.A. Printed by C. Hullmandel.

A CHARMING little head. The drawing is firm and tasteful; and it is impossible to surpass the delicacy and finish of Mr. Lane's lithographic execution. We are concerned to learn that this accomplished artist has been recently suffering a severe domestic calamity, in the loss of a most beautiful and interesting child.

PRUSSIAN MEDAL.

WE, the other day, noticed the presentation of a medal, by the King of Prussia, to M. Jullien, of Paris; since which time we have had the pleasure of seeing one of these handsome symbols of royal favour. It was sent by his Majesty to Mr. Vendramini, the engraver of the magnificent picture of Sebastian del Piombo in our National Gallery,—as a mark of his approbation of that noble effort of the burin. The medal itself is of gold, above the size of, and much thicker than, a crown-piece; and its execution does great credit to the fine arts of Prussia. On one side is the King's head—a classical and striking likeness, with the legend "Friedrich Wilhelm III. Koenig von Preussen"—on the other is a superb winged female figure, seated, and crowned with a mural crown. In one hand she holds a cornucopia, and in the other a sceptre re-

versed, leaning on the Prussian eagle. The work is, as we have said, admirably executed: the artist's name *Iachmann*. We believe this medal is worn abroad as a decoration; and it certainly should be displayed, as reflecting an honour to the liberal and royal donor, as well as conferring one on the meritorious receiver.

Anecdotes of Canova.—When Canova first went to Paris, which was in 1803, he had the good fortune to find, at Villers, his group of Cupid and Psyche, now in the Louvre. "The drapery," he observed to a friend, "was horribly executed, and entirely shapeless. This was occasioned by my having for a time entertained the erroneous notion that negligent drapery set off the flesh. I borrowed a mallet and chisels, and every morning for a week a hired cabriolet took me to Villers, where I corrected, as much as possible, this miserable drapery."

The repetition of Canova's statue of the Magdalen was made with the marble cut from between the legs of the statue of Napoleon which is now in the Duke of Wellington's antechamber. A bust of Pius VII. was made from the marble cut from under the arm. When this statue of Napoleon was embarked on the Tiber, for the purpose of being sent by water to France, it was placed in the vessel on a false movable platform, in order that it might in three minutes be plunged into the sea, should the English cruisers approach too nearly.—*Stendhal's Promenades dans Rome.*

ORIGINAL POETRY.

THE FALL OF THE LEAF.

[The following lines were suggested by the death of a young female, precisely under the circumstances which are here represented. She uttered the pathetic thought ascribed to her, almost word for word as it is written.]

SHE sat at the casement in autumn's dark eve,
A tear dimm'd her eye, but her soul did not
grieve; [streak,
Consumption had flash'd her pale brow with its
Yet her spirit was strong, while the body was
weak; [her eyes,
And there, with the light beaming forth from
She looked like a saint ready winged for the
skies.

She gazed on that tree which so long she had
loved; [moved
Its leaves were all sear'd, and the wind as it
O'er the withering branches with ominous
sound, [ground,

Swept them ruthlessly away, and they fell to the
She watched—that fair child whom Death could
not appal—

Their first touch of decay to their pitiless fall;
And she felt how, all faded and powerless its
stem, [them,

Her own flower of life had been blighted like
"I have seen," she exclaimed (and a hallowing
smile a while)—

O'er her cheek faintly spread its soft gleam for
"I have seen those dear leaves the last time—
they have fled,

As I soon shall flee, to the land of the dead."

She turned from the casement—no tear dimm'd
her eye; [on high—

Sweet child! she had communed with visions
Her parents to kiss, and her God to adore;
She turned—but she sat at that casement no
more. E. R.

Brighton.

STANZAS.

"Ye mock the mourner's heart when ye tell
Of aught save the home where it pines to dwell."
Picken.

NAY, let me stay in my native home,
The home where I was born;

Bid from its channel the streamlet roam,

Ere I from my rest am torn.
Tell me not of the glittering sea,
And the wild romantic view;
They would have no charms for me—
My heart could not take their hue.

I wish not to gaze on forests vast,
And on the beetling rocks—
A freshness, a glory is over them cast,
That my wither'd bosom mocks.
Deceitful the thought! that new scenes will
restore

Light to my sunken eye;
The visions of memory cloud it o'er—
It wants but vacancy.

It is not in the power of sun or air
Health to my cheek to impart;
My life is darkened by clouds of care,
The root of decay is my heart:
And let me stay and perish on
In mine own dear native bower;
Pluck not from the stem where first it shone
The broken, withering flower.

No, no—it is not change of scene
That will work a change on me—
Give me back the hours that once have been
In more than memory.
Give me the sunshine of each sweet smile
That lighted my spirit then;
And perhaps my cheek ye may beguile
To blossom and blush again.

Worton Lodge, Isleworth.

M. A. BROWNE.

SKETCHES OF SOCIETY.

GEMS OF TURKISH HISTORY & CRITICISM.

The Ottoman Name.—It is well known that the Ottoman is only one branch of the aboriginal Turkish race, the founder of which gave his name to his tribe, and is by most supposed to be the same as the *Targitæ* mentioned by Herodotus, and the *Togharma* of the tenth chapter of Genesis. The Ottoman branch, on the other hand, derived their national appellation from *Othman*, or *Osman*; and as the Koran says that "names are of heavenly birth," we will follow Edris, and other Turkish historians, in tracing the celestial cognomen of their fellow-countrymen to its root and source. *Osman*, according to its Arabic meaning, implies the "Bone-breaker." Now the royal vulture is to the nations of the East what the double and single-necked royal eagle is to those of the West, and has been held even in higher veneration among the former, from the days of Ramees to those of the present sultan. This bird is also specially denominated the "bone-breaker," because he contemns living prey, and makes his repast of the remains of the slaughtered. And the three sons of Oghus Chan, from the eldest of whom *Osman*'s descent is deduced, were also called "the Breakers," because they broke into three pieces a bow their father had presented to them. As they broke the bow, so, say the Turkish genealogists, did their descendants break in twain the walls of castles and fortresses; and, in like manner, the prowess and triumphant career of the royal vulture *Humai*, the bone-breaker amongst the winged tribe, has been reflected in the *Humajun Osmanli*, "vultural" (or, in strict European phraseology, *imperial*) house of *Osman*.

The Divan.—Four is the favourite and sacred number of Orientalists. The four viziers are the four props of the imperial administration in Turkey; the Koran gives four angels as bearers of the throne; there are four cardinal virtues among the Asiatics as well as the

Greeks; and the prophet formed, after the model of the four evangelists, his four immediate apostles, the first caliphs of Islamism. This deep-rooted prejudice was Mahomet the Second's motive for appointing four pillars or props to support his dominion in the persons of viziers, kadiaskeres, defterdars, and nishandshis, whom he equally appointed to form the four pillars of the imperial Divan, or more properly *Diwan*. The latter word is the plural of *diw*, a devil: and the appellation is said, by a Persian lexicographer, to have been first bestowed by a Persian sovereign, who, upon observing his crafty counsellors assembled in high conclave, exclaimed, "*Yuan diwan end*,"—those men are devils!—"*Mutato nomine, de te fabula narratur*," may be pertinently applied, in this instance, to the councils of more sovereigns than those of Isphahan.

Origin of Fleas and their Confraternity.—Ewlia, in his book of travels, has recorded a singular tradition of the origin of vermin, as preserved among a sect of Kurds, who dwelt in his time at the foot of Mount Sindhar. "When Noah's ark," says the legend, "sprung a leak by striking against a rock in the vicinity of Mount Sindhar, and Noah despaired altogether of safety, the serpent promised to help him out of his mishap, if he would engage to feed him upon human flesh after the deluge had subsided. Noah pledged himself to do so; and the serpent, coiling himself up, drove his body into the fracture and stopped the leak. When the pluvius element was appeased, and all were making their way out of the ark, the serpent insisted upon the fulfilment of the pledge he had received; but Noah, by Gabriel's advice, committed the pledge to the flames, and scattering its ashes in the air, there arose out of them flies, fleas, lice, bugs, and all such sorts of vermin as prey upon human blood. And after this fashion was Noah's pledge redeemed."

The Pasha.—However familiar this title may be to European ears, its real meaning and derivation are scarcely familiar even to the "erudite few." The word itself is compounded of the Persian "*pai shah*," or the shah's foot; and is a standing memorial of the designations, which, according to Xenophon, Cyrus bestowed on his officers of state; calling them his feet, hands, eyes, and ears. Those intrusted with domestic affairs were styled "*the eyes*;" the secret emissary was termed "*the ear*;" the tax-gatherer "*the hands*;" the warrior "*the foot*;" and the judge, as mouth-piece of the law, the "*tongue of equity*." Of so remote an institution as this is the name of the present Turkish pashas, who, in their several capacities of governor, general, and vizier or minister, are appositely styled the "feet of their master."

The Chatti-Sherif.—This word implies the sign-manual of the sultan. In the early days of Turkish story, when the Ottoman sovereign was unacquainted with the use of the pen, he had no other sign-manual, or chatti-sherif, but the rough impression of his hand, which had been previously besmeared with ink. In more recent times, the sultan, feeling a sovereign antipathy to the toil either of ruling or writing, his genuine autograph is of very rare occurrence; and the chatti-sherif, or "noble line," is limited to a line of two or three short words, which he scrawls with his own hand at the corner of treaties, cabinet orders, diplomas, &c. It has ever been more to their taste to wield a sword than a pen.

MUSIC.

THE MUSICAL PRISM.

THE present has been emphatically called a mechanical age. The intellect, in its endeavours to advance, is at every stage of its progress surrounded and aided by appropriate machinery; and, whatever may be the ultimate results of thus facilitating the acquisition of knowledge, either with regard to the faculties of the human mind, or to the state of knowledge itself, it is impossible to deny that, to a certain extent, far more may be learned, and within a far shorter period, by means of the various existing inventions for abridging intellectual labour, than was possible in the days of our Titan forefathers, who had no lever but their own vigorous arms where-with to lift the mountains. Among those inventions for lessening and at the same time imparting a new interest to exertion, may be placed an article which has just appeared, entitled the Musical Prism. In this elegant and ingenious little publication, a figure, somewhat resembling a flower with variously coloured petals, is so constructed as to exhibit the combinations of sound which form the basis of harmony, and displays them with so much simplicity and precision, that the young musical student (for whose use it is designed) will find it almost equally difficult to err or to forget. The adaptation of the long-noticed analogy between colours and musical sounds to the development of the relations subsisting between the latter, is interesting and ingenious. Teachers of music will, we think, find in this little performance a useful auxiliary.

DRAMA.

DRURY LANE.

ON Tuesday *Guy Mannering* brought Sinclair's delightful voice again upon the public ear; when, like the almost forgotten melody of "Rest thee, babe, rest thee," on the sense of the character he sustained, it awakened the most pleasurable emotions. Such a native minstrel ought never to be absent a season from the metropolitan boards.

Mr. Lister's tragedy, *Epicharis*, was produced on Wednesday last, and met with the most favourable reception. The celebrated conspiracy of Caius Piso has already furnished the subject of a tragedy for the French stage; but the *Epicharis et Néron* of Legouvé is far inferior to the nervous and interesting drama now before us. The deaths of Piso and Epicharis by poison are necessary violations of history for the sake of dramatic effect: the other incidents are well selected, and arranged with considerable skill. With the exception of the fourth act, the interest is sustained throughout; and the novelty of the termination (we speak of the stage arrangements) was duly appreciated by the audience. The catastrophe presented difficulties to the dramatist which have been ably overcome; and if not quite so stirring a tragedy as *Rienzi*, *Epicharis* may fairly rank next to it in the list of modern dramas. With respect to the language, Mr. Lister has made his characters speak plainly and to the purpose. He has not suffered his imagination to run away with his judgment; and though here and there a fine burst declares his pretensions as a poet, there is more feeling than figure in his dialogue. His men and women (woman we should say) speak the language of passion, not of composition. Mr. Young made a vigorous portrait of the bold and manly Tribune; and Mr. Cooper has added much to our opinion of him by his personation of *Nero*.

The part of *Piso* afforded but little opportunity to Mr. Wallack, but that little was not lost. Mr. Vining's *Proculeus* evinced his usual talent—but his appearance almost bordered on the ludicrous; and the scene between him and Epicharis would bear considerable curtailment. While noticing defects, we would suggest the propriety of omitting the march of the conspirators to execution, in the last scene but one of the play. It is "stale, flat, and unprofitable," exciting ridicule instead of sympathy; and on Wednesday evening provoked a comparison of the tragedy with *Venice Preserved*, which it might otherwise have escaped, despite the similarity of *Flavius's* situation in the scene with the conspirators, and that of *Pierre*—

"You've singled me, sir, out for this hard question," &c. We have reserved our notice of Miss Phillips till now, in order that we might conclude our article with unqualified praise,—a circumstance always agreeable to us, but more particularly so where a lady is concerned. Her *Epicharis* is a most beautiful and affecting performance: there is nothing theatrical about it—nothing overstrained. Her first interview with the tyrant is, in our opinion, perfect, and was rewarded by the hearty and unanimous applause of the house. The dresses, particularly those of Nero and his court, were classical and splendid; and Mr. Wallack announced the tragedy for repetition with great approbation.

COVENT GARDEN.

THE first dramatic novelty this season has made its appearance in the shape of a two-act comedy, entitled *The First of May, or a Royal Love-Match*. It is attributed to the pen of Miss J. Hill, sister of Mr. Benson Hill, the comedian, and authoress of some poetical volumes.* "The Wooing at Grafton," in poor Neale's *Romance of History*, has perhaps furnished Miss Hill with the idea of her drama, which turns upon the loves and marriage of Edward IV. and the beautiful widow Elizabeth Grey. It contains some pleasant lines, and is altogether creditable to the fair authoress, who was fortunate enough to get her drama most admirably cast. The well-known reply of the old lady to Edward, "For thy handsome face thou shalt have forty pounds," is happily introduced. The principal defects in the piece are the pruriencies of his majesty's libertinism and the want of *véraisemblance* in the character of *Jonas, the horse-boy*, whose familiarity with his royal master exceeds the farthest limits of even stage probability. Some music by Mr. Lee was spiritedly sung by Miss Forde; and the curtain fell amidst considerable applause.

HAYMARKET THEATRE.

THIS theatre closed on Thursday, with a suitable address, mentioning the success of every drama that had been produced or revived, and returning thanks for the public patronage. On the preceding evening we were much entertained with Farren's *Lord Ogleby*, and charmed with the performances of Miss F. H. Kelly in several characters. Mrs. Glover and Mrs. W. Clifford also displayed great

* The Poet's Child, a tragedy; Constance, a tale; Zaphne, &c. &c. The last volume, entitled *Holyday Dreams* (published by Cadell, London; and Blackwood, Edinburgh), is not only oddly characteristic, but displays marks of talent of an uncommon kind. We did not review it, as most of the pieces had appeared in various periodicals, and its poetry was not of the foremost order; but we take this opportunity to mention it, especially with its preface, as a literary curiosity from the pen of a lady.

talents, which (with other examples) are now, we presume, released to the larger theatres.

ADELPHI.

THIS delightful little place of great amusement continues to hold out its attractions for those who like to laugh till their sides ache; and we advise all the lovers of such pleasing pains to see Mathews, again and again, as *Caleb Pipkin* in the *May Queen*; for they will scarcely look upon its like now or hereafter. Nothing can exceed his humour, whim, and drollery; and in Mrs. Fitzwilliams he has a most inspiring *Mrs. Pipkin*. On Monday we had a spell, and found him more than usually irresistible,—for actors' spirits are not always in the same top key, and this happened to be a happy night. There was also a new piece produced, called the *Floating Beacon*, in which Yates plays the sanguinary Captain in a masterly style; and Mrs. Edwin deserves the highest eulogy for her admirable personation of his half-distracted victim. Her pathos was powerfully affecting. Gallot is an honest English Tar, (and though we wished for Cooke, and regretted much that any difference between him and his friends should have divorced him from the scene of his naval glories and laurels at the Adelphi,) it is but justice to this useful, versatile, and meritorious actor to say, that he acquitted himself in a very satisfactory manner. The last piece, *Obi*, introduced Mr. O. Smith to this theatre, and he was greeted with loud applause, which he caused to be often repeated during his performance. Never was a better cast of the fierce Indian outlaw; and yet what a contrast to the lovely Rose, in the same drama, which was sweetly played by Mrs. Yates. Only we cannot but feel sorry when this fine and lady-like creature is thrown into any male disguise, however modestly her feminine spirit teaches her to assume it.

VARIETIES.

Skeletons.—The *Narrateur de la Meuse*, of the 16th of August, contains an account of the discovery, in the valley of Daspich, near Thionville, in France, at a small distance from the surface, of twelve skeletons of ordinary stature, which are supposed to have belonged to the Roman era, and to be the remains of warriors who were hastily interred. Near them were a waist-buckle and an agraffe in good preservation, of undoubted Roman manufacture.

New Paper.—The Mexican Congress has passed an act enjoining the different departments of the Mexican government to use no other paper than that which is made from a vegetable grown in Mexico, called *maguay*. Manufactories of paper from this plant have been established at Queretara and St. Angel; and the paper is said to be equal for all purposes to that made from the finest linen rag.

Preparation of Flax and Hemp.—M. Rosier, the author of the *Dictionnaire d'Agriculture*, announces that hemp and flax, after maceration in the earth, (the part being watered occasionally,) and careful washing in pure water, are equally fit for manufacture as when prepared in the usual way. The great advantages of the new process are, the absence of all infection, great simplicity and economy, and the deprivation of all the mucilage of the plants. A long account of the mode of preparation is given in the last number of the *Journal des Connaissances Usuelles*.

Silk-Worms.—At a recent sitting of the *Société d'Economie Domestique et Industrielle*, in Paris, a long paper was read on the

rearing of silk-worms; from which it appeared that silk-worms had been lately introduced, with great success, in the northern parts of France, and that the silk obtained from them was equal in quantity, and superior in quality, to that which is obtained in warmer latitudes. It has been strongly recommended to breed silk-worms extensively in those parts of France which are within the 46th and the 48th degrees.

New Spirit.—It is stated that the berries of the service-tree (*sorbus aucuparia*) are now used in the north of France for distillation, and the result is said to be equal to the purest distillation from grapes for brandy. The process is thus conducted:—Take the berries, when perfectly ripe, and after having exposed them for some time to the action of cold in the open air, put them into a wooden vessel; pound them, and pour over them boiling water, stirring it frequently until the heat has sunk to twenty-two degrees of Réaumur; then add a proper quantity of yeast, and cover up the vessel until the fermentation is complete, which may be known by the scum upon the surface, and by holding a candle to an opening which is to be left for the fixed air. If the candle does not go out, the fermentation is complete. The liquor is to be then put into the still, and distilled in the usual way. The first running is weak, and has a disagreeable flavour, but by redistilling over very fresh charcoal in powder, in the proportion of eight or nine pounds to forty gallons, a very fine spirit is obtained. Previous, however, to the second distillation, the charcoal should remain in the spirit two or three days, and be frequently stirred. This spirit has none of the fiery and unwholesome properties of spirit distilled from grain; and as the berries could be extensively cultivated in England, it might be made a profitable branch of industry.

The Fire King.—Competitors are invading the dominion of M. Chabert. Several young gentlemen, totally unprepared with non-conducting clothing, or bricks to stand upon, have entered his oven and remained a minute or so. One of them informed us that he breathed as freely as if he stood before a large kitchen fire—that the thermometer, being hung against the heated wall, rose infinitely higher than the general temperature, and that there were several fire-places, with embers, on which the beef-steaks were (of course) cooked. This report, we must say, rather abates our wonder; and leaves only the swallowing of poison (if phosphorus be, however, taken, and in all cases poison) to be explained as a remarkable phenomenon.

Steam Carriages.—About Manchester sundry steam waggons have been running races on the rail-roads for 500*l.*; but what with pistons going wrong, boilers bursting, and other accidents, we confess we have not been able to ascertain which won. Nearer town, Sir James Anderson and others have been trying the fairer experiments of running a steam carriage on the common road; and a printed account of these asserts, (if we calculate rightly,) that this carriage would go 120 miles an hour on a rail-road!!!

Raphael's Cartoons.—These master-pieces are, it is said, about to be sent from Hampton Court to the King's Chapel in the Picnic Palace.—*Newspapers.*

The Giraffe.—We regret to say that our interesting acquaintance the Giraffe died at the Sandpit Gate, Windsor Park, on Sunday last.

A New Orchestra.—It is stated in the American papers, that a Mr. Moelsel, (brother of

the mechanician of Vienna, who invented the celebrated automaton chess-player), has constructed, at Boston, a full band of forty-two musical performers, which, or who, execute many pieces of different music to perfection. The fiddlers are said to be particularly dexterous; and this is the first orchestra that ever existed without jealousies and quarrels.

Lithography.—A Brussels correspondent of the *Journal des Connaissances Usuelles* states, that in Brussels, where there were a few years ago only one or two lithographic establishments, there are now twenty-six in full activity.

Nat. Hist.: Animal Deception.—We extract the following from the notes of a recent traveller in the Libyan desert: "October 12th.—Being on watch this night, I caught for the first time the *scarabæus ateleuchus sacer*, or chafer, with which the imaginations of the ancient Egyptians so frequently busied themselves. My attention was attracted by a noise close to my side, and athwart the darkness I discovered a large rolling ball. Conceiving it to be a crab or land-tortoise, I took it into my hand—but found it to be nothing but a lump of horse-dung; and immediately afterwards I perceived a similar ball come rolling towards me. Upon holding my lantern down and minutely examining this strange machine, I found that it concealed a large black chafer, who drove it forwards by means of his long hind-legs; and as it proceeded, it gradually increased in size by the continual accumulation of sand: this, indeed, became so considerable at last, that the insect itself was scarcely perceptible. It is more than probable that the Egyptian priests took advantage of this deception to mystify their followers, and that their veneration for the chafer, or scarabæus, arose from that circumstance. Upon a further examination, with the aid of my lantern, I discovered several animated balls of a like description, more than three inches in diameter: my Arabian companions, however, did not appear to take the slightest notice of them."

Remarkable Apple-Tree.—At one of the recent sittings of the Royal Society of Emulation at Abbeville in France, an account was read by M. Tillette, a botanist, of an apple-tree forty years old, at St. Valery, which, owing to the imperfect organisation of its blossom, had never borne fruit until last year; when the idea of impregnating the bloom with the pollen of the blossoms of other trees, was entertained, and put in practice. All the blooms so treated produced fine fruit; whilst those which were not brought in contact with the blossoms from other trees remained, as formerly, entirely barren.

Jelly from Grapes.—Take the ripest grapes and spread them on clean straw; at the end of a fortnight pluck them from the stalks, and boil them for five or six minutes, in order to be able to extract the juice with ease: after passing the juice through a sieve, add a quarter of a pound of white sugar to each pound of juice, and boil for half an hour. Then set to cool; and in twenty-four hours there will be a fine jelly, the properties of which are excellent for invalids.—*Journal des Connaissances Usuelles.*

LITERARY NOVELTIES.

Australia.—The Scots Times, a well-conducted Glasgow journal, has, we observe, seriously repeated a piousness of ours in the Review of the Picture of Australia, where we considered Allan Cunningham the botanist in New South Wales, as Allan Cunningham the poet residing at Picnic. As we happen to be again mentioning this volume, it may be as well to add, that though far too hastily compiled, and therefore in many instances careless and ill-written, it yet gives a mass of useful and valuable information respecting the Newcort World.

Parallel Miracles, or the Jews and the Gipsies, is announced by Samuel Roberts: it is to prove the latter people to be the descendants of the ancient Egyptians, denounced by the prophets Isaiah, Jeremiah, and Ezekiel, &c. &c.

Mrs. S. C. Hall, the Editor of "the Juvenile Forget-Me-Not," &c. announces for early publication a volume for the young, under the title of *Chronicles of a School-Room, or Characters in Youth and Age.*

Bourrienne's Memoirs.—We cannot occupy more of our pages with foreign literature, however interesting; and with regard to Bourrienne's Memoirs, we would refer readers to an able article upon them in our contemporary, the *Foreign Review* for September, which has drawn a striking and original character of Buonaparte from this source.

The Memoirs of the Court of Louis XVIII., by a Lady who asserts she was in the confidence of His Majesty, is announced with the usual piques to curiosity.

Stories of a Bride, by the authoress of "the Mummy," are also announced for speedy publication.

In the Press.—*Tales in Verse*, illustrative of the several Petitions of the Lord's Prayer, by the Rev. W. F. Lyte.—*Flowers of the Desert*, by W. D. Walke;—also the *Child of Thought*, and other Poems, by the same author.—*Tales of Four Nations.*—The Life of Major-General Sir Thomas Munro, Bart. and K.C.B. late Governor of Madras, extracted chiefly from his public and Private Correspondence.—The Correspondence and Diary of Ralph Thoresby, by the author of "the History of Leeds."—*Tales of My Time*, by the authoress of "Blue-Stocking Hall."

LIST OF NEW BOOKS.

Wind variable, prevailing N.W.
Except the 8th and 9th, generally cloudy.
Rain fallen, .475 of an inch.

A Tabular View of the Amount of Rain in Inches and Decimal Parts of an Inch, fallen during the Months of June, July, August, and September, from the Year 1809 to the present Year, both inclusive.

Year.	June.	July.	August.	Sept.	Total.
1809	.95	5.95	4.125	2.505	13.53
1810	.725	3.4	2.6	.575	7.2
1811	3.8	3.4	1.9	1.3	9
1812	2.625	3.3	2.225	1.2	9.35
1813	2	2.45	.85	1.2	6.5
1814	2.475	1	2.085	1.475	6.975
1815	1.975	1.25	1.835	1.1	6.16
1816	2.475	4.275	1.902	1.85	10.102
1817	1.625	1.925	2.5	1.25	6.075
1818	.4	.65	.1	1.375	2.525
1819	2.67125	1.9375	.425	2.7	7.53375
1820	1.5625	2.475	1.125	2.625	7.5675
1821	1.425	2.2625	1.575	2.9625	7.5175
1822	1.3	2.4	1.75	.875	6.325
1823	1.725	3.325	1.925	.775	6.75
1824	4.35	1.975	1.275	3.675	11.275
1825	1.85	1.625	2.925	2.475	6.9125
1826	.6	2.45	1.575	2.225	7.75
1827	1	1.3525	1.5	3.225	7.9775
1828	1.85	4.25	3.05	2	11.15
1829	1.648	4.45	5	4.2	14.698

By inspecting the above table it will be seen that the quantity of rain which has fallen during the last past four months of the present year exceeds twice the average amount of the twenty preceding years by .08 of an inch—the mean fall of rain during the twenty years being seven inches and .909 of an inch.

Latitude..... 51° 37' 33" N.
Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

We are much obliged to Thomas G., but have not room for the French version of a portion of Thomson's Spring.

To confess a truth to J. D. about Quintus Curtius, we are somewhat sick of poetry upon classical subjects.

Second edition, post 8vo. 8s. 6d.
NARRATIVE of a JOURNEY from CALCUTTA to EUROPE, by way of EGYPT, in the Years 1827 and 1828.

By Mrs. CHARLES LUSHINGTON.
“We have hesitated in recommending Mrs. Lushington's Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of approbation.”—*Oriental Herald*.
John Murray, Albemarle Street.

Waverley Novels.—New Edition.

THE ANTIQUARY, Vol. I. forming

Volume V. of the new edition, price 5s. in cloth.

This volume, besides an Introduction and Notes, is embellished by a Frontispiece by C. Stanfield, engraved by J. Phelps, and a Vignette by A. Cooper, R.A. engraved by Ambrose Warren. Volumes I. II. III. and IV. of this edition, comprising Waverley and Guy Mannering, are again reprinted, and may be had of all Booksellers.

In 8vo. 12s.

AN ACCOUNT of some of the most Important DISEASES peculiar to WOMEN.

By ROBERT GOOCH, M.D.

Contents.—The Peritoneal Fevers of Lying-in Women—the Disorders of the Mind in Lying-in Women—the Diseases liable to be mistaken for Puerperal Fevers of the Uterus—The Irritable Uterus—A peculiar form of Hemorrhage from the Uterus—A Disorder of Children commonly mistaken for Congestion of the Brain—Is the Plague a contagious Disease?

“The extracts which we have made will satisfy the general reader, that the opinions to which we have alluded have been moulded in the mind of one who has seen well, thinks deeply, and explains his thoughts with that simplicity of language which always accompanies power. If the professional reader have attended at all to the progress of medicine, he will see that there is not one of the ten Errors in Dr. Gooch's work which does not prove an important practical point. No such work has appeared on the branch of medicine professed by our author since the time of that admirable physician, Dr. William Hunter.”—*Quarterly Review*, July 1829.

“Dr. Gooch has long been known to the public and the profession as a physician whose opinion, particularly in female complaints, was of great value; and his method of investigating disease has generally been supposed to bear a great resemblance to that pursued by the late Dr. Baillie. Possessing a mind so highly endowed, and so rare at the present day, it is not to be wondered at that his work should have been received with respect, and pursued with interest. This volume displays a rich collection of facts and observations in reference to the diseases of which it treats, deduced from opportunities which few have enjoyed, and still fewer known how to employ; and we strongly recommend those engaged in the responsible practice of obstetric medicine to make themselves well acquainted with its contents.”—*London Medical and Physical Journal*, July 1829.

“Dr. Gooch presents an interesting example of a man in feeble health retaining the full vigour of his mind, and analysing the material with which his extensive opportunities have provided him, and presenting to his brethren the results of his matured experience. It is refreshing to turn from the ordinary routine of medical writing to a work like that before us, in which the graphic delineations of disease at once convince the reader that they are copied from nature, and beneath the inferences deduced seem to be completely borne out by the facts.”—*London Medical Gazette*, May 30, 1829.

John Murray, Albemarle Street.

In 2 large vols. 8vo. with 70 Plates, price 2l. 8s. bound and lettered,

ST. PETERSBURGH; a Journal of Travels to and from that Capital through Flanders, along the Banks of the Rhine, through Prussia, Russia, Poland, Saxony, Silesia, Bavaria, and France.

By E. GRAY, Esq. F.R.S. F.L.S. M.R.S. &c.

“A book which contains a great deal of useful information.”—*Times*.

“It should find a place in every drawing-room in England.”—*Atlas*.

“He enjoyed opportunities of seeing more than any writer upon that city with whom we are acquainted.”—*Literary Gazette*.

“His picture of St. Petersburg contains the most copious and detailed description of the gigantic edifices of this extraordinary city, which has hitherto been laid before the public.”—*Quarterly Review*.

“It will be read by every person who has either travelled in the countries visited by the doctor, or who is desirous of becoming acquainted with them.”—*Globe*.

THE FOREIGN REVIEW,

No. VIII.

The First Four Volumes of this very interesting and popular Journal may be had complete, price 2l. 8s. extra.

London: Black, Young, and Young, 3, Tavistock Street, Covent Garden; Bousquet, Barthès, and Lowell, Great Marlborough Street; and Whittaker, Treacher, and Co. Ave Maria Lane.

“The Foreign Review has done more in the two years of its existence, than the Quarterly and Edinburgh in the four or five years of their memorable career. The present number contains nine principal articles, besides short notices on some thirty or forty of the most recent and remarkable publications of Italy, France, Spain, &c. The selection of articles is good, and the execution highly creditable.”—*Standard*.

In 3 vols. 8vo. with numerous Plates, from Drawings by Mrs. Ward, price 2l. 8s. bound,

M E X I C O.

By H. G. WARD, Esq.

The 2d edition, revised. Comprising an Account of the Mining Companies, and of the Political Events in that Republic, to the present time.

“We are glad to see this second and enlarged edition of the most systematic and complete work of which we are in possession respecting Mexico. Mr. Ward, as British chargé d'affaires for more than two years, enjoyed the best opportunities for acquiring the first intelligence; and he has evidently possessed the ability to make the best use of these advantages. Thus his work is of very great value; and at this time, when the political fate of Mexico is again in the balance, when an attempt is making to retrieve it for a Spanish dependency, and when union with North America and separate existence are equally spoken of, it is important to have reference to a work of such high authority which these volumes possess. Not only their matter, but their maps and illustrations, render them of sterling worth and utility.”—*Literary Gazette*.

Printed for Henry Colburn and Richard Bentley, 5, New Burlington Street.

Now ready, 2d edition, in 8vo.

CONSTANTINOPLE in 1828.

By CHARLES MACPARRAN, Esq.

With an Appendix, containing Remarks and Observations on the Autumn of 1829.

BOOKS IN THE PRESS.

New Annual for Youth.

Shortly to be published, neatly done up in a Case, price 5s.

ACKERMANN'S JUVENILE FORGET-ME-NOT; a Christmas, New-Year's, and Birthday Present for 1820, containing nearly Three Hundred Pages, Ten Engravings on Steel by eminent Artists, and an Inscription-page.

Originating with the same Publisher, chiefly under the same literary superintendence, and proceeding placed under the same pens as the "Forget-Me-Not," this work needs no stronger recommendation to parents, guardians, teachers, and the friends of youth of both sexes, who wish to put into their hands an elegant miscellany, expressly adapted to their age and capacity, and containing nothing but what is conducive to moral improvement, combined with pleasing instruction and innocent amusement.

Sets of Proofs of the Engravings, in a neat Portfolio, before the letters, price 20s.; with the letters, 14s.

Purchasers are requested to be particular in asking for and ordering "Ackermann's" Juvenile Forget-Me-Not.

On Wednesday, October 21st, will be published,

A LETTER from SYDNEY, the Principal Town of Australasia; together with the Outline of a proposed System of Colonization.

London: By J. Cross, 18, Holborn.

On the 1st of November, a new Juvenile Annual, elegantly bound in silk, entitled,

THE ZOOLOGICAL KEEPSAKE for 1820.

Natural History is a subject so much and so deservedly a favourite with Young Persons, that it is impossible not to anticipate a favourable reception for this work. It will be embraced by a light conversational manner of treating its Zoological topics, and by an abundance of Anecdotes and a Series of Conversations, and Descriptions of the Embellishments, upwards of Forty in number, will consist of spirited Engravings, from Drawings by Constable, Landseer, Blythe, &c. &c.

Printed for William Marsh and Alfred Miller, 137, Oxford Street; and Constable and Co. Edinburgh.

On the 2d of November, 1820, will be published, beautifully printed in small 8vo. embellished with 11 Lane Engravings from the old Masters, executed in the finest manner upon Steel, price 12s.

THE IRIS; a Literary and Religious Offering.

Edited by the Rev. THOMAS DALE, M.A. The Literary portion of the book contains articles from the pens of the Rev. T. Dale, M.A.; Bishop Heber; the Rev. E. Baines; the Hon. and Rev. Baptist Noel, M.A.; the Rev. T. S. Raffles; the Rev. F. A. Cox; James Montgomery; Thomas Roscoe; Thomas Pringle; A. A. Watts; S. C. Hall; Josiah Conder; Thomas Haynes Bayly; W. Jerdan; the Harrowian; Miss A. M. Porter; Mrs. Ople; Miss Jewsbury; Mary Howitt; Mrs. Cockle, &c. &c.

The Book will be delivered bound in silk, and a few Copies printed in large post 8vo. with proof Impressions of the Plates, price 11s. 6d.

A very limited number of proof Impressions of the Plates will be printed, calculated for the Collection of fine Engravings, and for Scriptural Illustration.

Proofs, on calendered 4to. 41 11 6

French paper, ditto 1 4 6

Sets of Proofs (8vo.) 9 0 0

London: Published by Sampson Low, Lamb's Conduit Street; and Hurst, Chance, and Co. St. Paul's Churchyard.

On the 28th of October will be published, price 8s. dedicated to Professor Wilson.

THE JUVENILE KEEPSAKE for 1820.

Embellished with numerous fine Engravings, under the superintendence of Charles Heath, Esq. and by the aid of the most favourite and distinguished Writers for Youth, are enlarged to Sixteen Sheets of Letter-press, forming one of the most beautiful works of its class. In the List of Contributions are the "Hair of Newton Bazzard," a humorous Tale in Verse, by the late celebrated Mrs. J. Hemans, (renewed by Lady Campbell); "The Children of the Island," by M. de Genlis; "A Tale of the Christmas Holidays," "The Ball Dress," by the Author of the "Flower Show," "The Battle of the Magpies," by Miss Mitford; also Tales by Mrs. Hemans, Mrs. Ople, Miss Fennell, Miss Boscawen, Miss R. Taylor, L. L. W. Howitt, J. Montgomery, Esq. of Sheffield, John Bunting, Esq. of the "Literary Gazette," &c. &c.

London: Hurst, Chance, and Co. St. Paul's Churchyard.

On the 1st of November will be published, revised and corrected throughout,

THE LAW AND COMMERCIAL DAILY REMEMBRANCER for 1820.

The Remembrancer continued in this work has been increased since last year by nearly four times the usual quantity, of that of the most useful and valuable description essentially necessary to be known by all persons, consisting of the principal clauses in the Sixty-three public general Acts of the last Session. Alphabetical Lists of the members of both Houses of Parliament, with their Town and Country Residences; useful Directions for each Month, on various Topics; in the whole 1000 closely printed pages. In the 7s. and 4s. 6d. editions a similar space for Daily Memoranda has been allowed for Sunday, as on the other days of the week, without any increase to the former year's charge.

London: Published by Edward Dutton, 5, St. Andrew Street; and may be obtained upon application to any Bookseller or Stationer in the United Kingdom.

On the 1st of November will be published, in small 8vo. elegantly half-bound, with gilt edges,

THE DIURNAL REMEMBRANCER; or, Private Diary for 1820.

This publication, though adapted for general use, is more particularly useful as a diary, to record the occurrences of private life; and to those who keep a memoir of daily events, will be found eminently instructive and useful, peculiarly so, from its convenient size, to tourists, voyagers, and travellers. To each day will be given a sentence, taken from the highest and purest source, calculated to guide and assist in the due government and direction of the mind and action. It is suggested that these observations daily recurring to the eye, must be attended with a highly beneficial influence, and tend to promote and extend the growth of the more exalted feelings of the human mind. A selection of the most useful tables, and information of general utility, will accompany this work.

London: Published by E. Dunn and Son, 9, Fleet Street. Price 6s. containing a page for each day's memoranda; 4s. half a page for each day.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

On Saturday, Oct. 24, will be published, price 3s.

INSECT ARCHITECTURE. Being Part VI. of the Library of Entertaining Knowledge.

The Second Part of "Insect Architecture," completing that Division of Entomology, will appear early in November.

London: Charles Knight, Pall Mall East.

LONDON: Published every Saturday, by W. A. SCRIPPS, of the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Moulton Street, Oxford Street; also by J. Chappell, 21, Royal Exchange; E. Marlborough, 40, Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Son, Robertson and Aikman, Glasgow; and J. Cumming, Dublin.

SATURDAY, OCTOBER 24, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Constantinople in 1828. By C. Mac Farlane, Esq. Second edition. 2 vols. 8vo. London, 1829. Saunders and Otley.

UPON the appearance of the quarto edition of this work, we expressed so very favourable an opinion of it, as might naturally lead to the expectation of this speedy and improved version. Unfettered by political bias, and content with giving a simple and faithful transcript of the impressions made upon him by the singular people among whom he sojourned, Mr. Mac Farlane has produced a work far more to our taste than the laboured and spun-out accounts with which we are too often invaded by would-be learned and profound travellers, who largely engraft as much as they can from libraries at home on the slight materials they have picked up abroad. But having already spoken of his performance generally, our business now is with the additions, which occupy nearly two hundred pages of these octavos; and with this we shall be as concise as possible. But before we treat of Turks and Russians, or allude to the great events which have occurred in the East, it may be curious to copy a short sentence from the *General Gazetteer* (published so long ago as 1823)*, and which, if it had been looked to, might have afforded our quidnuncs information much needed by them, and prepared our politicians for some of those results that seem to have burst so unexpectedly upon them. Speaking of Turkey in Europe, our worthy friend of the *Gazetteer* says—

“More than three-fourths of their subjects in that part of their empire are affected, and wait only the support of an efficient military force. This support is yet denied them by the conflicting politics of Europe.”

Is it not surprising that the common sense of a common *Gazetteer*, published six years ago, and confirmed by every volume of travels since, should never have infused itself into the minds of our political lights? but that, till the Balkan was passed, Adrianople occupied without resistance, peace dictated, and the Turkish empire prostrated, they should have gone on speculating and misleading us with every kind of absurdity about the certain defeat of the Russians, and the triumphs of the Porte—no longer Sublime! Mr. Mac Farlane among other things tells us, that even at the end of their invasion the Turks had no *Etat-Major*.

“The Turks have no staff-officers!—the mind of an army does not exist; and among the fatal consequences arising from that deficiency, the generals of corps on different positions are uninformed of the nature and extent of each other's plans and movements, and are constantly liable to have their own direct orders misunderstood, and their objects defeated by ignorance. When the enemy multiplied his points of attack, the misunderstandings, the want of concert, and the confusion that ensued, may be easily conceived, and must be fatal.”

It has been so; but the following are charac-

teristic traits, which we select as better adapted than purely warlike details, to the spirit of our *Gazette*.

“The defects and vices of the Russian commissariat were such as to excite surprise; but those of the Turks were still worse, in despite of the partial improvements induced by the Sultan; and though attempts have been made to conceal the fact, it is certain that not only the army, but Constantinople, Adrianople, and the towns of Thrace, have suffered from the cutting off the supplies of corn from the ports of the Black Sea.* The honesty that attends the generality of the Turks in their transactions with European merchants, or with one another, as humble and private individuals,—a valuable quality which certainly exists among them, and to which ample justice has been done by those who have known them,—does not accompany their operations with government; fraud and robbery then lose their dishonour in their eyes; they coalesce with the people in office, who are notoriously and universally corrupt; and I should doubt whether there be a government in Europe so cheated as the Turkish. The murmurs of the soldiery reached the ears of the Porte, and commissaries, or *fournisseurs*, were detected, who had charged for corn the troops had never received, or had dealt out grain adulterated beyond endurance. A peccant head or two were lopped off, but the disease was not cured, nor had the sultan sufficient corn to send it pure and wholesome to the army. The quiet, inoffensive behaviour of the undisciplined hordes on their marches last year excited my admiration; but when dispersed over an extent of country, and withdrawn from the observation of those few superiors who had the sultan's commands, and the welfare of the agricultural and pastoral classes, whether Osmanlis or Christians, at heart, and when they were pressed by want of provisions, and by privations of every kind, their virtue was not proof to the temptation of a peasant's cottage, or a shepherd's hut,—they recurred to the reprobated practices of former wars, and plundered and ill-treated the peaceful inhabitants, as if they had been in an enemy's country. It was on the acclivities of the Balkan and the fertile plains at its feet, and on a gentle, a Christian people, the Bulgarians, that this scourge chiefly descended;

* “A Sardinian brig, on board of which I and my friends H. and D. left Constantinople in the month of October, when scarcity was felt, and the bread much adulterated, had at least one half of its cargo in its hold; and the captain disclosed to us all his secret negotiation with the Turkish men in office, and the amount of his bribe to each. What follows will scarcely be credited, and yet I saw part of the transaction with my own eyes, and was intimately acquainted with the merchant who did it. The sultan permitted several neutral vessels to pass the Bosphorus with cargoes of merchandise for Russian ports on the Black Sea. A European merchant availed himself of this. The Russian troops on the Danube were known to be in want of almost every thing; he chartered a light sailing vessel, loaded it with wine, rum, coffee, sugar, &c., bribed the proper officers, and sent it from Constantinople up the Danube, to the Russians, who were besieging the Turkish fortresses! I could increase examples of this sort *ad infinitum*. When I speak of the universal cor-uptibility of the Turks in office, it is on good grounds.”

and when we recall the interesting picture of this peaceful, amiable, and industrious peasantry, as ably sketched by Dr. Walsh in his passage through their districts, we must feel for the manifold sufferings to which they have now been exposed for many months, with increased poignancy. The effect of this oppression on the pacific Bulgarians has been, to add hatred and impatience of the Turks and Turkish misrule in general, to the sympathy they must naturally have harboured for the Russians, as co-religionists: we see them every where joining the standard of the advancing eagle; and though they have for ages 'entirely laid aside the military character that once distinguished their ancestors,' circumstances may now revive and cherish their hardy and gallant spirit, and having arms put into their hands by those whom they will consider as their allies, they may act on the Turks scattered among them, or hang on the flanks or rear of a retreating Osmanli army, with terrible effect. Vast numbers of them, as shepherds who have fed their flocks from childhood on the Balkan mountain, are better acquainted with its recesses and passes than any other people; merely as sure and friendly guides, their services would be invaluable to the Russians; but their sense of long suffering and barbarous usage may inspire them to imitate the deeds of the Tyrolese Highlanders in the last war; and the advancing or retiring Turks may be cut to pieces in the gorges or buried in the chasms of the Hæmus, as were the French in those of the Alps. If we turn to other provinces of the empire, we see similar vicious causes producing the same pernicious effects; and that even in Asia, their own continent—the home of Islamism—the power of the Turks is shaking to its very foundation. The line of operations of General Paskevitch has brought him into contact with the Armenian rayahs of the Ottoman empire; and as he has advanced, those people, oppressed by a yoke too heavy to be borne, have every where evinced their sympathy for his successes; and now, emboldened by the rapidly succeeding reverses of their former tyrants, are joining his standard, and taking an active part in the warfare. The Armenians, who abound in the Pashalik of Erzerum and the upper Turkish provinces of Asia Minor, like those subjected to Persia, and in or near to the regions which once formed their own powerful kingdom, differ from the meek, submissive, cowardly Armenians, whom I have correctly described at Constantinople and at Smyrna. They are characterised as prudent and persevering; by no means devoid of fire and courage; and all the Armenians are physically (as far as bone and muscle go) a fine race, exceedingly robust, and capable of bearing immense fatigue. In the Armenian districts, which Russia has rescinded from Persia, troops have been raised equal to any that march under the banner of the northern eagle, and the materials now reverting to the conquerors will be similar in quality. The co-operation of the Armenians has led to, or has hastened, the

* 3 vols. Simpkin and Marshall.

capture of Van; and the value of that acquisition to the Russians is not more enhanced by the great strength and military importance of the place, than by the holy reverence attached to it by the Armenians. The city of Van may be styled one of the capitals of the Eutychean, or real Armenian church; it is the residence of a patriarch, and of a numerous and organized hierarchy. The expulsion of the infidel crescent from such a revered place cannot but be agreeable, and tend to raise the spirits of the Armenians—religious enthusiasm may prove an important ally to the Christian invaders, and that enthusiasm has now a rallying point and a place of strength. In the regions on the Asiatic side of the Black Sea, through which the Russians are advancing, they will also find a very considerable Greek population, the scattered remnants of the ancient colonies, and of the lingering last Greek kingdom of Trebizond; and of their dereliction from the Turks no doubt can be entertained. In tracing the weaknesses of the empire of Mahmood, I may go farther still, and even enumerate among them the disaffection of the Osmanli population itself. I have faithfully described the symptoms of oppression, and misery, and disgust, that fell under my observation; but these are nothing to what have been remarked by those who have taken a wider range in Asia Minor."

Who, indeed, can contemplate this important picture without feeling that a mighty change has been effected in the world, and the seeds sown of events as stupendous as have ever yet filled the page of history? It is not Russia, or Turkey, or Greece, or Persia, or India,—it is not even Europe, the modern abode of civilisation and power, nor Asia, the ancient cradle of the human race,—it is the moral, political, and religious condition of mankind that is more at stake at this crisis than even at the period when Napoleon bestrode the narrow world like a Colossus. With regard to Christianity and Mahometanism, the present is certainly the most extraordinary aspect since the first date of the Hegira, and ought to excite the attention of every people.

Of the Greeks in general, the author draws a far more favourable character than many preceding writers have done. He attributes their faults to various causes, not difficult to be removed: but perhaps the most valuable portion of his Appendix is the development of a plan for restoring Greece to civilisation, by means of disseminating European education over the country. This design he earnestly and enthusiastically recommends to the English public, and, in detail, proposes to form a society for the purpose. Indeed, we are assured that considerable progress has been made in organising this institution, to which we heartily wish success, and for the particulars of which we refer our readers to Mr. Mac Farlane's work.

The last paper gives a very pleasing account of our countryman's visit to Prinkipo, the largest of the Princes' Islands,—the great resort of the Fanariotes from Constantinople,—of which we shall give some particulars next week, but must for the present conclude, wishing all the Greeks as much happiness as they seem to enjoy in the Princes' Islands—only freed from the oppressions and cruelties of their ruthless conquerors. And while we do this, and have occasion to speak of the projected resuscitation of Greece through the civilising means of literature, our readers will not, we trust, be averse to an addendum intimately connected with literary pursuits,—the Ardebil Library, relating

to which we have the following interesting statement to make:—The war of invasion and conquest, by which Russia preceded her aggression upon Turkey is, in this respect, calculated to form an era in the annals of oriental literature. Its trophies are not merely captured standards and subjugated towns and provinces, but a conquest achieved in the field of science and learning,—the acquisition of the library of Eastern MSS. hitherto attached to the mosque of Sheik-Sefy at Ardebil. This collection has been removed to the Imperial Library at St. Petersburg, where it has been carefully examined, and arranged according to its contents. Mention of it occurs both in Morier's and Olearius's travels; but neither of these writers has described any one of the works it contains, excepting the Koran, which latter, together with a few unimportant Arabic and Turkish and all the Persian manuscripts, have been left behind by General von Sütchelen. The collection, therefore, in its present state at St. Petersburg, consists of 166 volumes, which form ninety-six distinct works, after deducting several duplicates. Amongst these ninety-six are eighteen historical MSS., one of which (and an inestimable gem it is) is Tabery's celebrated Chronicle, of which no other perfect copy in the original Arabic version is known to exist. There are also two duplicate translations of this work into the Persian by Abu Aly Muhammed-ben-Muhammed al-Belamy, the vizier of the Samanide Emir, Mansur I., who flourished in the latter half of the tenth century. The next historical work of note is the Firdaus-et-tewarich of Chosrau ben Adid Aberkuhy, commonly called "Ibn Muin;" it contains very copious chronological, historical, and literary tables, is an extremely interesting work, and executed with much industry and considerable erudition; besides which, as far as we are aware, the present is the only copy which has yet been discovered. Among the sixty-six poetical works are Daulethah's celebrated Teskeret-esh-shuera, or history of Persian Poetry, with a selection of specimens from the works of the poets, on whom it descants, and four highly interesting collections of Murakkaat, or models of writing, which afford examples of nearly every species of Arabic and Persian characters, such as were in use among the illustrious calligraphers of the ninth and tenth centuries of the Hegira. One of them is embellished with drawings, executed with a degree of skill infinitely superior to any eastern specimens hitherto known.* The greater part of the manuscripts are as much distinguished for beauty of penmanship as for external splendour, both as regards the borderings, vignettes, and drawings, and the paper and binding. The whole, with few exceptions, are pious bequests from the great Shah Abbas, dated in the year 1608; of which the following is the text, from the first leaf of one of them: "Abbas the Sefide, the dog who keeps watch at the threshold of the tomb of Aly, the son of Abu-Talib (on whose head be peace for ever!) has bequeathed this book to the glorious tomb of Shah-Sefy; and every one that likes may read its pages, upon condition that he do not take it away from the tomb. But if any shall remove it, on him be the blood of Hussein, the Imam, over whom dwells the peace of God!"

The Literary Souvenir for 1830. Edited by Alaric A. Watts. pp. 363. Longman and Co. WE do think Mr. Watts has well merited

* A Catalogue Raisonné of this important collection is preparing for publication.

that this year's *Souvenir* should retain the full popularity of its predecessors. Take it all in all, one year with another, the merit of many of its poems and tales, the beauty of the plates, &c., this work has pretty generally been in every respect, if not the very foremost, at least not behind the very foremost of its class. It has on the present occasion opposed the principle of trusting too exclusively to the influence of great names, and looking for fame to a list of contributors whose characters tell prodigiously in an advertisement, though sometimes their performances have not been equal to the expectation raised. Some blanks there certainly are; and we do think, not even that variety so desirable in a work of this class (consisting of seventy-five pieces in prose and verse) is sufficient recommendation for such comparative failures as "Miss Myrtle;" "the Last Man in Town;" a poor imitation of a rather clever sketch called "the Younger Brother," in some periodical,—and two or three other productions of the same genus. It is true that things of this sort may amuse some readers; but our prejudice is so strong against the coxcombries committed in attempts to sketch what is called fashionable life and manners in a gay and flippant tone, that we had hoped the best of the *Annals* would have steered clear of the contagious nothingness of simpers and flirtations, worthless even to the silly persons who practise them, and altogether offensive to common sense and public taste. It is well enough to laugh once or twice at these impertinencies; but when persisted in, they become perfectly nauseous. In the *Souvenir*, however, they are but specks. Of the rest we may observe, that Mr. Hoyle has wasted much poetical talent and feeling in taking that most uncongenial form in our English language—the sonnet. But we are not going into minute and severe criticism—we have enough to praise. Some of the prose tales are peculiarly good: "the Love-Draught," by the author of *Highways and Byways*—"the Last of the Storm," by the authors of *Tales of the O'Hara Family*—"the Forest of Sant' Eufemia," by the author of *Constantinople in 1838*—"a Village Romance," by Miss Mitford—"an Incident at Sea," by the author of the *Kuzzil-bash*, deserve very high praise indeed: but at least an equal favourite, and better adapted to our limits, "the Smugglers' Isle," by the author of *Tales and Confessions*, is what we select.

"The sea-port town of Mowbray, every body knows, rose, flourished, and fell with the last war. A faithful chronicle of its fortunes would, no doubt, be interesting to the curious reader; but the unthinking many would, I fear, prefer the stories of Tyre and Carthage. There is one incident, however, in the annals of its zenith which I cannot help imagining deserves a place in history; and it is therefore herein-under set forth with the brevity and simplicity which should characterise the historic style. No sooner had Mowbray begun to emerge from the insignificance of a fishing village, and to assume a place among the number of maritime towns, than it split, according to what seems to be a law 'made and provided' in such cases, into a variety of petty factions. Every man's hand was against his neighbour, and every woman's tongue against her. The jarring atoms of society at length separated, as they usually do, into two vast masses; and the moral and political government of the town was vested in the two chiefs, whose purse or principles possessed this chemical power of attraction. The Montague and Capulet of Mow-

bray were two elderly men, whose waxing fortunes increased inversely with their waning vigour. They could remember when their native place was little better than a rendezvous for fishing craft; and when the condescension of a Mediterranean bark in accepting the protection of its bay from a gale of wind was matter of triumph for a month. The fortunes of the place were now mightily changed. The fishing village had become a busy, bustling port, with rich argosies, not only from the continental towns, but from the West Indies, lying secure within her two quays, which clasped them like a pair of greedy arms. To the free trade, however, as it is called in contradistinction to the fair trade, Mowbray was beholden for a considerable portion of its wealth and importance—the coast being singularly well adapted for the *running* business, while as yet no port-blockade had been established. To the lawless habits introduced, and rendered familiar in such cases, it was owing that a certain wildness was exhibited in the character of the people; and that even in their most common transactions there was manifested a portion of the reckless and adventurous spirit which, on a great scale, furnishes materials for history, and on a small scale suggests hints for romance. The Montague of this place was a Mr. Mortimer, and its Capulet Mr. Grove; the resemblance between the real and fictitious personages being further kept up by the circumstance of Mr. Mortimer having a son, and Mr. Grove a daughter. A bitter hostility had existed between the two families from time immemorial, which—in the chronology of a mushroom-town like Mowbray—means somewhere about twenty years, and had continued unabated up to the moment when the son and daughter of the rival houses had attained that period of life when boys and girls begin to think of love, and their fathers and mothers of matrimony. When old Mortimer cast his eyes around among his neighbours in search of a fitting match for his son, his view was always intercepted by a great glaring white house, towering aloft among its brethren of the town with an air of wealth and an assertion of supremacy which made him sigh, as he reflected that it was the abode of Mr. Grove. When old Grove, for a similar purpose, threw a keen and discriminating glance among the smoky mass of bricks and mortar around him, his wandering looks returned unconsciously to fix themselves upon a huge red house, looking grim and lowering upon its neighbours, and by its very absence of neatness exhibiting the careless superiority of acknowledged opulence. The old man groaned at the sight—for it was the dwelling of Mr. Mortimer. When Frank Mortimer, posting himself near the church-door after the service, as was the custom of the young men of Mowbray, surveyed with a critical eye the blooming lasses of the town as they tripped demurely over the stones, a quick bounding of his heart and a flushing of his cheek proclaimed, almost before her appearance, the approach of Miss Grove; and Frank sighed as he reflected that so beautiful a creature was the daughter of his father's enemy. When Ellen Grove, on such occasions, turned the angle of the church-door, her proud step and swan-like motion were broken, and her tottering walk, rising colour, and conscious look, proclaimed that she was about to pass under the eyes of the boldest and handsomest youth in the county side,—and Ellen sighed at the thought that he was the son of the hated Mortimer. The consequence of all this sighing

may be conceived. The two fathers, far from being inconsistent in their conduct, only yielded, as usual, to the attraction of interest. Under this powerful spell their enmity was forgotten;—they shook hands, exchanged visits, and finally signed and sealed an agreement, by which Grove engaged on that day two years to give his daughter in marriage to Mortimer's son, with a portion of five thousand pounds; and Mortimer consented to add another thousand to the stock of the love-firm, in token of his good-will and further intentions. As for the young people, unlike the heroes and heroines of romance, they entered at once, with the most filial devotion, into the plans of their parents; and this with so much zeal and spirit, that, on the very day of the introduction, Mr. Grove, on entering hastily the room to break the ice of a first *tête-à-tête*, was at once surprised and rejoiced to find Frank Mortimer at his daughter's feet. Two years, all but one month, elapsed. Twenty-three of those true honeymoons which light up the paradise of love, rolled away. Frank Mortimer passed his nights in dreaming of bliss, and his days in enjoying it. The marriage-day was fixed; the promised-land of his heart was distinctly visible in the distance, its heights glittering in the morning sun, and its bowers and breathing groves sparkling with eternal green. One morning, at this epoch, a report arose in the town, no one knew whence or how. It was whispered by one to another, with pale lips and faltering speech; it made the round of the counting-houses like some watchword of terror and dismay, awakening an echo of alarm wherever it fell. A pause then succeeded—still heavy—terrible; and in the evening of the same day this was followed by the expected crash—'all that the heart believed not—yet foretold!'

With heaviest sound a giant statue fell—the firm of Mortimer and Co. stopped payment! The ruin of the house, occasioned by the misconduct of their agents abroad, was sudden and complete; old Mortimer, who was in declining health at the time, died almost immediately of the shock; and Frank became, in the same moment, an orphan and a beggar. When his stunned and bewildered mind had somewhat recovered from the blow, he hastened to the counting-house to open the letters of the firm, among which he found the following, addressed to himself:—

"Dear Sir—Beg to condole with you on the melancholy occasion,—but death is a debt that must be paid by us all. Refer you to enclosed copy of agreement between the late Mr. Francis Mortimer, sen. and self, by which you will observe, that your marriage with my daughter depends upon the clause being fulfilled, which provides for one thousand pounds being paid into the joint stock by you or the said Mr. F. M., senior. Have no objection to sign your certificate; but, as there appears to be some doubt of the said one thousand pounds being forthcoming on the twenty-third, previous the marriage-day, as per agreement, would rather decline till then, and till such time after as I may take to come to terms with a suitable partner for my daughter, the favour of your further visits. I am, dear sir, &c.

'JOHN GROVE.'

Young Mortimer's "last hopes of a residue being left after payment of the debts, were finally overturned; the agreement, which he had been accustomed to think of as if it had been the marriage contract, was about to expire; and worse than all, a new suitor—unexceptionable

in age, person, fortune, and character—made his appearance, ready to pounce upon the prize as soon as the strict mercantile honour of old Grove should permit him to give the signal. The very constancy of Ellen, who relinquished both her walking and sailing excursions after the overtures of the rival, deprived him of every opportunity of catching a single beam of hope from her beautiful eyes; concealing from his view those worshipped stars of love, the only lights which of late had been visible above the misty horizon of his fate. One day, however, feeling probably the impolicy of her seclusion, the young lady consented to accompany her future lover on a short sail in the bay; and escorted by him, she repaired to the pier at an early hour in the morning, and glanced around with a flushing cheek and restless eye. No answering look met hers. A sailor, in her father's employment, was the only boatman, Mr. Wingate (the aspirant) being himself skillful in such matters; and the only spectator was an old foreign-looking seaman, one of those fellows who, with short bowed legs, drooping shoulders, contracted eye-lids, and hands dug in their pockets, may be seen at all hours of the day and night, *hulking* about the quays of a shipping town. This man eyed their preparations with that contemptuous curiosity which is often vouchsafed by such personages to the small affair of getting a pleasure-boat under way; but sometimes with a greater appearance of interest, he turned his face to the weather quarter, which presented, as might have been conjectured from his manner, indications not strikingly auspicious."

Some wants take Wingate and the boatman out of the way—when the disguised foreigner turns out to be Mortimer, who leaps into the little vessel and pushes off to sea with his beloved Ellen. We must pass over the well-drawn scene which ensues, and only notice, that a storm arises and forces the fond pair to seek for shelter on the fearful Smugglers' Isle.

"That night the Smugglers' Isle presented a scene resembling a country inn, in which travellers of every opposite character and pursuit are shuffled into temporary contact or collision. The crew of a smuggling sloop, which had sought refuge among the rocks, were thrown into consternation by a luminous appearance in the ruined lighthouse, from which the lamp had been banished for many years; and the captain and his four satellites crept silently and cautiously to the spot. Climbing to the broken window, the leader could not restrain an exclamation of surprise as he beheld a young lady, of extraordinary beauty, standing beside the fire-place, which blazed with wood apparently just torn from the walls. The female darted into an inner chamber at the noise of his approach, and as the outlaw jumped upon the floor, his men made their appearance by the more legitimate avenue of the door; and the party stood confronting, for an instant, a young man in a sailor's dress, who seemed ostensibly the sole inhabitant of the mysterious domain. The next moment the stranger was in the clutches of the ruffians, and Captain Brock making his way eagerly to the inner apartment; when, by a sudden effort, the prisoner burst from his jailors, and darting upon their captain seized him by the collar, and said in a low, stern whisper,—'Brock, are you mad?—you are about to ruin both your own fortune and mine; look at me—I am Frank Mortimer.' The smuggler stared at the announcement, but was speedily able to identify the stranger with the only remaining representative of the once great firm of Mortimer and Co. He motioned

his men to withdraw; and leading Frank to the fire by the button, with the familiarity produced by an anticipated fellowship in crime, inquired, 'But what do you want with me, Master Frank,—and what do you mean to do with the girl?' 'Can you ask,' answered Mortimer, 'what is the intention of a ruined and desperate man in seeking the friendship of a bold smuggler? As for the girl, that was a chance affair; but one that will enable me to begin my new career in brilliant style. She is the daughter of old Grove. On a sailing excursion this morning, with Mr. Wingate, her intended husband, we were driven by the storm to take shelter here: the boat struck upon the rocks, and went down,—every soul perishing but Miss Grove and myself. My proposal is this. Let us carry her off to Holland, where I know you are bound, and then go share and share in the ransom.' The smuggler's eyes sparkled at the bright suggestion, and his satisfaction evinced itself in a volley of oaths. 'Hush!' whispered Mortimer; 'we are now upon honour with each other. The affair, you understand, is to be managed by you alone—I have nothing to do with it. As soon as day breaks, I will throw the things I have saved from the wreck into that old trunk, and carry it on board of you. I expect to find you by that time at the mouth of the creek, and ready for sea. Having thus made a prisoner of me,—prisoner you understand,—I cannot prevent you, if you have a mind, from coming over to the lighthouse and carrying off the lady too.' 'It will do!—I see it!—I take it!' ejaculated the smuggler, as Mortimer pushed him towards the door. 'Good night.' 'Good night,' said the latter;—'Captain! honour?' 'Oh, honour! honour!' The next morning the wind had fallen considerably when the faint light of the dawn first streamed upon the black bosom of the sea. The waves, although still rising in wreaths of foam upon the rocks of the Smugglers' Isle, rolled elsewhere along in almost unbroken masses, seeming to owe their remaining agitation more to unquiet recollections of the preceding day, than to the actual agency of the morning breeze. The ocean was no longer a desert; for some far and filmy masts might already be descried in the offing; and along the crowded coast, among the still lingering shadows of night, the symptoms were discernible of renewed activity. The smuggling sloop was already at the mouth of the creek, moored to both sides by strong tackle; the decks were cleared, and every thing in proper order for getting under way at a moment's notice. The crew were anxiously looking out for Mortimer's appearance; and as the increasing light disclosed every minute more and more of the distant coast, a darker shade was observed to lower upon the brow of Captain Brock. The expected passenger was at length seen toiling along the ridges of the rocks, with a trunk upon his shoulders, the size and apparent weight of which very easily accounted for his delay. On his arrival, the captain and he shook hands in silence, and a significant glance from Mortimer directed the eyes and thoughts of his new friend to the lighthouse. 'Shall we stow your chest away in the hold?' asked the captain. 'There is no need,' said Mortimer, 'we shall have plenty of time by and by; and the object now'—pointing to the far coast, where the craft by this time were seen stirring like bees—'is to get clear out to sea without the loss of a moment.' 'Captain Brock and two of his satellites hereupon sprang upon the rocks, and armed with nothing more than a piece of canvass, contrived to serve the purpose of a palanquin in case of

need, took their way to the ruined lighthouse. While they were still in sight, Mortimer stood gazing upon the party with an uneasy look; but when they had disappeared among the rocks, he turned with a sudden and decided motion to the remaining man. His air expressed perhaps more of hostility than he intended to exhibit; for, as an idea of treachery seemed to enter the smuggler's mind, a shout of warning or for help, which perhaps no personal danger could have extorted, run over the deep. The next moment a heavy plunge in the water told what were his thanks for his gratuitous communication, and on the ridge of a broken wave he was conveyed to the land, and discharged most emphatically upon a ledge of the cliff. The shout, however, had sufficed to alarm the smuggling captain and his two men, and they were now seen rushing furiously back to the vessel. The catastrophe had been brought on prematurely, and Mortimer perceived no means at hand of severing the cables more efficacious or expeditious than the clasp-knife he had in his pocket. To work, therefore, he went with this frail instrument, and cut, and sewed, and hacked for very life. Every moment the holloa of the smugglers came louder upon his ear; and the indistinct glance he was enabled to take of his enemies, without raising his eyes from the rope, told him that they had already surmounted the highest ridge of the cliff. This singular property of vision which the eyes possess, of seeing without looking, appeared at the time to be more a quality of the mind exercising its mysterious functions without the agency of the bodily organs: he felt their approach without seeing it; their feet trode upon his heart, when as yet the sound of their steps was unheard. To have been able to fling upon the work in which he was engaged his utmost strength—to tear with hands and teeth—to struggle till his sinews cracked and his heart was ready to burst—would have been comparative enjoyment. But the weak blade required the nicest and gentlest management, and while his whole frame trembled with terror and impatience, his hand was obliged to move like that of a lady, when armed with a pair of scissors for the destruction of silk or gauze. The shout of the smugglers became louder as they approached, and their steps now grated harshly upon the rocks. A cold sweat broke over Mortimer's forehead, as all the horrors of Ellen's situation rushed upon his mind. Well he knew the desperado into whose power she must shortly fall; well he knew, that even the suggestions of avarice would have been unattended to, had not a plan been formed at the moment in his lawless mind, for the gratification of a fiercer passion. He could hear the boards of her prison cracking with her struggles for freedom—he could even hear the convulsive catching of her breath; and amply did he appreciate the loftiness of spirit which repressed every cry of womanish terror; which refrained from interrupting by the very sound of her voice, the labours of him who she knew was labouring for her deliverance. The smugglers were now at hand—they gained the edge of the cliff—they threw themselves into their boat, and with cries of mingled rage, blasphemy, and exultation, pushed furiously towards the vessel. At this moment, by a heavy roll of the sea, a sudden strain was given to the nearly severed rope, which broke with a loud report, and the sloop drifted a few yards, and swung by the remaining cable. Mortimer's eyes were lighted up with a momentary gleam of hope; but when he saw that the weight and pitching of the vessel had no effect upon the single rope by which she

was now held, and when he knew that a few strokes of their oars were sufficient to bring the smugglers alongside, it gave way to absolute despair. The lurch, however, had had the effect of splitting the cheat in which Ellen was confined, against a bulk. The next instant she stood before Mortimer; and as the boat of the assailants rattled against the ship's side, and a wild hurra burst from the crew, she snatched the knife from his hand and replaced it with a handspike. Mortimer was now in his element. Brock first appeared upon the gunwale, and was received with a tremendous blow, which laid him sprawling in the bottom of the boat. His comrades met successively with the same salutation; and as Ellen worked at the rope with more skill and ingenuity than her lover, it might have seemed that the fate of the action was at least doubtful. The smugglers, however, used to hard knocks, were no sooner down than up again; Mortimer's arm grew weaker at every blow; and at length, quite spent with fatigue, he lost his balance, and nearly fell overboard. A hoarse roar of exultation rose from the boat's crew as they extended their hands to drag him into the boat; and although their triumph was deferred by a lofty wave rising between, when it subsided the two vessels came together with a crash, which threatened to prove fatal to the weaker. A shrill scream from Ellen startled the combatants on both sides. It was a scream of joy; for, at that moment, the rope burst with a noise like the report of a musket, and the sloop drifted to leeward. The smugglers' boat had received so much injury in the collision, that instead of being able to pursue, they had much difficulty in gaining the rocks before she filled and went down. It is a matter of dispute among historians, whether old Grove would, in any case, have refused to sanction the union of the lovers, after the foregoing adventure. His magnanimity, however, was not put to the trial; for Mortimer obtained an advance on the same evening (the 23d) of one thousand pounds, on his share of the revenue prize. The bond was thus implemented in all its parts; and Mortimer and Ellen entered forthwith into partnership as husband and wife, and became one of the first houses in Mowbray in the great business of matrimony."

Our extract has been so long, that we must perforce omit several poems we had marked for quotation; but if we cannot find, we must make, room for one or two exquisite verses from the "Anniversary," by the editor himself.

"And, half infected by our gloom,
Yon little mourner sits and sighs;
His playthings, scattered round the room,
No more attract his listless eyes:
Mute his infant task he plies,
Or moves with soft and stealthy tread;
And, called, in tones subdued replies,
As if he feared to wake the dead!

Where is the blithe companion gone,
Whose sports he loved to guide and share?
Where is the merry eye that won
All hearts to fondness?—Where, oh! where?
The empty crib, the vacant chair,
The favourite toy, alone remain,
To whisper to our hearts' despair
Of hopes we cannot feel again!

Ay, joyless is our 'ingle nook,'
Its genial warmth we own no more!
Our fireside wears an altered look—
A gloom it never knew before!
The converse sweet—the cherished lore—
That once could cheer our stormiest day,—
Those revels of the soul are o'er!
Those ample pleasures past away!"

It were absolute injustice not to mention "Memory," a graceful poem by Mr. Fraed, and "Chivalry at a Discount," a playful and pleasing composition; the "Dying Mother,"

by Miss Bowles, as simple as it is touching; and "My Birthday," a little poetical gem by Mr. Willis,* a young American poet, we believe; and, though last, not least in our esteem, Mrs. Hemans has several very sweet productions. Altogether, the *Souvenir* well merits its public reputation.

Family Library, Vol. VII.; being Vol. I. of the *Natural History of Insects* (in two volumes). London, 1829. Murray.

THE editors of the *Family Library* after having, apparently, like most other people, except ourselves, relaxed their industry somewhat during the months of touring and sporting, seem now to have taken the field for the winter campaign in excellent style. The first volume of their *Natural History* has just been laid on our table, and we have no doubt will be considered as well worthy of a place in the series which has already been distinguished with such extraordinary success. This department has, we understand, been undertaken by an association of various scientific gentlemen,—one of the very highest eminence being at their head; and their labours promise to place a very popular system of this most interesting science in the hands of the public, at the small expense at which this class of periodicals is, from its extensive circulation, published; for without such new process it would cost some 50*l.* to procure a work, or rather collection of works, containing the same information, and meriting confidence. It is easy to trace, in their brief and clear Introduction, a thorough knowledge of the science, strictly so called, of entomology; but in the arrangement as well as general execution of the treatise, the points chiefly attended to have been the suppression of dry details, the grouping and describing things so as to seize the memory through the fancy;—in short, the enveloping of the *utile* in the *dulce*.

We can have no doubt that this able and lively compend of what is most entertaining, as well as instructive, in the able works of Reaumur, Huber, Latreille, Kirby, and the other great lights of entomology, will be welcomed by parents, guardians, and schoolmasters, as one of the most valuable helps that

* This has some resemblance to Hood's "I remember, I remember," but is still so different, that we will add it in justice to our trans-Atlantic compeer.

"I'm twenty-two—I'm twenty-two,—they gaily give me joy.

As if I should be glad to hear that I was less a boy;
They do not know how carelessly their words have given pain

To one whose heart would leap to be a happy boy again!
A change has o'er my spirit passed, my mirthful hours are few.

The light is all departed now my early feelings knew;
I used to love the morning gray, the twilight's quiet deep,
But now, like shadows on the sea, upon my thoughts they creep.

And love was a holy star when this brief year was young,
And my whole worship of the sky on one sweet ray was hung;
But thought things have come between and shut it from
And though that star shines purely yet, I mourn its hidden light!

And fame—I bent it to my knee, and bowed it to my brow.

And it is like a coal upon my living spirit now;
But when I prayed for fire from heaven to touch the soul,
I bowed.

I little thought the lightning-flash would come in such a
Ye give me joy! Is it because another year has fled?
That I am farther from my youth, and nearer to the dead?
Is it that manhood's cares are come—my happy boyhood o'er?

Because the visions I have loved will visit me no more!
Oh wherefore give me joy, when I can smile no welcome back?

I've found no flower, and seen no light, on manhood's track:
My love is deep—ambition deep—and heart and mind will
on,

But love is fainting by the way, and fame consumes me

could be offered to the business of education; and we are quite sure the young people will devour such pages as these with avidity. Indeed, the more we consider the rapidity with which such excellent manuals are issued from the press, and the extensive sale which they command, we are puzzled;—and calculate their probable influence in raising, before another generation passes away, the general character of the nation.

We shall merely open the volume and quote whatever turns up. Take the following from the Chapter on Ants.

"Connected with the subject of the warfare of ants, is the history of a species of this insect, not existing in these islands, called by Huber the amazon, or legionary ant, the *formica rufescens* of Latreille. It is both warlike and powerful, and, unlike the rest of the tribe, its habits are far from being industrious. Enough has been said to shew that the proceedings of some insects so nearly resemble human actions, as to excite our greatest wonder: but the habits of the *legionary ant* are still more surprising than the proceedings of the chiefs which we have just described;—it is actually found to be a slave-dealer, attacking the nests of other species, stealing their young, rearing them, and thus, by shifting all the domestic duties of their republic on strangers, escaping from labour themselves. This curious fact, first discovered by Huber, has been confirmed by Latreille, and is admitted by all naturalists. The slave is distinguished from its master by being of a dark ash-colour, so as to be entitled to the name of *negro*,—an epithet now appropriated to the *Formica fusca*, or ash-coloured ants. Their masters are light in colour. The *negro* is an industrious, peaceable, stingless insect; the *legionary*, a courageous, armed, and lazy one. The relation between them is not, however, that which subsists between a task-master and his bondsman, but a strong attachment is mutually felt—another instance of the modification of instinct, education obliterating in the ash-coloured ant all its natural antipathy to another species.

"In their attacks the legionaries never take the old negroes prisoners, knowing, perhaps, that at an adult age the love of home, with all its associations, would be sad obstacles to transplantation; nor is their contest attended with loss of blood—they seek the young; and these being obtained, they speedily decamp with their booty. . . . On the negroes reared among them they depend not only for house and home, but even for food; and these faithful and affectionate servants begrudge neither labour nor pains in providing for their masters.

Huber enclosed thirty amazons with several pupæ and larvæ of their own species, and twenty negro pupæ, in a glass box, the bottom of which was covered with a thick layer of earth; honey was given to them, so that, although cut off from their auxiliaries, the amazons had both shelter and food: at first they appeared to pay some little attention to the young; this soon ceased, and they neither traced out a dwelling nor took any food; in two days one-half died of hunger, and the other remained weak and languid; commiserating their condition, he gave them one of their black companions: this little creature, unassisted, formed a chamber in the earth, gathered together the larvæ, put every thing into complete order, and preserved the lives of those which were about to perish."

But the instincts and acts of these wonderful creatures, and also of bees, have been so largely quoted in the preceding Numbers of our jour-

nal, when reviewing Huber's works, and also the still more interesting volumes of Kirby and Spence, that we shall vary the subject by extracting a few loose passages relative to other insects. After describing the gnat, the author says:—

"Another of our tormentors is the bug, which, as it would appear, has not been long known in this island. Had the insect been common, as Kirby justly observes, the two noble ladies mentioned by Mouffet would scarcely have mistaken their bites for plague spots. They were first known by the name of wall-louse. It was not until the middle of the last century that they began to be styled bugs, or goblins; the word being of Celtic origin, and used in old versions of the Bible in the sense of spirit: thus, in Matthew's Bible, Ps. xci. 5, the passage translated in our modern version, 'Thou shalt not be afraid for the terror by night,' is rendered, 'Thou shalt not need to be afraid of any bugs by night.' Horrible as these disgusting creatures are, it would appear that at Surat there was, or perhaps there still is, a Banian hospital, containing not only horses, pigs, mules, oxen, sheep, goats, monkeys, pigeons, and poultry, but also an extraordinary ward appropriated to rats, mice, and bugs; and Forbes, upon the authority of whose Oriental Memoirs this is stated, adds, that beggars are hired, who, for a stipulated sum, agree to pass a night at this institution, in order to afford 'the fleas, lice, and bugs,' an unmolested feast! A species of bug, described by Geoffroy under the name of fly-bug (*reduvius personatus*), is an inhabitant of our dwellings. It prowls about in disguise, at night; and, among other insects, shews itself the uncompromising enemy of the loathsome bed-bug. Kirby thinks it ought on this account to be encouraged; but its own bite, as painful as the sting of the bee, and its supposed power of communicating an electric shock on the slightest contact, would render the remedy somewhat worse than the evil. In its three states of grub, nymph, and winged insect, it is ever on the look-out for food. Being slow of motion, though capable, like a crab, of walking backwards, sideways, or forwards, it is obliged to entrap its prey by masking itself: hence its cognomen, 'personatus.' Knowing that the insects for which it is on the hunt are accustomed to the sight of dirt, cobwebs, flue, and such other materials as are usually found in the habitations of man, the *reduvius* piles upon itself bits of hair, flour, down of feathers, sawdust, or plaster, so as to enlarge its own dimensions to twice or thrice the natural size; and thus accoutred, it is scarcely to be recognised by its prey, or by its own enemies, as any thing but a ball of flue. When it sees a bug, or spider, or any soft-bodied insect, it approaches its destined victim with the most guarded caution. Sometimes the little lump of gathered dust seems to be blown about the room in a zig-zag direction: sometimes it is puffed into the air, and falls as if a chance gust had acted on it. These motions, however, are any thing but unintentional. After stealthily sideling, or making little leaps, followed by intervals of motionless repose, the better to deceive its prey, the creature at last contrives to secure, paralyse, and suck its victim's juices, to the very last drop. When it has acquired the wings of its perfect state, it doffs its cassock, and boldly flies about without disguise.

"Among the insect tribes, few seem to be more generally regarded with horror and disgust than the whole family of spiders, and such wingless insects as resemble them. Notwithstanding this, there are savages who eat them:

Sparman says, that the Bashie men consider them as dainties; and Labillardiere asserts, that the inhabitants of New Caledonia seek for and devour large quantities of a spider nearly an inch long, which they roast over a fire. Reaumur relates, on the authority of M. de la Hire, that a young French lady could never resist the temptation of eating a spider, whenever she met with one in her walks. They are said to taste like nuts, at least this was the opinion of the celebrated Maria Schurman, who not only ate them, but justified her taste by saying that she was born under Scorpio. Latreille informs us, that the astronomer Lalande was equally fond of this offensive morsel. Man is truly an omnivorous animal; for there is nothing which is disgusting to one nation, that is not the choice food of another. Flesh, fish, fowl, insects, even the gigantic centipedes of Brazil, many of them a foot and a half long and half an inch broad, were seen by Humboldt to be dragged out of their holes, and crunched alive by the children. Serpents of all sorts have been consumed as food; and the host of the celebrated inn at Terracina frequently accosts his guests, by politely requesting to know whether they prefer the 'eel of the hedge or the eel of the ditch.' To evince their attachment to their favourite pursuit, most naturalists seem to consider it indispensable to taste and recommend some insect or other. Darwin assures us, that the caterpillar of the hawk-moth is delicious; Kirby and Spence think the ant good eating, and push their entomological zeal so far as to distinguish between the flavour of the abdomen and the thorax; and Reaumur recommends the caterpillar of the *Plusia gamma* as a delicate dish.

"The spider has many enemies; and hence its web is always in danger of being deranged and damaged: to meet this inconvenience, nature has furnished the insect with a magazine of materials for occasional repairs, and which, although frequently exhausted, still continues to be replenished: this reservoir, however, is drained in time. When spiders grow old, their supply of gum is dried up; but even when this calamity happens, the cunning creature is not altogether destitute of resources which avail it for some time longer. A crafty old spider, having no longer the means of securing a subsistence, seeks out a young one, to which it communicates its wants and necessities; on which the other, either out of respect for old age, or from a dread of old pinners, resigns its place, and spins a new web in another situation. But if the old spider can find none of its species which will, either from love or fear, resign its net, it must then perish for want of subsistence.

"The water-spider spins no web to catch its prey; but, nevertheless, offers one of the most singular objects of contemplation. If we possessed no other evidence that the world had been planned and created by an Intelligent Being, the habits, proceedings, and instincts of this little creature would be alone sufficient to prove the fact. As soon as it has caught its prey on the shore, it dives to the bottom of the waters, and there devours its booty. It is, therefore, an amphibious animal; although it appears more fitted to live in contact with the atmosphere than with the water. The diving-bell is a modern invention; and few facts excite our wonder more than the possibility of a man's being enabled to live and move at the bottom of the ocean. This triumph of reason over the unfriendly element, however, was anticipated by an insect—the spider in question. This creature spins some loose threads, which it at-

taches to the leaves of aquatic plants; it then varnishes them with a glutinous secretion, which resembles liquid glass, and is so elastic as to admit of considerable distension and contraction; it next lays a coating of this same substance over its own body, and underneath this coating introduces a bubble of air. Naturalists conjecture that it has the power of drawing this air in at the anus from the atmosphere at the surface of the pool; but the precise mode in which it is separated from the body of the atmosphere, and introduced under the pellicle covering the insect's body, has not been clearly ascertained. Thus clothed, and shining like a ball of quicksilver, it darts through the waters to the spot in which it had fixed its habitation, and disengaging the bubble from under the pellicle, it dexterously introduces it into a web formed at the bottom. After repeatedly moving from the top to the bottom of the water, and at each journey filling its habitation with a fresh bubble of air, at length the lighter completely expels the heavier fluid, and the insect takes possession of an aerial habitation, commodious and dry, finished in the very midst of the waters. It is about the size and shape of half a pigeon's egg. From this curious chamber the spider hunts, searching sometimes the waters and sometimes the land for its prey, which, when obtained, is transported to this sub-aquatic mansion, and devoured at leisure. The male as well as the female exhibits the same instincts. Early in the spring, the former seeks the mansion of the latter, and having enlarged it by the introduction of a little more air, takes up its abode with its mate. About the middle of April the eggs are laid, and, packed up in a silken cocoon in a corner of their house, are watched with incessant care by the female."

As the water-spider employs a diving-bell, so does the gossamer a balloon; and

"There is a tribe of hunting spiders that leap like tigers on their prey; and, what is more extraordinary, have the faculty of doing so sideways. One of these jumped two feet on a humble-bee. They approach the object of their intended attack with the noiseless and imperceptible motion of the shadow of a sundial. If the fly move, the spider moves also; backwards, forwards, or sideways, and that with so much precision as to time and distance, that the two insects appear as if bound together by some invisible chain, or actuated by the same spirit. If the fly take wing and pitch behind the spider, the head of the latter is turned round to meet it so quickly, that the human eye is deceived, and the spider appears to be motionless. When all these manœuvres bring the fly within its spring, the leap is made with fearful rapidity, and the prey struck down like lightning. The redeeming trait in the history of these cruel creatures is, their affection for their young."

We might greatly multiply these entertaining quotations, but the want of the pretty little wood-cuts which illustrate them prevents us; and we hope we have done enough to shew how pleasing a volume this is.

Forget Me Not: a Christmas and Birth-day Present for 1830. Edited by F. Shoberl. London, 1829. Ackermann and Co.

AMONG the crowd of Annuals that, like the new buildings, are springing up on every side, till it is difficult to know one from another, the *Forget Me Not* has peculiar claims to attention. The first and founder of the race, it has been the very reverse of many heads of eminent families—fallen into decay,—for it has gone on

improving; and the present beautiful little volume is a worthy companion to its predecessors. There are many amusing tales, from among which we select the "Red Man," by a Modern Pythagorean.

"It was at the hour of nine, in an August evening, that a solitary horseman arrived at the Black Swan, a country inn about nine miles from the town of Leicester. He was mounted on a large fiery charger, as black as jet, and had behind him a portmanteau attached to the croup of his saddle. A black travelling cloak, which not only covered his own person, but the greater part of his steed, was thrown around him. On his head he wore a broad-brimmed hat, with an uncommonly low crown. His legs were cased in top-boots, to which were attached spurs of an extraordinary length; and in his hands he carried a whip, with a thong three yards long, and a handle which might have levelled Goliath himself. On arriving at the inn, he calmly dismounted, and called upon the ostler by name. 'Frank!' said he, 'take my horse to the stable; rub him down thoroughly; and, when he is well cooled, step in and let me know.' And, taking hold of his portmanteau, he entered the kitchen, followed by the obsequious landlord, who had come out a minute before, on hearing of his arrival. There were several persons present, engaged in nearly the same occupation. At one side of the fire sat the village schoolmaster—a thin, pale, peak-nosed little man, with a powdered periwig, terminating behind in a long queue, and an expression of self-conceit strongly depicted upon his countenance. He was amusing himself with a pipe, from which he threw forth volumes of smoke with an air of great satisfaction. Opposite to him sat the parson of the parish—a fat, bald-headed personage, dressed in a rusty suit of black, and having his shoes adorned with immense silver buckles. Between these two characters sat the exciseman, with a pipe in one hand, and a tankard in the other. To complete the group, nothing was wanted but to mention the landlady, a plump, rosy dame of thirty-five, who was seated by the schoolmaster's side, apparently listening to some sage remarks which that little gentleman was throwing out for her edification. But to return to the stranger. No sooner had he entered the kitchen, followed by the landlord, than the eyes of the company were directed upon him. His hat was so broad in the brim, his spurs were so long, his stature so great, and his face so totally hid by the collar of his immense black cloak, that he instantly attracted the attention of every person present. His voice, when he desired the master of the house to help him off with his mantle, was likewise so harsh, that they all heard it with sudden curiosity. Nor did this abate when the cloak was removed, and his hat laid aside. A tall, athletic, red-haired man, of the middle age, was then made manifest. He had on a red frock coat, a red vest, and a red neckcloth; nay, his gloves were red! What was more extraordinary, when the overalls which covered his thighs were unbuttoned, it was discovered that his small-clothes were red likewise. 'All red!' ejaculated the parson almost involuntarily. 'As you say, the gentleman is all red!' added the schoolmaster, with his characteristic flippancy. He was checked by a look from the landlady. His remark, however, caught the stranger's ear, and he turned round upon him with a penetrating glance. The schoolmaster tried to smoke it off bravely. It would not do: he felt the power of that look,

and was reduced to almost immediate silence. 'Now, bring me your boot-jack,' said the horseman. The boot-jack was brought, and the boots pulled off. To the astonishment of the company, a pair of red stockings were brought into view. The landlord shrugged his shoulders, the exciseman did the same, the landlady shook her head, the parson exclaimed, 'All red!' as before, and the schoolmaster would have repeated it, but he had not yet recovered from his rebuke. 'Faith, this is odd!' observed the host. 'Rather odd,' said the stranger, seating himself between the parson and the exciseman. The landlord was confounded, and did not know what to think of the matter. After sitting for a few moments, the new-comer requested the host to hand him a nightcap, which he would find in his hat. He did so: it was a red worsted one; and he put it upon his head. Here the exciseman broke silence, by ejaculating, 'Red again!' The landlady gave him an admonitory knock on the elbow: it was too late. The stranger heard his remark, and regarded him with one of those piercing glances for which his fiery eye seemed so remarkable. 'All red!' murmured the parson once more. 'Yes, Doctor Poundtext, the gentleman, as you say, is all red,' re-echoed the schoolmaster, who by this time had recovered his self-possession. He would have gone on, but the landlady gave him a fresh admonition, by trampling upon his toes; and her husband winked in token of silence. As in the case of the exciseman, the warnings were too late. 'Now, landlord,' said the stranger, after he had been seated a minute, 'may I trouble you to get me a pipe and a can of your best Burton? But, first of all, open my portmanteau, and give me out my slippers.' The host did as he was desired, and produced a pair of red morocco slippers. Here an involuntary exclamation broke out from the company. It begun with the parson, and was taken up by the schoolmaster, the exciseman, the landlady, and the landlord, in succession. 'More red!' proceeded from every lip, with different degrees of loudness. The landlord's was the least loud, the schoolmaster's the loudest of all. 'I suppose, gentlemen,' said the stranger, 'you were remarking upon my slippers.' 'Eh—yes! we were just saying that they were red,' replied the schoolmaster. 'And pray,' demanded the other, as he raised the pipe to his mouth, 'did you never before see a pair of red slippers?' This question staggered the respondent; he said nothing, but looked to the parson for assistance. 'But you are all red,' observed the latter, taking a full draught from a foaming tankard which he held in his hand. 'And you are all black,' said the other, as he withdrew the pipe from his mouth, and emitted a copious puff of tobacco smoke. 'The hat that covers your numakull is black, your beard is black, your coat is black, your vest is black, your smallclothes, your stockings, your shoes, all are black.' In a word, Doctor Poundtext, you are—' 'What am I, sir?' said the parson, bursting with rage. 'Ay, what is he, sir?' rejoined the schoolmaster. 'He is a black-coat,' said the stranger, with a contemptuous sneer, 'and you are a pedagogue.' This sentence was followed by a profound calm."

The stranger goes to the stable; and the scene of his absence and return is very characteristic.

"The appearance of the Red Man again acted like a spell on the voices of the company. The parson was silent, and by a natural consequence his echo, the schoolmaster, was silent also: none of the others felt disposed to say

anything. The meeting was like an assemblage of quakers. "Who can this man be?" "What does he want here?" "Where is he from, and whither is he bound?" Such were the inquiries which occupied every mind. Had the object of their curiosity been a brown man, a black man, or even a green man, there would have been nothing extraordinary; and he might have entered the inn and departed from it as unquestioned as before he came. But to be a Red Man! There was in this something so startling that the lookers-on were beside themselves with amazement. The first to break this strange silence was the parson. 'Sir,' said he, 'we have been thinking that you are—' 'That I am a conjurer, a French spy, a travelling packman, or something of the sort,' observed the stranger. Doctor Poundtext started back on his chair, and well he might; for these words, which the Man in Red had spoken, were the very ones he himself was about to utter. 'Who are you, sir?' resumed he, in manifest perturbation; 'what is your name?' 'My name,' replied the other, 'is Reid.' 'And where, in heaven's name, were you born?' demanded the astonished parson. 'I was born on the borders of the Red Sea.' Doctor Poundtext had not another word to say. The schoolmaster was equally astounded, and withdrew the pipe from his mouth: that of the exciseman dropped to the ground: the landlord groaned aloud, and his spouse held up her hands in mingled astonishment and awe. After giving them this last piece of information, the strange man arose from his seat, broke his pipe in pieces, and pitched the fragments into the fire; then, throwing his long cloak carelessly over his shoulders, putting his hat upon his head, and loading himself with his boots, his whip, and his portmanteau, he desired the landlord to shew him to his bed, and left the kitchen, after smiling sarcastically to its inmates, and giving them a familiar and uncereemonious nod. His disappearance was the signal for fresh alarm in the minds of those left behind. Not a word was said till the return of the innkeeper, who in a short time descended from the bed-room overhead, to which he had conducted his guest. On re-entering the kitchen, he was encountered by a volley of interrogations. The parson, the schoolmaster, the exciseman, and his own wife, questioned him over and over again. 'Who was the Man in Red?—he must have seen him before—he must have heard of him—in a word, he must know something about him.' The host protested that he never beheld the stranger till that hour: it was the first time he had made his appearance at the Black Swan, and so help him God, it should be the last! 'Why don't you turn him out?' exclaimed the exciseman. 'If you think you are able to do it, you are heartily welcome,' replied the landlord; 'for my part, I have no notion of coming to close quarters with the shank of his whip, or his great red, alledge-hammer fist.' This was an irresistible argument, and the proposer of forcible ejectment said no more upon the subject. At this time the party could hear the noise of heavy footsteps above them. They were those of the Red Man, and sounded with slow and measured tread. They listened for a quarter of an hour longer, in expectation that they would cease. There was no pause: the steps continued, and seemed to indicate that the person was amusing himself by walking up and down the room. It would be impossible to describe the multiplicity of feelings which agitated the

minds of the company. Fear, surprise, anger, and curiosity, ruled them by turns, and kept them incessantly upon the rack. There was something mysterious in the visitor who had just left them—something which they could not fathom—something unaccountable. 'Who could he be?' This was the question that each put to the other, but no one could give any thing like a rational answer. Meanwhile the evening wore on apace, and though the bell of the parish church hard by sounded the tenth hour, no one seemed inclined to take the hint to depart. Even the parson heard it without regard, to such a pitch was his curiosity excited. About this time also the sky, which had hitherto been tolerably clear, began to be overclouded. Distant peals of thunder were heard; and thick sultry drops of rain pattered at intervals against the casement of the inn: every thing seemed to indicate a tempestuous evening. But the storm which threatened to rage without was unnoticed. Though the drops fell heavily; though gleams of lightning flashed by, followed by the report of distant thunder, and the winds began to hiss and whistle among the trees of the neighbouring cemetery, yet all these external signs of elementary tumult were as nothing to the deep, solemn footsteps of the Red Man. There seemed to be no end to his walking. An hour had he paced up and down the chamber without the least interval of repose, and he was still engaged in this occupation as at first. In this there was something incredibly mysterious; and the party below, notwithstanding their numbers, felt a vague and indescribable dread beginning to creep over them. The more they reflected upon the character of the stranger, the more unnatural did it appear. The redness of his hair and complexion, and, still more, the fiery hue of his garment, struck them with astonishment. But this was little to the freezing and benumbing glance of his eye, the strange tones of his voice, and his miraculous birth on the borders of the Red Sea. There was now no longer any smoking in the kitchen. The subjects which occupied their minds were of too engrossing a nature to be treated with levity; and they drew their chairs closer, with a sort of irresistible and instinctive attraction. While these things were going on, the bandy-legged ostler entered, in manifest alarm. He came to inform his master that the stranger's horse had gone mad, and was kicking and tearing at every thing around, as if he would break his manger in pieces. Here a loud neighing and rushing were heard in the stable. 'Ay, there he goes,' continued he. 'I believe the devil is in the beast, if he is not the old enemy himself. Ods, master, if you saw his eyes: they are like —' 'What are they like?' demanded the landlord. 'Ay, what are they like?' exclaimed the rest with equal impatience. 'Ods, if they a'n't like burning coals?' ejaculated the ostler, trembling from head to foot, and squeezing himself in among the others, on a chair which stood hard by. His information threw fresh alarm over the company, and they were more agitated and confused than ever. During the whole of this time the sound of walking over-head never ceased for one moment. The heavy tread was unabated: there was not the least interval of repose, nor could a pendulum have been more regular in its motions. Had there been any relaxation, any pause, any increase or any diminution of rapidity in the footsteps, they would have been endurable; but there was no such thing. The same deadening, monotonous,

stupifying sound continued, like clockwork, to operate incessantly above their heads. Nor was there any abatement of the storm without; the wind blowing among the trees of the cemetery in a sepulchral moan; the rain beating against the panes of glass with the impetuous loudness of hail; and lightning and thunder flashing and pealing at brief intervals through the murky firmament. The noise of the elements was indeed frightful, and it was heightened by the voice of the sable steed, like that of a spirit of darkness; but the whole, as we have just hinted, was as nothing to the deep, solemn, mysterious treading of the Red Man."

The party argue themselves into the belief that he is indeed the enemy of mankind.

" 'If more proof is wanting,' resumed the parson, after a pause, 'only look to his dress. What Christian would think of travelling about the country in red? It is a type of the hell-fire from which he is sprung.' 'Did you observe his hair hanging down his back like a bunch of carrots?' asked the exciseman. 'Such a diabolical glance in his eye!' said the schoolmaster. 'Such a voice!' added the landlord: 'it is like the sound of a cracked clarinet.' 'His feet are not cloven,' observed the landlady. 'No matter,' exclaimed the landlord; 'the devil, when he chooses, can have as good legs as his neighbours.' 'Better than some of them,' quoth the lady, looking peevishly at the lower limbs of her husband. Meanwhile the incessant treading continued unabated, although two long hours had passed since its commencement. There was not the slightest cessation to the sound, while out of doors the storm raged with violence, and in the midst of it the hideous neighing and stamping of the black horse were heard with pre-eminence loudness. At this time the fire of the kitchen began to burn low. The sparkling blaze was gone, and in its stead nothing but a dead red lustre emanated from the grate. One candle had just expired, having burned down to the socket. Of the one which remained, the un-snuffed wick was nearly three inches in length, black and crooked at the point, and standing like a ruined tower amid an envelopement of sickly yellow flame; while around the fire's equally decaying lustre sat the frightened *coterie*, narrowing their circle as its brilliancy faded away, and eyeing each other like apparitions amidst the increasing gloom. At this time the clock of the steeple struck the hour of midnight, and the tread of the stranger suddenly ceased. There was a pause for some minutes—afterwards a rustling—then a noise as of something drawn along the floor of his room. In a moment thereafter his door opened; then it shut with violence, and heavy footsteps were heard trampling down the stair. The inmates of the kitchen shook with alarm as the tread came nearer. They expected every moment to behold the Red Man enter, and stand before them in his native character. The landlady fainted outright: the exciseman followed her example: the landlord gasped in an agony of terror: and the schoolmaster uttered a pious ejaculation for the behoof of his soul. Dr. Poundtext was the only one who preserved any degree of composure. He managed, in a trembling voice, to call out 'Avaunt, Satan! I exorcise thee from hence to the bottom of the Red Sea!' 'I am going, as fast as I can,' said the stranger, as he passed the kitchen-door on his way to the open air. His voice aroused the whole conclave from their stupor. They started up, and by a simultaneous effort rushed to the window. There they beheld the tall figure of a man,

enveloped in a black cloak, walking across the yard on his way to the stable. He had on a broad-brimmed, low-crowned hat, top-boots, with enormous spurs, and carried a gigantic whip in one hand, and a portmanteau in the other. He entered the stable, remained there about three minutes, and came out leading forth his fiery steed thoroughly accoutred. In the twinkling of an eye he got upon his back, waved his hand to the company, who were surveying him through the window, and, clapping spurs to his charger, galloped off furiously, with a hideous and unnatural laugh, through the midst of the storm. On going up stairs to the room which the devil had honoured with his presence, the landlord found that his infernal majesty had helped himself to every thing he could lay his hands upon, having broken into his desk and carried off twenty-five guineas of king's money, a ten pound Bank of England note, and sundry articles, such as seals, snuff-boxes, &c. Since that time he has not been seen in these quarters, and if he should, he will do well to beware of Dr. Poundtext, who is a civil magistrate as well as a minister, and who, instead of exorcising him to the bottom of the Red Sea, may perhaps exorcise him to the interior of Leicester gaol, to await his trial before the judges of the midland circuit."

There is also considerable variety in the poetry; and we like the following song, by Miss Emma Roberts, enough to extract it.

"Upon the Ganges' regal stream
The sun's bright splendours rest,
And gorgeously the noon-tide beam
Reposes on its breast;
But in a small secluded nook,
Beyond the western sea,
There rippling glides a narrow brook
That's dearer far to me.
The lory perches on my hand,
Caresing to be free,
And spreads its plumes at my command,
And stoops its purple head;
But where the robin, humble guest,
Comes flying from the tree,
Which bears its unpretending nest,
Alas! I'd rather be.
The fire-fly flashes through the sky,
A meteor swift and bright,
And the wide space around, on high,
Gleams with its emerald light:
Though glory traces that shooting star,
And bright its splendours shine,
The glow-worm's lamp is dearer far
To this sad heart of mine.
Throughout the summer year, the flowers
In all the flush of bloom,
Clustering around the forest bowers,
Exhale their rich perfume.
The daisy and the primrose pale,
Though scentless they may be,
That gem a far, far distant vale,
Are much more prized by me.
The lotus opes its chalice,
Upon the tank's broad lake,
Where India's stately palaces
Their ample mirrors make:
But reckless of each tower and dome,
The splendid and the grand,
I languish for a cottage home,
Within my native land."

Altogether, the *Forget Me Not*, like the *Souvenir*, well deserves to retain its accustomed place in public favour. Further claims to this distinction will be found in Lord Byron's first (though not very remarkable) attempt at poetry, in some clever contributions by W. H. Harrison, and in the general merit of the miscellany.

The Gem; a Literary Annual. London, W. Marshall; Philadelphia, T. Wardle. We have not room to say much of this volume, the fourth or fifth we have perused within the last few days; and we feel that this glut disables us from playing the part of fair critics. What seems tiresome to us, on repletion, might be very acceptable to us when hungry; and so

fastidious do we become, when we have lots of dainties pressed upon us, that we are sometimes apt to fancy the unsophisticated public might not agree with us so cordially as it generally does. But of the *Gem*. There is an injudicious trading preface, from the leading principles of which we utterly dissent; and all we can say of this introduction is, that however well meant and inoffensive it may be, it is not conceived in judgment and good taste. The *Annals*, however, are not held by us to be amenable, *seriatim*, to severe criticism; and though we shall possibly, when the hurly burly's done, offer some remarks on the system, as it touches literature and the arts, we shall, till then, abide by the rule we have prescribed for the *Literary Gazette*, and fairly report upon the merits of the volumes individually as they are placed before us.

With the usual mixture of common-places which of necessity adheres to all works of this miscellaneous class, the *Gem* has several clever and entertaining varieties. The "Man and the Lioness," by Lord Nugent, is a well-told and original story; and the "Tichborne Dole," a characteristic pleasantry, in the style of the ancient ballad, by the same noble writer. The "Unrecorded," by J. T. Hollings, is a touching little poem; and the "Three Pilgrims," by W. Howitt, a happy idea, ably wrought into verse. We shall quote it, and the "Standard-Bearer" of Allan Cunningham, as the most convenient specimens which our Annual-crowded pages of this week allow us to exhibit.

"The Pilgrims of the World."

I see a city of the East,
A city great and wide;
The evening sunlight richly falls
On its pinnacles of pride.
Its marble fountains and porticoes,
Its towers and temples vast,
And its pillars of memorial tall,
Shadows of beauty cast.
The murmur of its multitudes
Is like the ocean's voice;
Yet mayst thou hear the children's cries,
That in streets and squares rejoice.
How glorious looks that antique town!
How pleasant is its din!
But the evening falls—the gates are closed,
And have shut three strangers in.
Their steps are faint, their garbs are quaint,
Their travel has been sore:
With what a wild and hungry glance
They stalk by every door!
On goes the first—What cries are those?
I seem at once to hear
Rebellious shouts, despairing rage,
Wo, agony, and fear.
The second, with a mutter'd curse,
Down tower and house has hurried;
And the third has left a silence there,
That shall outlast the world.
Mine eye is on a broad, rich realm,
On pleasant fields and downs—
On beaten roads that run, like veins,
Unto a thousand towns.
What green and cattle-traversed hills!
What old majestic woods!
How lightly glide those merchant-ships
Along the gleaming floods!
But that pilgrim three!—that fearful three!
Again I see them, there!
And banners rise, and dying cries,
And darkness, and despair.
What cursed vision have I seen?
Is this the land they paced?
This,—where the ruins lie in heaps
Along the wormwood waste?
This,—where the wild ass snuffs the wind,
The silent ostrich stands;
And the column, like a ruin'd king,
Frowns proudly on the sands?
A home! there is a happy home!
An old, ancestral tower;
And blessed is the family
That peoples it this hour.
Honours their vallant fathers won,
Fair are their lands and wide;
But the love that is in their kindred souls,
That is their wealth and pride.

Now vengeance on these wandering fiends!
Hither, too, are they come!
I see them lowering at the gate,
And a shadow wraps that home.

Oh! there are tears—wild, burning tears,
Terror, and scorn, and hate;
Mad words, dark looks, and breaking hearts,
And partings desperate.

Can no one stop those wizards curst?
Can no one break their power?
The green boughs shrivel as they pass,
Their footsteps scorch the flower.

Stand back! stand back! thou desperate man!
Wouldst thou their progress thwart?
Those feet have stood in Adam's bower;
Those hands laid waste his heart.

Those gaunt forms round the world have gone,
Through centuries of guilt,
Pulling down what the wise have framed,
And what the mighty built.

Children of hoary Eld, they hold
This groaning earth in fee,
While Time shall stretch his weary wing
Towards the timeless sea.

Stand back! for who may cross the path
Of creatures void of breath?
Stand back! for who may dare the power
Of Sin, Decay, and Death?"

"The Standard-bearer.

All saddled and bridled,
And booted and ready,
He stopped but to listen
One word from his lady:
'All saddled and bridled—
She said it in pride,—

'To the war, like a victor,
Lord Edward, ye ride.
I wrought this fair standard
I give to thy trust:
Return it unsoiled,
Or lie with it in dust.'

He stroked his white war-horse,
He touch'd his sword-hilt:
'These hoofs shall be moisten'd,
This blade shall be gilt
In blood, ere I lose it.

Of other words none
He spoke:—like a sunbeam
He gleam'd, and was gone.
Around his bright banner
Swords sprang from the sheath;
And the words of their war-cry
Were, Victory or death!

He rode to the combat
With princes and peers,
To the rending of corselets
And splintering of spears:
He rode to the combat
Of peasants with lords,
To the flashing of muskets
And thrusting of swords.
With his sharp sword he pointed
To lines long and large,—
Cried, 'Down with the churls!
And spur'd to the charge.

All plumed, like young eagles,
And bright as the beams
Of the sun when he wakens,
In June, on the streams:
All fierce as young eagles,
When, stooping, half way
Down from heaven they come,
With a scream, on their prey:—
So rush'd knights and nobles
On peasants and grooms,
With the sounding of trumpets
And tooting of plumes.

The death-veil of battle
Asunder is torn:
Like the tempest that sports
In the valley of corn,
Death scatter'd their riders:—
In vain have they striven;
O'er the earth, like the down
Of the thistle, they're driven:
And he who rode proud
'Mid the knelling of cannon,
Lies low on the field.

With his war-steed and pennon.
Behold! he hath been
Where the striving was hot;
And, pierced with the lances,
And torn with the shot,
His war-horse has sunk—
Never more will he hear
The trumpet, or rush
On the sabre and spear:
And to him who bestrode him,
What minstrel will yield
More meed than he merits
Who flies from the field?"

There is a poem of the late J. Keats', which appeared a few weeks since in the *Literary*

Gazette: it is but justice to state, that the proprietors had previously printed their version from another copy.

SIGHTS OF BOOKS.

Ackermann's Juvenile Forget Me Not: a Christmas, New-Year's, and Birthday Present for Youth of both Sexes, for 1830. Edited by Frederic Shoberl. London, R. Ackermann and Co.

THIS is a very pretty little volume—some of the tales very good; but we are so over-crowded with Annuals this week that we have not room for extract; but we must mention, with most especial commendation, "The Half-Boarder," by Miss Isabel Hill: it is a very touching story, and indeed one of the best of its kind we have met with in any publication for the young. "The Son of Arminius" is another favourite; and "One of the Vanities of Human Wishes" is a very sweet poem. We again congratulate our youthful friends on the variety of amusement contrived for them this year.

The Iris: a Literary and Religious Offering. Edited by the Rev T. Dale. London, 1830. Sampson Low.

ANOTHER Annual, and of a religious tendency,—for which the heathen name of *Iris* would not prepare us. "The Daughter of Jairus," by the editor, is alone worthy of the volume's price; but it is accompanied by many very pleasing pieces, which will recommend the work still more to the public.

Scènes Comiques. 12mo. pp. 374. London, Simpkin and Marshall.

No course of reading can improve the student so much in French as the perusal of the best comic authors; and these scenes—selected from Molière, Le Sage, Destouche, Picard, &c. &c.—are exercises of the most agreeable kind.

Watson's Apology for the Bible, translated into French. By L. T. Ventouillac. 12mo. pp. 199.

WE would almost retract our preceding opinion—but it is more just to say, that, in another style, this little volume is equally worthy of the French reader.

The Polar Star. Vol. I. 8vo. pp. 420. London, 1829. H. Flower.

THIS volume is a continuation of the *Extractor*, up to Michaelmas, and a selection of such articles as appear in new publications and periodical works which the editor thinks fit to arrange in his miscellany. Without complementing his judgment, we will say that it affords a proof of the great improvement and increased usefulness of the press within the last ten or twelve years.

Temporis Calendarium.

THIS is the first of the Almanacs for 1830 which has reached us; and it is a mixture of sanctified twaddle and predictions about the weather, with some, we believe, useful tables, and other almanac intelligence.

Nature Reviewed; or, a History of the principal Domestic Productions of the Earth, &c. 12mo. pp. 152. Guy, Chelmsford.

WHAT the "domestic productions of the earth" are, we do not know; but we perceive that this compilation, though it contains many good things, is not executed with that degree of intelligence and judgment to elevate it above the endless number of books made in like manner.

The Anabasis of Xenophon, &c. By F. C. Balfour, M.A., &c., late Professor of Arabic in the Greek University of Corfu. 12mo. pp. 287. Longman and Co.; Baldwin and Co.; Whittaker and Co.

A VERY good school edition of a work which needs neither comment nor commendation. The Greek text is fairly printed, and the explanatory notes, examination questions, and indexes, of the most useful description.

Bayle and Holland's Manual of General Anatomy. Translated from the French, by H. Storer. 18mo. pp. 318. London, 1829. J. Wilson.

A GOOD translation of this valuable Manual has been much wanted, and we are glad to see it ably performed in the present instance. Anatomical students are infinitely indebted to Mr. Storer for it: with plates it would be perfect as an epitome of this branch of medical science.

Johnson and Walker's Dictionary of the English Language, with the Pronunciation greatly simplified. By R. S. Jameson, Esq., of Lincoln's Inn. 8vo. pp. 831. London, 1829. W. Pickering.

WE have only to notice this second edition of a very well-edited dictionary, in which the re-trenchments and the additions appear to be adopted with equal judgment. The marks to direct the pronunciation are singularly good; and in a typographical point of view, the volume does infinite credit to its publisher.

ORIGINAL CORRESPONDENCE.

Paris, Oct. 1828.

I CAN imagine that a regular-bred British jockey would look with contempt at the *coup-d'œil* of our races, which the Champs de Mars presented a few days ago. The French are not as yet quite *horse-mad*, consequently spectators are few in comparison to the number which crowd the course of Epsom: on Sunday, however, as his majesty and the royal family honoured the ground with their presence, fashionable and unfashionable flocked thither, notwithstanding a fog which might compare with a Scotch mist;—above all, there was a rare exhibition of exquisite accoutred in English costume, and looking as though they deemed the king and all present had assembled on purpose to admire them. There were not above ten or twelve tents for public accommodation; so that those who did not arrive early, or who had not tickets for the *enceinte*, were obliged to "bring their courage to the sticking place," ankle-deep in mud. This was no joke; particularly as, added to the difficulty of keeping one's ground, it generally happened that some kind neighbour grasped the shoulder nearest to him to preserve his own equilibrium, leaving such indelible marks on the unfortunate prop as would lead to a supposition that fingers were pinchers; but even the loss of a limb is of slight consideration when compared to the pleasure of pursuing pleasure. No sooner were the steeds led into the arena, than my ears were dinned by exclamations of admiration: one lady, in the effervescence of enthusiasm, asserted that the courser Vesta was *un ange* in grace and form; another elevated her to *un dieu*;—and, in fact, no hero of glory or woman of beauty could have excited greater energy of expression or rhapsody of praise. As well as I remember, there were five horses *concurrents* for the prize: Vesta outstripped all the others at least fifty yards each round, and, in return for several unmer-

ciful *coups d'épée*, won for her master five thousand francs from the hand of the king, as well as several bets to a high amount from private individuals.

Amongst the news of the day is a mistake which took place in fashionable life. A few weeks ago, an Irish gentleman, of sporting reputation, ran off at twelve o'clock at night with a lady of rank, supposing her to be a very different personage: neither did he discover his error until, arriving at the first post, an *ouster* with an impertinent lantern revealed to him an old aunt instead of a young niece. The surprise, no doubt, was not altogether of the most agreeable kind: the Hibernian, however, took his part *en brave*; and perhaps finding that the *écus* of Madame la Tante outweighed the charms of her youthful relative, compromised matters, and consented to become the uncle instead of the husband of mademoiselle. On Sunday week the nuptials are to be celebrated.

The stage, or diligence, constructed so as to contain sixty live souls, has commenced its performance. The builder, I understand, has taken the precaution of separating heads by partitions of canvass; so that travellers may fancy themselves either in a kind of ambulatory pillory or in a strait jacket.

Devereux, by Mr. Bulwer, has just appeared, translated into French by a Mr. Cohen; the *French Reviews* speak highly of this work; but as Mr. Bulwer has given such fine specimens of poetic talent, his admirers here regret his present abandonment of the Muse who formerly awoke his lyre.

ARTS AND SCIENCES.

ANCIENT AND MODERN EGYPT.

Thirteenth Letter of M. Champollion.

Thebes, May 26, 1829.

THE geographical details given by Strabo do not permit us to look any where but in the valley of Biban-el-Molouk for the site of the tombs of the ancient kings. Even the name of this valley, which some would derive entirely from the Arabic, by translating it, "by the gates of the kings," but which is at once a corruption and a translation of the ancient Egyptian name Bib-an-Ouroou (the hypogæums of the kings), as M. Silvestre de Sacy has very justly said, would remove all doubt upon the subject. It was the royal necropolis; and a spot had been chosen perfectly adapted to this melancholy purpose—an arid valley, enclosed by very lofty perpendicular rocks, or by mountains in a complete state of decomposition; in almost all of which there are large crevices, occasioned either by the extreme heat, or by internal sinking of the earth, and the ridges of which are marked with black bands, as if they had been partly burnt. No living creature frequents this valley of death—for I do not reckon the flies, the foxes, the wolves, and the hyænas, as it was our abode in the tombs, and the smell of our kitchen, that attracted these four hungry species of animals.

On entering the most retired part of this valley by a narrow opening, evidently produced by art, and shewing still some slight remains of Egyptian sculpture, we soon saw, at the foot of the mountains or on the declivities, square doors, most of them choked up, and to which you must go close in order to see the decorations. These doors, which are all alike, are the entrances to the tombs of the kings. Every tomb has its own; for formerly no one had any connexion with another; they were all isolated: it was the seekers for treasures, both

ancient and modern, who made some communications between them.

I was eager on my arrival at Biban-el-Molouk to ascertain that these tombs, to the number of sixteen (I speak here only of tombs that retain sculptures, and the names of the kings for whom they were made), were really, as I had inferred beforehand from several considerations, those of kings, all belonging to Theban dynasties, that is to say, to princes whose families were of Theban origin. The hasty view which I took of these excavations before we went to the second cataract, and the abode of several months which I have made there on my return, have fully convinced me that these hypogæums contained the bodies of the kings of the eighteenth, nineteenth, and twentieth dynasties, which are, in fact, all three Diospolitan or Theban dynasties. Thus I found first the tombs of six of the kings of the eighteenth, and that of the oldest of all, Amenophis Memnon, who was buried apart in the insulated valley of the west. Then come the tombs of Rhamses Meiamoun and those of six other Pharaohs, successors of Meiamoun, and belonging to the nineteenth and twentieth dynasties.

No order either of succession or of dynasty has been observed in the choice of the site of these several royal tombs; every monarch has had his own excavated where he expected to find a vein of stone suitable for his sepulchre and the vastness of the projected excavation. It is difficult to refrain from feeling a degree of surprise when, after having passed through a rather plain door, we enter into large galleries or corridors, covered with sculptures perfectly well executed, still retaining, in a great degree, the splendour of the brightest colours, and leading successively to halls supported by pillars, still more richly decorated, till we reach at length the principal apartment, that which the Egyptians call the Golden Hall, more vast than all the others, and in the middle of which was the mummy of the king, in an enormous sarcophagus of granite. The plans of these tombs, published by the Commission of Egypt, give an exact idea of the extent of the excavations, and of the immense labour which they cost to execute them with the mattock and chisel. The valleys are almost all choked up by hills formed of the little chips of stone proceeding from the astounding works in the interior of the mountain.

I cannot here give a circumstantial description of the tombs; several months have scarce sufficed for me to draw up a pretty detailed notice of the innumerable bas-reliefs which they contain, and to copy the most interesting inscriptions. I will, however, give a general idea of these monuments, by a rapid and very succinct account of one of them—that of the Pharaoh Rhamses, the son and successor of Meiamoun. The decoration of the royal tombs was arranged according to a certain system; and what is found in one, appears, with some exceptions, in almost all the others.

The architrave of the entrance-door is adorned with a bas-relief, (the same on all the first doors of the royal tombs,) which is no other than the preface, or rather the summary, of all the decorations of the Pharaonic tombs. It is a yellow disk, in the middle of which is the Sun, with a ram's head, that is to say, the setting sun entering into the lower hemisphere, and adored by the king on his knees. On the right of the disk, namely, on the east, is the goddess Nephthys, and to the left (west) the goddess Isis, occupying the two extremities of the career of the god in the upper hemisphere. At the side of the Sun,

and in the disk, is sculptured a great scarabeus, which here, as elsewhere, is the symbol of regeneration, or of successive revivifications. The king is kneeling upon the heavenly mountain, on which the feet of the two goddesses also rest. The general meaning of this composition refers to the deceased king: during his life, like the sun in his career from east to west, the king should be the vivifier and enlightener of Egypt, and the source of all the natural and moral blessings necessary to its inhabitants. The deceased Pharaoh was therefore naturally compared to the sun, setting and descending towards the dark lower hemisphere, which he must traverse to rise again in the east, and restore light and life to the upper world, which we inhabit; in the same manner as the deceased king was to revive, either to continue his transigrations, or to inhabit the celestial world, and be absorbed in the bosom of Ammon, the universal father.

This explanation is no invention of my own; the time of conjectures respecting ancient Egypt is past. All this results from the whole of the legends which cover the royal tombs. Thus this comparison or assimilation of the king with the sun in its two states, during the two parts of the day, is the key, or rather the source and the subject, of which all the other bas-reliefs, as we shall see, are only the gradual development.

In the picture described, there is always a legend, of which the following is a literal translation: "Hear what Osiris says, the lord of the Amenti, (the western region, inhabited by the dead.) I have granted thee a dwelling in the sacred mountain of the west, as to the other great gods (the king's predecessors); to thee, Osirian king, lord of the world, Rhamses, &c. still living."

This last expression would prove, if it were necessary, that the tombs of the Pharaohs, which were immense works, and required much time to execute, were commenced during their lives; and that one of the first cares of every Egyptian king was, conformably to the well-known spirit of that singular nation, to think immediately of the execution of the sepulchral monument which was to be their last asylum.

This is still better demonstrated by the first bas-relief which is met with on the left on entering all these tombs. The object of this representation evidently was, to make the king easy respecting the ill omen which seemed to result from the excavation of his tomb at a time when he was full of life and health: in fact it shews the Pharaoh, in his royal costume, presenting himself to the god Phré, with the head of a sparrow-hawk, that is to say, to the sun in its splendour at the hour of noon, who addresses to his representative on earth these consolatory words: "Hear what Phré says, the great god, lord of heaven: We grant thee a long series of days to reign over the world, and to exercise the royal attributes of Horus upon earth."

On the ceiling of this first gallery of the tomb we likewise read magnificent promises made to the king for his terrestrial life, and the detail of the privileges preserved for him in the celestial regions. These legends appear to have been placed here as if to smooth the too rapid descent which leads to the hall of the sarcophagus.

Immediately after this representation, which is a kind of delicate oratorical precaution, the question is more frankly approached by a symbolical representation,—the disk of the Sun Cricephalus, which has left the east, and is advancing towards the frontier of the west:

one knows better than Mr. Prout where to prick for them; and, as in this instance, how to avail himself of them.

Illustrations of the Bijou, for 1830.

ALTHOUGH the number of the embellishments of the *Bijou* is not quite so large as that of some of the other *Annuaire*s, yet several of the plates deserve to rank with the best in any contemporary publication. The introduction to them is a royal one:—"The King;" painted by Sir T. Lawrence, P.R.A., from a picture in the collection of Sir W. Knighton, G.C.H., now first engraved by Mr. Ensom. Of the many portraits which we have lately seen of his Majesty, we think this one of the most pleasing. It is from a picture of a kit-cat size, and represents the King in his daily and familiar costume.—"Ada, a Portrait of a young Lady;" from a picture by Sir T. Lawrence, P.R.A., engraved by Mr. Dean. Sprightly, tasteful, and highly finished.—"The African Daughter;" painted by Bonington, engraved by Mr. Sangster. Bonington seems to have delighted in sharp and sparkling effects: this is a fine little specimen of him.—"Portrait of Mrs. Arbuthnot;" painted by Sir T. Lawrence, P.R.A.; engraved by Mr. Ensom. Of the exquisitely graceful and elegant picture, the visitors to Somerset House must have a strong and pleasing recollection; great justice has been done to it by Mr. Ensom.—"The Beggar;" painted by D. Wilkie, R.A.; engraved by Mr. Fox. A very characteristic head; admirably engraved by Mr. Fox, who is rapidly rising in his profession.—"Portrait of Lady Jane Grey;" painted by De Heere; engraved by Mr. Dean. A curious and interesting representation of this amiable victim to the ambition of others.—"Milton composing *Paradise Lost*;" from a drawing by T. Stothard, R.A.; engraved by Mr. Ensom. The figures of the daughters are feminine and beautiful; we cannot eulogise that of the great bard.—"The Blue Bell—a portrait of a child;" painted by Mr. Hastings; engraved by Mr. Fox. Exceedingly pretty. Perhaps a little more repose in the effect would have been advantageous.—"Rosalind and Celia;" painted by T. Stothard, R.A.; engraved by Mr. Phelps. Very slight; but romantic and graceful.

Illustrations to the Gem, for 1830.

THE first glance at the graphic embellishments of the forthcoming volume of the *Gem* shows us that they maintain a high rank among their contemporaries and rivals. Let us consider them a little in detail.

"The Coquette;" engraved by Humphrys, from a drawing by Chalon. Not less amusing than beautiful. One lover, on his knees, is ardently pouring forth his vows to his mistress, while she, the jade! affecting to listen to him, and to pat him playfully with her fan, stretches forth her hand over a screen to another and concealed avain, who devours the "white wonder" with kisses. The subject is precisely one of those in which Mr. Chalon is pre-eminent; and the light and not over-wrought style in which it is engraved by Mr. Humphrys sets off the elegance of the design to the best advantage.—"Tyre;" engraved by N. Lacey, from a picture by T. Creswick. A splendid and fascinating little work, equally creditable to both the artists engaged in its production.—"The Stolen Interview;" engraved by H. C. Shenton, from a picture by F. P. Stephanoff. The picture, or one nearly resembling it, has appeared in the Exhibition. It possesses all Mr. Stephanoff's usual excel-

lence in composition and expression.—"Love-letter;" engraved by A. W. Warren, from a picture by R. Smirke, R.A. A most unfair proceeding. A fine buxom girl, who has received a billet-doux from her lover, overcome either by the warmth of his protestations, or which is more likely, by the warmth of the weather, has fallen fast asleep, retaining the tender epistle in her grasp. Two youthful female friends have stolen silently upon her; one of whom is endeavouring to read the letter, and thus "to pluck out the heart of her mystery." The subject is very sweetly treated.—"The Gipsy Belle;" engraved by A. Duncan, from a picture by C. R. Leslie, R.A. There is in every thing that Mr. Leslie produces a raciness and an originality which are exceedingly striking. Of those qualities this piquant head affords a pleasing specimen.—"Saturday Night;" engraved by T. Mitchell, from a picture by D. Wilkie, R.A. This is probably from one of Mr. Wilkie's earlier works; but it is very clever. It represents a domestic interior. While an old codger is sitting comfortably by the fire, puffing his pipe, a stout girl in the back-ground is performing on a squalling urchin the ablutions which are necessary to fit him for making his appearance at church next morning. The accessories are all well imagined and arranged.—"Mamelukes;" engraved by H. Warren, from a picture by A. Cooper, R.A. Sparkling and picturesque.—"Halt on the March;" engraved by W. Greatbach, from a picture by R. Edmonstone. The repose of a soldier and his family; full of interest.—"Ruins of Trionto;" engraved by W. H. Smith, from a picture by J. Martin. Another extraordinary specimen of the "multum in parvo," with which Mr. Martin is fond of surprising us.—"Verona;" engraved by W. J. Cooke, from a drawing by R. P. Bonington. They who are unacquainted with the lucidity of an Italian atmosphere can form but an inadequate notion of the fidelity of this spirited representation of the objects which it irradiates.—"Rose Malcolm;" engraved by C. Rolls, from a picture by A. Cooper, R.A. Rather a critical situation for a lady. We sincerely trust that her brave champion will triumph.—"The Infant Bacchus brought by Mercury to the Nymphs;" engraved by C. Edwards, from a picture by H. Howard, R.A. Whoever saw the original in the Exhibition at Somerset House, cannot have forgotten the poetical and classic taste which pervades it. The print is sweetly engraved.

Illustrations to Ackermann's Juvenile Forget Me Not, for 1830.

FOR the gratification and entertainment of his more youthful friends, Mr. Ackermann has provided nine embellishments to his *Juvenile Forget Me Not*, all of which are possessed of much merit. Our favourites are:—"Cottager's Family," engraved by A. Fox, from a picture by R. Hills;—"Lace Maker," engraved by H. Rolls, from a drawing by Christall;—"The Contented Family," engraved by H. Rolls, from a drawing by G. Jones, R.A.; and—"Playing with Time," engraved by J. Romney, from a drawing by Miss Sharpe.

Illustrations to the Keepsake, for 1830.

IN the notice of these Illustrations which appeared in our last Number, we inadvertently omitted to mention that the exquisite plate of "Francis the First and his Sister," was engraved by C. Heath, from a picture by R. P. Bonington.

DRAMA.

BERRY LANE.

A YOUNG lady of provincial celebrity made her appearance here last Friday week as the *Wife of Cherry* in Cherry's wretched comedy the *St. Didier's Daughter*. It would be unfair to judge of the capacity of any actress from her performance of a part which requires no capacity at all; we shall therefore postpone our opinion of Miss Mordaunt till we have an opportunity of hearing her speak something in the shape of common sense. We flatter ourselves with the hope, however, that the said opinion will be favourable. Her figure and face are pleasing, though petite; her voice sweet, though rather thin; her manner lady-like;—and there was a touch of archness now and then in her expression which promised fairly. Her reception was most gracious. We owe Farren a grudge for making us laugh so heartily at such egregious nonsense and common-place clap-traps as compose the language of *Georgina Heartall*. Mrs. Fancit and Cooper were two of the best-dressed, jolliest, half-starved puppets we ever had the pleasure of beholding. The only indication the latter favoured us with of his not having another suit to his back, was his sporting full dress at ten o'clock in the morning. Jones, as *Frank Heartall*, needs no eulogy.

A melo-drama, entitled the *Great Family*, and reported to be the joint production of Mr. Barrymore and Mr. Raymond, was acted for the first time on Thursday, at this house; and in it Mr. Grimaldi, jun. made his first bow on that side Brydges Street. His reception was very flattering—not so that of the melo-drama.

COVENT GARDEN.

A VERY clever adaptation of the Irish tale of "Suil Dhuv, or the Coopers," was produced on Thursday at this theatre, under the title of *The Robber's Wife*. It is from the pen of Mr. Pocock, who has changed the scene from Ireland to Cumberland, but adhered pretty faithfully to the principal incidents. Fawcett, Keeley, Blanchard, Power, and Abbott, all exerted themselves most laudably. Blanchard's *Lawyer* was indeed a study from nature. We have not seen this excellent actor to more advantage for some time. The *Robber's Wife* found a powerful representative in Miss E. Tree: her truly natural and pathetic delineation of the repentant daughter was acknowledged by loud and frequent bursts of applause. The terrific character of *Red Rory* loses much of its prominence in the drama, but, as far as it goes, was creditably sustained by Mr. Evans, whose careful performance of the smallest parts intrusted to him deserves the highest commendation. The scenery is admirable, as is almost invariably is at this house. Nothing can be more real than the *Cobblers' Cave*, or the exterior and interior of the inn. The drama was announced for repetition by Mr. Fawcett, amidst universal plaudits.

A Mr. Balls from Dublin made a rather successful debut on Tuesday in *Triumph Pickle*.

HAYMARKET THEATRE.

IN our notice of the close of this theatre last week, we omitted the following list of pieces produced during the season.

The Female Sheriff, a Ballet by Burnet.
Lodgings for Single Gentlemen, a Comedy in one act by Poole.
Menemore, a Comedy by Dance and Pritchard.
Happiest Day of My Life, a Farce in two acts by Shakespeare.
Nothing Surprised, a Comic Piece in one act by Thompson.

Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 12mo. 2d edition, enlarged, price 5s. boards.

SURE METHODS OF IMPROVING HEALTH and PROLONGING LIFE,

by regulating the Diet and Regimen; embracing all the most approved Principles of Health and Longevity, and exhibiting the remarkable Power of proper Food, Wine, Air, Exercise, &c. in the cure of obstinate Chronic Diseases, as well as in promoting Health and Long Life. To which are added an Account of the Art and excellent Effects of Trains for Health, Rules for reducing Corpulence, and Maxims for the Bilious and Nervous, the Consumptive, &c. Illustrated by Cases.

By A PHYSICIAN.

"We are disposed to think it the most useful and rational work of the kind we have met with; it is altogether an admirable code of health."—*Atlas*, Sept. 1887.

"The tendency of this volume to advance the important objects which it proposes is unquestionable, and we warmly recommend it. It is intelligent, practical, and highly interesting."—*New Literary Gazette*, Sept. 1887.

"That this work has been the result of mature study and protracted experience, we fully believe; and that men of all habits will derive information from it, calculated to increase their comfort and extend their days, is as firmly our conviction."—*Edinburgh Observer*, Jan. 1888.

Published by Simpkin and Marshall, Stationers' Court, London; sold by all Booksellers.

Of whom may be had, by the same Author, just published, price 6s. 6d. boards.

2. An Account of Persons remarkable for Health and Longevity, exhibiting their Habits, Practices, and Opinions in reference to the best means of preserving Health, improving a bad or impaired Constitution, and prolonging Life.

To which are added, authentic Cases of Recovery from many various and protracted Diseases, with the means successfully employed; a definite Plan for the removal of that peculiar affection of the Throat to which Clergymen and other Public Speakers are liable; and Maxims of Health for the Gouty, Paralytic, and Asthmatic.

"A work replete with admirable precepts."—*Hammer Mercury*, 14th July, 1880.

"It is drawn up with great knowledge of the subject, and we have seldom met with a production calculated to entail greater benefits on the community."—*Sun*, 1st July, 1880.

"The motto of this book is, 'Knowledge is power'; but its tendency is to show that 'knowledge' is even something better than 'power'—that is, health, and long life, and happiness."—*Court Journal*, 4th July, 1880.

Corrected to Feb. 1880.

In 2 vols. 12mo. price 1l. 8s. boards, with the Arms elegantly engraved, the 18th edition of

DEBRET'S PEEPAGE OF THE UNITED KINGDOM OF GREAT BRITAIN and IRELAND.

Printed for Rivington, Egerton, Clarke, Longman and Co., Cadell, J. Richardson & Co., Baldwin, and Cradock, Bech, Book, Bagster, Hatchards, Hamilton and Co., Parbury and Co., Scholey, Pickering, Lloyds, Hodgson, Templer, and Houlston.

Of whom may be had, uniformly printed, Debrett's Baronetage; new edition, corrected to Sept. 1880, 9 vols. 12mo. price 1l. 8s.

Price Six Shillings.

THE FOREIGN REVIEW.

No. VIII.

The First Four Volumes of this very interesting and popular Journal may now be had complete, price 3l. 3s. extra boards.

London: Black, Young, and Young, 2, Tavistock Street, Covent Garden; Messrs. Barchard, Messrs. Jewell, Great Marlborough Street; and Whittaker, Treacher, and Co. Ave. Marsh Lane.

"The present number of the Foreign Review is every way respectable. The first article is on the never-fading subject of Phylology. With all our prejudices in favour of the German, we are bound in justice to confess that the reviewer has given us some formidable thorns. The second article, 'Lectures on Germany,' is lively and entertaining. The fourth article, 'Müller's Dorians,' gives a clear and distinct view of the history of the Dorians, but that is not German. The article before us we believe is the first that has been written on it, and deserves no small degree of praise."—*Edinburgh Evening Post*.

In 8vo. 12s.

AN ACCOUNT of some of the most important DISEASES peculiar to WOMEN.

By ROBERT GOOCH, M.D.

Contents.—The Peritoneal Fevers of Lying-in Women—the Disorders of the Mind in Lying-in Women—the Diseases liable to be mistaken for Pregnancy—Polyus of the Uterus—The movable Uterus—A peculiar form of Hemorrhage from the Uterus—A Disorder of Children commonly mistaken for Congestion of the Brain—Is the Plague a contagious Disease?

"The extracts which we have made will satisfy the general reader, that the opinions to which we have alluded have been moulded in the mind of one who has seen well, thinks deeply, and explains his thoughts with that simplicity of language which always accompanies power. If the professional reader has attended at all to the progress of medicine, he will see that there is no one of the ten Essays in Dr. Gooch's work which does not prove an important practical point. No such work has appeared on the branch of medicine professed by our author since the time of that admirable physician, Dr. William Hunter."—*Quarterly Review*, July 1880.

"Dr. Gooch has long been known to the public and the profession as a physician whose opinions, particularly in female complaints, was of great value; and his method of investigating disease has generally been supposed to bear a great resemblance to that pursued by the late Dr. Baillie. Possessing a mind as highly educated, and so rare at the present day, it is not to be wondered at that his work should have been so generally and so enthusiastically perused with interest. This volume displays a rich collection of facts and observations in reference to the diseases of which it treats, deduced from opportunities which few have enjoyed, and still fewer known how to employ; and we strongly recommend those engaged in the responsible practice of obstetrics to make themselves well acquainted with its contents."—*Lancet Medical and Physical Journal*, July 1880.

"Dr. Gooch presents an interesting example of a man in health retaining the full vigour of his mind, and analysing the materials with which his extensive opportunities have presented him, and presenting to his brethren the results of his own experience. It is refreshing to turn from the ordinary routine of medical writing to a work like that before us, in which the graphic delineations of disease at once convince the reader that they are copied from nature, and in which the facts are so arranged as to be completely borne out by the facts."—*London Medical Gazette*, May 20, 1880.

John Murray, Albemarle Street.

A SECOND COURSE OF SERMONS for the YEAR; containing Two for each Sunday, and One for each Holiday; abridged from the most eminent Divines of the Eastern Church, and adapted to the Service of the Parishes intended for the Use of Families and Schools. Dedicatory, by permission, to the Lord Bishop of London.

By the Rev. J. R. PITMAN, A.M.

Alternate Morning Preacher of Belgrave and Brompton Churches, and alternate Evening Preacher of the Foundling and Magdalen Hospitals.

"There is no question which the clergy are more frequently asked, and to which they find it more difficult to give a satisfactory reply than this—What Sermons would they recommend for the use of a private family? We think that Mr. Pitman's work will supply the deficiency which has been so much regretted."—*Quarterly Theological Review*.

A Second Edition of the First Course is just published, same size and price as above.

Printed for James Duncan, 27, Paternoster Row.

Invasion of British India by the Russians.

Just published, in 1 vol. 8vo. price 1s. boards.

ON THE PRACTICABILITY of an INVASION OF BRITISH INDIA, and on the Commercial and Financial Prospects and Resources of the Empire.

By Lieut.-Col. DE LACY RYAN.

J. M. Richardson, 23, Cornhill.

Three superior Books for the Higher Classes of Students in the French Language.

VOYAGE de POLYCLÈTE; ou Lettres Romaines.

Abrégé par M. DE ROULLION.

Price 7s.

2. Leçons Françaises de Littérature et de Morale. Par M. Noël et M. de la Place. 8vo. 16s.

3. Œuvres de Molière; accompagnées des Notes Explicatives et des Remarques Critiques. Par M. Gambert. 3 vols. 16s.

The first of these works does homage to the name of the author, not only by its correct description of the manner in which Customs and Institutions, but also by the elegance of style, the correctness of sentiment, and the perfection of morality with which it is ornamented.

The second work, comprising Selections from the best Writers in the French Language, is held in the highest esteem all over the Continent. The third edition of the *Œuvres de Molière*, and may be depended upon as the most correct extant.

The Notes and Arguments attached to the celebrated *Plays* of Molière, by M. Gambert, will enable the reader to discover the numerous beauties of the author, and to acquire a correct taste and judgment.

Printed for J. Souter, School Library, 75, St. Paul's Churchyard.

FBI MEMPHIS, TENNESSEE, MAY 6 AND 7, 1968

SIR JOSHUA REYNOLDS'S PICTURE,

the Property of the British Institution, for which 8000 Guineas were given. In a few days will be published, a Line Engraving from the Picture, to be sold by the Printers of London, and of the Engraver, J. G. Walker, Bond Street, (near the New Church), Chelsea.
Proofs, on India paper, before the letters, 15s. each; Proofs, on India paper, with the letters, 10s. each; Prints, 7s. each.

This day is published, price 1s.

WESTALL'S GREAT BRITAIN

ILLUSTRATED, No. XV. containing Four Views, beautifully engraved by Finden, of Preston, Cambridge, Dover, and Durham: continued monthly.
"We never observed any thing before so remarkably beautiful, at such a very low price."—*Genl.'s Magazine*.
Printed for Charles Tilt, 25, Fleet Street.
A few Proofs on India paper are taken, price 2s. each Number.

To Wykehamists and others.

PICTURESQUE MEMORIALS OF WINCHESTER.

CHESTER. Part I. price 3s. (or 2s. 6d. to Subscribers for the Six Parts complete), in demy 4to. elegantly printed, containing—1. The Ancient City Cross—2. East End of the Cathedral—3. The Cheyney Court and Close Gate.
With Historical Descriptions, by A. WYKEHAMIST.
Published by George Cowie and Co., W. Pickering, and Simpkin and Marshall, London; and Robbins and Wheeler, Booksellers to the College, Winchester.

A few Copies, Proofs, 5s. 1. and on Folio Paper, 7s. 6d.
Part II. in November, will contain—1. Winchester College—2. The Deanery—3. Ancient Conventual Kitchen in the Close.

MUSIC.

Just published, for the Use of Professors, Governors, Schools, &c. with a beautiful Delineation of the Pedal Harp, the Strings correctly coloured, the Gamut, &c. price 4s.

THE HARP PRIMER.

By CHARLES EGAN,
Professor to H. R. H. the Princess Augusta, and First Harpist to H. R. H. the Duchess of Clarence.
Sold by all the principal Music-sellers, and the Author, 2, Wilton Street, Grosvenor Place, London.
"An excellent little work, well written, and admirably calculated to assist beginners."—*John Bull*.
"We know of no production which so clearly explains the elements of music as this *Harp Primer*. It will be most useful to professors, pupils, schools, and musical families in general."—*Morning Chronicle*.

The Musical Prism.

This day is published, price 6s.
THE MUSICAL PRISM.
Goulding, D'Almaine, and Co. Soho Square.

BOOKS PUBLISHED THIS DAY.

In 1 vol. 12mo. price 4s. boards.

LIFE ON BOARD A MAN-OF-WAR,

including a full Account of the Battle of Navarino.
By A BRITISH SEAMAN.
"As the narrator served in the *Genoa* at the Battle of Navarino, a full account is given of all that came under his own observation during that extraordinary conflict, and such new light is thrown on the conduct of that vessel and its commander, regarding which so great an interest has been excited in the public mind by the recent court-martial at Portsmouth. It does credit to the author's talents and power of observation, and is a well-timed publication."—*Edinburgh Literary Gazette*.
Printed for Blackie, Pall Mall, and Co. Glasgow; and James Duncan, 27, Paternoster Row, London.

Small 8vo. 6s.

THE FAMILY LIBRARY, No. VII.

(being the Natural History of Insects.)
John Murray, Albemarle Street.

Price 6s.

A LETTER from SYDNEY, the Princi-

pal Town of Australia.
Edited by ROBERT GOUGER.
Together with the Outline of a System of Colonization.
London: J. Cross, 12, Holborn; Simpkin and Marshall, Stationers' Court; and Wilson, Royal Exchange.

French Translation of Bishop Watson's Apology for the Bible.

APOLOGIE ou DEFENSE de la BIBLE.

Par RICHARD WATSON, D.D.
Traduit de l'Anglais, et avec des Résumés de Preuves en faveur du Christianisme, et d'un Appendice.
Par L. T. VENTOUILLAC.
Se vend chez C. J. G., et F. Rivington, St. Paul's Churchyard, et Waterloo Place, Pall Mall; et Treuttel, Wurtz, et Co. Soho Square.

THE Rev. J. W. BELLAMY'S CON-

CORDANCE to the HOLY BIBLE, is just published in 4to. price 5s. sewed; to which are added, a Geographical Index, Calendar, and Table of Lessons, and an Alphabetical List of Proper Names, accompanied.
This Work will be found very useful to bind up with any 4to. edition of the Bible, and is particularly adapted to the Maps and Notes of the Family Bible edited by Dr. O'Byrne and Bishop Mant.
Printed for C. J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Dr. Baileiff's Sermons.

In 2 vols. 8vo. price 11. 10s. boards.
SERMONS on the most important Duties of the Christian Religion, the Lord's Prayer, and on the Great Mystery.

By J. A. BUSFIELD, D.D.
Domestic Chaplain to the Earl of Mulgrave, and Rector of St. Michael's, Wood Street.

Sold by C. J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

* * * A few Copies of the Third Volume may be had separately, price 12s.

In 12mo. price 6s. 6d. boards.

HENRY and ANTONIO; or, the Proselytes of the Roman Catholic and Protestant Churches.
Translated from the third edition of the German of Dr. C. G. Bretschneider, Chief Counsellor of the Consistory, and General Superintendent in Gotha.

By the Rev. M. MORGAN,
Chaplain to the British Residents at Gothenburg.
Printed for C. J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 12mo. price 6s. boards.

PROTESTANT ERRORS, and ROMAN CATHOLIC TRUTHS; a Tale.

By NOEL THOMAS ELISON, M.A.
Rector of Hantsley, Somerset; and late Fellow and Tutor of Balliol College, Oxford.
Printed for C. J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

On Health and Longevity.

SURE METHODS OF IMPROVING

HEALTH and PROLONGING LIFE, by regulating the Diet and Regimen; embracing all the most approved Principles of Health and Longevity, and exhibiting the remarkable Power of proper Food, Wine, Air, Exercise, &c. in the cure of obstinate Chronic Diseases, as well as in promoting Health and Long Life. To which are added, an Account of the Art and excellent Effects of Training for Health, Rules for reducing Corpulence, and Maxims for the Billows and Nervous, the Consumptive, &c. Illustrated by Cases.

By A PHYSICIAN.
"We are disposed to think it the most useful and rational work of the kind we have met with. It is altogether an admirable code of health."—*Atlas*, Sept. 1887.

"The tendency of this volume to advance the important objects which it proposes is unquestionable, and we warmly recommend it. It is intelligent, practical, and highly interesting."—*New Literary Gazette*, Sept. 1887.

"That this work has been the result of mature study and practical experience we fully believe; and that men of all habits will derive information from it, calculated to increase their comfort and extend their days, is as firmly our conviction."—*Edinburgh Observer*, Jan. 1888.
Published by Simpkin and Marshall, Stationers' Court, London; and by all Booksellers.

Of whom may be had, by the same Author, just published,

price 6s. 6d. boards.

2. An Account of Persons remarkable for Health and Longevity, exhibiting their Habits, Practices, and Opinions in reference to the best means of preserving Health, improving a bad or impaired Constitution, and prolonging Life. To which are added, authentic Cases of Recovery from many severe and protracted Diseases, with the means successfully employed; a definite Plan for the Removal of that peculiar Affection of the Throat to which Clergymen and other Public Speakers are liable; and Maxims of Health for the Gouty, Paralytic, and Asthmatic.

"A work replete with admirable precepts."—*Humber Mercury*, 14th July, 1888.

"It is drawn up with great knowledge of the subject, and we have seldom met with a production calculated to entail greater benefits on the community."—*Sun*, 1st July, 1888.

"The motto of this book is, 'Knowledge is power'; but its tendency is to show that 'knowledge' is even something better than 'power'—that is, Health, and long life, and happiness."—*Cover Journal*, 4th July, 1889.

Corrected to Feb. 1889.

In 2 vols. 12mo. price 11. 8s. boards, with the Arms elegantly engraved, the 18th edition of

DEBRETT'S PEERAGE OF THE UNITED

KINGDOM OF GREAT BRITAIN AND IRELAND.
Printed for Rivingtons, Egerton, Clarke, Longman and Co., Cadell, J. Richardson, J. M. Richardson, Baldwin and Cradock, Beeth, Books, Benger, Hatchard, Hamilton and Co., Farbury and Co., Scholey, Pickering, Lloyd, Hodgson, Templeman, and Houlston.

Of whom may be had, uniformly printed,

Debrett's Baronetage; new edition, corrected to Sept. 1888, 2 vols. 12mo. price 11. 8s.

Price Six Shillings.

THE FOREIGN REVIEW.

No. VIII.

The First Four Volumes of this very interesting and popular Journal may now be had complete, price 21. 2s. extra boards.

London: Black, Young, and Young, 2, Tavistock Street, Covent Garden; Bosange, Bartholomew, and Lowell, Great Marlborough Street; and Whitaker, Trenchard, and Co. Ave. Mark Lane.

"The present number of the Foreign Review is every way respectable. The first article is on the never-failing subject of Phenology. With all our prejudices in favour of the subject, we are bound in justice to confess that the reviewer has given a most thorough and accurate account of the subject. 'Lectures on Germany,' is lively and entertaining. The fourth article, 'Mish's Dorians,' gives a clear and distinct view of the history of the Dorians, by that learned German. The notice before us we believe to be the first that has been given of it, and deserves no small degree of praise."—*Edinburgh Evening Post*.

In 8vo. 12s.

AN ACCOUNT of some of the most Important DISEASES peculiar to WOMEN.

By ROBERT GOOCH, M.D.

Contents.—The Peritoneal Fevers of Lying-in Women—the Disorders of the Mind in Lying-in Women—the Diseases liable to be mistaken for Pregnancy—Polypos of the Uterus—The Intractable Uterus—A peculiar form of Hemorrhage of the Uterus—A Disorder of Children commonly mistaken for Consumption of the Brain—Is the Plague a contagious Disease?

"The extracts which we have made will satisfy the general reader, that the opinions to which we have alluded have been carefully and in the mind of one who has seen well, thought deeply, and explains his thoughts with that simplicity of language which always accompanies power. If the professional reader has attended at all to the progress of medicine, he will see that this is not one of the ten Essays in Dr. Gooch's work which does not present an important practical point. No such work has appeared on the branch of medicine professed by our author since the time of that admirable physician, Dr. William Hunter."—*Quarterly Review*, July 1889.

"Dr. Gooch has long been known to the public and the profession as a physician whose opinion, particularly in female complaints, was of great value; and his method of investigating disease has generally been supposed to bear a great resemblance to that pursued by the late Dr. Baillie. Possessing a mind so highly endowed, and so rare at the present day, it is not to be wondered at that his work should have been received with respect, and perused with interest. This volume displays a rich collection of facts and observations in reference to the diseases of which we treat, deduced from opportunities which few have enjoyed, and still fewer known how to employ; and we strongly recommend those engaged in the responsible practice of obstetric medicine to make themselves well acquainted with its contents."—*London Medical and Physical Journal*, July 1889.

"Dr. Gooch presents an interesting example of a man in full health retaining the full vigour of his mind, and analyzing the materials with which his extensive opportunities have provided him, and presenting to his brethren the results of his matured experience. It is refreshing to turn from the ordinary routine of medical writing to a work like that before us, in which the graphic delineations of disease at one continue the reader than they are copied from nature, and in which the inferences deduced seem to be completely borne out by the facts."—*London Medical Gazette*, May 20, 1889.

John Murray, Albemarle Street.

In 2 vols. 8vo. price 7s. boards.

A SECOND COURSE of SERMONS for

the YEAS; containing Two for each Sunday, and One for each Holyday; abridged from the most accurate Review of the Established Church, and adapted to the Services of the Day intended for the Use of Families and Schools. Dedicated, by permission, to the Bishop of London.

By the Rev. J. B. PITMAN, A.M.
Alternate Morning Preacher of Belgrave and Barchinay Churches, and alternate Evening Preacher of the Foundling and Magdalen Hospitals.

"There is no question which the clergy are more frequently asked, and to which they find it more difficult to give a satisfactory reply than this—What Sermons would they recommend to the use of a private family? We think that Mr. Pitman's work will afford to supply the deficiency which has been so much regretted."—*Quarterly Theological Review*.

A Second Edition of the First Course is just published, same size and price as above.

Printed for James Duncan, 27, Paternoster Row.

Invasion of British India by the Russians.

PRICE 8d.

Tales of My Time. By the Author of "Blue-
Stocking Hall." 3 vols. 12mo. London, 1823.
Calburn and Bentley.

"The reader may perhaps imagine that Miss Ferret was not of such a grade in society as to admit of her interesting herself amongst the guests in a housewife's home; and that her education, confined to a humble walk, would scarcely aspire so high as to rule the destinies of two such people as Miss Robinson and Mr. Harbord; but the fact was otherwise. A downy country neighbourhood far removed from metropolitan fastidiouslyness, admits of occasional mistakes unknown to high life in town; and when we consider that the Ferret family, of which Jeanette was the last remnant, had lived with credit and voted steadily for Mr. Bager during a course of years,—as also that Miss Ferret's central position close to the market-place afforded her opportunities of forestalling the wants and uncertain supplies of fish, sweetmeats, and other dainties which are the price on which turns the fame of a dinner entertainment in a remote situation,—it cannot surely surprise any reasonable person that Miss Ferret should often be invited to suppers her peers, and with her dinner dressed in a headscarf, and suspended from the peasant, exhibited to parties of the gait cheer which her late and early vigilance had provided. She was, besides, a woman of address. If she passed a carriage on the road, she drew her veil over her face, and never rode up to the front door. She had heretics a permanent deposit of flowers, feathers, and feathers, which were left in a basket at Cleburn, under the guardianship of Lady Goodman's maid, with whom she was a prime favourite,—as, however unobtrusive the manner on her hands, she never forgot to slip a volume of the last novel into her basket for Mrs. Hophien. If a servant was to be hired, Miss Ferret inquired the character; if a bargain was to be had, Miss Ferret heard of, and recommended it to her friends; and when all her various duties were performed, the evening was not neglected. Harbord with a cross-stitch stand of an old, and freighted with charades, epigrams, epithalamiums, and piquaneries, the same number of society doted all the

We must give the commencement of her operations -

— When the glad announcement was made that dinner was served, Miss Ferrel, who had laid her plan of operations, commenced them by keeping up such a cross-fire of talk with the company were in the act of descending the stairs, that by the time they reached the dining-parlor, she had marshaled the guests without being perceived by any one, and contrived to take herself into a chair between Miss Robinson and Mr. Harland. The marriage arrangement which, by passing two gentlemen in the center, would have given each lady an equal claim on his attention, might not have been so judicious had it been Miss Ferrel's intention of affairs, she indicated herself the indeterminate's throne, where any attention was bound to be extremely scanty; and she was thus enabled to re-

late and guide it as was most conducive to her ultimate ends. Before the dinner came up, the table, she had ventured to insinuate that there was a wonderful sympathy in the tones of her *pet pee*; and she conveyed the sentiments from one to the other, so the comparative merits of roast and broiled, fricasse and fry, hot and cold, brown and cream, fry, with sundry other interesting appanages which she herself suggested, there certainly did appear to be a harmony of opinion which led far for disputes, as was a that state of affairs, which we are taught to believe, traverse most of the unappetites by which it is, also, so frequently vitiated, to a fatal talent for dissipation upon such like topics of daily recurrence. The perpetual correction of any crops will wear out a cook; and there we Miss Ferret seemed to be guided by sound discretion in her admiration of our harmonious, it being, as she always observed, 'made to do little things.' From generals it was natural to descend to particulars, and Hensley still was on the tapis as the ladies withdrew. Miss Ferret asked Miss Radburn if she, who was so partial to the pursuit of rural sports, and knew 'every thing about plants, from the oak to the daisy,' had ever seen a *corn-crow*. The young answered in the negative. Miss Ferret exclaimed, '(Oh, I am so glad that we have any thing to show you.' By the by, may I say that I am, I am really glad to meet you, and so to have Mr. Hartman's name to give my promise, as it is at Hartman's that I have met which I have meant and is to be said. They say that it was brought over on a *gig* (a cart, near London, from a little old years ago, by an officer who got it to his good grandfather, who then rented the lands where we are looking to Mr. Hartman.' Mr. Hartman thanked; and his thin being thin and fat, the sufficiency was manifest to a degree which engured well for setting fire to a train which was laid in Miss Ferret's trail, so he rejoined, 'I have known which can be compared in a better service, and at a time I shall be happy to engage those best interests in procuring such an honour as you kindly say for their master.' 'I pen my word, Mr. Hartman, you are very polite, and so I move on I deserve after such a liberty as I have taken that I mean to point to it, I assure you.' Miss Radburn ought not to suffer for my assistance in forgetting that with my *pet pee* before all my interest in Hensley's game was. Now a scrupulous friend, she said, 'I would your horses, for I am sure that you would not refuse to favour me in the same thing. You know, my dear, that the Radburns are more than that, and I have heard that last gentleman that was a little disappointed, and also a little of the same kind of praise, but she did not say so. So you see that I have not a word to say of the praise of a friend, which is the thing to be given to a friend, and so I shall not be so proud and proud to make much of it.

ever she goes.' What with blushing, bantering, laughing, and complimenting, a very fair measure of execution was done before the party re-assembled above stairs, and Miss Ferret, who, like all wise people, was a keen observer of portents, remarked that Mr. Hartland was the first gentleman to leave the dining-room."

We need scarcely say, that the issue is such as to add reason to the rhyme—

"Loving goes by haps;
Some Cupids kill with arrows, some with traps."

The history of the family thus founded is told with much skill, and displays talent that may well distinguish it from its many competitors.

An Encyclopædia of Plants; comprising the Description, Specific Character, Culture, History, Application in the Arts, and every other desirable particular respecting all the Plants indigenous, cultivated in, or introduced to, Britain: combining all the advantages of a Linnean and Jussieuan Species Plantarum, an Historia Plantarum, a Grammar of Botany, and a Dictionary of Botany and Vegetable Culture. The whole in English; with the Synonyms of the commoner Plants in the different European and other Languages; the Scientific Names accentuated, their Etymologies explained, the Classes, Orders, and Botanical Terms, illustrated by Engravings; and with Figures of nearly Ten Thousand Species, exemplifying several Individuals belonging to every Genus included in the Work. Edited by J. C. Loudon, F.L.S., H.S., &c. The Specific Characters, &c. by John Lindley, F.R.S., &c. The Drawings by J. D. C. Sowerby, F.L.S. 8vo. pp. 1159. London, 1829. Longman and Co.

THE long title-page of this work expresses so fully and clearly what it is intended to be, that the duty of a reviewer is limited to that of examining how far the intention is fulfilled. We have delayed doing this hitherto, not only because we wished to ascertain the opinion of a botanical friend, but because we also wished to examine the work at leisure ourselves. We now give the result of our own examination and of our scientific inquiry. Our general impression of the work is, that, taking it altogether, it is the most extraordinary that has yet appeared on any branch of science. Extraordinary for the immense mass of information condensed in so small a space; extraordinary for the number and beauty of the engravings and for the extent of letter-press; and extraordinary for the moderate price at which it is sold. We have the essence of what in the last edition of Miller's Dictionary occupies four folio volumes; in Sowerby's Botany, plates to the value of 50*l.*; and in the Botanical Magazine and Botanical Register, plates which sell for upwards of 200*l.*; besides a quantity of original matter to which we shall presently refer, and upwards of 200 engravings of plants which have never before been figured in this or in any other publication. These engravings are made from dried specimens in the herbariums of Mr. Lambert and of Mr. Lindley, and from living plants in the collection of Messrs. Lodiges; and are not only an important addition to botanical literature, but of themselves render the work a desideratum to the scientific botanical collector.

The utility of a work of this kind is not in general to be estimated by its originality; but it is a prominent and valuable feature in this, that it contains the first and only introduction to the natural or Jussieuan system of botany

which has yet appeared in the English language. It is composed by Mr. Lindley, and is a perfect model for order, perspicuity, and comprehensiveness. The French, though they are the fathers, and the greatest cultivators of the natural system, have nothing to equal it; and we were really astonished in reading this part of the work, at the interest created by bringing together in groups all the plants similar in appearance, and of similar natures. This is, in fact, what every man in looking at plants or any thing else does in his own mind, as far as he can; so that the natural system is nothing more than a return to nature, with an increased power of detecting differences and resemblances. This manner of studying botany, which is now taught both in the Cambridge and London Universities, by Professor Henslow and Professor Lindley, will, we have little doubt, soon be generally adopted; and to Mr. Lindley will be due the honour of having resolutely persisted, contrary to the opinion of nine-tenths of the botanical world, in making an innovation which will rank botany so much higher in the scale of science.

A second original feature in Mr. Loudon's work is the introduction of forty pictorial signs as a substitute for the ten arbitrary signs formerly in use in abridged botanical description. That our readers may understand the value of this improvement, we may state, that hitherto, in botanical catalogues, all plants of the ligneous or tree kind, whether shrubs, evergreens, timber-trees, &c. were designated by the same mark, understood among botanists and gardeners, but totally unintelligible to general readers. In this Encyclopædia all the different kinds of ligneous plants are designated by small pictures; for instance, the picture of an evergreen round-headed tree, of a deciduous round-headed tree, of an evergreen spiry-topped tree like the spruce fir, of a deciduous spiry-topped tree like the larch, of an evergreen shrub like the arbutus, of a deciduous shrub like the dog-wood, of a twining evergreen shrub, of a deciduous evergreen shrub, &c. &c. In this way an immense deal of verbal description is saved, while the reader's mind is not in the slightest degree burdened by the labour of recollecting the meaning of arbitrary signs. This improvement, we are informed in the preface, is the invention of the editor, and was first exhibited by him in the Encyclopædia of Gardening, (that other immense and curious volume which he published in 1824.) Were it not for the great expense of casting a set of types for these signs,* the improvement we are sure would be adopted in all botanical works; and we hope, for the sake of botanical readers, that this difficulty may soon be generally overcome.

Another feature worthy of remark, as being of great utility, is, that the names of the commoner plants of Europe are given in the different languages of Europe. This is done in a table at the end, arranged in such a form that any person travelling in any part of the continent, and wishing to know the English or scientific name of a plant, has only to ascertain its local name and refer to the table; or knowing its local name, by referring to the table he will find its English and scientific name. In this table are also included the names of different countries in South America, and of India, Japan, and China. To Englishmen resident abroad it must be of incalculable value; and the more

* We have examined them at Messrs. Spottiswoode's, whose presses in this respect are quite a sight in typography.—Ed.

so as these names have been obtained from Nennich's Universal Lexicon—a work published at five guineas a copy, and now out of print.

As a proof of the editor's talent for arrangement and condensation, we may refer to the Introduction to the Linnean System, which, by means of twenty-seven engravings, is got into two closely printed pages! It is, nevertheless, so complete, that, as far as this mode of arrangement is concerned, it leaves nothing to be wished for.

The Glossary is another model of completeness and comprehensiveness. We have taken the trouble of ascertaining that it contains above 100 terms more than are to be found described in Milne's Botanical Dictionary, and they are illustrated by 282 figures. The last feature of the work which we shall notice is the extraordinary accuracy of the spelling of the names and of their accentuation. We will venture to assert, that there is no work extant equal to it in this respect; and for the truth of our position, we would desire any botanist to refer to the last German editions of the works of Linnæus, to Decandolle's volumes, or to Stendel's nomenclature. On the whole, Loudon's Encyclopædia of Plants is a most invaluable addition to our literature: it will be more useful to beginners, and more instructive to general readers, than any botanical work in any language; and it will be as indispensable in a well-selected general library as an English or Latin dictionary.

Insect Architecture. The Library of Entertaining Knowledge. Vol. III. Part I. London, 1829. C. Knight.

WE do not wonder that the interesting subjects of natural history should speedily attract the care of the editors of the periodical series which now occupy so marked a rank in our current literature. We have, within a few Numbers, had to review White of Selborne in Constable's Miscellany, and a work similar to the present in Murray's Family Library, besides several volumes in which the same topics were largely introduced, though they did not compose the entire substance of the publications; and now we have before us the First Part of Mr. Knight's very delightful exposition of the habits of insects as displayed in the construction of their dwellings, and other remarkable instincts for the safe deposit of their eggs, the provision for their young, and, in general, the preservation and continuance of their species.

"When an insect first issues from the egg it is called by naturalists *larva*, and, popularly, a caterpillar, a grub, or a maggot. The distinction, in popular language, seems to be, that caterpillars are produced from the eggs of moths or butterflies; *grubs*, from the eggs of beetles, bees, wasps, &c.; and *maggots* (which are without feet) from blow-flies, house-flies, cheese-flies, &c., though this is not very rigidly adhered to in common parlance. Maggots are also sometimes called *worms*, as in the instance of the meal-worm; but the common earth-worm is not a larva, nor is it by modern naturalists ranked among insects. Larvæ are remarkably small at first, but grow rapidly. The full-grown caterpillar of the goat-moth (*Cossus ligniperda*) is thus seventy-two thousand times heavier than when it issues from the egg; and the maggot of the blow-fly is, in twenty-four hours, one hundred and fifty-five times heavier than at its birth. Some larvæ have feet, others are without: none have wings. They cannot propagate. They feed voraciously on coarse

substances; and as they increase in size, which they do very rapidly, they cast their skins three or four times. In defending themselves from injury, and in preparing for their change by the construction of secure abodes, they manifest great ingenuity and mechanical skill."

"When larvæ are full grown, they cast their skins for the last time, undergo a complete change of form, and, with a few exceptions, cease to eat, and remain nearly motionless. When an insect, after this change, does not lose its legs, or continues to eat and move, it is popularly called a *nymph*; and when the inner skin of the larva is converted into a membranous or leathery covering, which wraps the insect closely up like a mummy, it is termed *pupa*, from its resemblance to an infant in swaddling bands. From the pupæ of many of the butterflies appearing gilt as if with gold, the Greeks called them *chrysalides*, and the Romans *aurælia*; and hence naturalists frequently call a pupa *chrysalis*, even when it is not gilt. We shall see, as we proceed, the curious contrivances resorted to for protecting insects in this helpless state. After a certain time, the insect which has remained in its pupa-case, like a mass of jelly without shape, is gradually preparing for its final change, when it takes the form of a perfect insect. This state was called by Linneus *imago*, because the insect, having thrown off its mask, becomes a perfect *image* of its species. Of some, this last portion of their existence is very short; others live through a year, and some exist for longer periods. They feed lightly, and never increase in size. The chief object of all is to perpetuate their species, after which the greater number quickly die. It is in this state that they exercise those remarkable instincts for the preservation of their race, which are exhibited in their preparations for the shelter of their eggs, and the nourishment of their larvæ."

Our editor follows various insects through all these contrivances and mutations; and their mere names will help to indicate the curious nature of his investigations: for we have mason-wasps, mason-bees, mining-bees, carpenters, upholsterers, carders, social wasps, tree-hoppers, saw-flies, embroiderers, leaf-rollers, tent-makers, moss-builders, earth-masons, and many an other kind, whose extraordinary habits procure for them such appropriate appellations. And it is deserving of notice, that this is not, as is too usual, the transcript of statements from preceding and popular writers on entomology. On the contrary, Mr. J. Rennie is quoted as an authority for some very original inquiries; and he seems to us to have thrown considerable light on a number of interesting particulars connected with the study of natural history. But we need not again go over the ground we have of late traversed so frequently; and simply repeating that this little volume is well worthy of high esteem among its compeers, we shall give two or three extracts to illustrate its style and manner. Speaking of the upholsterer-bees, Mr. Rennie observes:—

"The material used for tapestry by the insect upholsterer is supplied by the petals of the scarlet field-poppy, from which she successively cuts off small pieces of an oval shape, seizes them between her legs, and conveys them to the nest. She begins her work at the bottom, which she overlays with three or four leaves in thickness, and the sides have never less than two. When she finds that the piece she has brought is too large to fit the place intended, she cuts off what is superfluous, and carries

away the shreds. By cutting the fresh petal of a poppy with a pair of scissors, we may perceive the difficulty of keeping the piece free from wrinkles and shrivelling; but the bee knows how to spread the pieces which she uses as smooth as glass. When she has in this manner hung the little chamber all round with this splendid scarlet tapestry, of which she is not sparing, but extends it even beyond the entrance, she then fills it with the pollen of flowers mixed with honey, to the height of about half an inch. In this magazine of provisions for her future progeny she lays an egg, and over it folds down the tapestry of poppy petals from above. The upper part is then filled in with earth; but Latreille says, he has observed more than one cell constructed in a single excavation. This may account for Réaumur's describing them as sometimes seven inches deep; a circumstance which Latreille, however, thinks very surprising. It will, perhaps, be impossible ever to ascertain beyond a doubt, whether the tapestry-bee is led to select the brilliant petals of the poppy from their colour, or from any other quality they may possess—of softness or of warmth, for instance. Réaumur thinks that the largeness, united with the flexibility of the poppy-leaves, determines her choice. Yet it is not improbable that her eye may be gratified by the appearance of her nest;—that she may possess a feeling of the beautiful in colour, and may look with complacency upon the delicate hangings of the apartment which she destines for her offspring. Why should not an insect be supposed to have a glimmering of the value of ornament? How can we pronounce, from our limited notion of the mode in which the inferior animals think and act, that their gratifications are wholly bounded by the positive utility of the objects which surround them? Why does a dog howl at the sound of a bugle, but because it offends his organs of hearing?—and why, therefore, may not a bee feel gladness in the brilliant hues of her scarlet drapery, because they are grateful to her organs of sight? All these little creatures work, probably, with more neatness and finish than is absolutely essential for comfort; and this circumstance alone would imply that they have something of taste to exhibit, which produces to them a pleasurable emotion. The tapestry-bee is, however, content with ornamenting the interior only of the nest which she forms for her progeny. She does not misplace her embellishments with the error of some human artists. She desires security as well as elegance; and, therefore, she leaves no external traces of her operations. Her's is not a mansion rich with columns and friezes without, but cold and unfurnished within, like the desolate palaces of Venice. She covers her tapestry quite round with the common earth; and leaves her eggs enclosed in their poppy-case with a certainty that the outward show of her labours will attract no plunderer.

"The monkish legends tell us that St. Francis Xavier, walking one day in a garden, and seeing an insect, of the *mantis* genus, moving along in its solemn way, holding up its two fore legs as in the act of devotion, desired it to sing the praises of God. The legend adds that the saint immediately heard the insect carol a fine canticle with a loud emphasis. We want no miraculous voice to record the wonders of the Almighty hand, when we regard the insect world. The little rose-leaf cutter, pursuing her work with the nicest mathematical art—using no artificial instruments to form her ovals and her circles—knowing that the elastic

property of the leaves will retain them in their position—making her nest of equal strength throughout, by the most rational adjustment of each distinct part—demands from us something more than mere wonder; for such an exercise of instinctive ingenuity at once directs our admiration to the great Contriver, who has so admirably proportioned her knowledge to her necessities."

Of the carders, we are told:—"The carder-bees select for their nest a shallow excavation about half a foot in diameter; but when they cannot find one to suit their purpose, they undertake the Herculean task of digging one themselves. They cover this hollow with a dome of moss—sometimes, as we have ascertained, of withered grass. They make use, indeed, of whatever materials may be within their reach; for they do not attempt to bring any thing from a distance, not even when they are deprived of the greater portion by an experimental naturalist. Their only method of transporting materials to the building is by pushing them along the ground—the bee, for that purpose, working backwards, with its head turned from the nest. If there is only one bee engaged in this labour, as usually happens in the early spring, when a nest is founded by a solitary female who has outlived the winter, she transports her little bundles of moss or grass by successive backward pushes, till she gets them home. In the latter part of the season, when the hive is populous and can afford more hands, there is an ingenious division of this labour. A file of bees, to the number sometimes of half a dozen, is established, from the nest to the moss or grass which they intend to use, the heads of all the file of bees being turned from the nest and towards the material. The last bee of the file lays hold of some of the moss with her mandibles, disentangles it from the rest, and having *carded* it with her fore-legs into a sort of felt or small bundle, she pushes it under her body to the next bee, who passes it in the same manner to the next, and so on till it is brought to the border of the nest—in the same way as we sometimes see sugar-loaves conveyed from a cart to a warehouse, by a file of porters throwing them from one to another. The elevation of the dome, which is all built from the interior, is from four to six inches above the level of the field. Beside the moss or grass, they frequently employ coarse wax to form the ceiling of the vault, for the purpose of keeping out rain, and preventing high winds from destroying it. Before this finishing is given to the nest, we have remarked, that on a fine sunshiny day the upper portion of the dome was opened to the extent of more than an inch, in order, we suppose, to forward the hatching of the eggs in the interior; but on the approach of night this was carefully covered in again. It was remarkable that the opening which we have just mentioned was never used by the bees for either their entrance or their exit from the nest, though they were all at work there, and, of course, would have found it the readiest and easiest passage. But they invariably made their exit and their entrance through the covert-way or gallery which opens at the bottom of the nest, and, in some nests, is about a foot long and half an inch wide. This is, no doubt, intended for concealment, from field-mice, polecats, wasps, and other depredators."

Here we conclude, fully convinced that the work needs no farther commendation from us to give it deserved popularity.

Beatrice: a Tale founded on Facts. By Mrs. Hofland. 3 vols. 12mo. London, 1829. Longman and Co.

AMID the many writers who have, in the present day, devoted talents worthy of the branch of literature they pursue—one of its most important and influential, viz. that which has in view youthful amusement and improvement—few take a deservedly higher rank than Mrs. Hofland. We know no books, for example, that we would sooner place in the hands of young people than her *Ellen the Teacher*, and the *Son of a Genius*. In this age of over-education, when, if there be no royal road to science, there are at least many macadamised ones—when zoology, conchology, &c. &c. are familiar in the mouth as “household words,”—we hold that author to be no small moral benefactor who remembers that there are such things as principles to be strengthened, affections to be cultivated, and, above all, that sense is preferable to knowledge. Indeed, good, plain, excellent sense, is the great characteristic excellence of Mrs. Hofland’s works: her maxims are such as all may apply, her examples such as all may imitate. *Beatrice* is, we think, one of her most successful productions: the story, though romantic enough to be extremely interesting, is quite rational enough to be also very instructive; for few mental lessons are more instructive than difficulties supported and overcome by principle and exertion. We shall not attempt to detail the plot, but content ourselves with an extract to mark some individual excellence. The ensuing scene is one of much power; it is that of a gamester returning home to the wife whom his harshness has already reduced almost to the grave.

“He descended with heavy steps, and turned into the little breakfast-parlour. Mrs. De Lester had been during the whole evening in that dreadful state, which may be conceived as affecting one whose health was so delicate, whose heart was so worn, whose *all* was set on one awful cast. The sultry state of the atmosphere, the distant roll of thunder, the fear that something might prevent Alice and Beatrice from arriving, and the remembrance that, in all probability, her last hope, her last chance, was over, contributed so to agitate her, that many times in the course of the evening it might be said her poor frame shook ‘almost to dissolution;’ and often did she wish the struggle was over, even by the surrender of an existence so long rendered miserable. At length, in the dead of night, when her very soul might be said to centre in her sense of hearing, she heard a light yet distinct step: it ascended the stairs to Alice’s room; ‘doubtless it was she, who was in the first place seeking a cloak or other necessities.’ In a few minutes this doubt vanished—it was De Lester’s tread: ‘unquestionably he had discovered their design; he had sought Alice as the first victim of his wrath, and not found her; he was coming alone, in this hour of darkness, to wreak it upon her.’ Gasping for breath, conscious of increasing faintness, Elinor tore the handkerchief from her throat, and tried to rise from the sofa on which she was sitting, that she might approach the window for air; but every step which brought her husband more near, doubled the beating of her heart, the indistinctness of her perceptions; and, at the moment when his hand was laid on the handle of the door, she sunk utterly lifeless on the pillow of the sofa, her head so thrown as to render her position dangerous. There was a chamber-lamp in the room, which, together with the candle in his

hand, shewed De Lester the form and situation of his wife. For a moment he started horror-struck, as thinking she was dead; but, on looking at her closely, he was convinced she had only fainted, for he had seen her several times in a precisely similar situation. ‘Doubtless she had heard him, and, knowing the house was unguarded, had been terrified by the fear of thieves. What! if she never should recover?—would it not be well if she never did? Her will might be now established—Maria might be his: the world was before him in all its splendour of promise.’ ‘A busy, meddling fiend’ was at the gamester’s heart: the most tempting stake he had ever thrown for was before him; the prize, the splendid prize, by which he might win a world of wealth, could be obtained, and, as it appeared, without risk for the future: ‘the future of time he meant—the future of eternity he thought not of.’ Whilst he gazed on her pale countenance, and her long small neck now exposed by her position, he perceived a slight motion of the eyelid indicative of returning life; he sprang forward, and his heart whispered, ‘that motion must be the last.’ Instantly clasping her neck with his hands, which yet trembled as they murdered, he pressed her closely: a deep gurgling sound rose from the stomach, and seemed struggling in the throat, whilst the body, as by a convulsive effort, rolled from the sofa upon the floor. Starting, as if the dead had risen from the grave to reproach him, De Lester suddenly let go his hold and fled from the room—the house.”

We agree too well with the following passage not to quote it.

“Of all the acts of folly and cruelty of which parental blindness can be guilty, there is none more to be lamented than that which, from the pride of display, or even the more generous desire for improvement, induces any one to press on infancy the tasks fitted for youth, or demand from youth the wisdom of manhood. It is rending and scattering the blossoms in order to reach the fruit, which, if obtained, is immature, unnatural, and therefore unpleasant; it is the conduct of an Egyptian taskmaster, demanding a work without the materials which form it; an arraigning of the wisdom and providence of God, who, in rendering man the most perfect of his creatures, has yet evidently made his progress the slowest towards the attainment of his powers. That indolence must be conquered, industry excited in children; that Dr. Johnson truly said, ‘idleness was the fault of human nature;’ and it is a fault every wise and kind parent will seek to eradicate,—there is no denying; but we speak in pity to that class of children who are stimulated because they are willing—goaded whilst running. Can the recitation of Greek verses at ten years old, the power of playing difficult music at sight by fingers not half grown, or any of the wonders we see and hear so much of, repay a blooming girl for the roses that are banished, the breath that is shortened, the appetite that is fled, the spine that is curvating, the sense of joyful existence which once danced in her eyes, vibrated through her nerves, was heard in every thrilling accent?—Oh, no, no!”

In laying down Mrs. Hofland’s works, we feel it is an equal pleasure and justice to say we cordially approve and warmly recommend them.

Epicharis: an Historical Tragedy. By the Author of “Granby.” 8vo. pp. 115. London, 1829. Colburn and Bentley.

WE doubt whether this tragedy be so well

calculated for quiet and unexcited persons;—indeed, criticism on an acted drama comes somewhat late: if favourable, it is but the echo of already expressed opinion; and if the reverse, the author’s ear has previously confessed his doom. We shall therefore content ourselves with quotation: our first is Flavius’s spirited address to Piso.

“All is not lost if thou art still the same
I thought thee once—let us play a daring part:
No other suits the time. Come to the camp
And rouse our soldiers—or be that my office—
Mount thou the rostrum—let thy eloquence
Flow as it hath ere now: we’ll not lack help—
Trust me there’s many a yet unsounded bosom
Will kindle at thy words. Our confidence
Will shew like strength—surprise and dread will quell
The spirit of Nero—dangers unforeseen
Scare e’en the brave—and, what! shall you poor tyrant
With Tigellinus and his sensual crew
For sole defence—shall he resist our onset,
As sudden as ‘tis fierce? We’ll prove his power.
We know not yet the vastness of our own.
Plans to the dastard seem impossible,
While the prophetic eye of bravery
Pregures their completion. Oh! if safety,
If ought but fameless safety were our aim,
‘T were wiser to be bold. The pestilence
Of treachery spreadeth far: its deadly breath
Hath been on thee; and in a few short hours
It may consign thee to inglorious death.
If thou must fall, oh, let it be with honour—
Fall with the last proud wrecks of Roman virtue—
Fall for the commonwealth—fall if thou must,
But so that not success can be more glorious.
Thou hast a soul awake to high ambition—
And shall it slumber? See, there lies success—
There failure—but what failure? I will tell thee.
If e’en thou faltest nobly, thy best name
Shall find a dwelling-place in every heart
Where honour lives. Their memories shall embalm
thee—
Their children shall be taught to lip thy praise,
And hold thee more than mortal; and who e’er
Utters henceforth the awful name of Rome,
Shall think on Piso.”

One pretty speech of the heroine’s, and we have done.

“Epicharis. But, my Flavius,
Methinks I must reproach thy agency.
What! bear this spirit-stirring tale so long
Pent in thy bosom?
Flavius. Nay, forgive me, dearest:
I would not cast one cloud on that fair brow
That I could not remove. I would not wound
Thy soft and tender nature.
Epicharis. Ay, ‘tis soft,
A very woman’s; yet believe not, Flavius,
That I would shrink to hear of noble perils,
Or dim the glory of the man I honoured
With ill-timed tremblings for his safety. Danger
Is a dread precipice, on the brink of which
Men earn the love of woman. I have not
Perchance that rigid stubbornness of nerve
That Roman matrons boast. I cannot view
With stern delight the dreadful game of death
In the blood-stained arena. I have shuddered
At the bare mention of its festivals,
Where one slight motion of a careless hand
Is made the signal for deliberate slaughter,
And wanton idlers bid defiance to mercy
Butchered for their sport. Yes, if to shudder
At deeds like these be wit, then such am I.
But yet, repent not to have told me all.
I can applaud your dangers, and can share them.
I may have yet to prove what fortune
Lurks in the silken folds of female weakness.”

Reisen in Egypten, &c. Travels in Egypt, Libya, Nubia, and Dongola, between the Years 1820—1825. By Dr. W. F. Hemprich and Dr. C. G. Ehrenberg. Vol. I. Part I. 4to. Berlin, 1828.

THOUGH the work, of which this first part is the forerunner, cannot fail to prove a valuable accession to the cabinet of the geologist and botanist, yet so much has been written and published of late on the subject of the countries to which its scientific pages are devoted, that our readers will rather thank than blame us for waving any diffusive comment upon it. Besides, separate narratives of this expedition have already been given by General Minnott, Dr. Scholz, and M. Grun. It may be necessary, however, to remind the reader, that it was undertaken under the patronage of the Royal Academy of Sciences of Berlin, was

nearly wrecked by reason of the scanty supplies with which that learned body was enabled to furnish it, and was ultimately indebted for its refitting and completion to the munificence and public spirit of the present King of Prussia; a monarch who has, silently and unostentatiously, effected more for the real happiness and intellectual advancement of thirteen millions of his fellow-creatures than any other of the loudly be-praised princely liberals of his age.

To the subsequent extracts from this publication we shall merely premise, that the travellers quitted the shores of Europe in June 1820, and returned in 1826, from a six years' sojourn in Africa, during which Dr. Hemprich, Professor Liman, and seven other Europeans, sunk under the privations and difficulties to which they were exposed.

The Bocca di Cattaro.—"The inhabitants of this district are an athletic race; nor can I ever forget the five living Rolandos whom I saw standing in the cafeteria of Castel Nuovo, dressed out in their Sunday attire, and glittering with their silver arms; their noble figures singularly contrasting with a meagre, black-apparelled mummy of an attorney. The perusal of the regulations induced them with right military precision to remove their hats from their brows. In a moment my fancy had conjured up the forms of Tell and his companions in arms: my companion's thoughts were busied with like recollections; and it required all the persuasion which his prudence could suggest, to induce me not to make a sketch of this interesting scene, in which the parties were occupied with the execution of a contract. The people of the country have borne their national character in its fullest vigour through every repeated change of masters. The countryman will not resign the arms at his girdle, and his long Albanian musket, glistening with its silver glories, though murder and deeds of sanguinary vengeance have long since made the government desirous of disarming him. The military garrisons of the forts never associate with these people: mutual pride and mistrust have raised a partition wall between them; and the soldiery are compelled to keep constantly upon their guard. Allusions were dropped by the Hungarians, who compose the bulk of the garrison, to an Austrian Siberia; but the perspiration which distilled from our every pore afforded pretty substantial proof that the comparison did not hold good, so far as climate was concerned. When any of the natives die, their female neighbours issue forth with dishevelled locks, the flesh torn off their faces and bosoms, and howling in regular cadence. Many of them cut off their hair, bind it with the deceased person's, and set up the branch upon the grave. All monks and clerical persons stand in bad odour; and we found it a prevalent axiom among the common people, that those who consider religion as their bread, cannot be religious themselves. An atrocious murder, consequent upon violation, which had been committed by an ecclesiastic not many days before, close to Castel Nuovo, seemed to be the chief cause of the odium generated against his caste; and it must be confessed, that if there were any truth in the tales of atrocities told of the ecclesiastics in this quarter, they deserved all the detestation in which they were held. The Bocchese are in part Catholics and in part schismatic Greeks; and the juxtaposition of two such determined rivals, of whom the latter are the prevailing party, is probably the occasion of all kinds of broils.

Their fashions are long and rigid;—a point in which the Catholics approximate closely to the Greeks. Even cheese, eggs, and fish, are prohibited. For our own security's sake, we were advised, whenever we had occasion to visit any distant spot, to take none but a native for our guide. The predominant language is Illyrian; but there are individuals in every quarter who either speak Italian or can make themselves understood in that tongue. The dress of the Bocchese consists of broad, easy shoes, coloured stockings, short breeches not much slashed, and a vest fastened with large buttons, and sometimes decorated with broad gilt plates, to which it is customary to add a large glass button set in silver. Round the middle of the body runs a girdle of red woollen stuff, into which a long knife with a silver sheath is stuck, the knife being secured by a silver chain. Its usual accompaniments are a smaller knife and a richly ornamented pistol. A woollen jerkin hangs across the left shoulder. Their sleek locks are covered by a round hat, with a somewhat capacious brim; and in their hand they bear an Albanian musket, handsomely ornamented. A tobacco-bag hanging from the girdle, and a long pipe with a Turkish head and amber mouth-piece, complete the personal paraphernalia of the Dalmatian. There is much less of display in the female's attire. An upper-garment without sleeves, and of no very becoming trim, sets every conjecture as to corporeal endowments at defiance. The hair is loosely bound together, or enveloped in a cloth. Castel Nuovo lies on the side of a hill; the fortress standing on the summit, about four hundred feet above the town. One part of the place is protected by high walls, and the other hangs over steep precipices; it consists of small houses of a mean appearance, most of them being set against the rocks: a few of them form steep lanes, and some fifteen are brought together so as to form a kind of market-place, where stands a well, bearing an Arabic inscription. Cattaro is not much larger nor handsomer. The environs of Castel Nuovo offer a rich banquet to the historical inquirer, in its ruins, walls, and inscriptions. Its population is about 1000; and that of Cattaro cannot be much larger."

Coloured Shadows.—"When in the neighbourhood of Candia, on the first of September, about sunset, there was a large halo encircling the sun, and to this succeeded a deep glow of evening crimson. The heavens were cloudless, and the sky was serene and clear. Under such circumstances as these, it was singular that every shadow in the ship was tinted;—an occurrence which generally accompanies double refraction. The shadows which fell upon the white scuttles were of azure blue; and those which fell upon the rigging and sails, to which the sun had imparted a slight reddish tint, varied from blue to green. Some were of a clear bright green. The sea was agitated, and did not reflect the sun. On those portions of the sails which the sun had tinted with the deepest red, the green predominated over the blue. A similar, and no less brilliant appearance, was observed on the 3d of September; and in both instances there was not only no double shadow, but the sun was surrounded by a halo. The tint thus imparted to the shadows must have arisen from the yellowish gray stratum of mist which lay between the ship and the sun."

A Beduin Family.—"We must yet render some account of the family of Beduins, in whose neighbourhood we had encamped for the night, during our excursion to the Libyan

desert. The *paterfamilias* was a robust old man, with silvery locks, and led an isolated life in this district with three old women, who formed part of his chattels: he inhabited a hut constructed with branches of the date-tree and durra-straw; it was enclosed on three sides only, and was too low to admit of a person's standing upright. He was perfectly naked, save and except a piece of ragged cloth drawn across his loins, and wore on his head a tattered woollen cap, which evinced, by its hue, that his wives were not addicted to the craft of washing. The latter were clad with a piece of exceedingly dirty linen, which they had thrown over their heads and round their bodies; and tended his flocks, with the assistance of long staves made of the date-tree. Naked as the old man was, he was nevertheless the owner of several camels, oxen, asses, seven hundred sheep, and some hundreds of goats. By means of a cross pole, furnished with a counterpoise at one end and a basket at the other, he drew up water for the irrigation of his little garden; in which he cultivated durra, tobacco, and melons. Immediately against the well he had raised a dam, running in an inclined direction into his garden, and formed a canal on the top of it, through apertures in which, that he could open with his hand or close with earth, he led the water to whatever spot he wished. We perceived no arms or utensils under his roof, besides a gun and half the rind of a gourd: some remnants of woollen cloth apparently formed their nightly coverings. His wives, whose chins were painted blue, always kept themselves at a distance, and when they wished to speak to him, winked to him to come to them: their faces were not concealed; but whenever our excursions brought us near to them, they drew a corner of the linen that covered their heads across their mouths, but without moving away from the spot. Their food consisted of fresh bread baked upon heated stones, and a little milk; though dry as the season of the year was to our apprehension, we could not obtain any without making a present to the owner. In spite of the miserable scantiness of comforts which characterised this nomadic existence, the harmless expression of the old man's features inspired us with a tinge of veneration for its simplicity. The deprivations, which apparently accompanied it, were in fact engendered by the paucity of its exigencies; and every circumstance which surrounded us called up vivid recollections of the patriarchal times."

At our next convenience we shall extract from this work some interesting particulars relative to Mehmet Ali, Pasha of Egypt.*

Friendship's Offering: a Literary Album, and Christmas and New Year's Present, for 1830. London. Smith, Elder, and Co.

THERE is a very agreeable variety in this volume; Mr. Kennedy's productions being, on the whole, the most striking and original. His "Outline of a Life" deserves peculiar notice; and we cannot do better than quote his poem of "Lyra."

"Meet emblem of the fairest dreams
Of Poesy art thou,
Sweet Lyra! with thy locks of youth
Around a thoughtful brow.
The sacred instrument of song
That woos thy high command,
May well give forth its holiest tones
Beneath so pure a hand.

* Apropos of this pasha, we observe that he is about to increase his army, and place it entirely on the European footing. The *Spectateur Militaire* states that he has secured the services of five French *chefs d'escadron*, who are to receive each 25,000*fr.* per annum; and sixteen cavalry captains, who are to have each 10,000*fr.*

O were the minstrel's soul still warmed
By visions like to thee,
How blest in this world's wilderness
His quiet walk would be!

Quick-rushing tears of love would flow
From ardent eyes and proud,
Drawn by his voice, as grateful showers
Fall from a thunder-cloud.

And, touched by him, dark Passion's dross
Would turn to Virtue's gold,
And scenes to Fancy only known
As yet, all might behold.

All might—all would—could Fantasy
Effect each airy plan,
Or could a fond wish separate
The minstrel from the man.

But bards of the least earthly mould
Have much of mortal leaven;
They match the eagle in his flight,
And soar—though not to heaven.

O were this breast a temple fit,
Dear Lyra, for thy stay,
By the best blossom of my hopes,
Farewell I could not say!

But there, from highways of the world,
Intrude a vagrant crew
Of thoughts unmeet to mate with thee;
So, Beautiful! adieu.

The rarest wind that blows will bear
Thee gladly along,
If, like the lark, thou'lt only cheer
Thy journey with a song.

Then on the pinions of the breeze
O'er mead and mountain sail—
Smooth the stern warrior's stormy front,
Consoled the lover pale.

And at those hours when most I feel
Heart-purified and free,
I shall invoke thee, that thou may'st
My guiding spirit be."

The "Bechuana Boy," by the editor himself (Mr. T. Pringle), is a very pretty poem; and the "White Bristol"—a curious title for a slight story—very dramatically put together. The binding, embossed plum-coloured leather, is both elegant and better adapted for use as well as ornament than the cases of its silken rivals.

The Bijou: an Annual of Literature and the Arts. London, 1830. W. Pickering.

In our last we passed in review that division of this Annual which pertains to the arts: of its literary division we are not called upon to say much; for, with some pleasing reading, there is nothing so much out of the common way as to tempt us to extract. Indeed, the *Bijou* must rest more on its arts than its literature this year—a remark, be it said, which will apply very generally to its fellows in the field. There is not one of these publications which is not "as cheap as dirt,"* if merely estimated by its embellishments; yet, in truth, the majority are very defective in literary novelty and striking talent: but we promised to withhold our reflections till the entire produce of the season was fairly before us,—and we shall then take a comprehensive view of their effects upon contemporary literature and arts.

The Juvenile Keepsake. 1830. Edited by T. Roscoe. London. Hurst and Co.

ANOTHER very delightful little volume, and one we can cordially praise; but, from an overpress of these annual *débutantes*, we can only extract the following little poem by L. E. L.

"The Mariner's Child to his Mother.
Oh, weep no more, sweet mother,
Oh, weep no more to-night;
And only watch the sea, mother,
Beneath the morning light.

* The Printer's Devil having queried our marks of quotation, we are bound to give up our author; viz. Cornelius O'Gorman, from whose sign we copied it some time since, and somewhere down the river. C. O'G. appeared, from circumstances, to have set up, over the way, a rival shop to John Timson's, who having inscribed his board—"John Timson, Haberdasher, &c.—all sorts of haberdashery goods as cheap as Flint's," Mr. O'Gorman immediately added to his name and pretensions "all sorts of haberdashery goods as cheap as dirt!"

Then the bright blue sky is joyful,
And the bright blue sky is clear,
And I can see, sweet mother,
To kiss away your tear.

But now the wind goes wailing
O'er the dark and trackless deep,
And I know your grief, sweet mother,
Though I only hear you weep.

My father's ship will come, mother,
In safety o'er the main;
When the grapes are dyed with purple,
He will be back again.

The vines were but in blossom
When he bade me watch them grow;
And now the large leaves, mother,
Conceal their crimson glow.

He'll bring us shells and sea-weed,
And birds of shining wing;
But what are these, dear mother?
It is himself he'll bring.

Our beautiful Madonna
Will mark how you have wept,
The prayers of early morning,
The vigils you have kept.

She will guide his stately vessel,
Though the sea be dark and drear;
Another week of sunshine,
My father will be here.

I'll watch with thee, sweet mother,
But the stars fade from my sight;
Come, come and sleep, dear mother—
Oh, weep no more to-night."

There is a pretty tale, translated from *Madame de Genlis*; and we like much the "Mask," and a "Tale of the Christmas Holydays."

Mac Farlane's Constantinople in 1828.

(Second Notice.)

HAVING left a few matters in this publication which seem to us to demand our notice, we beg to append the following short sketch to what we said in our preceding Number.

"Gaming (says the author) is a vice in which all barbarians are found to delight; and the strict prohibition of the Koran has not been sufficient to repel the passion from the breasts of the Turks. On the quay of Smyrna, and immediately under the windows of my friend Langdon's house, I used to observe daily a tribe of uncouth mountaineers playing at a game with three thimbles and a pea (the identical ambulatory mode of gambling resorted to on our race-courses). The table was kept by a Smyrniote Greek; but the solemn Turk, Hadji-Bey, the chief of the police, was a partner in the concern; and thus not only free license to the infringement of the laws of the prophet was accorded, but the *cat's-paw*, the Greek, was protected in the exercise of his calling against the violence of the losers. I have frequently been amused by observing a group of naked-legged *devidjis*, or camel-drivers, gathered round the attractive table: their wild, coal-black eyes would almost start out of their head, as they followed the motions of the adroit Greek; their hard, fixed features would brighten into an expression of triumph as they threw down their broad hand on the thimble,—sure the pea was there; and perspiration would stand in globules on their forehead after their repeated failures and losses. All their Turkish and oriental apathy was not proof to the excitement of play; and their animation and expression was the more striking, from their general phlegmatic demeanour and the immobility of their countenances. I once saw a fellow of this class, who had just received several hundred piastres for some figs he had brought to market, play at the thimbles and pea until he had lost his last asper; and he would then have staked his camels, if the Greek had not been afraid. Another evening I saw a swarthy *devidji*, who had been repeatedly foiled by the dexterous ghiaour, and who had lost his last stake, wax furious and rush on the Greek with his drawn yataghan,

swearing he was Satan himself, or he could not so deceive his eyes. Two stout Turks, covered with arms, the allies or the agents of friend Hadji-Bey, always hovered by to protect the conjurer and the money,—they were there then, and seized and disarmed the madman before he could do any mischief. This game of the pea is the only species of gambling in public I ever saw amongst the Turks.

"I have" (continues Mr. Mac Farlane, speaking of another Turkish relaxation) "described the military music of the Turks as I was accustomed to hear it at Smyrna: it was not without its charms; but the Turkish music at the College of Dervishes was, as might be supposed, far superior. Indeed, after being somewhat used to its wildness and eccentricity, I began even to relish it, and was frequently deeply moved with its thrilling flight and its simplicity, particularly when the minstrels sounded 'the loftier theme,' responsive to the Arabic adjurations of devotion and enthusiasm, and the dervishes were dancing violently round, as in a whirlwind. The favourite instrument, and which is indeed their best, is a sort of pipe or flute, held almost perpendicularly, and blown at the end like a flageolet or clarinet: it is above three feet in length, more slender than our common flutes, with its stops much wider apart; it seems made of a simple reed or cane, and has no keys. In short, it is as primitive a musical instrument as I ever saw, and probably has descended without improvement or change from the most remote ages and the earliest people of the East. Yet from this rude reed notes are produced that are ravishingly soft and sweet—some of them dissimilar, but very superior to the finest tones I ever heard from our flute, even when in the hands of a Drouet. There is a species of flute with an elbow, called by the Italians '*la voce umana*,' whose notes approach near to those of the Turkish pipe,—but they do not equal them."

Among the other curiosities in these volumes is a copy of the Prayer, in Romic, which the Sultan Mahmoud, their sworn and cruel adversary, caused the Greek patriarch to frame, and the Greek population of Constantinople to put up to heaven in their churches, for the success of his arms. We would fain print this remarkable document, but we want room.

At Prinkipo Mr. Mac Farlane took up his lodgings with three respectable Greek widows, of whom the following melancholy tale is told: "The eldest of them had been the wife of a Greek musician of high repute; the two younger the wives of the old lady's sons: the father and the two sons, who lived together, had been instructors in the accomplishments of music and dancing to the female children purchased for the sultan, and destined to grace his harem. These situations were lucrative, and even honourable in the estimation of the country. The quiet retreat of Prinkipo was well chosen: the fair Turkish children were lodged in the house of the Greek, and several who had since become the ornaments of the seraglio, or the favourites of the sultan, had dwelt and played in the rooms of which I was about to take possession. The employment of the Greeks was one of great confidence, and, as I have said, even of honour, and frequently brought both father and sons in contact with the great Turks about the seraglio,—at times even with the sultan himself, and they might indeed be considered as sorts of favourites, and among the small number of rayahs of their class who deemed themselves bound to pray for the prosperity of Mahmood. At the breaking

out of the Greek revolution they were residing at Prinkipo, whence perhaps they had never been much farther distant than to Constantinople in their lives. Of the movements of their brethren, whether in the Principalities, the Morea, or the Islands, they knew nothing; yet one morning, the father and his two sons were summoned to the Porte, and beheaded without a word of accusation or of reason on the part of the Turks. They had repaired at the call unsuspectingly, and even confident in the favour they enjoyed; and the hapless females, who were never to see them more, saw them depart early in the morning, nothing doubting but they would return in the evening. The wife of the head of the family, who suffered doubly in the loss of husband and sons, at that distance of time had not wholly recovered from the shock which had nearly deprived her of reason. Her widowed daughters-in-law were two genteel women, apparently under thirty years of age; at the time one of them had been suffering for many months from the attacks of a slow fever, which had reduced her to such a state of weakness that she very rarely left her bed. I never saw a human being so pale, and thin, and woe-begone. She would take no medicine—she dared not shorten her life, but she would do nothing to prolong it; and it was sometimes with difficulty that her affectionate relatives could induce her to swallow that infinitely small portion of food on which she existed. As her fever was intermittent I thought that the chinine I was taking might be beneficial to her; she, however, constantly refused to take it, and would not listen to the advice of the Swedish physician who several times visited me. The Greeks always wear their mourning, particularly when the person lost has stood in such a close relation as that of husband or son, for a very long time, I believe scrupulously, never less than three years; but seven years had elapsed since these unfortunate women were widowed, and they still wore their weeds, which would certainly never be quitted by two of them,—the aged and the sick; and most probably never by the third. Such a sad household might be imagined not at all befitting one in my state, but their grief had long ceased to be noisy or obtrusive; their calm melancholy would frequently be enlivened by the gaiety of others, and whenever they had any thing to do for me they did it with alacrity and pleasure. That natural grace and gentility which I have so often remarked even in Greeks of very inferior condition, were strikingly conspicuous in these widows of Prinkipo."

We have only once more to recommend these very agreeable volumes to the attention of our readers.

THE YELLOW FEVER.

Untersuchungen über das Gelbe Fieber, &c. Inquiries concerning the Yellow Fever, &c. By C. C. Matthæi, &c. Hanover, 1827.

LATE as may be our notice of this work, and abundantly as the general reader may feel astonished that we have not suffered it to retain its station on the shelf of oblivion, we have, amongst others, three very powerful reasons for taking it in hand. In the first place, it is the work of a writer who has, long and deeply, studied his subject; in the second, it is a prize essay; and in the third, (compared with which indeed the preceding motives possess scarcely the weight of a feather,) the interests of science and of society at large enjoin us, on such occasions, to abandon the path of amusement for that of utility. We also feel that we shall

best promote the purpose of this notice by omitting to lead the reader over the field of controversy; we shall not inquire whether the virulence of the disease be greatest, or its treatment best understood, in Gibraltar or Kingston—nor whether it is contagious at Philadelphia and non-contagious at Marseilles; but proceed at once, and with all the brevity of which we are masters, to give an *aperçu* of opinions which have not only conferred a rich meed of distinction on their propounder, but have received the sanction of the medical faculty of Berlin.

In 1822 the government of Oldenburg proposed a series of questions respecting the yellow fever; and assigned a reward of two hundred ducats to the individual by whom the faculty of medicine of the University of Frederic-William should deem those questions had been most satisfactorily resolved. Of the eighteen essays consequently presented to them, they adjudged the premium to that which bore the motto, "*Opinionum commenta delet dies, natura judicium confirmat.*" The author of the successful essay proved to be Counsellor Matthæi of Verden, a writer of previous celebrity, who had made a complete collection of every work published on either side of the Atlantic on the subject of that dreadful scourge. And we consider our time cannot be more usefully employed than in stating the principal questions he discusses, and giving his solution of them.

1. What are the causes which engender the yellow fever in tropical regions?—"An atmospheric heat of not less than 72 degrees of Fahrenheit (or 19 degrees of Réaumur) is considered necessary for the generation of this disease; and, when once germinated, its dissemination will be most fatally promoted by an inferior degree of heat, provided that degree be above the point of congelation. It does not appear requisite, either for its generation or propagation, that the atmosphere should be charged with aqueous vapours, or exhalations from putrid substances, whether animal or vegetable; and it is as yet uncertain what degree of influence is produced upon it by atmospherical electricity, or any convulsions of the elements, such as earthquakes, &c. It is most probable, on the other hand, that the reciprocal agency of persons of various climes herding together, promoted as it is by a tropical climate,—not merely individual predisposition especially deriving from a want of acclimatisation, from sudden change in the system of living, or from depressing affections of the mind,—is the chief source of the yellow fever. This inference is corroborated by the well-known fact, that the disease was originally a stranger to the American shores, until it was generated by the circumstances attendant upon the intrusion of the Spaniards."

2. When the malady has reached its height, can any inherently morbid or contagious principle exhibit itself and be propagated by means of the direct or indirect contact of two bodies?—"The yellow fever is contagious; and though, on certain occasions, it may not wear that appearance, these are the result either of accidental circumstances, which elude the virulence of the contagion, or of the absence of any susceptibility of its agency on the part of those who are exposed to it. A similar occurrence is observable with other contagious diseases, and particularly the small-pox. It should be remarked, that several fevers, peculiar to tropical climates, are accompanied by vomiting and jaundice of the skin, though they are not homogeneous with the yellow fever, nor of a contagious character."

3. Does the yellow fever of the United State, of America and the south of Europe entirely resemble the yellow fever of tropical countries, and do both spring from like causes?—"The testimony of medical men, who have witnessed epidemical crises of yellow fever at various times and in various regions, bespeaks its identity. This is equally corroborated by a comparison of the observations made on the spot, both as regards the symptoms of the disease, as well as its prognostics, and the phenomena discoverable by aid of the microscope."

4. Is the yellow fever a specific disease and *sui generis*, or simply a more intense degree of the intermittent and remittent bilious fevers peculiar to warm climates?—"It is a disease *sui generis*, which, among other characteristics, stands distinct from the intermittent and remittent bilious fevers peculiar to warm climates, by its contagious quality."

5. Has it hitherto prevailed along the sea-coast only, without affecting elevated regions?—"There has occurred but one solitary instance in which the yellow fever has shewn itself on a spot which was six thousand five hundred feet above the level of the sea; but this forms no ground for assuming that it is absolutely impossible it should not affect more elevated regions."

6. Does the yellow fever appear at times sporadically, or does it shew itself only under an epidemic form in the hot season?—"The sporadic yellow fever cannot be said to be of more rare occurrence than the sporadic small-pox."

The writer does not advance a single proposition without supporting it by the testimony of facts, or by the documents given in the second volume, which contains four appendices, and in which he briefly narrates every instance of yellow fever hitherto observed, enumerates the places and dates where and when that disease occurred, gives an alphabetical catalogue of 566 books and pamphlets on the subject, and quotes the original passages in support of the facts he adduces.

In opposition to M. Chervin, who has asserted that the yellow fever is not contagious, the whole medical faculty of Berlin stamp with their approving "imprimatur" the following dictum of Counsellor Matthæi:—"Happy will it be for the human race, if every individual will but open his mind to a firm conviction that the yellow fever generates a principle, which, when transferred either directly or indirectly to healthy persons, imparts the same disease to them, under conditions propitious to the agency of that principle. With such a conviction, no expense, no privations, no exertions, would be spared, which would conduce to avert the dangers attendant upon the birth and propagation of that disease from countries which have hitherto escaped its contamination. With such a conviction, neither sovereigns nor nations would lend a favourable ear to those writers who found their assertions on hypotheses unsupported by demonstration; and, with no other object in view but the supposed interests of commerce, strive to represent every sanitary precaution against the yellow fever as useless, superfluous, and therefore ridiculous."

We hope, cursory as is our notice, that it will justify the premises with which we introduced this important publication to the reader's attention; but we cannot shut it without adding, that the work is closed by a geographical chart, in which a yellow tint is given to every spot where the fever has prevailed, from its first appearance until the present hour.

SIGHTS OF BOOKS.

The Young Lady's Book: a Manual of Elegant Recreations, Exercises, and Pursuits. 12mo. pp. 504. London, 1829. Vizetelly, Branston, and Co.

WE shall find it difficult to speak of this volume in terms sufficiently expressive of the admiration, and indeed wonder, with which an examination of it has filled us. It is not only a curiosity, but a beautiful curiosity; and no less excellent in its useful qualities, than it is elegant in its decorative parts. A few years ago all the talents in England could not have produced such a work: now it is a fine example of the perfection to which wood engraving is carried,—and the multitude of prints of every kind does infinite credit to the taste and skill of Messrs. Vizetelly and Branston. Besides forty or fifty principal embellishments, there are hundreds of small cuts to illustrate the various subjects, which well merit to be perennially esteemed "*the Young Lady's Book*"—botany, mineralogy, conchology, entomology, dancing, riding, archery, music, and other accomplishments becoming in the youthful fair. But the book must be seen to be valued as it deserves; and all that we shall add is our most unreserved praise both of its ornaments of every kind, and of the very pleasing, able, and winning way in which its literary, scientific, and amusing pages are put together. A better or more captivating performance to present to a young lady has not been offered to the choice of parents or friends. By its perusal, and by an attention to its contents, every fair and blooming reader may become—what we consider the perfection of the sex—an accomplished English gentlewoman.

The Golden Lyre. Edited by John Macray. London, 1830. J. D. Haas.

THIS is one of the curiosities of modern literature, being a little volume beautifully printed in gold, and containing selections from poets of England, France, Germany, Italy, and Spain: in all, amounting to thirty short pieces, tastefully selected from popular authors. *The Golden Lyre* is dedicated to Princess Mary Esterhazy; and is appropriate to a young lady at whose grandfather's diamond coat we have wondered and admired so much.

The Fitzwalters, Barons of Chesterton; or Ancient Times in England. By the author of "a Winter's Tale." &c. &c. London, 1829. Newman and Co.

ONE of the steady old school of novel-writing, which we should find it impossible to exemplify by quotation, even if we wished to do so, instead of consigning the old Barons of Chesterton to the modern circulating libraries.

ARTS AND SCIENCES.

ANCIENT AND MODERN EGYPT.

M. Champollion's Thirteenth Letter—continued. [We resume the interesting description of the tomb of Pharaoh Rhameses, the son of Memnon.]

NEAR the first door, that of the rising, the twenty-four hours of the astronomical day are represented under a human form, with a star upon their heads, and marching towards the further part of the tomb, as if to indicate the direction of the god's course, and to point out that which must be followed in studying the pictures, which excite a more lively interest, because in each of the twelve hours of the day is drawn the detailed image of the bark of the god, navigating in the celestial river on the primordial fluid or ether, the principle of all

natural things, according to the Egyptian philosophers, with the figures of the gods who successively assist him, and besides the representation of the celestial abodes through which he passes, and the mythological scenes proper to each of the hours of the day.

Thus at the first hour his bari or bark begins to move, and receives the adoration of the spirit of the east. Among the pictures of the second hour we find the great serpent Apophis, the brother and enemy of the sun, watched by the god Atmou. At the third hour, the god Sun arrives in the celestial zone, where the fate of souls is decided, with respect to the bodies which they are to inhabit in their new transmigrations: the god Atmou is seen seated upon his tribunal, weighing in his balance the human souls which successively come forward. One of them has just been condemned; it is seen carried back to the earth in a bari, which advances towards the gate, guarded by Anubis, and driven with rods by Cynocephali, the emblems of divine justice: the culprit is in the figure of an enormous sow, above which is engraved in large characters, *gluttony*—doubtless the capital sin of the delinquent, some gourmand of those times.

At the fifth hour the god visits the Elysian fields of the Egyptian mythology, inhabited by the souls of the blessed, reposing after the fatigues of their transmigrations upon earth. On their heads they wear an ostrich feather, the emblem of their just and virtuous conduct. They are seen presenting offerings to the gods, or, under the inspection of the lord of the joy of the heart, they gather the fruits of the celestial trees of this paradise. Further on are others with sickles in their hands; these are the souls that cultivate the fields of truth; their legend is as follows:—"They make libations of water, and offerings of the grains of the fields of glory; they hold a sickle to reap the fields, which are their portion; the god Sun says to them, 'Take the sickles, reap the grain, carry it to your abode, enjoy it, and present it as a pure offering to the gods.'" Elsewhere they are seen bathing, leaping, swimming, and playing, in a great basin filled with the celestial and primordial water, all under the inspection of the god heavenly Nile. In the following hours the gods prepare to combat the great enemy of the Sun, the serpent of Apophis. They provide themselves with stakes and nets, because the monster inhabits the waters of the river on which the vessel of the Sun navigates. They stretch ropes—Apophis is taken, and bound with cords. This immense reptile is dragged out of the river by means of a cable, which the goddess Selk fastens round his neck, and which is drawn by twelve gods, assisted by a very complex machine, worked by the god Sev (Saturn), assisted by the genii of the four cardinal points. But all these preparations would be vain against the efforts of Apophis, did not an enormous hand (that of Ammon) issue from below, which seizes the rope, and checks the fury of the dragon. Lastly, at the eleventh hour of the day, the captive serpent is strangled; and soon afterwards the god Sun reaches the extreme point of the horizon, where he is going to disappear. It is the goddess Netphé (Rhea) who, performing the office of the Thetis of the Greeks, rises to the surface of the celestial waters, and mounted on the head of her son Osiris, whose body ends in a volute like that of a syren, the goddess receives the vessel of the Sun, which is soon taken into the immense arms of the celestial Nile, the old ocean of the Egyptian mythology.

The course of the sun in the lower hemi-

sphere, or that of darkness, during the twelve hours of night, that is to say, the counterpart of the preceding scenes, is sculptured on the walls of the royal tombs, opposite to those of which I have just given a very succinct description. There the god, pretty generally painted black from head to foot, traverses the seventy-five circles or zones, over which preside so many divine personages of various forms, armed with swords. These circles are inhabited by the souls of the guilty, which undergo various torments. This is truly the primordial type of the Inferno of Dante—for the variety of the torments is surprising; and I am not astonished that some travellers, shocked at these scenes of carnage, considered them as affording proofs of the use of human sacrifices in Egypt; but the inscriptions remove all uncertainty on this head. These are affairs of the other world, and form no ground for judging of the usages and customs of this world.

The guilty souls are punished in different ways in most of the infernal zones which the god Sun visits; these impure spirits persevering in guilt, are almost always represented under a human form,—as that of the sparrowhawk with a human head, entirely painted black, to indicate at once their perverse nature, and their abode in the abyss of darkness. Some are strongly bound to stakes, and the guardians of the zone, flourishing their swords, reproach them with the crimes which they have committed upon earth; others are suspended with their heads downwards; others, with their hands tied upon their breast, and their heads cut off, march in long files; some, with their hands tied behind, drag upon the earth their hearts, which come from their breasts; living souls are boiled in large cauldrons, either under a human form or that of a bird, or only their heads and hearts. I have also observed souls thrown into the cauldron with the emblem of happiness and celestial repose (the Fan), to which they have forfeited all their claims. I have faithful copies of this immense series of pictures, and of the long inscriptions which accompany them. In every zone, and by the side of the tortured souls, we always read their sentence, and the punishment they undergo. "These hostile souls, it is said, do not see our god when he emits the rays of his disc; they no longer inhabit the terrestrial world, and do not hear the voice of the great God when he traverses their zones."

On the other hand, by the side of the representation of the happy souls, upon the opposite wall, we read: "These have found favour in the eyes of the great God; they inhabit the abodes of glory, those where they lead a celestial life: the bodies which they have abandoned shall repose for ever in their tombs, till they shall enjoy the presence of the supreme God."

This double series of pictures gives us therefore the psychological system of the Egyptians in its two most important and moral points—rewards and punishments. Thus is completely demonstrated all that the ancients have said of the Egyptian doctrine of the immortality of the soul, and the positive object of human life. It is certainly a great and happy idea to symbolise the twofold destiny of souls by the most striking of the celestial phenomena—the course of the sun in the two hemispheres, and to connect the picture of it with that of this striking and magnificent spectacle. This psychological gallery occupies the walls of the two great corridors of the two first halls of the tomb of Rhameses V., which I have taken as the model of my description of the royal tombs, because

it is the most complete of them all. The same subject, but composed in a directly astronomical spirit, and on a more regular plan, because it was a scientific representation, is repeated upon the ceilings, and occupies the whole length of those of the second gallery, and of the first two halls which succeed it.

Heaven, under the form of a woman whose body is bespangled with stars, envelopes on three sides this immense composition. The torso extends the whole length of the picture, the upper part of which it covers: the head is to the west; the arms and the feet limit the length of the picture, which is divided into two equal stripes: the upper represents the superior hemisphere, and the course of the Sun in the twelve hours of the day; the lower, the inferior hemisphere, and the course of the Sun in the twelve hours of the night. To the east is represented the birth of the Sun from its divine mother Neith, under the form of an infant putting his finger to his mouth, and enclosed in a red disk. The god Meui (the Egyptian Hercules—the divine reason), standing in the bark intended for the voyages of the young god, raises his arms to place him there himself. After the infant Sun has been attended to by the two goddesses his nurses, the bark departs, and navigates the celestial ocean, or the ether, which flows like a river from the east to the west, where it forms a vast basin, into which one branch of the river falls, traversing the inferior hemisphere from west to east. Every hour of the day is marked on the body of heaven by a red disk, and in the picture by twelve barks, in which appears the god of the Sun, navigating the celestial ocean, with a suite which changes every hour, and accompanies him on the two banks. At the first hour, the moment when the vessel begins to move, the spirits of the east present their homage to the god, who is standing in his naos, which is raised in the middle of this barf. The crew consists of the goddess Sori, who impels the prow; of the god Sev, with the head of a hare, holding a long pole to sound the river, which he does not use till after the eighth hour, that is to say, when he is approaching the west: the reis, or commander, is Horus, who has under his command the god Haké-Oeris, the Phaëton and faithful companion of the Sun; the pilot who guides the helm is a hieroccephalus named Hoon; then the goddess Neb-wa (the lady of the bark), of whose special functions I am ignorant; lastly, the god the superior guardian of the tropics. On the banks of the river are represented the gods or spirits which preside over each of the hours of the day: they adore the Sun on his passage, or recite all the mystical names by which he was distinguished. At the second hour appear the souls of the kings, having at their head the deceased Rhameses V. going to meet the bark of the god, to adore his light. At the fourth, fifth, and sixth hours, the same Pharaoh participates in the labours of the gods who make war upon the great serpent Apophis, concealed in the waters of the ocean. In the seventh and eighth hours the celestial vessel proceeds along the coasts of the abodes of the blessed—gardens, shaded by trees of different species, under which the gods and pure souls are walking. At length the god approaches the west: Sev continually sounds the river, and the gods stationed on the banks direct the bark with precaution. It goes round the great basin at the west, and reappears in the upper half of the picture—that is to say in the inferior hemisphere—upon the river, which it ascends from west to east. But in all this navigation of the twelve hours of night, as is still

the case with the barks which ascend the Nile, the bari of the Sun is always towed by a great many subaltern genii, whose number varies every hour. The numerous suite of the god and the crew have disappeared. There remains only the pilot, standing inert at the entrance of the naos containing the god, to whom the goddess Thmei (Truth and Justice), who presides over hell, or the inferior region, seems to be addressing words of consolation.

Hieroglyphic inscriptions placed over each person, and at the commencement of all the scenes, indicate the names and the subjects, declaring the hour of the day or night to which these symbolic scenes refer. I have myself taken copies both of the pictures and of all the inscriptions. But on these same ceilings, and out of the composition which I have just described in general, there are hieroglyphic texts, perhaps still more interesting, though connected with the same subject. These are tables for the rising of the constellations for all the hours of every month of the year: they are expressed as follows:—

Month of Tobi, the last half. Orion rules and influences the left ear. 1st hour—the constellation of Orion influences the left arm. 2d hour—the constellation of Sirius influences the heart. 3d hour—the commencement of the constellation of the two stars (Gemini?) influences the heart. 4th hour—the constellations of the two stars influence the left ear. 5th hour—the stars of the river influence the heart. 6th hour—the head (or the beginning) of the lion influences the heart. 7th hour—the arrow influences the right eye. 8th hour—the long stars, the heart. 9th hour—the servants of the anterior part of the quadruped menté (the sea-lion?) influences the left arm. 10th hour—the quadruped menté the left eye. 11th hour—the servants of menté the left arm. 12th hour—the foot of the sow influences the left arm.

Here then we have a table of risings, like that which was engraved on the famous gilded circle of the monument of Osymandyas, and which gave, as Diodorus Siculus says, the hours of the rising of the constellations, with the influences of each of them. This will unanswerably prove to our learned friend M. Létourne that astrology in Egypt goes back to the most remote ages—a question in which he was much interested, and which is in fact finally decided.

The translation which I have just given of one of the twenty-four tables which compose the times of rising, is certain in those passages where I have introduced the actual names of the constellations in our planisphere. Not having had time to carry the comparison any further, I have been obliged every where else to give the literal translation of the hieroglyphic text.

It was my duty to collect—and I have done so with scrupulous care—these precious remains of ancient astronomy and science which were naturally connected with astrology, in a country where religion was the immutable basis of all social organisation. In such a political system all the sciences had, almost of course, two distinct parts,—that of facts observed, which alone constitutes our actual sciences; and the speculative part, which connected science with religious faith—a bond necessary, and even indispensable, in Egypt, where religion, in order to be strong, and to be so always, had attempted to include the whole universe, and the study of it, in its boundless domain, which, like all human conceptions, has its advantages and its disadvantages.

CELESTIAL PHENOMENA FOR NOVEMBER.

22d day, 53 min.—the Sun enters Sagittarius according to the fixed zodiac; his true place in the heavens on this day is close to β Scorpi.

Lunar Phases and Conjunctions.

	D.	H.	M.
☾ First Quarter in Capricornus	3	21	6
☾ Full Moon in Aries	10	15	48
☾ Last Quarter in Leo	19	20	51
☾ New Moon in Scorpio	26	0	32

The Moon will be in conjunction with

	D.	H.	M.
Saturn in Leo	17	5	40
Mars in Virgo	23	2	0
Mercury in Libra	24	15	15
Jupiter in Ophiuchus	27	9	30
Venus in Ophiuchus	27	7	2

14th day—Mercury at his greatest elongation, and visible as a morning star.

Venus, as the evening star, is the most conspicuous object in the heavens, surpassing in brightness the planet Jupiter, near which it may be observed during the month. Venus will be in conjunction with the following stars, at the respective times specified:—

	D.	H.
B Ophiuchi	1	4
λ Sagittarii	12	23
ϵ —	18	4
\downarrow —	22	5

5th day, 8 hrs.—Mars in conjunction with 9 Virginia.

Jupiter is nearly lost in the solar beams. 18th day, 23 hrs.—in conjunction with B Ophiuchi.

10th day, 30 min.—Saturn in quadrature, nine degrees west of Regulus in Leo. This planet will transit the meridian at the following times respectively:—

D.	H.	M.	D.	H.	M.	D.	H.	M.
1	18	52	13	18	6	25	17	17

Uranus passes the meridian at the following times respectively:—

D.	H.	M.	D.	H.	M.	D.	H.	M.
1	5	54	11	5	15	21	4	35

Depford.

J. T. B.

EXPEDITION: SOUTHERN HEMISPHERE.

A LETTER from an officer of H. M. S. Chanticleer says, "We left the river Plate on the 5th of October, and proceeded to our southern voyage, our little bark being heavily laden with ten months' provisions. On the 21st we put into Staten Island, and remained in a snug little cove for two months, making numerous philosophical experiments, and swinging the pendulum. We have sent home every thing of value or importance,—plants, shells, sea-weeds, and a great collection of geological specimens illustrative of the places we visited, and some stuffed birds and insects. The cold of southern regions is a complete fable, and at variance with truth and nature. At Cape Horn, in latitude 56 deg. south, vegetation was in full vigour in May, or the November of their year, and snow rarely lies upon the low grounds. In fact, we have sufficient matter to elucidate the climate of the south, and to establish its comparative mildness with the north, especially if America be taken as the example. The summers of the south are by no means warm or hot, nor winters cold; but to compensate for this, it is the region of wind, storms, and rain, perpetual gales and eternal rains: never twenty-four hours without rain. It is the court of Eolus surely. The barometric pressure low and mean, being 29.32 inches; magnetic intensity low; the winds almost always westerly; electric phenomena extremely rare. I have forwarded some seeds from these regions, which will stand the English climate well, and prove advantageous:—1. The Fuegian rush, of which most ad-

mirable baskets are made, table-mats, chair-bottoms, and probably hats and bonnets: it is remarkably strong, and the produce rather elegant, somewhat like cane-work or India mats. The stem is rather sweet, and when dried eats like coarse hay, for which in cases of necessity it may be a substitute. This rush has the habit and aspect of our common rush, which, however, it may justly supplant by reason of its very superior qualities. It will grow on moist boggy soils, where nothing else will thrive. Its flower is large, and not inelegant; it is the *juncus grandiflorus*. 2. The seeds of a barberry (*barberris microphylla*), intermediate in quality between a grape and a gooseberry, of a good size and fine appearance; the bush is not inelegant—is a free and copious bearer: the fruit fit for the table, or domestic use. 3. Seeds of a large and luxuriant celery, of very hardy habit. 4. A most charming and elegant arbutus, an evergreen of great beauty, competing even with the myrtle, and bearing a profusion of red berries in the winter. 5. A *Frechia* of great merit; being, in fact, a shrub of good size, bearing clusters of pendent flowers of the greatest beauty. It is a very superb plant, and so hardy as to leave no doubt of its being an ornament to the choicest gardens. An embotrium, an auricula of great promise, and a chelone of most vivid hue, are among the handsome and ornamental plants. The berries of the hamadryas, for a colour between turmeric and annotta, with a curious specimen of wood, green as verdigris, which forms an admirable paint. These are some of the results of my botanical researches, excepting some remarks upon the magnificent and gigantic seaweeds of these regions. The Horticultural Society will have all the seeds, as they furnished me with paper, &c. for their preservation, and as I am in some measure employed by them.

"In comparative anatomy, I have made some researches which are curious. In the dissection of the seal of South Shetland, I found a vein of enormous magnitude, seventeen inches in diameter; a most prodigious one indeed, and unparalleled.—Well, we will proceed from Staten Island to South Shetland, and to the southern land (query continent?), as many of us were disposed to rank it, from its extent and appearance. Lofty mountains running a considerable distance inland, seventy miles, and a great extent of coast, which we could not determine. We came to a point, which we called Cape Possession, and deposited a cylinder, containing an inscription of our taking possession in the name of George IV.; the latitude of the spot being 63° 45' south, and longitude 60° west, being the most southern land yet known.* I have a piece of the rock, which is handsome agelite. Here we were surrounded with numerous icebergs of immense size, from 300 to 400 feet in height, and upwards of 1,000 feet in length. We put into the harbour of Deception Island—as horrid, dreary, and wretched a place as the imagination can conceive—the very portal of Pandemonium,—an island of black ashes and cinders, covered with mountains of ice and snow,—not a vestige of vegetation—horror of horrors!† Here we tarried two months, to our

* It will be recollected that Capt. Weddell sailed more than 10° farther south than this; and in the chart prefixed to the volume of this able and enterprising seaman, we observe "Trinity Land," as a part of South Shetland, laid down as stretching to the south as high as 64° and even 65°. The writer is therefore in error.

† It was off this that Weddell lay. Had the Chanticleer gone some degrees more to the south, and then steered eastward, she would have encountered ice of still larger dimensions, both in berg and field.

great discomfort and annoyance. There are myriads of millions of penguins, which, in the absence of other food, we were obliged to eat. The ground in some parts is covered to the extent of two or three miles with these birds. The flesh is black, and, at best, it is little superior to dog's meat."—*Newspapers*.

LITERARY AND LEARNED.

OXFORD, Oct. 24.—On Thursday the following degrees were conferred:—

Masters of Arts.—W. Cripps, Trinity College; Rev. T. Harding, Rev. J. Harding, Worcester College; Rev. T. Clarke, Pembroke College; Rev. C. W. Page, Student, W. J. Blake, Christ Church; Rev. T. W. Barlow, Wadham College; Rev. T. A. Powys, Fellow, Rev. T. L. Ramsden, St. John's College; T. Walpole, Balliol College. *Bachelors of Arts*.—W. F. Radcliffe, J. Richardson, Scholar, Queen's College; G. Pigott, Trinity College; M. Mitchell, W. Rawlings, Magdalen Hall; C. Childers, Christ Church; G. A. Jacob, Scholar, Worcester College.

SOCIETY FOR THE PROMOTION OF ELEMENTARY INSTRUCTION IN FRANCE.

THIS Society has just published a report of its receipts and proceedings, from the date of its institution in 1814 down to the end of the year last past. M. Rénouard, one of its secretaries, by whom the report is drawn up, after advertising to the origin of the Society, and to the causes, political and other, which have at various periods tended to advance or retard its efforts, submits separate tables of the number of its members, and the amount of their subscriptions, from the commencement of the Society to the close of the year 1828. By these it appears, that although a great fluctuation has taken place occasionally in the numerical strength of its supporters, yet that the funds of the Society have by no means varied in a proportionate ratio; and that although the former have vacillated from 317 to 641 (their highest number till last year, when they rose at once to 1406), the increased liberality of the members who remained had nevertheless so amply supplied the deficiencies occasioned by secession, that the defalcation in the receipts had been at all times comparatively trifling; while at the closing of the account, the last year's subscription had reached 43,974 francs, that of the first year of the institution of the Society having been no more than 9,940. The report, on various grounds, anticipates considerable assistance in the preparing of a correct statistical account of the progress of instruction in France. The Society appears to be now in communication with 260 schools in the provinces, to several of which it has furnished masters, &c.

University of Berlin, &c.—The late summer term of this University has stood pre-eminent above every preceding one, the number of students having increased to 1706; of whom 1,219 were natives, and the remainder from foreign parts. The theological courses were attended by 566, the jurisprudential by 638, the medical by 299, and the philosophical by 203. It is a singular circumstance in many of the universities I have visited, that the poorest class of students study medicine, and the richer attend (rather than study) the courses in jurisprudence. About two years back the university of Helsingfors took the place of that of Abo, and in the spring of the present year was frequented by 471 students. Being upon the subject of these northern climes, I take the opportunity to add, that the population of Prussia at the end of 1828, as appears by the census made up to that date, was 12,726,823, giving an increase of 2,377,792 souls during the last twelve years. Berlin contains 236,830 inhabitants, giving an increase of 27,791 since

the census of 1822; Breslau, 90,000; Königsberg, 67,941; Cologne (and Deuts), 64,499; Danzig and suburbs, 61,902; Elberfeld, 54,345; Magdeburg (within the walls), 44,049; Aix-la-Chapelle, 36,809; and Stettin, 31,191. The average location of the Prussian population was 2,525 to every square mile. H.

FINE ARTS.

NEW PUBLICATIONS.

Illustrations to Friendship's Offering, for 1830.

AND a very acceptable offering we are sure it will in all cases prove. The illustrations are in number a round dozen; and we should richly deserve "a round dozen" were we not to say that the great majority of them are exceedingly beautiful. But we must be more particular in our comments.—"Reading the News;" engraved by H. Robinson, from a picture by D. Wilkie, R.A. It is several years since we saw the picture, but Mr. Robinson's masterly engraving brings it back as strongly to our minds as if we had beheld it only yesterday. The concentration of interest in the group, and the sunny tone of the demi-tints, are admirable.—"Catharine of Arragon;" engraved by W. Humphreys, from a picture by C. R. Leslie, R.A. A fine and simple composition. The dignified resignation of the dying queen, while listening to "that sad note she named her knell," and "meditating on that celestial harmony she goes to," is expressed with Mr. Leslie's usual felicity.—"Vesuvius;" engraved by T. Jeavons, from a picture by J. M. W. Turner, R.A. What a magnificent eruption! If one could but bespeak such a one, it would be well worth while to undertake a voyage to Naples on purpose to witness it.—"The Spies;" engraved by J. A. Wright, from a picture by T. Stothard, R.A. Curious female secrets are here confidentially unfolding, which a good-for-nothing young fellow, concealed behind some pales, is most ungenerously and ungallantly overhearing. We long to give him a sound horse-whipping.—"Mine own;" engraved by J. C. Edwards, from a picture by J. Wood. A graceful and elegant portrait: if a faithful resemblance, many a one would gladly call the original by its title.—"Echo;" engraved by E. Goodall, from a picture by G. Arnald, A.R.A. There is a pure and classical taste in all Mr. Arnald's works; of which this is an exquisite little specimen.—"Lyra;" engraved by T. A. Dean, from a picture by J. Wood. Pretty, and playful.—"Early sorrow;" engraved by W. Finden, from a picture by R. Westall, R.A. One of those infantile griefs which are perhaps salutary; as they prepare poor human beings to endure more serious suffering.—"Spoleto;" engraved by T. Jeavons, from a drawing by W. Purser, after a sketch by Captain Melville Girdley. It is seldom that even an imaginary composition comprehends so many picturesque qualities as belong to the reality in the view of this ancient city, and its rich, broken, and varied vicinity.—"Mary Queen of Scots presenting her Son to the Church Commissioners;" engraved by R. Baker, from a picture by J. Stephanoff. The intensity of maternal affection forcibly expressed.—"The Masquerade;" engraved by C. Armstrong, from a picture by W. Kidd. This is not our favourite plate of the set: it is sadly too black and white.—"The Honey-moon;" engraved by T. A. Dean, from a picture by J. Wood. As all honey-moons ought to be, and as some are,—full of sweetness and harmony.

The Countess of Belfast—engraved by Thomson, from a miniature by Mrs. Mee—is the fifty-ninth ornament of the Female Nobility in *La Belle Assemblée*. The lady's large and expressive eyes make an interesting countenance still more attractive.

PREMIUM MEDALLION FOR SAINT
THOMAS'S HOSPITAL.

WE have been much gratified by the examination of this splendid medallion, which is unquestionably one of the finest specimens of medallion engraving, this, or indeed any other, country has ever produced. The obverse bears the head of the celebrated Cheselden; and it is really difficult to give an idea by words of the placid dignity of the whole head, or the calm expression of nature which pervades the countenance—the delicate markings of the features and the perfect softness of the flesh are the triumph of the medallion art. Cheselden is represented, according to the custom of his day, in a velvet cap; and though we are aware that Mr. Wyon has the high authority of the Hammerini and Hedlinger, we cannot help thinking his own fine taste should have objected to this costume, which, however it may improve the general effect, deprives us of the outline of the head, and we lose thereby the play of the locks, the execution of which no die engraver has turned to more advantage in his works than Mr. Wyon. But it is impossible for us to criticise what deserves only an expression of our unqualified praise.—On the reverse is represented a human body placed on a dissecting-table, in a reclining posture, immediately after death, while all the muscles and the effects of their action may be discerned. This (in common hands) unpleasant subject, the extraordinary skill and judgment of Mr. Wyon has converted into one which produces no painful impression; but which, on the contrary, rivets the attention, from its beauty; and all forbidding associations are lost in admiration of the knowledge displayed in every line of the figure. Such, at least, was the effect produced upon ourselves. In the back-ground, the motto "*MORS VIVIS SALUS*" is introduced, with some parts of a skeleton, and glasses covering medical preparations. These advantageously balance the composition, without interfering with the principal object.

We have compared this medallion with the finest productions of the many eminent foreign engravers of the present day, and we have risen from the comparison confirmed in the opinion which we have expressed of the ability of the chief engraver of the British Mint.

ORIGINAL POETRY.

THE ATHENÆUM.

[THERE has been some commotion in this celebrated Club; and a correspondent has favoured us with the following scrap, found, as he informs us, in the house-keeper's trunk, which happened to be officially examined, upon suspicion of containing very different things.]

Scene—Annual Meeting, ATHENÆUM.

The Right Hon. J. W. Croker, Conductor.
Greeting Chorus, led by Dr. Henderson, W. Ayrton, and Thomas Young, Esqrs. The Staccato Passages by Dr. H.

Recitation—Right Hon. J. W. C.

I, John Wilson Croker, will do as I please:
You asked for an ice-house, I give you a friend;
And graciously grant, of my free will alone,
Instead of a Bath, a fine piece of Bath stone.

A MOONLIGHT VIEW OF BARNARD CASTLE,
On the River Tees.

THE moon rides through the clouded sky,
Now hid entirely from the eye,

Now bursting, brilliant, on the sight
In all her pomp of silver light.
The planet now her radiance showers
On Barnard Castle's lofty towers;
But when her beams the tempest drowns,
The sullen pile in darkness frowns:
Here Tees its smooth tide gently pours,
And there a foaming torrent roars.
Thus, like the moon, the tower, the stream,
Doth man's frail fortune changeeful seem.
Though prosperous sunshine gild our way,
Dark clouds may soon obscure its ray:
Though smooth the stream of life may glide,
Soon rocks unseen may chafe its tide;
Nor, though misfortune's tempest lower,
Need we despair a happier hour.

Oakham, Oct. 9th, 1839.

J. D.

THE PARTING HOUR.

It is the parting hour,
That hour of bitterest woe,
When the full heart has scarcely power
One blessing to bestow;
Yet all they can my lips shall tell
The anguish of this last farewell!

Have we, for long, long years,
But cherished hopes of bliss
To see them all dissolved in tears—
Tears of an hour like this?
That fall like dew-drops mute and fast,
Freshening the memory of the past!

I thought not when we roved
Beneath yon blessed moon,
And all so late and fondly loved,
That we should part so soon;
I thought not then the sudden gloom
Of gathering clouds presaged our doom.

Yet, ere we part, recall
The happiness we've known,
Ere falsehood's dregs of bitterest gall
Into our cup were thrown,—
Ere seeming friends to traitors turned,
And love and truth alike were scorned.

Think upon every vow
Of pure and fadeless love,
Though disregarded here below,
Yet registered above:
Soul bound to soul, and heart-to heart,
That mortal power may never part!

H. W. H.

TO THE SWALLOW.

Go, wing thy way to climes unknown—to skies
Haply without a cloud. I love the birds
That share the fickle English year with me,—
Linnet, and thrush, and lark, and all that dwell,
Though songless, in our northern groves. But
chief

I hail the robin. He from leafless woods
Comes forth to bless the wintry hour—"a friend
Born for adversity," who pours the lay,
When all are mute beside, of peace and hope.
But thou art like a summer friend, that smiles
When skies are fair, and softly sigh the gales
Of fragrance breathing from a thousand bowers;
Yet frowns and leaves us when the churlish blast
Of life blows rude. But still, without thee,
Spring

Would lose one charm, for thou hast ever been
Her blithe attendant. On my summer path
I joy to meet thee; and when evening comes,
Shedding her sober calm, 'tis sweet to mark
Thy wantonings above the brook that flows
In silver through the emerald meads. Then
plume

Thy swift dark wing for flight; and I will wish
For thee propitious heavens and breezes kind,
And shores, at last, of beauty: and till Spring

Returning shall, with voice mysterious, call
Thee to our British fields again—farewell!
ANON.

TO

WHEN that feeling comes o'er me,
Remembrance of thee,
And thy form floats before me
As a mist o'er the sea,—
Like the cloud on the ocean
It droops on my breast,
And each former emotion
Seems folded in rest.
But as cold the blast stealing
Sweeps o'er its chill breath,
And the dread sea revealing
Shews its heaving beneath;
So thy vision thus waning
Departs from my brain,
And the sad thoughts remaining
Heave wildly again.

W. G. H.

Ocell Street, Strand.

SKETCHES OF SOCIETY.

FRANCIS I., EMPEROR OF AUSTRIA.

THIS sovereign, says a foreign correspondent of ours, rises regularly at six o'clock, breakfasts at seven, and devotes the remainder of the forenoon to public business and audiences. At one o'clock he generally takes a walk, in which he is accompanied by the empress at times, but oftener by his great chamberlain, or one of his aides. At four he sits down to dinner, which seldom consists of more than four dishes and a dessert, and at which he drinks nothing but water, unless it be a glass of Tokay as a finale. At six he takes his coffee in the pavilion of the new imperial garden, after refreshing himself with a stroll in the Paradise gardens, where a vast number of pigeons are reared. The empress herself, whose attire is of the most unpretending kind, does the honour of the coffee board; and few English dames can surpass her in exemplary devotion to her domestic duties. The emperor spends the remainder of the evening until supper-time in playing trios on the violin or flute, in both of which instruments he is an adept,—calling in one of his aides and some nobleman about his person to take the secondo and terzo parts. All the members of the imperial family have been taught some trade or other: the crown or hereditary prince is an excellent weaver, and his brothers excel as carpenters or joiners. They have been brought up with a rigid regard for the purity of their moral conduct. As to the business of the state, it rests entirely with Metternich, whose absolutism dates from the year 1810. It is added that the emperor is an excellent Latin scholar, and speaks Latin correctly as well as fluently. He is perfectly acquainted with botany and natural history, and an enthusiastic wooer of both studies.

A Mameluke's Spirit.—During Selim's campaign in Egypt (1517), Kurtbai, the bravest of the beys, had escaped the general massacre of the mamelukes, by concealing himself in a house at Cairo. This having reached the sultan's knowledge, he sent one of his friends to him with a book and a piece of cloth; the latter as a pledge of peace, and the former as a pledge of safety, in the shape of a Koran, by which he had sworn to save him from harm. Kurtbai, in full reliance on these tokens, appeared before the sultan, who received him seated upon his throne. "Thou art," said Selim at his entrance, "the chosen knight of the horsemen; whither hath thy valour taken wing?" "It endures," was Kurtbai's laconic

reply. "Knowest thou what evil thou hast done my followers?" "Ay! I know it well." But when Selim asked him how he came to adventure the desperate attempt he had made in the field of battle on the sultan's person, Kurtbai, who was as remarkable for eloquence as bravery, poured out his soul in a splendid eulogy on the bravery of the Mamelukes, and vented his contemptuous abhorrence of artillery; an engine which dispensed murder, without requiring the presence of courage. He then related how a Mauritanian had brought the first cannon-balls into Egypt, in Sultan Eshrif Cannsu's time, and how the sultan and beys had set their faces against them, as unworthy of gallant warriors, and contrary to the usage of the prophet, who had restricted the Arabians to the use of the bow and sword; adding, that the Mauritanian had thereupon replied:—"He who lives long enough will live to see dominion pass away by means of these balls!" "The event," added Kurtbai, "has proven the augury. But power belongs to Omnipotence alone!" "If thou holdest in this wise," said Selim, "to the Koran and the Sunna, how has it come to pass that we have smitten and driven ye out? that thou standest a prisoner before me?" "It is God's work!" answered Kurtbai; "it is not by your valour or horsemanship we have been undone; fate hath decreed it; for every thing hath a beginning and an ending, and the duration of empires is measured: tell me where are the caliphs, the soldiers of the faith? where the mightiest sovereignties which the world ever beheld? And thy time will come, too; and thine empire will return unto the dust!" The sultan, burning with fury, cast his eye at the executioner; and as the sword of immortality impended over him, the brave, the undaunted, and unfortunate bey exclaimed, "Take my bleeding head, and lay it, traitor, in thy helpmate's lap; Heaven give, her perfidy may balance thine!"

MUSIC.

CHURCH MUSIC.

A Collection of Psalms and Hymns from the most approved Versions. By Montagu Burgoyne, Esq. *The Music selected from the Works of ancient and modern Composers, and harmonised and arranged for One, Two, or Three Voices, with an Accompaniment for the Organ or Piano-forte.* By J. M. Harris.

A Collection of Movements selected from the sacred vocal Works of Mozart, Haydn, Beethoven, Hummel, Cherubini, Romberg, Spohr, Winter, Rink, Graun, Pergolesi, Marcelllo, Hasse, &c. arranged as Voluntaries for the Organ. By W. H. Callcott.

THE soundest and most pious divines of the Church of England have uniformly attached considerable importance to congregational psalmody. A late Bishop of London, Dr. Porteus, made it a prominent subject of exhortation in a charge given to the clergy of his diocese, in the year 1790; and it is well known that the great success of some classes of dissenters in making converts from the established church is mainly to be attributed to the attraction of sacred music, which, in many meeting-houses has been rendered more impressive and affecting than in our parish churches, where this elevating part of public worship has been consigned either to ill-taught charity children, or else to one or two hired and careless singers concealed in the organ-gallery—"half a dozen merry men in a high place," as Serle says in his *Christian Remembrancer*, "who loudly

chant it away, to the praise and glory of themselves." This defect in our public worship might be easily remedied, if families were (especially on Sunday evenings) to make the cultivation of plain psalmody a part of that musical recreation which, in the present day, is resorted to in all houses of the middle and upper classes. English psalm-tunes are very numerous, and comprise in their affecting simplicity some of the noblest melodies ever conceived by the mind of man.

In the work before us, the whole, or nearly the whole, of these fine tunes, with appropriate words from the old and new versions, are contained; so that any individual who should make himself master of the contents of this volume, would be qualified to join efficiently in the musical part of public worship, which, to be fitly performed, should arise from the united voices of the congregation; for this is not only the common-sense of the matter, but is precisely what has been enjoined by the prophets and the apostles. In bringing this work forward, Mr. Burgoyne, the editor, has accomplished a service of no mean importance to the cause of devotion, and has employed his talents and his influence in society to the furthering, by means of the profits arising from this work, the interests of one or two charitable institutions. Of the musical arrangement, under the care of Mr. M. Harris, we are enabled to speak with equal praise. The harmonies are at once perspicuous, simple, and effective, and the text of the melodies is every where pure. This latter circumstance is a great advantage; for, without considerable research, few persons are aware of the injury which ancient airs have received from modern frippery. The musical taste of our forefathers was rude, but strong; and the refinements of the present day sit ill upon them, and pervert their meaning. Of this truth we were especially convinced in examining Dr. Croft's majestic old tune set to the eighteenth psalm, which Mr. Harris has restored to its original state, as composed upwards of one hundred years ago; and by way of demonstrating the mischief which must infallibly result from any interference with the work of a great master, the modern effeminacies are indicated by small notes, which, it will be seen, rob the air of all its vigour and character. To the general collection Mr. Harris has added several of his own compositions, which are worthy of the company by which they are surrounded. We may particularly allude to a prayer from the Italian of Michael Angelo.

Among the original contributions to this collection of psalm-tunes and hymns, we were also particularly struck with several of those by a musician who conceals his name, and who is only indicated by asterisks. Why so excellent a composer should determine to be anonymous, it is not easy to conjecture. Perhaps he is an amateur; but even if so, a man of such talent in musical composition should not hesitate to publish his name. There are many precedents; the father of the Duke of Wellington, for example, who was one of the best of our glee composers.

The other work which we have cited at the head of these remarks, is altogether of a different character from the above-mentioned English psalms and hymns. Its contents are derived from the religious compositions of the great foreign masters, and the strains are scientific and elaborate. As the Roman church is more pompous in its ceremonial observances than ours, so is the devotional music more intricate, ornate, and ambitious, than any thing in English psalmody. But in their

way, nothing can be more exquisite than the Roman Catholic masses, as set to music by the great masters of the Italian and German schools. Many of the movements in these are admirably adapted for voluntaries in our church; and with this view Mr. Callcott has made the present arrangement, in which the numerous parts in the original scores are most effectively condensed. No public organist should be without this useful and portable work, which contains twenty movements from the religious compositions of the foreign musical classes. Mr. Callcott's volume will also be very acceptable to private piano-forte performers, especially in families who do not allow the introduction of secular music on the Sabbath.

The Edinburgh Musical Album. Edited by George Linley, Esq.

THIS is a very pleasant musical miscellany, consisting of several old traditional Scotch airs, and sundry original compositions in the shape of overtures, polaccas, waltzes, new songs, and concerted vocal pieces. These latter portions, though not always theoretically correct, evince no inconsiderable portion of fancy and invention on the part of the composer or composers: but the chief value of the volume consists in the native Scotch melodies, which are there given to the lovers of music in their first, unadulterated state. To do this is to perform a great service to music in general, and particularly to national music, which latter should never undergo sophistication. We recommend this northern work as a source of gratification to our readers, whether English, Scotch, or Irish.

The Musical Bijou. Edited by F. H. Burney. 4to. pp. 136. Goulding and d'Almaine.

THIS volume is described as an Album of Music, Poetry, and Prose, for 1830: a happy conjunction, and one not unadorned by art—for we have also a beautiful design of a presentation-plate by Bonington, and four lithographic prints by Gauci, Childs, and Haghe, from drawings, &c. by C. Tomkins and J. Pocock: the "Exiled Knight" of the former displaying a powerful imagination. Of the music and the poetical contributions it may be sufficient to notice that Rawlings, Barnett, Parry, Solis, Burrows, Holder, Jolly, H. Herz, C. Smith, Bishop, Kiallmark, Rossini, Kalkbrenner, Valentine, and Rodwell, supply the first; and that Haynes Bayly, the Ettrick Shepherd, Planché, Sir W. Scott, Hemans, Vandyk, Pocock, &c. &c., are the chief of the poetical doers. "The Confessions of a Suspicious Gentleman," by Lord Nugent, is one of the very best and most piquant prose articles we have any where met with among the Annual collections.

CITY OF LONDON LITERARY AND SCIENTIFIC INSTITUTION.

ON Thursday evening last we were present at a concert given by the music class of the above excellent Society, and were highly pleased with the manner in which the amateur corps executed their various performances. Altogether, the amusements of the evening were gone through in a style highly creditable to the tyros engaged in them, and to the Institution under whose care their knowledge has been acquired.

DRAMA.

DRURY LANE.

SOME good comedies have been acted here; and on Thursday, an operetta, in one act,

called *No*, was brought out. We are not aware whether it is from the French *Non*; but something of the same kind has been performed at the Surrey, we believe. The singing of Sinclair, aided by the talents of Miss Graddon, Mrs. Orger, Mrs. C. Jones, Browne, and others, carried the piece pleasantly through here.

COVENT GARDEN.

The Early Days of Shakespeare!—Mr. Somerset (if such be indeed the name of the writer) is a bold man—his drama proves him to be an ingenious one; and boldness and ingenuity combined rarely fail to attain the prize for which they struggle. His subject presented more than common difficulties; and he has grappled with these manfully. On the other hand, the interest of his audience was enlisted on his side by the very title; and he was clever enough to avail himself to the fullest extent of the prejudice in its favour. To put language into the mouth of Shakespeare were a worse than Phaëton experiment, and must inevitably consign the presumptuous mortal to a fate as awful as that of the adventurous charioteer; Mr. Somerset therefore made him speak his own poetry wherever he had an opportunity. Nobody could object to this; and to say that “the leather and prunella” which made up the account was tolerated by the side of it, is to say that it received at least as high a compliment as the author’s modesty* could possibly have expected. The incidents are ably arranged, and follow each other in the following order:—Shakespeare, after a dream on the banks of the Avon, in which the principal creations of his fancy, at the command of *Oberon* and *Titania*, “come like shadows, so depart,” is taken before Sir Thomas Lucy, charged with having shot a buck, the property of that mirror of magistrates. “The Warwickshire Thief” poses the original *Justice Shallow* with a lecture on the game laws, is finally condemned to pay a penalty of fifty crowns, according to the statute, and after writing down the worshipful knight “an ass” in the well-known squib, “a parliament man and a justice of peace,” &c. makes his escape to London. There he has the good fortune to stop the runaway horse of my Lord Southampton, who, on the introduction and recommendation of *Richard Burbage* the actor, takes the young poet under his patronage, and encourages him to stand candidate for the prize-essay proposed by Queen Elizabeth, which, we need not inform our readers, he produces to the satisfaction of her Majesty, and of course of the court; the audience taking it for granted, as they were not indulged with a word of it. The queen, who has just heard of the destruction of the Armada, gives loose to her joy by adding a sort of codicil to her former royal will, “signed, sealed, and delivered,” in the command of a poetical impromptu from each of the persons around her, which of course adds to the triumph of Shakespeare, who bears off not only the bell, but the portrait of his *belle reine*, set in diamonds. The scenery is appropriate and beautiful. The piece is strongly cast and admirably acted. A pretty

medley overture by Bishop, and some tastefully arranged music from Weber’s *Oberon*, &c. added to its general effect; and we have little doubt, from its reception on Thursday evening, that it will have a considerable run.

ADELPHI.

On Monday *The Rose of Ettrick* was produced at this house, and has been enacted since every night; though it is not exactly of that character for which this entertaining theatre has taught us to look, by its excellent sea-pieces, varied with the most comic little dramas. This, on the contrary, belongs to the romantic class.

THEATRE FRANCAIS.

A TRAGEDY called *le More de Venise*, which the French papers say is a literal translation of Shakespeare’s *Othello*, was produced a few days ago at the Théâtre Français in Paris. It is from the pen of M. Alfred de Vigny, and is well spoken of by most of the Parisian critics. Some of the young men, however, who fancy that they cannot be just to Shakespeare without offence to the name of Voltaire, raised a clamour, which the good sense of the audience overpowered; and the piece met with decided success. M. Perrier, the actor who was called upon, according to the French custom, to name the author, stated that this translation from “the great Shakespeare” was by M. de Vigny. The tribute to our immortal bard conveyed in the word “grand” was hailed with grand approbation.

VARIETIES.

Roses and Onions!—A German gardener declares that he has found by experience, that an onion of the largest kind, planted near a rose-bush, gives a more agreeable and exquisite perfume to the roses.

Travelling by Steam in America.—The fare by the steam-boats from New York to Albany is only half a dollar—less than one farthing per mile.

War.—The following is an account of the number of battles, sieges, and treaties, which have taken place since the origin of the French monarchy up to 1815:—battles, by land, 1305—by sea, 77; sieges, by land, 1780—by sea, 23; treaties of peace, 66.—*French Paper.*

Fine Arts.—The King of Bavaria has had painted by eminent artists, under the arcades of the large building in the royal park at Munich, subjects taken from the history of Bavaria. These paintings, which are in fresco, and twelve in number, were thrown open for public inspection on the 1st instant. They are highly spoken of.

Suspension Bridge.—An iron chain suspension bridge has lately been constructed at Avignon, which is considered a master-piece of art, and has attracted great attention from the beauty of its proportions. The total length from one buttress to the other is 500 feet; there are two stretches of 240 feet each, capable of supporting a weight of 500,000 kilogrammes. The breadth, which is the same the whole distance, is thirty feet, divided into three ways or roads; the centre one for carriages, and the two others for foot passengers. The height above low-water mark is thirty feet. A triumphal arch surmounts the centre pillar, as well as the two at the buttments of the bridge, resting on the angles. It is supported by six iron cables, by means of vertical cords, the cables being fastened

to the pillars after having passed over the triumphal arch.

Linen Manufacture.—M. Ternaux, the eminent manufacturer, and one of the French deputies, has recently purchased the château of Colmoulin, near Montvilliers, Lower Seine, for the purpose of converting it into a linen manufactory. About 700 acres of land, of which the estate is composed, are to be cultivated with flax.

Speaking-Pipe.—A tin pipe, similar to that which has for years been found so convenient for verbal communications in large establishments and manufactories, has been applied to shipping, at the suggestion of Mr. Parsons, of Portsmouth Dock-yard. The Briton has thus been fitted with a pipe up the mainmast, to convey orders from the deck to the top in boisterous weather.

Fine Arts.—The Scotch Academy of Arts at Edinburgh have elected Mr. Martin an honorary member: this admirable and extraordinary artist has no academical honours whatever in London. The city of Edinburgh has also presented its Freedom to the great pictorial boast of Scotland, D. Wilkie: this was done by the Lord Provost in the most public and honourable manner.

Proof against Fire.—On Tuesday week an experiment was made in presence of a committee of the Academy of Sciences at Paris, by M. Aldini, for the purpose of shewing that he can secure the body against the action of flames, so as to enable firemen to carry on their operations with safety. His experiment is stated to have given satisfaction. The pompiers were clothed in asbestos, over which was a net-work of iron. Some of them, it is stated, wore double gloves of amianthus, held a red-hot bar during four minutes.

Cure for Gout, &c.—The *Notisia del Giorno*, of Rome, gives circumstantial details of several experiments most successfully made on persons of every age, and of both sexes, in that capital, for the radical cure of the gout, rheumatism, and sciatica, — diseases which have hitherto been thought incurable. The recipe consists in administering to the patient forty-eight doses of very warm water, each dose to weigh eight ounces, and to be taken every quarter of an hour during the paroxysm of the disorder. The result of this potion, of which the effect is diuretic, and excites perspiration, is obtained at the tenth or eleventh, and sometimes at the first dose. The physicians say, that although this quantity of drink may occasion nausea and vomiting, the doses should not, however, be diminished; and the remedy, which is cooling and antiphlogistic, is recommended by Drs. Rasori and Tomassini.

At a late sitting of the Paris Royal Academy of Sciences, Dr. Legrand read a memoir relative to the cure of scrofula by preparations of gold. M. Foureaud de Beauregard reminded the Academy of a memoir formerly presented by him with a view to shew that the yellow fever is to be considered as an acute scorbutic affection, and that the most efficacious remedy for it is the rhatany root.—At the same sitting, M. Lasfranc read a memoir relative to cancer, in which he endeavours to shew that in many cases it is not necessary to extirpate entirely the organ affected, but merely to cut off the diseased parts. He stated, that in several experiments the results had proved the correctness of his opinion.

Lithotritie.—Baron Heurteloup, of whose method of performing the operation called lithotritie we gave an account a few weeks ago, is proceeding most successfully with his practice.

* Apropos of modesty:—the author of *Shakespeare’s Early Days* has thrown down the gauntlet to his brother dramatists with perhaps a little more of the tone of insult than is quite becoming a novice in the art. We have never joined in the ally and unfair outcry against the writers of the present day, which, after all, is but the echo of a charge as old as dramatic writing itself in this country; and we confess we should not have thought less highly of Mr. Somerset’s original efforts, had he left such commonplace and threadbare tirades as he has put into the mouth of Burbage, to the ignorant, the envious, and the disappointed.

St. Bartholomew's Hospital and the Hunterian Society have, we are informed, witnessed several cases of cure for this most painful of diseases by the Baron's mode of excavating and crushing the stone. We consider these experiments to promise a great blessing to suffering humanity.

Ventriloquism.—Among the most successful of the vagabonds who nightly exhibit in the Boulevards of Paris at present is a ventriloquist, who has contrived a puppet on springs, with which he holds a conversation. The curious are obliged to approach close to the ventriloquist to hear the responses; and he immediately desires his wooden friend to tell the age of the individuals present:—two sous pieces are forthwith produced, and possess the power of effacing some ten years from the number of every munificent inquirer.

Paris Academy of Sciences.—The communications and business generally at the sitting of the 26th instant were not of much interest. It was whispered that the differences between the government and the Academy on the subject of public education were likely to be satisfactorily adjusted, and that an intention was entertained of increasing to a considerable extent the expedition which the king has resolved to send to Africa. Some of the members read privately to their friends, *en cercle*, letters from members of the expedition in Egypt; but they did not add much to the valuable information already supplied by M. Champollion.

Natural History.—At the sitting of the Paris Academy of Sciences on the 19th inst., M. Robineau Desvoidy, in the course of some observations on natural history, stated, that on opening a female viper of the species called the red viper, he found three thousand young, of different degrees of size. M. Desvoidy supposes that this extraordinary fecundity is peculiar to the red viper.—At the same sitting M. Geoffroy Saint Hilaire resumed his observations on monstrosities, and particularly remarked on the two Siamese brothers who arrived lately at Boston. The union of these brothers, he said, is limited to a point extending from the base of the breast to the navel. It is superficial, and is shewn solely in a small portion of the skin, a few vessels, and some muscles. Each of them is a complete man with respect to the important organs of life. They have attained their 18th year. Their stature is short. They have never been ill. The inconvenience of their position, face to face, has caused them to use great efforts to modify it, and they have succeeded in acquiring a power of motion so far as to regard each other obliquely, so as to make a right angle between them. Their minds are well cultivated, and they agree well together. On their voyage to Boston, the only difference between them arose from the wish of one to bathe in the sea, whilst the other thought the water too cold for the diversion.—It is a curious coincidence, that at the meeting of the 26th inst. it was also announced by the same learned physiologist, that the twin girls Rita and Christina, who are joined together, had arrived in Paris, and were to be examined by some eminent anatomists on that day at the Museum in the Jardin du Roi.

New School in Paris.—The *Société des Méthodes d'Enseignement* in Paris have, with the authority of the Minister of Public Instruction, just established a new school at Paris, under the title of *Ecole Orthomatique*, viz. school in which persons are taught on the most approved methods. Besides the ordinary

routine of instruction, the pupils are to be taught the living languages, natural history, natural philosophy, chemistry, mathematics, commercial sciences, &c. The chief promoters of this scheme are—M.M. Lafayette, Casimir Perrier, André Delessert, Lafitte, the Duke of Broglie, the Count de Noailles, and J. Smith, Esq. M.P.

Scientific.—At the sitting of the Paris Academy of Sciences, on Monday week, some interesting observations on monstrosities were made by M. Geoffroy St. Hilaire; and a new mathematical instrument, called *règle-échelle*, for facilitating the drawing of plans, was exhibited.

LITERARY NOVELTIES.

Dublin is about to adventure a Literary Gazette: the prospectus holds out, particularly, the consideration of theological subjects, and biographical sketches of eminent living characters.

The author of "Caleb Williams" has another novel in preparation.

The Poetical Works of the Rev. George Croly are nearly ready for publication.

Mr. Britton's History and Antiquities of Bristol Cathedral, with eleven engravings by Le Keux, is, we learn, nearly ready. On this occasion, for the first time, the author prints a list of subscribers, to shew the extent and character of local patronage. Mr. Britton is also preparing to publish his Illustrations and History of Hereford Cathedral in the course of the season.

A new work is promised by the author of "The O'Hara Tales."

Mr. Gally Knight announces a Letter to the Earl of Aberdeen on the Foreign Policy of England.

Mr. W. Long Wellesley has in the press a History of the Court of Chancery—its Abuses and Reforms. The work may be expected very soon.

The British Naturalist, or an Account of the Appearance and Habits of the more remarkable Living Productions of Britain and the British Seas, &c. &c., is announced.

Sir Edmund Temple will shortly publish an Account of his Travels in South America.

We have to thank the publisher for the fourth edition of *Rienzi*; and, without depreciating the great talent of its author, we may observe, that its success both on the stage and in the closet ought to encourage writers of ability to cultivate the higher branches of dramatic literature.

The Adventures of an Irish Gentleman may be very shortly expected.

Dr. Forster has nearly ready Letters of Locke to Mr. Furl, Mr. Clarke of Chelney, and Sir Hans Sloane; and also some Original Letters of Algernon Sydney, of Lord Shaftesbury, &c. &c.

The Memoirs of Bolivar, including the Secret History of the Revolution, is announced for speedy publication.

Random Records from the pen of George Colman the Younger are in a forward state.

In the Press—Stories of Travels in Turkey, and of the Manners and Customs of the Inhabitants of Constantinople; with a Sketch of the History and Geography of the Empire: to be embellished with plates.

LIST OF NEW BOOKS.

Crittwell's Housekeeper, 1830, 4to. 2s. sewed.—Jackson's Designs for Villas, 4to. 12. 11s. 6d. bds.—Jenkins and Hosking's Architectural Ornament, folio. 12. 14s. bds.—Fincham's Practice of Ship-Building, 8vo. folio plates, 2s. 2s. bds.; on Masts, Ships, and Mast-Making, royal 8vo. 15s. bds.—Gribble on Fencing Horseman'ship, 8vo. 7s. bds.—Watson's Apology, French, 12mo. 4s. bds.—Henry and Antonio, from the German, 12mo. 6s. 6d. bds.—Ellison's Protestant Errors, 12mo. 6s. bds.—Clarke's Complete Cellarman, 12mo. 7s. bds.

METEOROLOGICAL JOURNAL, 1829.

October.	Thermometer.	Barometer.
Thursday . . . 22	From 44. to 55.	29.60 to 29.80
Friday . . . 23	33. to 51.	29.88 to 29.91
Saturday . . . 24	27. to 54.	29.91 to 29.94
Sunday . . . 25	29. to 54.	30.03 to 30.19
Monday . . . 26	38. to 52.	30.25 to 30.26
Tuesday . . . 27	29. to 51.	30.30 to 30.25
Wednesday 28	34. to 51.	30.15 to 29.25

Prevailing wind, N.E.
The 22d and 26th for the most part overcast: the remaining five days almost cloudless, except the early part of the morning of the 28th, when, 2 of an inch of rain fell.
Edmonton. CHARLES H. ADAMS.
Latitude . . . 51° 37' 32" N.
Longitude . . . 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

ERRATUM.—In the account of the Occupation of Aldebaran in our last, line 17, for "Of the immersion I cannot speak," read "Of the emersion I cannot." &c.
If J. H. refers to the Meteorological Journal in our No. for Oct. 10th, he will find the information he seeks.

ADVERTISEMENTS

Connected with Literature and the Arts.

EDINBURGH REVIEW. ADVERTISEMENTS, NOTICES, &c. to be inserted in the General Advertising Sheet of the forthcoming Number of the Edinburgh Review, are requested to be sent to Longman's and Co. Paternoster Row, by Monday, 8th of November; and to be placed in the 12th. Advertisers will perceive the great advantage of sending their Advertisements and Bills early, as they are placed in the exact order they are received by the Publishers.

LANGUAGES. Mr. J. H. SMITH, Professor of the Greek, Latin, German, and French Languages, attends Schools and Private Pupils on Terms very moderate. Mr. S. had considerable experience as Classical Tutor, previous to a Residence of several Years in Germany and France, where he had an opportunity of learning the respective Tongues correctly. English taught to Foreigners.
Apply at No. 161, Fleet Street.

BOOSEY'S FOREIGN CIRCULATING LIBRARY, Broad Street, City.

The Subscribers who devote themselves to French and German Literature are respectfully informed that short valuable Additions have been made to the Library in general, but more particularly in those Languages.
Terms of the Four Classes of Subscription are from 2s. 6d. to 5s. 6d. per Annum; Half-yearly and Quarterly Subscriptions on the usual proportionate Scale.
Further Particulars and Catalogues may be had as above, and of T. Boosey and Co. 25, Holles Street, Oxford Street.

Just published,

THE ANATOMY OF THE HUMAN BONES, illustrated in Five Plates, calculated to impress upon the mind their respective Names and Situations; designed for the Use of Young Students and Artists. Size of each Plate, 18 inches by 17 inches. Price 10s. 6d. coloured.

The Anatomy of the Human Bones will shortly be followed by The Anatomy of the Human Muscles, executed upon a similar Plan.
Published by William Darton, 55, Holborn Hill, London.

Published this day, price 1s. No. II. of

THE JOURNAL OF FASHIONS, consisting of Four Plates of Costumes, selected from the latest Parisian Publications, with Descriptions, Observations, &c. To be continued on the 10th and 15th of every month.

Established by Harrison Isaac, Charles Street, Soko Square; sold by Simpkin and Marshall, Stationers: Hall Court; Chappin, Pall Mall; and Plah, 2, Goswell Road.

MUSIC.

Just published, dedicated to His Most Gracious Majesty the King.

THE MUSICAL BIJOU for 1830.

Edited by F. H. BURNBY.
The very gratifying manner in which the first Number of the Musical Bijou was received by the Public, has induced the Proprietors not to spare any expense in the production of the present volume, and they confidently challenge attention to the enlarged List of Contributions.

Table of Contents.—Musical.			
	The Poetry by	The Music by	
Romance	M. Jony	G. Rosini	
The Exiled Knight	Harry Stoe Vandyk	John Barnett

London: Published by Gouthing and D'Almeida, 20, Fenchurch Street; and to be had of all Music and Book-sellers.

BOOKS PUBLISHED THIS DAY.

In royal 8vo. price 11. 8s. in cloth boards, the 8d edition, corrected and materially improved, of
THE CLERICAL GUIDE; or, Ecclesiastical Directory, containing a complete Register of the Dignities and Benefices of the Church of England, with the Names of their present Possessors, Patrons, &c. and an Alphabetical List of the Dignitaries and Beneficed Clergy; with an Appendix, containing the Ecclesiastical Patronage at the disposal of the King, the Lord Chancellor, Archbishops and Bishops, Deans and Chapters, Colleges at the Universities, &c.
 By RICHARD GILBERT, Compiler of the "Clergyman's Almanack," and the "Liber Scholasticus."
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8 vols. 8vo. price 18s. boards, the 8th edition of
A CRITICAL AND PRACTICAL ELUCIDATION OF THE BOOK OF COMMON PRAYER, and Administration of the Sacraments, and other Rites and Ceremonies of the Church, according to the Use of the United Church of England and Ireland.
 By the late JOHN SHEPHERD, M.A. Minister of Fawcett, Essex.
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Small 8vo. 4s.
THE FAMILY LIBRARY, No. VII.
 (Being the Natural History of Insects.)
 John Murray, Albemarle Street.

4to. with Plates, 12s. 6d.
A DESCRIPTION OF COMMANDER MARSHALL'S NEW MODE OF MOUNTING AND WORKING SHIP'S GUNS; wherein the Nature and Advantages of its novel Properties are shown, and illustrated by the results of Official Experiments.
 John Murray, Albemarle Street.

In fols. 8vo. gilt and half-bound in morocco, price 8s. the same size and shape as the volumes for 1830 and 1830.
THE JUVENILE FORGET ME NOT,
 for 1830.

Edited by Mrs. S. C. HALL.
 A Christmas and New-Year's Gift, or Birthday Present; intended expressly for the instruction and amusement of Children. A work under a similar title having been announced, and the Publishers having ascertained that orders have been given for it, under the idea that it is "the Juvenile Forget Me Not" for 1830, they are under the painful necessity of issuing this caution relative to an unjustifiable course. They therefore request that the work may be ordered as "Mrs. Hall's Juvenile Forget Me Not."
 On the 1st of November will be published, in medium 18mo. bound in rich green silk, price 12s.

The Amulet; a Christian and Literary Remembrance, for 1830.
 Containing the Contributions of several of the most distinguished Writers of the age; and illustrated by Twelve Engravings, from the most celebrated productions of art.
 One of the prints is from Mulready's picture of an English Cottage, in the possession of the late Duke of Devonshire, and the English of the Crucifixion, by Martin, and the Minister of Chamois; some idea may be formed from the fact, that, for the former, the Engraver, Mr. Le Keux, received 180 guineas; and, for the latter, engraved by Mr. J. H. Robinson, that gentleman was paid the sum of 100 guineas. It is presumed, however, that these works are unparallelled.
 Proof Impressions of the Prints, either in Sets or separate, may be obtained.
 London: Published by Wootley and Davis, Stationers' Hall Court.

Price 8s. 6d. No. VII. of
THE QUARTERLY JOURNAL OF AGRICULTURE, and the PRIZE ESSAYS and TRANSACTIONS of the HIGHLAND SOCIETY of SCOTLAND.
 Contents I.—I. On the Agriculture of the Romans.—II. On the Acclimatizing of Plants; by John J. Buchanan, Esq.—III. On the Origin and Natural History of the Horse and its allied Species; by James Wilson, Esq. F.R.S.E. M.W.S. &c.—IV. On an Improved Use of Potatoes; by John McInnes, Esq.—V. On an Elastic or Spring Shoe; by James Whyte, Esq.—VI. On striking Flax for Cattle, Sheep, and Wool.—VII. On Summer Fallow.—VIII. On Bone Manure; Report of the Doncaster Agricultural Association.—IX. On Reclaiming and Colonizing the Bogs and Wastes of Ireland—various Works.—X. On the Lease (concluded).—XI. Miscellaneous Notices.—XII. Quarterly Agricultural Report.—XIII. Tables of the Average Prices of the different kinds of Grains, Hatching-meat, and Wool, at various Places.—XIV. Foreign Corn Markets.
 Contents II.—I. Preliminary Notice.—II. Essay on the present State of the Highlands and Islands of Scotland; by John Anderson, Esq. W.S. &c.—III. Description of a Road-leveller; communicated by James Hunter, Esq. of Thurston.—IV. Description of an Improvement in the Construction of the Axles and Naves of the Wheels of Waggon for Railways; invented by James Aird and James Dunlop, of Carr's Millery.—V. Quarterly Agriculture Report.—VI. Description of a Machine for Cultivating Potatoes in the District of Cuthbert, communicated by John L. Stewart, Esq.—VII. Account of the Drainage of certain Farms on the Estate of Falkland.
 Printed for W. Blackwood, Edinburgh; T. Cadell, Strath, London; and W. Curry, Jun. and Co. Dublin.

In 18mo. with an Engraving, 4s. 6d. boards, the 8d edition of
A PRACTICAL TREATISE, to render the ART of BREWING more EASY; wherein is explained the Method of Brewing the several Sorts of Malt Whisky most generally esteemed, accompanied by Instructions for the Purchaser of Malt and Hops; also, particular Directions for the general Management of the Brewery; with Tables of the net Excise Duties on Strong and Table Beer. The whole rendered familiar for the Public or Private Brewer.
 By E. N. HAYMAN, Common Brewer.
 Printed for Longmans, Ross, Orme, Brown, and Green.

Cuvier's Natural History.
 Embellished with Twenty-one superior Engravings, in 4to. with Proof Impressions of the Plates on India paper, price 30s.; in royal 8vo. with the Plates accurately coloured, price 54s.; in royal 8vo. with the Plates plain, price 18s.; and in demy 8vo. price 12s. Part V. the Eighth of the Class Aves, of
THE ANIMAL KINGDOM: Described and Arranged in conformity with its Organization.
 By the BARON CUVIER, Member of the Institute of France, &c. &c.

With additional Descriptions of all the Species hitherto named, and of many not before noticed; with other Original Matter.
 By EDWARD GILBERT, F.R.S. &c. &c. and others.
 The Class Mammalia, complete in Twelve Parts, with upwards of Two Hundred Engravings, forming 5 vols. price in extra cloth boards—

Demy octavo	7 4 0
Royal octavo	10 10 0
Ditto coloured	14 8 0
Demy quarto, India paper	14 8 0

The Thirteenth Part contains an Account of the Fossil Mammalia, which, with Two subsequent Parts, to be devoted to other Organic Remains; is intended to form a distinct volume on the Fossil Genera and Species.

The Class of Birds will occupy Nine Parts; the Fishes, Insects, Reptiles, &c. will form about Twenty Parts; and the whole, it is computed, will comprise about Forty Parts. It will be so arranged for the convenience of those who may confine their studies to either of the Classes, that each Class will make a distinct Work, as well as one of the Series of the "Animal Kingdom." The conclusion will contain a Tabular View of the System, a copious Index, and a general Terminology of the Sciences. The engraved Illustrations of this Work are in a superior style of execution, by different Artists, and of the most excellence; and among the rest, managed by Mr. Landseer. Most of them are from original drawings made from Nature, and several represent species altogether new, or never before figured. The paper and type of this Work are in a corresponding style of excellence.

Also,
No. VII. of a Republication of this Work, to be continued Monthly, price 4s. in demy 8vo.; and 6s. in royal 8vo. embellished with Six Engravings. The Class Mammalia will form the first Thirty-six Numbers; the Class of Birds, Twenty-seven Numbers; the Fishes, Insects, Reptiles, &c. about Sixty Numbers.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Mr. Cooper's New Novel.—In 8 vols. post 8vo.
THE BORDERERS; a Tale.
 By the Author of the "Spy," the "Pilot," the "Red Rover," &c.
 "But she is dead to him, to all;
 Her love hangs silent on the wall;
 And on the stairs, and at the door,
 Her fairy step is heard no more."
 Rogers.
 Printed for Henry Colburn and Richard Bentley, 8, New Burlington Street.

On the 28th of October was published, price 2s. dedicated to Professor Wilson,
THE JUVENILE KEEPSAKE for 1830.
 Edited by T. ROSCOE, Esq.
 Embellished with numerous Line Engravings, under the superintendence of Mr. Charles Heath. The Contents, by some of the most favourite and distinguished Writers for Youth, are enlarged to Sixteen Sheets of Letter-press, forming one of the most beautiful works of its class. In the List of Contributions are the "Hair of Newton Buzzard," a humorous Tale in Verse, by the late celebrated Mrs. J. Hunter, (communicated by Lady Campbell); "The Children's Island," by M. de Genlis; "A Tale of the Christmas Holidays," by the Author of the "Pilot," &c. &c. "The Battle of the Marston," by Miss Mitford; also Contributions by Mrs. Hoiland, Mrs. Ople, Miss Porter, Miss Roscoe, Miss E. Taylor, L. E. L. W. Howitt, J. Montgomery, Esq. of Sheffield, John Bowring, Esq. the Author of "Lorenzo de Medici," the Editor of the "Literary Gazette," &c. &c.
 London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Present Edition of Turkey.
 Octavo edition, with 25 Engravings, in 5 vols. price 31s. 6d.
TRAVELS to CONSTANTINOPLE, in the Years 1827 and 1828.
 By Capt. CHARLES COLVILLE FRANKLAND, R.N.

Among other striking Illustrations in this Work, will be found Views of Constantinople, the European and Asiatic Castles of the Bosphorus—the Castle of the Dardanelles—the Bay and City of Smyrna—Damascus—Baalbeck—Scutari—Bayat Deré—Passage of the Danube at Giurgevo—the Scraglio Point, Leander's Tower and Olympus—Diosk Boyos—Palamidi—Napoli di Romania—Bairout, &c. Among the curious Plates of Costumes, are a Lady of Damascus, Arab Sheik, Lady of Aleppo, Arab Princess, Lady of Mount Lebanon, Greek Papas, &c. &c.
 "His volumes teem with interest and instruction, because it is impossible not to perceive what strong and new lights they throw upon the present state of war between the Turks and Russians."
 "One of the most picturesque and attractive of modern tours."
 —Morning Journal.
 Printed for Henry Colburn and Richard Bentley, 8, New Burlington Street.

THE UNITED SERVICE JOURNAL, and NAVAL and MILITARY MAGAZINE for Nov. price 2s. 6d. contains—Breaking the Line, as practised for the first time in the Battle of the Nile, April, 1798, by Major-General Sir Howard Douglas, Barr.—On the Manning of Fleets.—On Military Pensions.—Capt. THE WINTER'S WREATH for 1830.
 Embellished with Thirteen beautiful Line Engravings.

In preparing the "Winter's Wreath" for 1830, the Conductors of the work have, with very considerable exertion and expense, made such arrangements as have produced a volume in every way entitled to take the first rank amongst its beautiful competitors. The selection of the Illustrations has been carefully made, and the Proprietors have for availed themselves of the uncommon advantages which they possess of procuring clever and attractive pictures.
 In the Literary Department will be found many of the happiest compositions of our most talented authors, and ability and variety will not be sought in vain in any of the papers.
 A limited Number of Proof of the Plates, on French paper, in Portfolio, price 18s.
 Published by Whittaker, Treacher, and Co. Ave Maria Lane, London; and George Smith, Liverpool.

8, New Burlington Street.

School and College Greek Classics, with English Notes, Questions, &c.

In 1 vol. post 8vo. price 5s. 6d. boards.

THE ANABASIS OF XENOPHON; the Text improved, chiefly according to Hutchinson, with English explanatory Notes and Illustrations from Viger, &c.; Examination Questions, and Copious Indexes.

By F. C. BELFLOU, M.A. Oxon, F.R.A.S. LL.D.

The following are also ready for delivery:—

Hecuba of Euripides, from the Text, and with a Translation of the Notes, Preface, and Supplement of Persons; Critical and Explanatory Remarks, partly original, partly selected from other Commentaries; Illustrations of Idioms from Matthei, Dawes, Viger, &c.; a Synopsis of Metrical Systems, Examination Questions, and Copious Indexes. For the Use of Schools and Students. By the Rev. J. R. Major, Trin. Col. Camb. and Master of Wisbech School. 4s. boards.

Medea, ditto ditto. By the same. 5s. bds.

Phœnisæ, ditto ditto. 5s. boards.

Cœdipus Rex of Sophocles, with English Notes, Questions, &c. By the Rev. J. R. Brasse, D.D. late Fellow of Trin. Coll. Camb. 5s. boards.

Cœdipus Coloneus, ditto ditto. By the same. 5s. boards.

Antigone, ditto ditto. 5s. boards.

Thucydides, Herodotus, Demosthenes, &c. will speedily be published on the same plan.

At the express desire of many eminent Schoolmasters, Mr. Valpy has commenced the publication of a Series of such portions of the Greek Authors as are chiefly read in the upper Classes of Schools and in Colleges. The best Texts are adopted, and the Critical and Explanatory Notes are presented, it is presumed, in a more inviting and accessible form than those of Latin Commentators, by avoiding that profuseness of annotation which frequently anticipates the ingenuity, supercedes the industry, and retards rather than promotes the improvement of the pupil. Examination Questions, adapted to the points discussed in the Notes and Indexes, are also added; and the Series, it is hoped, will constitute a convenient Introduction to the niceties and elegancies of Greek Literature, and to the perusal of that portion of the relics of antiquity which is best calculated to interest a youthful student.

Each Volume will be sold separately, and it is intended that all shall be published in a cheap form. Sold by Longman; Baldwin; Whittaker; Rivington; Simpkin; Souter; and all other Booksellers.

CLAVIS HOMERICA; or, Lexicon of all the Words which occur in the Iliad, translated from the Original;

By JOHN WALKER, A.B.

2d edition, greatly improved and corrected. Printed for Whittaker, Treacher, and Co. Ave Maria Lane; and of J. Cammings, Dublin.

A SERMON ON THE NECESSITY OF INCREASED VIGILANCE AND ZEAL TO THE CLERGY OF THE ESTABLISHED CHURCH.

By HENRY RAPER SLADE, Cantab.

Sold by C. J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

"The subject is of vast importance, and it is handled in a masterly way. We would recommend all ministers of our religion who are not as attentive to their duties, to read this sermon of Mr. Slade."—Age.

After rather a severe criticism, the editor concludes,—"Yet, let not our readers suspect an interested motive; let us look to the language of the sermon, and surely the following passage in the mouth of a preacher would acquire him all but the parent intentions, &c.—Vide p. 9 of the Sermon."—Athenæum.

Waverley Novels.—New Edition.

THE ANTIQUARY, Vol. II. forming

Volume VI. of the new edition, price 5s. in cloth.

This volume is embellished by a Frontispiece by F. P. Stephenson, engraved by J. Romney, and a Vignette by J. Mitchell, engraved by Edwin Landseer.

No. 668.

SATURDAY, NOVEMBER 7, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Four Years in Southern Africa. By Cowper Rose, Royal Engineers. 8vo. pp. 308. London, 1829. Colburn and Bentley.

A VOLUME of that lively and sketchy character that so well satisfies the appetite of our time, which will not endure the tediousness of severe research, and is charmed by the lighter forms of literature. Mr. Rose is, indeed, an extremely pleasant writer: his delineations of the scenery of Southern Africa are very picturesque, and he appears to have deeply felt the beauties of nature, while he also paints the habits and manners of the people with whom he mixed like a man of sense and discrimination. Thus his book is an agreeable mixture of vivid landscape and spirited portraiture. His principal excursion, as described by himself, will serve as a key to the whole work.

"It was (he says, on his return to the settlement) ten months since I had left the bay that lay before me; and in that time I had seen much that, in after life, I shall often recall. I had shared the hard life of the elephant-shooter, and slept in the bee-hive hut of the Kaffer, and traversed his beautiful country. I had visited the house of the phlegmatic boor, and the station of the subdued-toned missionary. I had seen most of the savage animals of the country, the elephant, the rhinoceros, the hippopotamus. I had sought for the lion in the country where they were once common, but the tract had been partially settled on; and the wild beasts retire at the appearance of man, with an instinctive feeling that a being more savage and relentless than themselves has invaded their haunts, and that their ferocity is no match for his. I had seen the many-coloured birds in their native woods, and on their native rivers. I had wandered through the gloomy arches of the boundless forests, where the tall trees cast a massive shade that seems never to have been broken by one ray of light. I had seen those trees with their many-coloured blossoms, standing in beauty and in pride, while the rich creepers, that hung like light drapery from their wide-spreading branches, moved with every breeze, affording a striking and mournful contrast. I had seen them stretched at their length, mouldering, fallen untouched by man, in the heart of their own dark forests. I had feasted on the loveliness of flowers, in the country where flowers are the most lovely, and where their beauty gladdens the lone wilderness; for the pride of your greenhouse is, in Africa, but a wild flower. I had seen society under new forms, and Nature as at her birth; and now the bay lay with its wide sweep stretched before me, dotted with English ships; and I end as I began, once again in Cape Town."

From the author's descriptions of the sights thus summed up, a few selections will be the best review that can be offered. At the kraal of old Enno, a Kaffer chief on the Beka river, the following is related:—

"There was one young and finely formed

girl in the group, with her wild expressive eyes and beautiful teeth, on whom I flatter myself with having made an impression: her mode of shewing it was singular: she picked some vermin from the hairy side of her carosse, and offered them to me; and on my exhibiting some symptoms of disgust, laughed most heartily at my fastidiousness, and put one in her mouth to shew that it was good. It was the first mark of attachment which I had received since I left Cape Town, and I was affected accordingly; and had but the refinement of sentiment been added to so touching a proof of love—had she but sung,

'I give thee all, I can no more,
Though poor the offering be:'

I know not what the consequences might have been."

Of old Enno himself we are told, when food was given to him, he always distributed a portion to his followers.

"On receiving a potato, and his being told that he might have them in his own country with very little trouble, he slowly and calmly answered, 'I am very old—too old to learn new things; but I will take every thing that you will give me.' We laughed, and told him that it was a very clever answer. 'Yes, I have lived a long time in the world, and have learned cunning,' was his reply. The manner in which he tried to procure a present was amusing. 'It was not for the sake of the present, but that it would be asked of him by others whether the landdrost had passed through his country; and on his answering, 'Yes,' they would inquire what present he had received; and when he should say none, they would naturally reply, Then you must have behaved ill to him—for he is very generous.' He was a strange being, and possessed more talent than any Kaffer I ever saw; his words coming from him very slowly and innocently, while there was a slight twinkle in his small sunken eye that belied his lips. I saw a white Kaffer among Enno's tribe,—a hideous being daubed with red clay; and, on inquiry, found that it was the son of the chief; and heard that on Enno's being teased about his colour, and hints thrown out of unfair play on the part of his wife, he laughed it off, and asked if they had never known a black cow have a white calf. One more anecdote, and I have done with him. He was at the landdrost's house, and in order to see its effect upon him, a lady was seated at the piano playing a simple air, (and seldom has it been my chance to hear any one who played so sweetly,) when the old man, who was listening intently, suddenly stopped her, saying, 'That is enough; it reminds me of the loss of my child, and it tells me I should go home and cry.' The child to whom he alluded, and to whose death Enno often recurs, was shot on some occasion by the Cape corps.

"I was told too (continues Mr. Rose) of a chief who had been taken prisoner in some attack on Kafferland, and sent down to Cape Town, being recognised by an officer who had

seen him on the frontier, and who recollected that he was famed among his tribe for his courage in the chase, and for his skill in throwing the assegai: one was given to him, and he was told to throw it; but it fell from his hand, as he replied—'that he could not—for his heart was broken!' It did not strike me that the savage tribes are improved by the intercourse with us that has been opened by the fair that is held at Fort Wiltshire, the frontier post. I attended one of them, and was amused with the strange scene of barter—buttons and beads for hides and ivory. Gaika, the neighbouring chief, dressed in an old regimental jacket, was in the Fort with his retinue of twenty-five wives; and it was not without interest that I looked on one of whom Barrow had prognosticated so highly. He was then nineteen, he is now fifty; and melancholy has been the change that has taken place in the interval: the English have given him their protection, and with it their vices; and he is a sunk and degraded being, ready to exclaim with Caliban—

'I'll swear upon that bottle to be thy true subject,
For the liquor is not earthly;—'

a wretched savage, despised and suspected by his tribe, continually intoxicated, and ever ready to sell his wives for brandy. Such are the fruits of our protection! such have ever been the effects on the savage of the kindness of the civilised! If we find them simple and trusting, we leave them treacherous; if we find them temperate, we leave them drunkards; and, in after-years, a plea for their destruction is founded on the very vices they have learned from us."

Of the Bushmen we have also some very characteristic anecdotes. *Ex. gr.*

"Many of the colonists have likewise assured me, that their Boeshemen of either sex used in stormy weather to abuse the thunder with the words *!guxeri—!gaunati*, sorcerer, imp, and other reproachful expressions; and at the same time, in a furious manner, with their shoes, or any thing else that was at hand, menace and bid defiance to the flashes of lightning and peals of thunder that exploded and rolled over their heads. Whether this is true, I have not had the means of ascertaining, having never been in their country; but there is so much of wild poetry in the conception, that I cannot think it a colonial invention. Imagine the pigmy wretches, of unearthly ugliness, standing at the mouth of their cavern, watching the gathering tempest, as the lurid clouds darkened above them, while the earth shared the gloom of the heavens; and then, when after the breathless hush, the lightning's flash burst with its dread glaring light, and the thunder echoed through all the hills,—imagine these savages, their umber faces lighted up to a more fiend-like expression in the blaze, threatening the storm with their furious gestures, and, with impotent menaces, breathing their wild curses against the thunder. Some years since, I had one of these imps staying in my house for several months; his age might be

about twelve years; his height three feet; his hands and feet were wonderfully small and beautifully formed, while the ugliness of his face was startling. The creature possessed considerable quickness, and had great talents for mischief and mimicry. His first introduction was characteristic:—“Can you speak English?” I asked. “No.” “Can you speak Dutch?” “No.” “What do you speak?” “Ba-boon;”—and before he had been in the house six hours, I caught him mimicking my walk and manner. Donald (for that was the name given him) had no taste for cleanliness, and I was obliged to insist on his going into the sea every morning at the time I bathed: this he by no means admired, and, one grey, cloudy day, shewed extreme reluctance; and, while standing on the sand, asked me if the water was cold. “No,” I replied; and he then dipped his tiny foot in the wave, shook it, and said—“It’s a d—d lie, now—for it is cold.”

“The belief in witchcraft is general throughout the country, and the punishments are dreadful. The rain-maker, after his ceremonies, fixes on some obnoxious individual, possessed of a large quantity of cattle: no proof is necessary, no protestations of innocence avail: the wretch is fixed to the earth by a thong, carried round the ankles and wrists, which are fastened to stakes driven into the ground; burning stones are then placed on his body, and nests of the large black venomous ants broken on the scorched and wounded parts. In his agony he confesses to all that is demanded of him, and is then ordered to give up the power by which he worked evil. He gives up something—any thing,—a string of beads, or an ornament, and is then tortured to death, or driven from the tribe a wanderer and a beggar.

“Kafferland suffers much from want of rain, and the tribes, that depend on their crops of Kaffer and Indian corn, die in a year of scarcity by hundreds. When this is threatened, the prophet, rain-maker, or doctor,—for he unites the three,—becomes of importance, and is bribed by a present of oxen to procure rain. He promises it; the thunder-clouds are to burst within a certain time, and the rain is to pour down: if it comes not, he says that the cattle they sent him were poor, and the rain-spirit is displeased; larger cattle are sent, and again the prophet names a period before which their wishes will be gratified: should that time pass, he says that nothing will avail, but a favourite ox of the chief’s. There is a long hesitation in yielding this, while so much time is gained; but it is given, and another term is mentioned. The doctor is now at the end of his subterfuges; and should the rain not come, names the man or woman who has frustrated the effect of his incantations, and the wretch is killed to save the credit of the rain-maker. I had from a missionary the following account of some of the Kaffer superstitions, several of which almost approach religion, which they are said to be without:—A Kaffer selects, as his guardian, the spirit of some former chief or friend, invokes him on all occasions of difficulty, thanks him on all escapes from danger, sacrifices to him part of the ox that he kills, part of the game that he takes; and in harvest-time scatters a portion

* Elsewhere we are informed, that “when a Kaffer returned to his own country from Cape Town, to which he had been taken by an English officer, and, full of the strange things he had seen, told his tale to the dark group around him, describing the wonders of a ship, which he called ‘a waggon that moved upon the waters, and that never utters a’ (unyoked), and many other marvels; he was greeted at the close of each story, when he expected applause, by the unanimous comment, ‘That’s a lie!’—a very common fate with travellers.”

of the grain as an offering. In crossing a flooded ford he calls upon him; and when the string that fastens the ornaments of his carrosse is loose, and he discovers it in time to save them, he ascribes to his kind spirit that the thought of looking had occurred to him. When the kraal is struck by lightning, the site is either deserted, or an ox burnt on the spot, or buried beneath it, as an offering to the incensed spirit of the kraal, or to *Uhlanga*, the spirit of thunder. The apparition of the dead, *Shulanga*, is supposed at times to haunt a kraal, when his dying wishes have not been complied with, and an ox is sacrificed to appease it; and a man rushes from the habitations, in wild pursuit of the dark shadowy form.”

The ceremonies of barbarous people often present remarkable coincidences: we here learn, that on killing the elephant the natives approach his dead carcass with superstitious care, and endeavour to “exculpate themselves of any blame in his death, by declaring to him gravely, that the thing was entirely the effect of accident, not design; while, to atone for the offence, or to deprive him of all fancied power, they cut off the trunk and solemnly inter it, pronouncing repeatedly, during the operation, ‘The elephant is a great lord, and the trunk is his hand.’” In like manner the wild Arab burns the head of the hyena, lest it should be converted into a charm of evil influence; and the American savage addresses the bear he has slain in language of the most cajoling kind. But we proceed with a few more of our characteristic extracts. The author is speaking of Conguar, the son of a chief, who accompanied the party.

“One night that our bivouac was surrounded by a distant hord of Kaffers, over whom he had no control, he was asked whether our things were safe, and replied—‘They have told me they will take nothing; but I cannot see their hearts.’ On my inquiring from him which were the most powerful chiefs in Kafferland, he replied, ‘Hinza,’—a long pause,—‘then Gaika—then St’lamby;’ he stopped. ‘And your own family comes next, I suppose.’ ‘We are but as dogs to Hinza, as the dust is to my foot.’ One of our party was attempting to explain to him, that the moon shining above us was a world like the one on which we stood; and he listened attentively, and calmly observed when the speaker had ceased;—‘I will not say, that what you have told me is not so, but has any one been up to see it?’ In reply to some observation of his, I said, ‘Conguar, I wonder at this from you, who live so near Mr. S—the missionary; I am sure he never does so.’ ‘Oh, Mr. S—knows God, and I don’t know him yet.’”

There are some entertaining details of elephant hunting, but, we regret, too long for our notice. D—the hunter who presided on these occasions, Mr. Rose relates, “told us of his having seen an elephant raise his fallen companion, and still assist him even when wounded himself. I saw the beast killed, rather than desert the one that could not follow; and they fell dead together. On my observing that, judging from the paths that intersected the country in all directions, they must be very numerous; he said, ‘they were, and indeed are so still. I have, I dare say, myself seen as many as three thousand in a troop, on the banks of the Fish River; but I should think, in the last three years, full that number have been destroyed.’ He mentioned one thing that struck me as very extraordinary,—that those who traversed the country never found the

body of an elephant that had died a natural death, though they frequently found those that had fallen by the hunters’ shot. I was surprised to hear D— say, that it was his wish to leave his present life, and to settle quietly in his farm. ‘Indeed!’ I said; ‘I should have thought that this wild pursuit, and your former dangerous trade, would render a quiet life somewhat sleepy.’ ‘I have a wife now, and shall have children; and have been driven to this by debt and necessity. I have nearly got over my difficulties; for in twenty months, I and my Hottentots have killed eight hundred elephants; four hundred have fallen by this good gun; and when I am free, I quit it. Scores of times have the elephants charged around me, even within a yard of the bush under which I had crept; and I feel that it was a chance I was not crushed. Once I had fired on a large troop in a deep ravine, one side of which was formed by a steep cliff, which echoed back the sound of the firing, and a hundred elephants, with upraised ears, and loud screams, and tossing trunks, rushed down the narrow pass, and charged the echo, being the opposite side to that in which we had fired, and the one to which we had moved; myself and Hottentots lying in the bush, while they rushed by us. The boldest hunter is killed at last. I have, when pursued by a rhinoceros, sprung down a high bank, not knowing its depth, or whether I might not fall on a rock or stump. No, sir, it is a life of no common hardship and danger. I have been obliged to eat the veldtschoon (untanned leather shoes) from my feet.’ I asked Skipper how many wild beasts he had shot in his life: his list I cannot accurately remember; but there were, I think, two rhinoceri, one lion—when all his companions fled—I know not how many elephants, tigers, wolves, &c.; but it finished with two Kaffers; for Skipper was not a man of nice distinctions. The night passed, and in the morning we packed up our baggage, consisting of a pair of saddle-bags; and I bade D— good bye, wishing him sport, and a high price for his ivory. ‘Well, Skipper, good bye; I think you would smoke if you were between the tusks of the elephant.’ ‘No, sir,’ he replied, without the slightest change of countenance, apparently taking my speech as literal, ‘for he would smell me.’ We separated—the hunter and boy took their guns and started homeward. Skipper and his companion went with the horses to bring away the tusks of the dead elephants, while my companion and myself returned from whence we came.”

And here we must conclude, though there is an additional chapter, giving the particulars of the author’s visit to St. Helena and the house of Buonaparte, on his homeward way;—a marvellous story of the Flying Dutchman, on the vouching of a British naval officer, which shews that superstition is not confined to Hottentots and Kaffers;—and sundry other matters, which just make out the volume to a right number of pages. Altogether, we recommend it as a piece of agreeable reading, which does credit to the taste and talents of our Engineer Officer.

Stories of a Bride. By the Author of the “Mummy.” 3 vols. 12mo. London, 1829. Colburn and Bentley.

We like these volumes exceedingly: the narratives are, to use a young-lady-like but most expressive phrase, very interesting; the style as graceful as it is *spirituel*; and the framework both novel and picturesque. Still none of these merits, high as the praise is that we

have allotted them, is the one that constitutes the peculiar excellence of these pages. The distinguishing characteristic of our author is a vein of philosophic thought—a true though feminine system of metaphysics, made up of that imagination which often bodies forth the truth so accurately (a little beau-idealised, perhaps)—that observation of feeling, so keen and so delicate, because its own feeling is the test—and that tact which, like the touch of a blind man, rather feels than sees its way,—this character of mind, displaying itself in a thousand slight touches, as well as in more elaborate composition, is at once the mark and the merit of the book before us. We have not for some time met with passages, either of reflection or observation, that have impressed us with higher ideas of a writer's lively perception, or of that discriminating faculty which analyses while it embodies those various feelings, motives, &c. which are the thousand and one wheels of social machinery. The introductory sketch is written with great vivacity: the young heiress is excellently drawn, and her falling in love is well managed. Rousseau says, *c'est notre premier soupir qui fait le destin de notre vie*; but in this case it was the *premier* yawn. There is something very original, yet English, in the rich peer and wealthy countess, equally fatigued and fortunate, being first attracted by a sympathetic yawning fit. The first tale is more likely to attract attention from its narrative than from sympathy with its hero. The "Mystic" has nothing in common with our young cavaliers: we live in an age of cambric and Cologne; and the perils of an over-excited imagination are, in our times, dangers as little to be deprecated as those of tilt or tournament: a youthful dame has now no rival so potent in her lover's affections as his tailor. The "Treasure-seekers" is a most romantic tale, and one we think, for its variety of incident and its foreign scenery, well calculated for popularity. There is much to praise and much to choose from; but our extracts must be, like pocket-books, ruled by columns: the following quotations from the life of the heiress will give a fair notion of the piquancy and animation of this sketch from real life.

"My father was a man of large fortune, and I was his only child: my mother died giving me birth; and my father, in a transport of despair, vowed to devote his future life entirely to the care of my education. 'Dear relic of my departed Emily!' exclaimed he, apostrophising me as I lay in my nurse's arms, when I had the honour of making my first appearance in his presence,—'no after cares shall ever divert my mind from the pleasing task of imparting the rudiments of instruction unto *thine*. From this moment I forswear the world; I will retire to the country; and there, secluded from society, my whole time shall be devoted to the delightful employment of training thy infant steps to virtue. No hiring governess shall interfere in this sacred duty, and on me alone shall devolve the great, the important charge.' My father was an enthusiast in every thing, and rapid in all he said or did. His favourite axiom was, that only the shortest possible time should elapse between the conception of a great design and its execution; and, unlike axiomatics in general, he practised what he taught: accordingly, the moment that he had determined to retire from society, in order to devote himself to me, he gave orders for the breaking up of his town establishment, and would have commenced my education *tout de suite*, had not my nurse respectfully hinted, that I was only a few days

old, and that it was not customary to teach babies any science till they could speak. The funeral of my mother, and the necessity of erecting an elegant monument to her memory, luckily seconded this wise suggestion; and my father's mind was soon too fully occupied in discussing the comparative merits of Gothic and Grecian architecture, to allow him to waste a single thought on me. Whilst he was meditating on temples and urns, and perplexing himself with every possible order of columns, all was well; but, unfortunately, buildings cannot be in progress for ever, and the mausoleum was finished before my reasoning faculties were sufficiently developed to enable me to receive instruction. Consequently, when my father, with a constancy of purpose very unusual to him, sent for me into his library to commence my education, about twelve months after my mother's death, he found me so stupid that he gave up the task in despair. 'It is very strange,' said he, as he rang for my nurse, and I made my exit in a violent fit of crying, 'that the passions begin to develop themselves so much sooner than the understanding. Incipient vanity sparkled in the eyes of that little creature when I shewed her my watch, and anger now swells in her youthful bosom; yet her mind is a perfect blank.' My father paused, and fell into a fit of musing, from which he only roused himself to take down and examine the different authors who have written upon the development of the human mind: unfortunately their theories did not correspond with his experience; and, after a fruitless study of some hours, he threw them aside, and employed himself in sketching out a plan for my education."

Luckily, an aunt saves her from the risk of, amid these systems, not being educated at all.

"At sixteen I was presented, and of course was instantly surrounded by crowds of adorers, who were lavish in praise of my beauty, my talents, my wit,—in short, every thing but my fortune; which, being a thing of no consideration in the eyes of necessitous young men of fashion, no doubt entirely escaped their notice. As I was an heiress, and consequently did not want to marry for an establishment,—and as romance did not happen to be in fashion,—I had no temptation to fall in love; the ordinary provocation of acting against the will of cross relations was also wanting; for my father and aunt, who were both a thousand times more romantic than myself, seemed to expect, as I was rich, that, as a matter of course, I must fix my affections upon some one who was poor. My aunt actually seemed almost disappointed when she found that I overlooked all the handsome youths of slender expectations who presented themselves before me, and that I liked myself too well to think much of any one else. My father, indeed, had no leisure to bestow many thoughts upon me; for his ardent mind was now entirely engrossed by a new subject. He had made a speech soon after taking his seat in the House of Lords which had been warmly applauded, and he now thought of nothing but politics. No persuasions could induce him to relinquish a debate; he spoke on every question, and voted in every division. No one exceeded him in patriotism, though I really forget whether he was a Whig or a Tory; and in the days I speak of, there was some difference between them. I only know that his speeches were generally two hours long, and that upon important occasions he used to send for me into the library, that I might hear him rehearse. Hours of penance! how I used to

rejoice when ye were over;—yet I loved my father; but, unfortunately, I had no genius for politics, and did not like long speeches. I had a large fortune from my mother; and as every one knew that if my father did not marry again, a circumstance that seemed by no means probable, I should in due time become Countess of Montessor in my own right, with all the funds, lands, and tenements, thereunto belonging, I had innumerable offers,—more, I verily believe, than the once celebrated Harriet Byron, though I certainly could not boast that I possessed half the charms of that paragon of perfection. No Sir Charles Grandison, however, 'bowed upon my hand;' and no one certainly ever ran away with me. Lovers take things more quietly now than they did fifty years ago. I am sure I do not know why, though, I dare say, ingenious hands might trace the cause to the National Debt, the Court of Chancery, or the Catholic Question; for I remember, during my political studies, that they seemed the roots of all evil. None of my lovers, luckily, being desperate, I enjoyed in their fullest extent those halcyon days of woman's life when all appears *en couleur de rose*;—when beauty is in its brightest bloom, and admiration gives animation to society,—till suddenly my happiness received a severe shock from the death of my father. He caught cold while waiting in the lobby for his carriage, after speaking with tremendous energy in the senate. 'Dulce et decorum est pro patriâ mori,' said a brother peer a few nights after his death, having contrived, with statesman-like skill, to introduce a funeral oration on his friend into a debate on Catholic emancipation. 'He died on the field of glory,' observed another. Many shook their heads, some sighed, more admired the eloquence of the orators who lamented his loss,—and after that my father was forgotten."

We have before stated that our heiress marries; and we shall finish with a chance observation or two.

"French women certainly think a good deal of effect. I believe if a house full of them were to be on fire, they would all throw themselves into elegant attitudes before they called for assistance; and I have been told, that a disconsolate widow, whose grief over the tomb of her husband in the Père la Chaise used to be the admiration of all Paris, was accustomed to practise daily her exclamations of despair before a large looking-glass!

"As I am generally happy myself, I like to see other people so; for, let philosophers say what they will, I am convinced nothing makes us so much disposed to view our fellow-creatures in a favourable light, as being in perfect good humour with ourselves; whereas, when we are in trouble and distress we get cross and ill-tempered, we are disposed to find fault with every thing, and cannot bear to see other people pleased, because we feel miserable."

We regret we have not room for some graphic pictures of Hungary; and shall only say that this is a very original as well as amusing work, and one which we think will be universally liked. We congratulate the author.

Travels in the Interior of Mexico, in 1825-6-7-8.

By Lieut. R. W. H. Hardy, R.N. 8vo. pp. 540. London, 1829. Colburn and Bentley.

We are not Hottentots, but civilised critics; and will not, therefore, receive the accounts of the gallant author of these travels in the rude manner recorded in the note at the bottom of our page 722; though, like Mr. Waterton, in

his "Wanderings," we confess he has somewhat staggered us with the strange facts he relates. Being a commissioner for the Company formed to fish for pearls and coral in the Gulf of California, the worthy lieutenant certainly proceeded on an errand that was likely to produce unexpected and extraordinary results; but we were not prepared for the very unexpected and extraordinary results stated in this volume. As an example, we will begin with a sub-marine tale, founded on descents to drag the pearly treasure from the deep.

"The oyster secures itself so firmly to the rocks by its beard, that it requires no little force to tear it away; and as its external surface is full of sharp points, the hands are soon severely cut by them. The effect of the buoyancy of the water is also curious. At the depth of seven or eight fathoms, it requires exertion to keep down; and if you then attempt to lay hold on a rock with the hands, you find yourself as it were *suspended*, so that if you let go your hold you will immediately *tumble upwards*! I remember, the first oyster I ever met with was at the depth of four fathoms only; my head was almost touching it; and forgetting, in my pleasure, to strike out with my legs, as I stretched forward my hand to catch hold of the prize, to my astonishment, the oyster slipped from my grasp, and I found myself nearly at the surface of the water the next instant; so that I had all my labour for nothing. So firmly does the oyster fix himself to the rock, that, in order to tear him away, it is necessary to get "a purchase" upon him, by placing the feet on the bottom. The excessive difficulty of doing this is incredible: it requires the muscular strength of the whole body to overcome the resistance of the water's buoyancy. I have no doubt that, by means of its long beard, the oyster has the power of locomotion, and that it changes its situation according to its pleasure or convenience. One principal object of inquiry, however, was obtained; namely, the true situation of the shells under water. I found that I had been in a complete error in supposing them formed in beds; that is, in heaps, as the word bed would seem to indicate. With this impression I left England, and continued in it till I had now convinced myself, by actual investigation, of the error into which I had been led by every body with whom I had conversed on the subject. Indeed, a moment's reflection would have pointed out the impossibility of the oysters being piled in heaps together in this gulf. This fish always seeks for tranquillity, which it could never find in situations exposed to currents, and motion occasioned by the undulations of the water. I always found them in sheltered bays, the bottoms of which were covered with large rocks. This brings me to consider the reason why a diving-bell, at least in the Gulf of California, can never be profitably employed. After reaching the bottom, if the greater surface be considered bottom, there are frequently found chasms in the rock below, which extend from one to two, or even three, fathoms lower. It is down these apertures that the diver may most generally expect to meet with oysters, which even here conceal themselves in the cavities of the rock; and as the power of vision fails in so dense a medium, particularly if the depth be considerable, and the surface rough, the diver is obliged to insert not his hand only, but even his head, into every hole and corner, like a person groping about in the dark; holding on, the while, by the points of the rock, to prevent his rising to the top, in consequence of the water's buoy-

ancy, at the depth, for example, of seven or eight fathoms, beyond which I cannot speak from experience. The perception of objects under water at this depth is very indistinct, and their magnitude is augmented, so that a very small shell appears of large dimensions, and the diver is frequently mortified by the discovery of the mistake when he rises. It is strange that the deception should not be detected by the *touch*; but it would appear, that in the same way as the *eyes* measure the capacity of the *stomach*, so also do they convey to the *hands* a sort of conviction that the *apparent* is the *true* size; so that these organs take pleasure in mutually deluding each other! The fissures in the rocks, in these submarine situations, do not frequently exceed ten inches or a foot; so that in descending, the back, chest, knees, and heels, are sometimes dreadfully lacerated. If, then, not even a shark could follow a diver in these situations, how is it possible that a diving-bell, which is considerably broader, should be able to do so? The idea that it could, is only to be entertained by a person as grossly ignorant of the circumstance as I was before I convinced myself of the truth. In fact, it might be said that the men in a diving-bell would remain suspended half way between hopes and realization, and would feel, as I sometimes did when I was crawling about the bottom, "like a fish out of water;"—an odd expression, by the by, for a fellow eight fathoms deep! I am convinced that there is no stimulant so great as hope. Under its influence, the diver is insensible to danger, although he see himself surrounded by sharks of prodigious magnitude. Armed with his short stick,* he considers the invasion of so formidable an enemy's domains as unworthy of a moment's hesitation. Anxious to grasp the prize, he pays little regard to the price of its attainment, which he no sooner possesses than he is ready to fight the stoutest of the finny race. I have myself descended when the horizon was filled with the projecting fins of sharks rising above the surface of the water; and although armed only in the way I have described, I thought myself perfectly secure from molestation; notwithstanding they were swimming round me in all directions, at not a greater distance than a few fathoms, I continued my pursuits with the greatest *sang froid*. I should no more be capable, in my cool moments of reflection, of braving this inconceivably horrible danger, where I might have been mangled and torn to pieces by one of these implacable monsters, than of entering the tiger's den before his breakfast, at Exeter Change. But when the passions are concentrated into one point, though that point be on the verge of eternity, hope still attends us. On these occasions how sensibly have I felt, and how often repeated, the beautiful lines of the enraptured poet!—

—'Methinks it were an easy leap
To pluck bright honour from the pale-faced deep.'

Don Pablo Ochou, who was for many years a superintendent of the fishery, and himself a most expert diver, gave me the following account of one of his watery adventures:—The Placer de la Piedra negada, which is near Loretto, was supposed to have quantities of

* "This stick is about nine inches long, and is pointed at both ends. The diver grasps it in the middle, and when attacked by a shark, he thrusts it into the monster's expanded jaws, in such a position, that, in attempting to seize his victim, the jaws close upon the two sharp points; thus secured, he can do no mischief, but swims away with his martyrdom; the diver rises, and seeks a new weapon of defence."

† Where did Lieut. Hardy find this quotation? we do not remember a more barbarous mutilation of Shakespeare.

very large pearl-oysters round it—a supposition which was at once confirmed by the great difficulty of finding this sunken rock. Don Pablo, however, succeeded in sounding it, and, in search of specimens of the largest and oldest shells, dived down in eleven fathoms water. The rock is not above one hundred and fifty or two hundred yards in circumference, and our adventurer swam round and examined it in all directions, but without meeting any inducement to prolong his stay. Accordingly, being satisfied that there were no oysters, he thought of ascending to the surface of the water; but first he cast a look upwards, as all divers are obliged to do who hope to avoid the hungry jaws of a monster. If the *coast* is clear, they may then rise without apprehension. Don Pablo, however, when he cast a hasty glance upwards, found that a tinteréro had taken a station about three or four yards immediately above him, and, most probably, had been watching during the whole time that he had been down. A double-pointed stick is a useless weapon against a tinteréro, as its mouth is of such enormous dimensions that both man and stick would be swallowed together. He therefore felt himself rather *nervous*, as his retreat was now completely intercepted. But, under water, time is too great an object to be spent in reflection; and therefore he swam round to another part of the rock, hoping by this means to avoid the vigilance of his persecutor. What was his dismay when he again looked up, to find the pertinacious tinteréro still hovering over him, as a hawk would follow a bird. He described him as having large, round, and inflamed eyes, apparently just ready to dart from their sockets with eagerness, and a mouth (at the recollection of which he still shuddered) that was continually opening and shutting, as if the monster was already, in imagination, devouring his victim, or, at least, that the contemplation of his prey imparted a foretaste of the *goût*! † Two alternatives now presented themselves to the mind of Don Pablo: one to suffer himself to be drowned—the other to be eaten. He had already been under water so considerable a time, that he found it impossible any longer to retain his breath, and was on the point of giving himself up for lost, with as much philosophy as he possessed. But what is dearer than life? The invention of man is seldom at a loss to find expedients for its preservation in cases of great extremity. On a sudden he recollected, that on one side of the rock he had observed a sandy spot, and to this he swam with all imaginable speed; his *attentive* friend still watching his movements, and keeping a measured pace with him. As soon as he reached the spot, he commenced stirring it with his pointed stick, in such a way that the fine particles rose, and rendered the water perfectly turbid, so that he could not see the monster, nor the monster him. Availing himself of the *cloud*, by which himself and the tinteréro were enveloped, he swam very far out in a transversal direction, and reached the surface in safety, although completely exhausted. Fortunately, he rose close to one of the boats; and those who were within, seeing him in such a state, and knowing that an enemy must have been persecuting him, and that, by some artifice he had saved his life, jumped overboard, as is their common practice in such cases, to frighten the creature away by splashing in the

* We have ourselves seen something like this, — it was in a pantomime, where Grimaldi was thrown overboard from a vessel, and got to the bottom of the sea. He, too, seemed to be terribly frightened by the big fish.

water; and Don Pablo was taken into the boat more dead than alive."

As one such story is as good as a hundred to illustrate a work, we shall for the present content ourselves with this single extract. The author's fault seems to be a strong desire to be facetious, which leads to satirically exaggerated pictures of what he saw, and is about the last quality we would covet in a description of countries little known to European travellers. Still there is much to amuse us in this publication, and we shall probably return to it again; though we really wish the writer had been a less clever and more common-place matter-of-fact man. His accounts of his own exploits certainly prove him to be *nomine felix*!

The Romance of History. Spain. By Don T. de Trueba. 3 vols. 12mo. London, 1830. Bull.

WE really do cordially advise our readers to get these volumes as soon as possible. This is the dullest of November weather: the Water Company, with their usual attention to the public taste, have cleared out the Basin in the Green Park in the most pleasant and preparatory manner, for the indulgence of our national propensity; Term began on the sixth; and suicide and suing now menace a thousand dangers. At such a season, books like these are an absolute act of patriotism, merging the dreary and dismal present in the dimly seen and thence beautiful past. Gentle reader, draw the crimson curtain—stir the fire with that proper mixture of prudence and force which is the happy medium between leaving the fire to darkness and decay, and raking all the coals out of the grate—light your lamp—place yourself gracefully on your sofa or in your arm-chair,—we say gracefully, because grace is ease—open these pages;—and forthwith, if a gentleman, begin fancying yourself as brave, as handsome, as victorious, as the gallant knights of old; or if a lady, dream yourself as beautiful and as beloved as the heroines;—and we promise you, without fail, a very pleasant evening. Our limits will not permit any thing like analysis of the vast store of romantic deed and wild adventure contained in this work: the "Romance of History" is a fitting title for the chronicles of Spain. We scarcely know which legend to select; but choose the following, for its length, as well as for the lighter tone which contrasts it with its graver companions. It is a tale of the minority of Henry III., whose guardians treated their young monarch somewhat cavalierly.

"One day, the king, returning from shooting quails, his favourite pastime, came into his palace later than he was expected. He waited patiently for some time in expectation of his dinner; but perceiving no sort of preparation, he ordered his page to inquire of his purveyor the cause of this unpardonable neglect. After a short time the page returned, but appeared for some time unwilling to speak. 'Well, Fadrique,' said the king, 'what accident has happened in the palace that causes this delay? Has my purveyor or cook died suddenly?' 'No, please my liege,' answered the page; 'but there is no dinner ready.' 'By Santiago, this is scarcely excusable!' quoth Henry; 'surely there is no need of much preparation, for my frugality is well known: tell them to prepare any thing; but bid them make haste—for the chase has more than usually sharpened my appetite.' The page went back with these commands, and soon after returned, accompanied, not by a troop of servants laden with the dinner, but

simply by the major-domo, or steward, exhibiting a most dismal and lengthened visage. 'Our Lady defend us!' cried the king, 'what ails thee, Martos, that can bring thee into our presence with those woful looks? Speak boldly, man; why is my dinner not ready?' 'I crave your *altessa's* forgiveness,' replied Martos; 'but the dinner —' 'Well, the dinner—what's become of the dinner?' returned Don Henry, with a smile: 'has it all been devoured by the cats, or has it been spoiled by the cook?' The major-domo gave an expressive shake of his head, which served as a prologue to his unwelcome intelligence. 'I am sorry to bring such bad information to my king; but there is nothing now in the palace to serve up for dinner.' 'Never mind,' resumed the king, good humouredly; 'any thing will do; you know that, in this respect, I am not difficult to please; now go and observe my orders.' But Martos, instead of going, most pertinaciously kept his ground, throwing at the same time additional solemnity into his already but too ominous looks. 'Señor,' he resumed, 'there is not wherewithal in the palace to prepare a meal for a boor, much less for the sovereign of Castile! We are totally unprovided, and —' 'Well, by my troth,' cried the king, with a mixture of vexation and laughter, 'such want of provision is inexcusable! My dinners have all along been so very moderate and plain, that I could not expect they stood in need of much preparation. I do not think that any respectable citizen fares more homely than his sovereign; and yet this poor meal cannot be had when it is called for. It is singular, certainly; but, as I must have something to eat, go and send me a slice of cold meat, with some vegetables.' 'I am deeply concerned, my liege,' replied the evil-boding major-domo; 'but we have neither cold meat nor vegetables of any sort to lay on the table.' 'This is really curious!' observed the king; 'why, I suppose that if I were to ask for a crust of bread, I should run a chance of not obtaining it?' The silence of Martos very plainly told his master that he was just in his surmises. 'At all events, bid the cook prepare the game which I have brought from the chase; I suppose I can have that,—unless, indeed, there is some magical process here that conspires against my dining.' The king, whilst his meal was preparing, began to reflect deeply on the utter destitution exhibited in his larder. Aware that many more secrets would come to light, he resolved to investigate the matter thoroughly, and learn what could be the real motive that produced such poverty in his household."

He hears that the Archbishop of Toledo gives a splendid fête that day, to which he obtains admittance in the disguise of a musician. "The king was struck, no less at the high tone of the guests, than at the magnificence of the banquet. The most costly delicacies were heaped upon the convivial board, and a crowd of attendants waited on the arrogant grandees. Don Henry took his station by a corner, from which he could minutely observe what was going forward, and hear the various remarks that fell from the lips of the company. 'Thy looks proclaim thee young,' quoth the archbishop, 'and you have made good progress in the musical craft. Who art thou?' 'Alack!' answered the king, 'most learned and reverend señor, I am a poor, houseless orphan, reduced to the greatest want; indeed, good sirs, to-day I have not been blessed with a dinner.' 'Poor youth!' muttered the archbishop; 'give him something to eat. Have

you always been in this dependent state?' 'Oh no, great sir; humble and insignificant as I now appear, I am of noble birth and parentage; but, unfortunately, my father died when I was a child, and my tutors, instead of fulfilling conscientiously the duties of their charge, despoiled me of my inheritance, and reduced me to such destitution that, as you see, good señores, I am actually compelled to wander about in search of a meal: this is the truth, so help me God!' 'A very interesting youth,' observed Don Pedro de Mendoza, one of the greatest depredators of the king's treasures; 'and it is shocking indeed to hear such an instance of injustice towards an orphan.' 'Heaven bless you, my honoured master,' returned the king, 'for your benevolence and kindness; but how much more will your generous feelings be kindled, when I tell you, that at the very time that I am depending upon the noble archbishop's bounty and charity for a meal, my cruel and sinful guardians are most prodigally feasting at my expense!' 'Holy Santiago keep me in his grace!' cried the conscientious prelate with warmth; such unprincipled conduct ought to be visited by the indignation of God and man. What think you of it, my noble *Caballeros*?' 'If the youth speaks truth in all,' said the Marquess of Villena, 'a complaint ought to be presented to government, that the sufferer may be righted, and his wrongers punished.' 'Oh! certainly,' observed Mendoza, 'they ought to be compelled to make full and ample restitution.' 'In sooth, Don Pedro,' returned the prelate, 'it strikes me that would scarcely be punishment enough for the offenders. I do not think justice would be hard upon them, if their guilt were visited by confinement, or even death.' 'Most reverend señor,' said the king, 'with all due respect to your learning and conscience, perchance what you propose savours of severity.' 'Not in the least,' returned the archbishop; 'such is the sentence I would give, if I were to be the judge upon the occasion.' 'May all the saints bless you, señor!' cried Henry; 'ere long I shall appeal to you, that ample right may be done me.'

On his return to the palace, Henry began to reflect upon some scheme which might deeply humiliate the delinquent nobles, and procure him ample reparation for his wrongs. From that moment he was confirmed in his previous resolution, of taking the reins of government into his own hands. A few days after the preceding event, he would complete his sixteenth year, and he chose that moment to carry his plans into effect. With this determination he retired to rest. On the morrow he sent a formal invitation to his grandees, spiritual and temporal, desiring them to assist in a grand entertainment, with which it was his intention to treat his noble and distinguished friends on his birth-day. After this he took no further notice of the affair, but received the archbishop, the Marquess of Villena, Mendoza, and the rest of the party, in the usual manner; not the remotest suspicion existing among them that their unjustifiable conduct was fully known to the king. Henry's birth-day at length arrived, and the grandees most joyfully attended the royal invitation; indeed, they were very eager to see what entertainment could be prepared by the king, considering the indifferent state of his coffers. Perhaps a treasure had been discovered, or perhaps their lord had borrowed from the King of Arragon, or some other prince in Spain. But yet it puzzled Don Pedro de Mendoza amazingly, how, if there was a treasure, it had escaped

from his clutches; or, if a loan had been made, how his vigilance could have been eluded, to prevent his deriving any profit from the transaction. Henry had given circulation to various rumours concerning the splendour of the feast; and the grantees, leaving their surmises to be satisfied by the event, repaired to the palace on the wings of expectation. As they gradually arrived, they were shewn into one of the chambers, where they were to wait until they were all assembled, and the doors of the banquetting hall thrown open for their reception. The wished-for moment at length arrived. With much ceremony they were conducted to the saloon destined for the feast. But what was their amazement at the sight which offered itself to their eyes? Instead of a decorated saloon, they found one which was almost tenantless from want, not only of ornament, but even of the most indispensable furniture. A long, unpolished deal table, with benches of the same humble materials, were the only things in the room. The king himself, clad in complete armour, sat at the head of the homely board, which contained no food whatever, except a piece of hard, coarse bread, and a jug of water, for each of the guests. Henry, with much affability, desired the guests to take their seats, and to do justice to the fare he had prepared for them. 'It is perchance not dainty enough,' he said; 'but I know full well the extent of your attachment and fidelity to my person not to receive with content any favour, however humble, which comes from my hands.' The grantees put on the best smiles they could command in so difficult a situation, and, sitting round the table, used their endeavours to push down their rebellious throats the hard and unsavoury food placed before them. They were puzzled to make out the meaning of this singular scene; but they had shrewdness enough to suspect that there was some mystery at the bottom. Again the good humour and affability of the king tempted them to imagine that the whole affair was a whim. Perhaps it was an exhibition emblematical of the self-denials and hard fare to which the ancient warriors had often been subjected; and indeed the armour in which Henry was equipped made the supposition probable. The king meantime devoured his portion of the food, in which he was rather well imitated by his guests, considering the very difficult nature of the task. 'I am afraid,' he then said, 'you have not found your repast to your satisfaction, but I hope you may relish the second course much better.' The announcement of a second course made the guests open their ears, and their eyes glistened with anticipation. They were confirmed in their surmises that the whole affair was a joke to give zest to the feast which was in store for them. Under this impression they rose up and followed the king, who now conducted them to another apartment where the second course of the dinner was said to be laid out. They entered the place, when, lo! their countenances fell for the second time. Upon a view of the room it appeared that the joke was prolonged; and indeed if the thing were a joke at all, it must be confessed to have been one of a most unpleasant and serious description. The place was hung with black, the light of day shut out, and the gloomy glimmer of two or three lamps substituted in its stead. Awful emblems of death were also visible on every side; there was a long board covered with a black pall, supporting a coffin; a large crucifix stood in front of it, and a skull, a friar's habit, a book of prayer, and all the paraphernalia of death, were dismally ex-

bited to the astonished and chilled sight of the grantees. The king now ordered the doors to be shut upon his guests, and in a firm and commanding voice proceeded to address them. 'Behold the second course of your dinner! but before I suffer your indulging in it, as well as in the dessert which is to crown the feast, I must put a few preliminary questions. You, Sir Archbishop, in due consideration of your exalted capacity and distinguished rank, are perhaps the most proper person to give the desired answers.' After a short pause, he continued, in a more austere tone—'Tell me now, truly, how many kings have you known in Castile?' 'Why, please your highness,' answered the bewildered prelate, 'I have known three: the great Don Henrique, of Trastamara, your grandsire, your father Don Juan, and your gracious self.' The king then put the same question to several others of the grantees, and they answered, two or three, according to their age. Henry, assuming an indignant frown, exclaimed—'For shame, *Caballeros!* you prevaricate and deceive your sovereign: the eldest of you asserts that he has known three kings of Castile only; and how can this be, when I, who am so very much your inferior in years, have seen at least half a dozen?'

'Another point remains to be settled,' resumed Henry. 'You have seen the sort of entertainment I have prepared for you. It certainly cannot be compared in splendour to the one lately given by the Lord Archbishop of Toledo. In that, to me, ever memorable banquet you may remember a certain orphan minstrel was present, whose wrongs you all volunteered to redress. I have taken the task upon myself, and, by the holy Santiago, and by my honour, I swear that the orphan shall have most ample reparation!' The archbishop and his companions were thunderstruck at these words; they prudently abstained from opening their lips in vindication, but preserved a deep silence, in anxious suspense for the catastrophe of this drama. This indeed took place even sooner than they expected. The king made a sign, and a secret door was opened, from which a civil officer, a priest, and an executioner, came forward: the ominous sight chilled the delinquent nobles with dismay. The black pall was partially removed, and the block and the axe were discovered to the view. Don Henry proceeded—'Sirs, you are in the case of the orphan; it is by your own sentence that you are condemned. First, then, you must sign a confession of your guilt, and a deed by which you give back to the rightful owner what your rapacity has usurped.' These documents were quickly signed by the tutors. 'It now only remains,' resumed the king, in a stern tone of voice, 'to carry into effect the second part of the sentence pronounced by the Archbishop of Toledo. My lords, commend your souls to God, and prepare for death.' At these awful words the prelate and his horror-stricken companions immediately prostrated themselves at the feet of their offended sovereign, and, pleading guilty, endeavoured by their prayers to soften his heart and obtain pardon. The king, who, as we have already stated, had no particle of cruelty in his disposition, and who perhaps had only meant to give a serious lesson to his nobles, after a short time relaxed from his imposing attitude, and released the culprits from their painful suspense. 'You are forgiven,' he said; 'for I would not darken my birth-day with deeds of blood. But you shall remain in strict confinement until a full and satisfactory restitution is made to the crown of

all your shameful spellations. Those of my guests whom I have summoned here merely to be spectators of this scene and profit by the lesson, may depart in peace; but those who formed the regency, and who have answered so shamefully to the trust reposed in them, must be accompanied to prison by my faithful officers. There they shall remain until my just demands are satisfied.'

So much for the work; and now for a few words in commendation of the author, who has executed his task with equal spirit, industry, and ability, and set forth an immense mass of historical information in its most attractive form. We cannot conclude without remarking on the general accuracy of his style. Don T. de Trueba is an extraordinary instance of a foreigner mastering so many of the beauties and niceties of composition in a tongue so difficult and so peculiar as is our English language.

A Letter to Lord Robert Seymour; with a Report of the Number of Lunatics and Idiots in England and Wales. By Sir Andrew Halliday, K.H. and M.D. 8vo. pp. 96. London, 1829. Underwoods.

If there be any one species of disease—if there be any one condition of human suffering—better entitled or more forcibly recommending itself to our kindly sympathies than another, who will say that it is not that of the "bereft in mind?" Is there one amongst us who can contemplate the moment when he may be stricken of his reasoning faculties—when all the vigour and energy, the meditations and hopes, the blissful hours and elevating enjoyments, all the thousand delights, which spring from the rational exercise of his mental powers—all that lends to human existence its sunshine and its value—may be wrested from his grasp?—is there one amongst us who can contemplate such a moment of utter destitution as this, and refuse to follow us, with a willing and opened heart, whither the hand of human commiseration beckons, and the voice of self-love and Christian benevolence calls us? For ourselves, we confess that the active exertions of the author in this great though neglected field, during a period of more than twenty years, give him a claim upon our notice, which renders us the more anxious that the present fruits of his researches should be universally diffused and appreciated amongst our reflecting fellow-countrymen. And even, though destitute of so powerful a recommendation as this, a subject which comes home to the feelings of the most abject of our race, would not fail to justify towards every reader a much more extended consideration of it than what can be expected from the slender limits of a weekly journal.

What this active philanthropist has effected for the ameliorated treatment of the wretched objects of mental bereavement, throughout Scotland and Ireland, is gratefully recorded, not merely by the public voice, but the improved state and discipline, and the extended institution of lunatic asylums, in both those kingdoms. He has, happily for us, turned his experienced attention to their wretched condition in our own land; and we bid him take fresh courage and boldness under the difficulties which have been disgracefully opposed to him; because we feel that the hand and heart of England will be with him. We say that the state of the lunatic and idiot in this country has "happily" excited his attention, because recent and authentic returns have shewn, not only that insanity, in all its forms, prevails so

a most alarming extent in England, but that the numbers of the afflicted have become *more than tripled* during the last twenty years: where, in 1810, one in three thousand of our population were thus mentally chastened, one in every thousand individuals is now bereft of all that makes life dear to man!

And how vast is not our debt to those who devote their labours to the staying of so widely increasing an evil, when we find the author speaking of it as a sort of monster, from which even the kindly-minded recoil! "I have known men of enlarged minds, and of the greatest humanity—men whose understandings I have considered as the most enlightened—whose ideas I know to be the most liberal—fly from every investigation of this subject as from a pest-house!" Had he not spoken of men of enlarged minds and of humanity, we should have considered his allusion to apply to those heartless legislators whose short-sighted financial wisdom has imparted such fatal vigour to the consumption of narcotic liquors and ardent spirits!—the monopoly of public breweries, and the circulation of excise licenses! But Sir Andrew has not attempted, much less shall we attempt, to trace the lamentable increase of lunacy to any such fiscal scourges as these, prolific as they are in spreading that moral contagion which must ultimately destroy both body and soul. It is "sufficient unto the day" that we should mark the melancholy results of our own analysis of his inquiries; and we give them with the more satisfaction, because they corroborate his own, though presenting the subject, we conceive, under a somewhat more distinct point of view.

Taking the whole population, comparatively with the number of lunatics and idiots, in 38 counties of England, there appear to be 1 insane person in every 1062 souls; and in 12 counties in Wales, 1 in every 800!

Of the 38 English counties, 16 fall under the head of "agricultural," and give 1 insane person in every 850; 8 under that of "agricultural and manufacturing," giving 1 in 1026; 11 under that of "manufacturing," giving 1 in 1380; and 3 under that of "mining," giving 1 in 900: so that it would appear mental disease commits the greatest devastation in those very districts where we should have presumed the existence of a superior state of physical vigour and general health.

We add, that the author finds in 6 maritime counties, 1 insane person in 1000; and in 6 inland counties, 1 in every 1165; and that out of the 13,710 insane persons found in England and Wales, 6,100 only are in confinement; the remainder being at large, or taken care of by relatives or friends.

In this early stage of his inquiries, he is wisely cautious of drawing inferences; but the following observations could not have escaped a far less diligent investigator, and we recommend them to the reader's attention. "Throughout the whole of England, wherever the majority of the people are engaged in agricultural pursuits, the proportion of insane persons, especially idiots, is more than the general average in the manufacturing districts. The manufacturers of cotton are not so subject to mental diseases as those engaged in the several branches of our woollen manufactures. The average proportion in the county of Northampton (where three-fifths of the population are employed in agriculture) is greater than in any other county of the same extent in England, being 1 to every 650 of the population." And lastly, "in Norfolk, where the excitement of manufacturing uncertainty and occasional dis-

treas has prevailed to a great degree in and about Norwich, and very frequently in other parts of the county, it is to be noticed, that the increase of insanity has not been so great as among the more settled and regular agricultural population of Suffolk."

We are willing, with the author, to believe, that our inattention to this most interesting of subjects has arisen more from ignorance of the extent of the evil and of its rapid increase, than either from inhumanity or indifference to the sufferings of our fellow-creatures: and we feel that we have discharged one of the duties of our public calling by bespeaking the attention and sympathies of the reader in favour of that wretched class, with whom "life's fondest scenes are darkened down to naked wastes!"

Reisen in Egypten, &c. By Dr. Hemprich and Dr. Ehrenberg.

(Second notice: conclusion.)

Mehemed Ali, Pasha of Egypt.—Though the features of Mehemed Ali Pasha may carry weight and effect with them among the natives of the East, they will make as little impression upon a European as the "outward signs" of his corporeal presence. His body is well proportioned, and of the middling size; whilst the diminutive form of his face clearly betrays his Albanian extraction; for the genuine Ottoman is usually distinguished by a large head and oval countenance. His features derive the liveliness of their expression from the effect of a small sparkling eye. The phlegm, which is peculiar to the bearing of the Turk, is a stranger to Mehemed's character; and though his oriental costume and manners may give him an appearance of unwieldiness in the eyes of a European, still he possesses, in a very remarkable degree, personal animation. I did not see him in any other posture than when he was sitting or riding.

If it be required of an extraordinary being that he should be characterised by something out of the common way in external circumstance, this characteristic would readily be found in the simplicity which surrounds him. In the ante-chamber of his open hall of audience were both *Cretshi* and *Plethi*, and at times such a clatter and noise would assail our ears, as to make us forgetful of our proximity to the pasha's presence. In more recent times he has encircled himself by a regular body-guard, but at the time when we saw him there was neither the form nor the perceptible existence of any such array. The soldiers were hanging about in a careless sort of manner, though armed in the fashion of the country. His mamelukes appeared to be the only individuals who personally protected him; and even they, properly speaking, were enacting the part of servants. The entrances, both to the palace as well as the divan, were entirely destitute of soldiery. All sorts of men, even of the very lowest classes, were rambling about upon the steps and within the ante-chamber. When Boghos Jussuf (his prime-minister) introduced us, the pasha saluted us; and the minister, as filling the post of chief interpreter, invited us to sit down upon a divan opposite to the pasha. The latter was seated, in his caftan, upon his divan, which stood near a window facing the harbour; he was smoking from a long Turkish pipe, and an English telescope was lying at his side. We were habited in the mameluke costume with a red *djibé*, or upper garment of light Cachemire wool, turbans, and long beards; and it was natural that the pasha, to whom mention

had been often made of us, should open the conversation by asking us how we were pleased with our new dress, and why we had not retained our European costume? Dr. Hemprich explained to him that we had adopted it in order that we might be less annoyed by the inquisitiveness and taunts of the Arabs. On thanking him for the letters of protection he had given us, he asked us whether we had been well received on every occasion? and then, whether we had found any of the precious metals in the country? In reply, I drew his attention to a rich and useful stratum of iron, which we had found in Dongola; and added, that no part of Egypt, Dongola, or the environs of the Nile, which we had explored, afforded any trace whatever of other metals. He then desired Boghos Jussuf to tell us, that he was much pleased with our being in Alexandria, as he was aware that we always gave medical advice to the sick. Coffee was presented to us during the conversation. Boghos stood near the pasha: and on the same divan with Mehemed sat Nedjib Effendi, the Constantinopolitan envoy, who had the pasha's youngest daughter, a child two years of age, on his lap. Ismael Gibraltar, the admiral of the fleet, was also present, joined at times in the conversation, and sat himself down beside us without any sort of ceremony.

As regards the etiquette observed on such occasions, we learned that the individuals in his service stand in his presence, and that he invites none to take their seats on the divan placed opposite to his own, excepting individuals of rank, heads of religions, wealthy persons who are not in his service, and Europeans. The presentation of coffee is a still greater mark of distinction; but he does not order a pipe to be offered to any but such parties of high rank as are either in his confidence or are immediately connected with him: such are consuls, &c. The greatest honour he can confer is to invite a person to sit down on the same divan as himself. In the latter case, he rises a little when he makes his salutation.

Mehemed Ali Pasha was born at Cavala, a town of ancient Macedonia, not far from the shores of the Grecian Archipelago, and is now (1827) in the sixtieth year of his age; he was consequently born in the year 1767. Ibrahim Aga, his father, was at the head of the police in that place. The son was fond of a military life, though, by way of speculation, he embarked in the more lucrative trade of tobacco. At the time of the French expedition, he crossed over to Egypt with the contingent ordered from his district, and became an officer in the Turkish army, which, under the auspices of the English, defeated the plans of their adversaries. He made himself beloved on every occasion, and his activity and dauntless bravery placed him at the head of every enterprise which was undertaken. He commanded the Albanese, his own countrymen; a body of men which was distinguished beyond any other by its daring and recklessness, and powerfully seconded his plans, whilst he himself suffered no qualms of conscience to deter him, where he could, from administering to their necessities. In the first instance, his plans appear to have had no object beyond the upholding of his sway in this corps; and nothing but the ease with which he saw it was possible to advance his fortunes, amidst the confusion of the moment, prompted him to turn it to his individual account. Force and fraud were alike the stepping stones to the attainment of his ends. He knew no sincerity in the compacts he entered into with his oppo-

nents, and took advantage of any weak or imprudent points in their terms to precipitate their downfall. Wherever peaceably disposed persons or public bodies possessed privileges which obstructed his designs, he contrived to get rid of them, or to render them subservient to his purposes, accordingly as he found it best or easiest. He has never treated individuals of inferior consideration with harshness, injustice, or cruelty. By these means he has not only brought the whole of Egypt, Nubia, and Dongola, under his dominion, but the greater part of them are become his personal property and possession, as he has gradually taken the land itself in payment from such proprietors as could not discharge their taxes; and, by narrowing their means of subsistence, has forced them to fertilise lands which lay waste, though susceptible of cultivation; taking care that they should hold the new soil under leases from himself.

Mehemed Ali has afforded numerous proofs of pecuniary disinterestedness. He is not of a cast to brood over accumulated treasures. His voluntary remittances to Constantinople are more than twice as much as Egypt ever sent before, and his special largesses exceed even these. His indefatigable mind is constantly intent upon strengthening his dominion by enlarging its sphere; and growing discontent, or the mere appearance of it, is instantly stifled in its birth. As lord of Egypt, he is the self-created successor of Kurschid Pasha, from the year 1804; but he was not confirmed by the feeble government of Constantinople, which always leans to the side of the stronger, until the aid of his Albanese had placed Cairo in his grasp. Since he has been sovereign and pasha of Egypt, he has studiously avoided even the appearance of being opposed to the Turkish government; though he has artfully contrived to render the military service he owed to it subservient to the execution of his own designs. His calculating commercial spirit is the peculiar quality in his character, which has given him political eminence, has brought the resources of Egypt into play, and can never quit him whilst its fruits invite him to fresh efforts. It is of indispensable necessity towards the power and prosperity of Egypt, at a time when the interior of Africa is so scantily cultivated, that it should have a quick and regular demand for its rich produce in the west of Europe. An interruption to its commerce might give a very different aspect to the state of Egypt, as well as to Mehemed's views and conduct. But before it comes to the worst, he takes pleasure in basking beneath the rays of his new-born exaltation.

Mehemed Ali has notoriously avoided every act that could imply a disposition to befriend the Christian religion. During our stay, English missionaries, seconded by the interest of the consulate, besought him to favour their plans for converting the Jews to Christianity; but they were turned back with a tolerant hint, that he did not compel the Jews to embrace Islamism, and was the less disposed to interfere in any such matter as theirs. In the year 1823 he supplied every Egyptian village, which was destitute of a place of public worship, with mosques erected at his own expense. Mehemed has no distaste for Rhenish, though he has not entirely abandoned the usages of the Mahomedan faith. • • • It is

• On one occasion I observed to a Fellah Arab, (a countryman),—"Surely you have reason to be pleased with the pasha; for your country is like a garden, and all your villages have steeples!" The Arab replied, "God is great! Our master (*Keffendine*) gives with one hand, and takes with two."

not in his character that he should ever turn Christian, but it is very possible he may cease to be a Mahomedan. Hitherto his mind has not wholly shaken off the fetters of prejudice, for a species of religious feeling has proved both a guide and a hindrance to him.

Mehemed has enjoyed no advantages from education; he speaks no western languages besides Turkish, Albanian, and Arabic: he learned to read and write late in life, but seldom makes use of those acquirements. Endued with a keen sense of what is best and most expedient, he has at all times lent a ready ear to extensive designs; and being withheld by no scruples of conscience, he has been enabled to bring them to a successful termination. His love for science is displayed by the patronage he confers on its disciples, and proceeds from his sense of its usefulness; though it is frequently the effect of his admiration for what is out of the common course. His attachment to Europeans is measured by the extent of their intellects and attainments; the utility of which he has learned to appreciate more sensibly of late than in earlier years. • • •

What he begins, he wishes to see completed; and the greater the difficulties he has to contend with, the bolder and more efficient are the means he adopts, so long as there exists the slightest glimmering of a hopeful result. • •

The Egyptians sigh, but their country flourishes, and a happy future gleams through the mist of their misfortunes and ignorance. The reform begun at Constantinople was reared upon the shoulders of Mehemed's system, and Nedshib Effendi was its bearer. With Mehemed Ali a new epocha has dawned upon the East; toleration and science promise to travel once more hand in hand with Islamism; and though the means may merit reprobation, yet has a result ensued, which has raised an enduring monument to the memory of its instrument.

Mehemed Ali had three sons, Ibrahim, Tusun, and Ismael, and three daughters, two of whom are married. Tusun Pasha died of the plague in Egypt at the close of 1816, after long conducting the campaign against the Wechabites. Ismael Pasha was assassinated during a revolution in Sennaar in 1822, when I was on its frontier, and my own safety was endangered. Ibrahim Pasha has subsequently commanded in the Morea.

SIGHTS OF BOOKS.

The Constitution of the Scotch Episcopal Church, concisely stated, in a Charge delivered, in August 1829, to the Clergy of the Episcopal Communion of Brechin. By the Right Rev. George Gleig, LL.D., F.R.S.E. Rivingtons.

THOUGH the review of theological works scarcely falls within our legitimate province, we cannot abstain from recommending this very able Charge to the notice of all our readers, lay as well as clerical. We express ourselves thus, not merely because of the high character of its author, but because the pamphlet contains by far the best outline which we have any where seen of no uninteresting portion of ecclesiastical history. The Scottish episcopal church, though at present neither wealthy nor powerful, has undergone too many vicissitudes of fortune not to be an object of interest to all inquiring minds; and we can safely assure such, that they will find in these pages more information, contained within narrower limits, than they are likely to find elsewhere. The style of the pamphlet, we need scarcely say, is at once vigorous and lucid. There is, moreover, no party bias, no spirit of polemicism,

about it; and hence it will be read by men of all persuasions with equal satisfaction. It is, therefore, as we said before, a very able, and we may now add, a very seasonable, performance.

Select Portions of Sacred History, conveyed in Sense for Latin Verses; intended chiefly for the use of Schools. By the Rev. Francis Hodgson, M.A. London, 1829. Taylor.

THIS is a useful book for beginners, and intended as a companion to the Hints for Versification, by the late Rev. Robert Bland. The difference between the two publications is principally this: that Mr. Bland's book consists of classical or moral, and Mr. Hodgson's of sacred poetry. Both are written by men of elegant and cultivated minds, well versed in the mysteries of Latin composition, by education at first-rate public schools. Masters who wish to give their boys a Sunday exercise in sacred poetry, and those parents or teachers who prefer such subjects on all occasions to profane ones, will do well to adopt this useful and elegant collection.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

Nov. 4th. Mr. Hoblyn in the chair.—This evening the first meeting of the season took place. The Marquess of Northampton was elected a member; thanks were voted to Mr. Peel for obtaining certain bills, votes, and papers, of the House of Commons, chiefly connected with commerce, manufactures, and the arts, for the use of the Society. A great variety of communications from competitors for the Society's premiums were read; amongst them was one for a glass clock. These were generally referred to the respective committees. Baron Ferrussac, director of the Bulletin Universel, made an application, requesting the Society to take some shares in the literary scheme he is at present attempting to establish in Paris. We understood the Society to decline the baron's request. This meeting being of the old series, no original paper was read by Mr. Aikin.

LINNEAN SOCIETY.

Nov. 2d.—The first meeting of the present session took place this evening; A. B. Lambert, Esq. one of the Vice-Presidents, in the chair. There was a very full attendance of fellows.

A long paper was read on the parasitical connexion of *Lathraea squamaria*, and the peculiar structure of its subterranean leaves, by J. E. Bowman, Esq. F.L.S. Several beautiful illustrative drawings accompanied the communication. The author seems to consider that the absence of green colour, so common in parasitical plants, (for instance, *Orobancha*, *Momotraba*, and some others familiar to our botanical readers,) is to be attributed to the want of proper leaves.—Six gentlemen were admitted fellows; and seven others proposed. On the table lay a considerable number of valuable presents; amongst them, an extensive collection of plants presented by the East India Company. These had formed part of the collection brought to England lately by Dr. Wallich, superintendent of the Company's garden at Calcutta; there were also presented by J. W. Bennett, Esq., two cases, containing specimens of fish from Ceylon; together with various foreign works of literature and art.

ANCIENT AND MODERN EGYPT.

M. Champollion's Thirtieth Letter—concluded. In the tomb of Rhameses V. the halls or corridors which follow those I have just described are

adorned with symbolical representations, relative to the different states of the Sun, considered either physically, or more especially with reference to mythology; but these representations do not form a connected whole, and for this reason they are either totally omitted, or do not occupy the same place, in the other royal tombs. The hall preceding that of the sarcophagus, generally consecrated to the four genii of the Amenti, contains, in the most complete tombs, the appearance of the king before the tribunal of the forty-two divine judges who are to decide the fate of his soul—a tribunal only represented upon earth by that which granted or refused to the kings the honours of sepulture. An entire wall of this hall in the tomb of Rhameses V. presents the images of these forty-two assessors of Osiris, mingled with the justifications which the king is supposed to present, or to cause to be presented in his name, to these austere judges, who appear to be commissioned each to inquire respecting some particular crime or sin, and to punish it in the soul subjected to their jurisdiction. This great text, divided consequently into forty-two verses or columns; is, properly speaking, only a negative confession, as may be judged by the following examples:—O God (—), the king, Sun, moderator of justice, approved by Ammon, has not committed any wickedness. The son of the Sun, Rhameses, has not blasphemed. The king, Sun, moderator, &c. has not been intoxicated. The son of the Sun, Rhameses, has not been idle. The king, Sun, moderator, &c. has not carried away the effects devoted to the gods. The son of the Sun, Rhameses, has not told falsehoods. The king, Sun, &c. has not been a libertine. The king, Sun, &c. has not shaken his head when hearing the word of truth. The son of the Sun, Rhameses, has not uselessly lengthened his words. The king, Sun, &c. has not had occasion to devour his heart (that is to say, to repent of some bad action). Lastly, by the side of this curious text, in the tomb of Rhameses Meiamoun, there were figures still more curious—those of the capital sins. There remain only three that are pretty visible: these are *Leasciviousness*, *Idleness*, and *Voracity*, represented under the human form, with the symbolic heads of a goat, a tortoise, and a crocodile.

The grand and last hall in the tomb of Rhameses V., that which contained the sarcophagus, surpasses all the others in size and magnificence. The ceiling, which is vaulted, has retained all the painting: the freshness of it is so great, that one must be accustomed to the miracles of preservation in the monuments of Egypt to persuade himself that these frail colours have withstood the effects of thirty centuries. The progress of the Sun in the two hemispheres during the astronomical day, a composition which decorates the ceilings of the first halls of the tomb, and is the general basis of all the decorations of the royal sepulchres, is here repeated on a large scale, and with more detail in certain parts. The walls of this first hall, from the basement to the ceiling, are covered with representations, sculptured and painted as in the rest of the tomb, with thousands of hieroglyphics, forming explanatory legends. The Sun is still the subject of these bas-reliefs, a great number of which likewise contain, under emblematical forms, the whole system of cosmogony, and the general principles of natural philosophy among the Egyptians. Long study alone can make out the whole meaning of these compositions, all of which I have myself copied, transcribing at the same time all the texts which accompany them.

It is the most refined mysticism; but under these emblematical appearances there are certainly ancient truths which we think very modern.

In this brief description of one of the royal tombs, I have forgotten to speak of the bas-reliefs that cover the pillars which support the several halls. They are adorations to the divinities of Egypt, and especially to those which preside over the destinies of souls, Phtha, Socharis, Atmou, the goddess Meresochar, Osiris, and Anubis. All the other tombs of the kings of Thebes, situated in the valleys of Biban-el-Molouk and the West, are adorned either with the whole, or only with a part of the representations which I have just described, according as the tombs are more or less extensive, and especially more or less finished.

The royal tombs which are really finished and complete are very few in number, namely, that of Amenophis III. (Memnon), the decorations of which are almost entirely destroyed; that of Rhameses Meiamoun; that of Rhameses V.; probably also that of Rhameses the Great; lastly, that of Queen Thaoer: all the others are incomplete. Some terminate at the first hall, which is converted into a great sepulchral hall; others go to a second hall of the complete tombs; some even end abruptly with a small chamber, hastily excavated and rudely painted, in which was deposited the unfinished sarcophagus. This incontestably proves what I said at the beginning, that the kings gave orders for their tombs when they ascended the throne, and if death surprised them before it was finished, the work was stopped, and the tomb remained incomplete. We may, then, judge with certainty of the length of the reign of each of the kings interred at Biban-el-Molouk, by the completion, or by the more or less advanced state, of the excavation intended for their sepulture. On this subject it is to be observed, that the reigns of Amenophis III., of Rhameses the Great, and of Rhameses V., were, in fact, according to Manetho, each of more than thirty years, and their tombs are also the most extensive.

I have still to speak of certain peculiarities which occur in some of these royal tombs.

Some remaining walls of the tomb of Amenophis III. are covered with plain painting, but executed with much care and delicacy. The great hall contains also a portion of the course of the Sun in the two hemispheres; but this composition is painted on the walls, under the form of an immense papyrus unrolled, the figures being simply traced as in the manuscripts and the legends in lineal hieroglyphics, approaching very nearly the hieratic forms. The Royal Museum possesses rituals in this intermediate species of writing.

The tomb of this illustrious Pharaoh was discovered by one of the members of the commission of Egypt, in the valley to the west. It is probable that all the kings of the first part of the eighteenth dynasty were interred in the same valley, and that there we must look for the sepulchres of Amenophis I. and II., and of the four Thouthmosis. They cannot be discovered except by clearing away immense accumulations of earth, &c. at the foot of the great perpendicular rocks in which these tombs were excavated. This same valley conceals perhaps the last asylum of the Theban kings of the ancient periods: at least, I think myself authorised to make this inference from the existence of a second royal tomb, in a very ancient style, which has been discovered in a most retired part of the same valley, that of a Theban Pharaoh named Skhai,

who certainly does not belong to the last four Theban dynasties, namely, the seventeenth, eighteenth, nineteenth, and twentieth.

In the valley properly called Biban-el-Molouk, we admired, as well as all travellers who have preceded us, the astonishing freshness of the paintings, and the delicacy of the sculpture of the tomb of Ousirei I. who in the legends takes the different surnames of Noubei, Athothi, and Amonei, and on his tomb that of Ousirei: but this fine catacomb decays more and more every day; the pillars split and give way, the ceilings fall in scales, and the painting peels off. I have had drawings made and coloured upon the spot of the richest pictures of this hypogeum, to give in Europe an exact idea of so much magnificence. I have also had drawings made of the series of nations represented on one of the bas-reliefs of the first hall of columns. I thought at first, from the copies of these bas-reliefs published in England, that these four nations, of very different races, conducted by the god Horus bearing a crook, were nations subject to the sceptre of the Pharaoh Ousirei: the study of the legends has proved to me that this picture has a more general meaning. It belongs to the third hour of the day, that in which the heat of the sun's rays begins to be felt, and warms all the inhabited countries of our hemisphere. It is meant to represent, according to the legend itself, the inhabitants of Egypt, and those of foreign countries. We have, therefore, before us the image of the several races of men known by the Egyptians; and we learn, at the same time, the great geographical or ethnographical divisions received at that remote epoch.

The men, led by Horus, the pastor of the nations, are represented to the number of twelve, but belonging to four very distinct families. The first three, those nearest the god, are of a dark-red colour, well-proportioned figures, mild countenances, a nose slightly aquiline, long braided hair, and white garments; and their legend designates them under the name of *ROT-EN-NE-ROME*, the race of men, or men properly so called, that is to say, the Egyptians.

The following three have a very different appearance; their skin is flesh-colour, inclining to yellow or tawny, the nose much curved, black thick beards ending in a point, and short garments of various colours: these bear the name of *NAMOU* (Asiatics).

There can be no doubt respecting the race of the next three; they are negroes, designated by the general name of *NAHASI*.

In fine, the last three have skins of what we call flesh-colour, of the most delicate whiteness, the nose straight or slightly arched, blue eyes, fair or red beards, tall and very slender figures; they are clothed in ox-hides with the hair on, and are real savages, tattooed in various parts of the body. They are called *TAMHOU* (Europeans).

I hastened to look for the corresponding picture in the other royal tombs; and having, in fact, found it in several of them, the variations which I observed fully convinced me that it was intended to represent here the inhabitants of the four parts of the world, according to the ancient Egyptian system; namely, first, the inhabitants of Egypt, which of itself formed one part of the world, according to the very modest custom of ancient nations; secondly, the Asiatics; thirdly, the inhabitants of Africa, the negroes; fourthly (and I am ashamed to say so, since our race is the last and most savage of the series), the Europeans, who in those remote ages did not, it must be con-

fessed, make too splendid a figure in the world. We must understand here all the people of the fair races and with light hair, inhabiting, not only Europe, but also Asia, where they had their origin.

This manner of considering these pictures is the more correct, as the same generic names recur in the other tombs, and constantly in the same order. There, too, we find the Egyptians and Africans represented in the same manner, which could not be otherwise; but the Namou (the Asiatics), and the Tamhou (the European races), offer important and curious varieties.

Instead of the Arab or the Jew, so simply clad in the tomb of Ousirei, Asia is represented in the other tombs (those of Rhameses Meiamoun, &c.) by three individuals, always with tawny complexions, aquiline noses, black eyes, and bushy beards, but habited with extraordinary magnificence. In one they are evidently Assyrians; their costume, even in the minutest particulars, is perfectly similar to that of the figures engraved on the Assyrian cylinders: in the other they are Medes, or the primitive inhabitants of some part of Persia; their physiognomy and costume being in fact found in every feature on the Persepolitan monuments. Asia, therefore, was represented by one of the nations that inhabited it, indifferently. It is the same with our good old ancestors the Tamhou; their costume is sometimes different; their heads are more or less covered with hair, and decorated with different ornaments; but their fair complexions, their eyes and beards, retain all the characteristics of a separate race. I have had this curious ethnographical series copied and coloured with care. I certainly did not expect, when I arrived at Biban-el-Molouk, to find there sculptures which may serve as vignettes for the history of the primitive inhabitants of Europe, if any one should ever have the courage to undertake it. However, there is something flattering and consolatory in the sight of them, since it renders us very sensible of the progress which we have since made.

The tomb of Rhameses I., the father and predecessor of Ousirei, was buried under rubbish and *débris* fallen from the mountain: we have had it cleared. It consists of two long corridors, without sculptures, ending in a painted hall, in an astonishing state of preservation, and containing the sarcophagus of the king, of granite, only covered with paintings. This simplicity contrasts with the magnificence of the son, whose sumptuous catacomb is a few paces distant.

I was extremely desirous to find at Biban-el-Molouk the tomb of the most celebrated of the Rhameses, that of Sesostris. It, in fact, exists there,—it is the third to the right in the principal valley; but the sepulchre of this great man appears to have been exposed, either to devastation by barbarous hands, or to the ravages of accidental torrents, which have filled it up, almost as high as the ceilings. It was by digging a kind of adit through the fragments of stones which fill this interesting catacomb, that we reached, crawling, and in spite of the extreme heat, the first hall. This hypogeum, from what we can see of it, was executed upon a vast plan, and adorned with sculptures in the best style, to judge of them by the small portions which still exist. Excavations undertaken on a large scale would, doubtless, lead to the discovery of the sarcophagus of that illustrious conqueror; but we cannot hope to find there the royal mummy, for this tomb has doubtless been violated and despoiled, at a very

remote epoch, either by the Persians or by the seekers of treasures.

At the farther end of a branch of the valley, and in the vicinity of this tomb, reposed the son of Sesostris. This is a very handsome sepulchre, but not finished. I have found there a small chapel, consecrated to the manes of his father, Rhameses the Great, constructed in the thickness of the wall of an insulated apartment. The last tomb at the end of the principal valley is remarkable on account of its unfinished state. The first bas-reliefs are executed and finished with admirable delicacy and care; the decorations of the rest of the catacomb, composed of three long corridors and two halls, are merely sketched in red; and lastly we found the fragments of the granite sarcophagus of the Pharaoh, in a very small cabinet, the rough walls of which are covered with some bad figures of divinities, sketched and daubed in a hurry. His successor, whose monumental name is Rhamerri, probably did not take much pains about his sepulture. Instead of having a tomb excavated for himself, like his ancestors, he found it more convenient to take possession of the catacomb next to that of his father; and the study which I have had to make of this palimpsest tomb has led me to a result of much importance for completing the series of the reigns forming the eighteenth dynasty.

Time having caused the fall of the stucco spread by the usurper Rhamerri over the primitive sculptures of some parts of the tomb which he appropriated to himself, I distinguished over the principal door the legends of a queen, named Thaozer; and time having thus destroyed the covering under which the first bas-reliefs of the interior were hid, has exposed to view representations of that queen making the same offerings to the gods, and receiving from the divinities the same promises and the same assurances as the Pharaohs themselves, in those bas-reliefs of their tombs which occupy the same place as these. It was therefore evident that I was in a catacomb excavated to receive the body of a queen, and, I must add, a queen who herself exercised the sovereign power; since her husband, though bearing the title of king, always appears after her in this series of bas-reliefs; the queen alone being seen in the first and most important. Menephthah-Siphtha was the name of this subordinate sovereign. As I had already found at Ghebel-Selseleh bas-reliefs of this prince, who had, after King Horus, continued the decorations of the great specos of the quarry, I could not but recognise at that time in Queen Thaozer the daughter of King Horus, who, succeeding her father, of whom she was the only heiress of an age to reign, exercised for a long time the sovereign power, and is found in Manetho's list of kings, by the name of Queen Achenchères. I made a mistake at Turin, in taking the wife of Horus, Queen Tmauhmot, for the daughter of that prince, mentioned in the text of the inscription of a group. This mistake in a name, which is indifferent as regards the series of the reigns, would not have been committed if the legend of the queen-consort of Horus had preserved its initial titles, which have been broken off: Siphtha therefore bears the title of king only as husband to the reigning queen, as had formerly been the case with the two husbands of Queen Amensé, mother of Thouthmosis III.

This fact diminishes a little the odium of the usurpation of the tomb of Queen Thaozer and her husband Siphtha, by their fifth or sixth successor, who, indeed, was not bound to have for them the respect due to his ancestors, because he descended directly from Rhameses I.,

and, according to the list, was, at most, the brother of the Queen Thaozer Achenchères, and continued the male line from King Horus. But that cannot justify the new occupier; first, for having every where substituted his own image for that of the queen, by means of additions or suppressions, disguising her in a helmet, or by garments and insignia suitable only to kings, and not to queens; secondly, by having covered with stucco all the cartouches containing the names of the queen and of Siphtha, in order to have his own legend painted on them. This operation must, however, have been executed in great haste; since, after having metamorphosed Queen Thaozer into King Rhamerri, they forgot to correct in the bas-reliefs the text of the speeches which the gods are supposed to make, and which are always addressed to the queen; and, both from their form and contents, could not be properly directed to the king.

The largest and most magnificent of all the tombs in the valley that still exist, was indisputably that of Rhamerri's successor—Rhameses Meiamoun; but now, time or smoke has tarnished the splendour of the colours which cover the greater part of the sculptures. It is, besides, interesting on account of eight small apartments, formed laterally in the thickness of the walls of the first and second corridors. These cabinets are adorned with extremely interesting sculptures, of which we have taken copies with great care. One of these little boudoirs contains, among other things, a representation of the operations of the kitchen; another that of the most rich and sumptuous furniture; a third is a complete arsenal, in which we see arms of every description, and the military ensigns of the Egyptian legions. Here are sculptured the royal barks and *ouages*, with all their decorations. One of them also shews us the symbolic picture of the Egyptian year, figured by six images of the Nile and six images of Egypt personified, alternately, one for each month, and bearing the productions peculiar to the divisions of the year which these figures represent. I have thought it proper to have copied, from one of these pretty apartments, the two celebrated harp-players, with all their colours, because they have not been accurately published by any body.*

This may suffice for Biban-el-Moleuk. I am desirous of returning to Thebes, whither you will not be sorry to follow me. I must, however, add, that several of these royal tombs bear upon their walls the written proof that they were abandoned many ages ago, and only visited, as in our times, by numerous curious idlers, who, also like those of our days, thought to immortalise themselves by scribbling their names on the paintings and bas-reliefs, which they have thus disfigured. Fools of all ages have numerous representatives here:—first, we find Egyptians, of every epoch, who have written their names—the most ancient in hieratic, the more modern in demotic characters—many Greeks, of very ancient date, to judge by the shape of the letters—old Romans of the time of the republic, who proudly give them-

* These harp-players are, we have little doubt, the same of which Bruce first gave representations in his Travels; and which (if our memory serves us correctly after such a lapse of years) some sage connoisseurs of that day pronounced to be either the pure inventions of his own brain, or at least very much beautified by him: one of these wisecracks, we recollect, objected to the number of strings given to the harpe. As M. Champollion has also taken copies of these figures, we hope to be able to compare his with Bruce's; and thus have it in our power to add another instance to the many in which the authenticity and correctness of that enterprising traveller's statements have already been demonstrated.—*Ed. L. G.*

selves the title of *Romanes*—names of Greeks and Romans of the times of the first emperors—a crowd of unknown persons of the Lower Empire, buried in the midst of the superlatives which precede or follow them—likewise names of Copts, accompanied with very humble prayers—lastly, the names of European travellers, whom love of science, war, commerce, chance, or idleness, have led to these solitary tombs. I have collected such of these inscriptions as are most remarkable for their contents, or most interesting to paleography. All these are materials: and every thing finds a place in my Egyptian portfolios, which will certainly be of some value when conveyed to Paris. I often think of it. Adieu.*

EXPEDITION IN GREECE.

FARTHER accounts from the French *savans* employed in this expedition state that they have nearly completed the examination of the islands, and have been much interested by a Grotto of Jupiter in Naxos, which has not hitherto been accurately described. Delos is represented as containing only a heap of ruins; and M. Bory de St. Vincent is of opinion that volcanic fires are about to rekindle in the Soufriere at Milo, and the island of Santarino.

LITERARY AND LEARNED.

OXFORD, Oct. 31.—On Thursday last the following degrees were conferred:—

Doctor in Divinity.—Rev. G. Proctor, Worcester College, Principal of Elizabeth College, Guernsey.

Masters of Arts.—Rev. E. B. Everard, W. P. T. Wickham, Rev. E. H. Bateman, Balliol College; Rev. F. Guille, Pembroke College; E. G. White, Lincoln College; Rev. W. J. E. Bennett, Christ Church; Rev. A. Roberts, Hon. L. J. Barrington, Oriel College.

Bachelors of Arts.—P. A. Browne, Corpus Christi College; W. Coleman, Queen's College; W. P. Austin, Exeter College; T. M'Calmont, Worcester College, incorporated from Trinity College, Dublin.

CAMBRIDGE, Oct. 31.—At a congregation, yesterday, the following degrees were conferred:—

Masters of Arts.—J. C. Russell, St. Peter's College; J. A. Maynard, J. Houghton, Pembroke College, Compositum; Rev. W. P. Larken, Jesus College.

Bachelors of Arts.—C. I. Falconer, J. Langton, Trinity College; E. Hayes, St. John's College. W. Turner, M.A. of Christ Church, Oxford, was admitted *ad eundem*.

ROYAL SOCIETY OF LITERATURE.

THE business of this Society, after the recess, was resumed on Wednesday, the 4th instant, with the reading Dr. Nolan's communication "On the Chronological Use of the Ancient Cycles," in which the author's observations on the Assyrian chronology are brought to a close. For the security of the principle applied in his previous communications, the author proceeded to shew, that the historical grounds on which Usher and Des Vignolles have undertaken to found the schemes which they have opposed to the system of Scaliger, when properly understood, really tend to the establishment of the views of the last-named chronologist. The authority of Herodotus, Diodorus of Halicarnassus, Justin, and Appian, were not only reconciled by Dr. N. to that of Ctesias, Diodorus, and Syncellus, but the demonstration which Des Vignolles professes to found on the celebrated eclipse predicted by Thales, was shewn, on the authority of Pliny, Solinus, and Cicero, and the calculations of Kepler, Newton, and Scaliger, to bring direct support to that scheme of Assyrian chronology

* This letter is so extremely interesting, that, though much cramped for space, we are not sorry to say we have the *fourteenth* already in our possession. It contains a description of the Rhameion (the quondam Memnonium), of the tomb of Ozymandias, military pictures, and others of religious acts, besides various interesting matters: we shall, of course, continue our translations, so that the readers of the *Gazette* may have these important letters complete. We are of opinion that these accounts will occupy the *litterati* of Europe for centuries to come.—Ed.

which the tests proposed by him for identifying the genuine dates among the spurious, prove to be exclusively true. Dr. Nolan announced his intention, on some future occasion, to inquire into the nature and antiquity of the sabbatical, genethliacal, and other cycles; as preparatory to the further development and adaptation of a principle which applies to every branch of ancient chronology.

LONDON PHRENOLOGICAL SOCIETY.

THIS Society resumed its meetings for the season on Monday last, when the President, Dr. Moore, delivered an oration on the present state of the science of phrenology, briefly reviewing the objections made by its opponents. He congratulated the members on the increasing prosperity of the Society, both with regard to the accession to their numbers, and the great additions which had been made to their collection of casts, during the recess: he concluded by presenting them with two skulls (a male and female) of the Guanches, the original inhabitants of the island of Teneriffe, and one of an Ashantee. The two former, we believe, are the only specimens (with one exception, in the Hunterian Museum) in the kingdom.

Mr. Robertson, surgeon, of Chatham, presented casts of the heads of two individuals remarkable for their sensuality; one of these, a black man, born at New York, of gigantic stature, will perhaps be remembered, since he was frequently engaged as a model at the Royal Academy; and the painting of a negro wrestling with a buffalo, exhibited a few years since, was a portrait of him. The development, it was stated, completely coincided with the character. A remarkable "case of sudden propensity to murder and suicide," communicated by Dr. Otto, of Copenhagen, was read. It appeared that the desire of this individual to kill both himself and his son arose from a morbid excitement, and congestion of blood in part of the brain, originating from a fall: his intentions were, however, frustrated; and he was afterwards placed in an hospital, where, under the care of Dr. Wendt, he perfectly recovered.

Thirty casts of national varieties of heads were placed upon the table, presented by the Phrenological Society of Edinburgh; viz. Icelandic; Long Celtic; Swiss, from Zurich; Ancient Greek, from the tombs of Samos; Circassian girl; Armenian; Chinese; Hindoo; Burmese; Ceylonese; native of the interior of Java; Sandwich islander; Papuan islander; New Holland chief; New South Wales female native; New Zealander; Moor; mummy, from Thebes; Negro; Ashantee; Mozambique; female Caffre; Icy Cape, near Behring's Strait; Esquimaux; North American Indian; Charib; Peruvian; Brazil Indian; Chilese; Araucanian warrior.

Dr. Elliotson informed the Society that there was sitting at his side Dr. Vimont, whose astonishing labours in phrenology were well known, and who, though induced to despise the doctrine of Gall, through what he had heard of it from his teachers in Paris, had determined to investigate its pretensions himself; and in the course of nine years collected three thousand five hundred heads of animals, and modelled three hundred brains in wax; and became gradually convinced, from this extensive observation, that it was founded in fact. He added, that Dr. Vimont presented to the Society a bust of General Foy, cast two hours after death; and pointed out the exact accordance of the development of the head with the talents and character of that celebrated man. The dimensions of the head were

singularly fine; the intellectual and moral positions being both pre-eminently developed.

POMPEII.

A NEW house has been discovered, adjoining to that known by the name of Castor and Pollux. It has the usual Tuscan atrium, surrounded with several little chambers, in which the following articles were found:—fourteen large and small silver spoons; of bronze, the bust of a man, and another rather handsome one of a young Tiberius, which served as an ornament to a box of the same metal; vases of various forms; shells; a beautiful tripod; a large and uncommon steelyard, with the weight in the figure of a Mercury; elegant candelabra; two little boxes containing pills and surgical or chemical preparations; a ring with the word "Ave" engraved upon it. Of marble, a singular statue, which seems to represent Hercules, with a dog reposing in his arms; vials of glass, and vases of terra-cotta. Then follows the gynæceum; a peristyle surrounds it in the inside. The exedra, or drawing-room, lies opposite the entrance—two niches must have contained the images of the ancestors of the family; above, Bacchanalian dances of extraordinary beauty are painted, and two pictures of very great merit adorn the sides of the apartment. The one represents Dejanira looking affectionately at Alcides, to whom she presents a pretty child: the hero, resting on his club, looks proudly at the centaur Eurytion, who is kneeling, and seems to implore mercy and forgiveness—(Hyginus, fable 31). The other represents Meleager with the boar, which lies dead at his feet, and Atalanta by his side: Althæa and Leucippus, at some distance, cannot conceal their envy. At the back of the exedra is a little garden, in the middle of which is an elegant marble table and a little statue of Apollo, from whose plectrum a fountain flowed. The apartment for the triclinium and the dancers is open towards the garden; a mosaic, the most considerable that has hitherto been found in Pompeii, adorns the floor; Cupids hold a lion, bound with garlands of flowers, in the midst of Bacchantes; there is also a temple, and an image pouring the juice out of a vase. All this may allude to a scene in the great Bacchanalian drama, in which wine and love triumphed over rudeness and strength.

FINE ARTS.

NEW PUBLICATIONS.

Fisher's Illustrations of England.

Nos. 14, 15, and 16.

WE were especially struck with the views of some of the cotton-twist manufactories of Manchester, contained in these Nos. of Mr. Fisher's work. They are skillfully treated, and convey a complete notion of those huge masses of brick and mortar. It is possible that the political greatness of England is dependent on her commercial greatness, and that her commercial greatness is in a considerable degree to be attributed to such structures as are here so faithfully represented. To us they are, nevertheless, subjects of painful contemplation. There may be, and we believe there are, exceptions; but, generally speaking, no person of the least observation or reflection can stand by and see the squalid, and hideous, and savage population of one of these buildings pour tumultuously forth at the hour of dinner, or of the termination of the day's or the night's labour, without being convinced that a cotton-factory is one of the rankest hot-beds of human vice and misery.

Recollections of Italy; in fifteen select Views, drawn from Nature by William Jeffs, Esq., in the Years 1826 and 1827. Ackermann.

A PUBLICATION pleasing in itself, and which must be peculiarly interesting to those who have witnessed the beautiful scenery, the "re-collection" of which it is so well calculated to renew in their minds. Of the various views, our favourites are—"Venice;" "the Falls of Terni;" and "the Crater of Mount Vesuvius." The first gives us quite a new idea of the celebrated "City of Palaces;" the second is the only print which we remember to have seen in which the three falls of Terni (undoubtedly the most beautiful cascades in Europe) have been comprehended in one view; the third is a striking and picturesque representation of one of the most awful objects in nature. The plates are neatly lithographed by the Gaucis.

Great Britain Illustrated; from Drawings by W. Westall, A.R.A.; engraved by E. Finden. No. XVI. Tilt.

As pleasing as its predecessors.

ARTISTS' AND AMATEURS' CONVERSAZIONE.

IN our *Gazette* of February we gave an account of the dinner given by this Society at Serle's Coffee-house. On Wednesday last we attended the resumed meetings at the Freemasons' Tavern, and, what between art and artists, spent a delightful evening. The contributions were numerous, and of the very first description; and it was with feelings of no ordinary satisfaction we perceived the table strewn with works from the portfolios of our best painters. To the labours of Mr. Henry Graves (of the spirited firm of Moon, Boys, and Graves), Scipio Clint (the founder), and Henry Behnes, we understand the Society is indebted for its present flourishing and eminent rank. These gentlemen have been indefatigable in their endeavours to bring together works and men of acknowledged talent; and the success with which they have laboured was abundantly shown in the display with which we were so much pleased. Some drawings by Ward, and a head by Inskipp, particularly attracted our regard. Several members of the R.A. were among the company.

THE COLOSSEUM.

OF this striking building and internally extraordinary exhibition we have now an admirable representation before us. It is from an etching by Parris, the distinguished painter of the View of London, and equally at home in almost every branch of art, and well engraved by T. Higham.

ORIGINAL POETRY.

PHRENOLOGICAL SOCIETY.

WHAT a fashionable place
Buckingham Street* soon will grow!
Thither the bump-discovering race
To survey their organs go:
There are plaster heads of men
In wonderful variety,
All collected by the Phren-
Ological Society.

Of casts a most distinguished lot
Are all arranged in neatest order—
Shakespeare, Milton, Southey, Scott,
Burke, Thurtell, Hare, and William Corder
—And many more illustrious men
Whose heads have notoriety,
Moulded in plaster by the Phren-
Ological Society.

* Where the Phrenological Society meet.

When you walk out you exercise
Your organ of *Locality*;
And when a friend you recognise,
'Tis *Individuality*.
Between these truths there's now and then
No little contrariety;
But that does not disturb the Phren-
O-Logical Society.
Earl Pomfret's bust had clever bumps,
Which Scott had not at all;
And as for Burke the murderer,
His murderous bumps were small:
And now I think that of my pen
You must have had satiety,
And so, I dare say, thinks the Phren-
Ological Society. W. L. C.

BIOGRAPHY.

JOSEPH MAWE, ESQ.

ON Monday, the 26th ult., at his residence in the Strand, after an illness of severe and protracted suffering, died Mr. John Mawe, author of *Travels in the Interior of Brazil, &c.*, and Member of the Mineralogical Society of Jena. Mr. Mawe was in the 65th year of his age; and, through a long life of honourable and successful exertion, few individuals have been more actively or usefully engaged in literary and scientific pursuits. To his enterprise and talent this country was indebted for the most faithful and interesting description of the Brazilian States, which he traversed in the year 1810, under the sanction and auspices of the Prince Regent of Portugal (afterwards King John VI.), for the purpose of inspecting the extensive gold and diamond districts of that empire; being the first Englishman to whom such a permission was granted. His *Travels in the Interior of Brazil*, which first appeared in 1812, took immediate rank amongst the most valuable standard works of that class; and have not only gone through numerous editions in England and the United States of America, but have also been translated into almost all the continental languages, and published in France, Sweden, Germany, Russia, Portugal, and Brazil.* As a mineralogist, Mr. Mawe was deservedly held in the highest estimation, for the variety and importance of his information, and the facility with which he developed the principles of his favourite science—upon which he has published several popular treatises. In the domestic relations of life, as a husband and as a father, he was warmly affectionate, and fondly solicitous for the happiness of his family: as a friend, he was kind, sincere, and steadfast; and in his intercourse with mankind, the cheerfulness of his disposition, the unblemished integrity of his character, the instructiveness of his conversation, and the suavity of his manners, won for him the respect, the esteem, and the regard of all who knew him.

DRAMA.

DRURY LANE.

Snakes in the Grass, a comic piece by Buckstone, in two acts, was produced here on Tuesday, November 3d. Picard's four-act comedy, *Les Tracaseries, ou Monsieur et Madame Tabillon*, has furnished Mr. Buckstone with the plot of his piece; which, if a moral lesson, pleasingly conveyed and admirably acted, deserves the support of the town, ought to fill the benches of old Drury for many nights to

* Mr. Mawe also contributed essentially to Lamarck's *Conchology*; published *Lessons on Mineralogy and Geology*, which volume has gone through many editions; a *Treatise on Diamonds*; the *Linnean System of Conchology*; and other useful and successful works.

come. But, alas for the stage! neither pleasant writing nor good acting can now-a-days ensure a profitable success. There is a species of fashion necessary to attach itself voluntarily to a drama, before the springs of the town are put into play, and the floods pour through Fleet Street and Piccadilly, to overflow a theatre-royal. "Have you seen so and so?" "No! then you must go." Till those talismanic words are heard in Bond Street or on the Exchange—and there is nobody in the former place to speak them before February—the best play may slide unnoticed from the stage, the best acting may be wasted on the desert air; and what the certain something is that shall extort those golden sounds, is as much a mystery to the most deeply initiated as to him who never snuffed the lamp. The critics!—phoo! Even those who do know what is good—and the number is lamentably small—are foiled upon that scent. Prophets of the past—Physician Moore is more to be depended upon for the future. They may confess the effect of that done, which, had they been consulted on the doing of, they would, most probably, have condemned as unworthy or impracticable; but they are as far off as ever from the knowledge of the popularity it is likely to obtain—the profit which may accrue from it to the manager. *Charles II.* and *Clari* were frequently performed, during their first seasons, to empty benches: the first, perhaps, one of the best of modern dramas—the second, certainly one of the worst. The same pieces, acted by precisely the same persons—no obvious cause existing for the change—have since drawn thousands of pounds into the Covent Garden treasury. It is a hard case, though, for authors,—who are paid, in general, according to the money brought, and not in proportion to the merits or success (as far as mere approval goes) of the piece, and perhaps one of the principal causes of the neglect of the stage by our greatest writers. It is too much of a lottery—the longest experience availeth nothing:

"Thinking is but an idle waste of thought,
And nought is every thing, and every thing is nought."

Snakes in the Grass, we have said, is pleasantly written and admirably acted; and if there is any attraction in a strong cast, surely a mere farce with all the comic strength of the house in it, except Farren, ought to draw. Listen the inimitable, Mrs. Glover the invaluable (whose re-appearance in her proper sphere we hail with unmixed delight), the gentlemanlike and lively Jones, the volatile Harley, and our pretty and clever new acquaintance Miss Mordaunt, who is creeping fast up our critical sleeve:—what, on earth, would the people have?

Venice Preserved was excellently enacted on Thursday: Miss Phillips *Belvidera*, Young *Pierre*, and Wallack *Jaffier*.

ADELPHI.

ON Thursday *The Bold Dragoons*, a light and most amusing little comic piece, was produced at this theatre; and is just such a thing as we love to see, when in pursuit of amusement. Gaiety and laughter are the sure concomitants; and instead of leaving the place fatigued with the entertainments, you depart with a lively recollection of pleasure. Mr. and Mrs. Yates, Mrs. Fitzwilliam, and J. Reeve, are the chief support of this novelty, which must prove very attractive to the Adelphi, where, however, we observe another new burlesque (called *Billy Taylor*) announced. At this rate the managers will not need the Elephant; of which, by the way, see our next page.

THEATRE ROAR-ALL ADELPHI.*

Pro-boeca Publico!

First Night of the Elephant!

THE proprietors respectfully announce, that in consequence of the heavy expense they have incurred by the immense exertions made to procure their patrons the pleasure of witnessing the powerful acting of this great performer, and the certainty of her being nearly able to fill the house by herself, they have yielded to the pressure of circumstances, and, aware of the impossibility of raising the prices to a proportionate height—which, according to an Irish calculation, would amount to about sixty thousand pounds† per person—they have come to the determination to issue this strong appeal to the free-quenters of the theatre, trusting they will see the necessity of giving their little stage all the support possible under such extraordinary encumbrances, and therefore not press for admittance (the public Press excepted),—as, should there be twenty hundred wait at the doors, there will be treble that weight within them.

The doors will be open at dusk. Places to be taken of Mr. Mass-in-ham, at the trunk-book office of the theatre—at the Elephant and Castle, Kent Road; the One Ton, Jermyn Street; and at Mr. A-dr-s's, the great book-seller of Bond Street; where private trunks and ivory tickets for the pit may also be obtained, upon early application.

VARIETIES.

Betshini, the best engraver in Rome, we observe from the Roman journals, died recently in that city.

Horned Cattle.—A great nuisance had arisen in a small town in the department of the Calvados: the olfactory department and common decency had been outraged by the placing of cattle under the public gateway; and the municipal capita, with a view, we presume, to quiet the storm raised by their better-halves, concocted and posted this pertinent notice:—"No person is allowed to place any *horned cattle* under this gateway except—the mayor and prefect!"

Animal Society.—Our readers may recollect the account we gave of John Austin, whose collection of animals of opposite natures living in tranquillity together, attracted so many curious spectators to his little menagerie across Waterloo Bridge. This ingenious person has, with great propriety, been taken up by the Zoological Society, and has now some of his extraordinary exhibitions in the Gardens. We have not yet had an opportunity of examining his new establishment, but learn that one of its strangest features consists of a pair of doves with two eggs, occasionally assisted (as our French friends would say) by a remarkably fine black rat! And, apropos of rats, it is worth mentioning, that the original black rat, which is often spoken of as exterminated by the brown or Russian rat, and extinct in this country, is in reality still abundant in many parts. For example, we are assured that the species is numerous about Meux's brewhouse, and that it also keeps possession of the old Post Office, in spite of its fierce northern invaders.—It might seem whimsical under the head of "Animal Society" to notice that the Secretary of the

Zoological Society has commenced giving evening parties monthly; at the first of which we met a very distinguished assemblage of men of high talents and scientific attainments.

Night-Telegraph.—Captain Kervéguen, of the French navy, has invented a new species of night-telegraph, which, by the motion and position of the illuminated radii of several circles, is capable of representing no fewer than 29,245 signs. By a single illuminated radius he can produce 8,649 telegraphic signs. The invention is under the consideration of the French minister of marine.

Bibliophiles.—In the year 1820, the recent establishment of the Roxburgh Club in England, led to the formation of a similar body in Paris, under the title of *Société des Bibliophiles Français*; the principal object of which was to publish works yet in manuscript, or to reprint works of great rarity. The Society consists of twenty-four members, besides five foreign associates. The collection, which is published at the expense, and under the superintendence of the Society, bears the general name of *Mélanges*. Every piece which enters into the composition of a volume is printed separately, on paper expressly fabricated for the purpose, and with Didot's best types; and has a distinct paging and a separate title. Every volume of the collection is marked with the year in which it was printed, and contains a general title, a table of contents, and a list of the Society. Every copy bears the number and the name of the member of the Society to whom it belongs. Twenty-four copies are struck off for the members of the Society; a twenty-fifth is deposited in the *Bibliothèque du Roi*, and one copy is allotted to each foreign associate. Every such copy which may be exposed to public sale, is to be immediately subjected to a bidding, in the name of the Society, of a hundred francs.

Extraordinary Fossil.—It is said that some fossil remains of a most extraordinary animal have been discovered in the state of New York. They consist of a jaw-bone, twenty feet long, and weighing twelve hundred pounds; several vertebrae, six inches in diameter, along which there is an oval passage for the spinal marrow, nine inches by six; and some ribs nine feet long! If the animal of which these are fragments was of the elephant species, it must have as much surpassed the ancient mammoth in size as the modern elephant surpasses a mouse.

French Royal Colleges.—By an ordinance of the King of France, dated October 10th, the number of pensions allowed by government to each royal college is fixed at thirty, independent of the pensions reserved for the preparatory schools instituted by the ordinance of the 9th of March, 1826.

To preserve Butter.—A correspondent of a French periodical work recommends that, to preserve butter, instead of using common salt, we should take a mixture composed of one part of sugar very finely powdered, one of purified nitre, and one of purified sea salt. An ounce of this mixture is to be put to each pound of butter, and well worked in: when this is done, the butter should be put into crocks, and carefully covered over with parchment. He says that butter thus prepared is much more agreeable to the taste, has a finer colour, and keeps much longer.

Education.—It has been stated in the French papers, that thirty-four Arabians have arrived in France from Egypt, for the purpose of being educated, at the expense of the Pasha. We understand that the Pasha has given

orders for them to receive instruction in all the useful arts; and that such of them only as shall evince peculiar aptitude are to be instructed in the classics. Some are to receive a medical education.

Adulterated Milk.—Some experiments were made lately, by order of the French minister of the interior, on the milk sold in Paris; from which it appears, that to conceal the reduction of strength by the addition of water, the milk-sellers adopt various modes of adulteration. Having removed the buttery part, which, from its specific gravity, rises to the top, and which is separately sold as *crème* (an article very different from cream as we use it in England), the milk-sellers add sugar to give flavour, and a thickened portion of flour, gently boiled, so as to mix well with the milk, and not precipitate. To whiten the milk, which, thus reduced and adulterated, acquires a slight violet, or, as it is called here, sky-blue colour, they use a little emulsion of almonds, prepared with brown sugar. To keep the milk from turning in hot weather, they add a small quantity of subcarbonate of soda. The chemical means of detecting these adulterations have been made public in France by order of the minister; but they are too tedious and scientific to be generally useful. It appears that the consumption of milk in Paris is now double what it was twenty years ago, without reference to the increase of population, owing to the more general use of *café au lait* among the working classes. The addition to the number of cows, however, is by no means in proportion.

Beet-Root Sugar.—A new French paper called *Le Temps* (the Times) contains an account of the production of sugar from beet-root in France; and it is stated that the quantity obtained last year in the 100 sugar-houses distributed through twenty-three departments was five millions of kilogrammes; being about one-fourteenth part of the entire consumption of sugar in the kingdom. The production of last year was double that of the two preceding years; and it is, according to these details, expected that the number of manufactories of beet-root sugar will in the course of the next year increase to 200—the speculation having been found a profitable one. According to this statement,* in order to supply the entire consumption of France, it would only be necessary to plant with beet-root one-28th part of the land now lying fallow. It appears, that an hectare of good land will produce 25,000 kilogrammes of roots, and that 100,000 kilogrammes of roots will produce 5,000 kilogrammes of raw sugar. The expense of constructing a manufactory varies from 25,000 to 30,000*fr.* To prepare 100,000 kilogrammes of roots requires 16,000 kilogrammes of coal, labour equal to that of 265 men and forty-six oxen for one day, and about 635*fr.* of miscellaneous expenditure.

The Caucasus.—M. Kupfer, a professor of Casan, has succeeded, after a very laborious struggle, in climbing to the summit of one of the loftiest peaks of the Caucasus; which is computed to be about a thousand feet higher than Mont Blanc. The most interesting observations made by the professor during his ascent, relate to the decrease, in proportion to the elevation, of magnetic intensity. The conclusion which he draws from this fact is, that it is impossible to attribute the magnetic power of the globe to the existence of a central magnetic nucleus.

Gelatine.—M. d'Arcet, a member of the French Academy, has for some years devoted much of his attention to the best mode of ex-

* We have received this *jeu d'esprit* from a correspondent; and as he seems to anticipate most of the wit to be expected from the public press on the occasion, and all that Mathews and Yates could wish to say on the subject, we adopt his bill, and recommend it for acceptance to the managers.

† See p.—Printer's Devil.

tracting from bones all the gelatine which they contain, without touching the calcareous matter. In this he has at length completely succeeded; and his apparatus is now in active and highly beneficial operation at the Hôpital de la Charité, at the Monnaie des Médailles, and at other public institutions in Paris. The most nutritive and palatable soups of every kind are made with the gelatine, at a very moderate expense. Interesting treatises on the subject have recently been published by M. d'Arceet, and by M. A. de Puymaurin, the director of the Mint.

LITERARY NOVELTIES.

The Lives of the Italian Poets, by the Rev. Henry Stebbing, M.A.—are preparing for publication. The Editor of the first sixteen volumes of *Time's Telescope* has requested us to state that he is in no way connected with the forthcoming volume for 1830.

LIST OF NEW BOOKS.

TO CORRESPONDENTS.

It is not in our disposition to act with incivility, nor can we feel otherwise than grateful for the many kind contributions that are offered to us; but we would appeal to our friends against the demand of specific answers, either in print or by letter, to every communication made to us. It is literally a fact, that more than one-third of the Editor's time is occupied in an endeavour to discharge these obligations; and much more than the whole of it would be requisite, were he to comply with every request for insertion, or his reasons for not inserting, or the careful return of papers. He must therefore beg his silence in most instances to be received as negation, or postponement, should circumstances allow him to act otherwise; and, farther, that he cannot hold himself amenable to the call of restoring MSS., unless they are of a more important nature than poetical essays, brief sketches, and suggestions on any subject.

The lines on the memory of H. K. White, and the Negro, cannot exclude more pressing temporary matter. * * * The influx of novelties has been so great within the last week, that we are obliged to apologise for the delay of the following Reviews.—The Keepsake, with its aristocratic list of contributors and exquisite engravings, which far surpass its literary department.—The Emmanuel, a strictly religious Annual, at a lower price than its contemporaries, and containing several excellent papers, besides an able defence of its title.—The Iris, large paper, and proportionately improved in beauty.—The Life of Dr. Calamy.—Mr. Hunt's charming Exemplars of Tudor Architecture, alike interesting in art and literary illustration.—The Life of Daniel De Foe.—Colonel Evans's important Essay on the Practicability of Invading India.—Second Notice of Roby's Traditions of Lancashire.—Senior's Lectures on Political Economy;—all of which shall have our earliest possible attention.

ADVERTISEMENTS

Connected with Literature and the Arts.

TO BOOKSELLERS and PRINTERS.

To be disposed of, at an unusually low Price, a carefully selected and entirely new Stock of Printing Materials, forming a very complete Jobbing Office, all as from the Manufacturers, and can be forwarded at the shortest notice.
Address, post-paid, to A. Z., Mr. J. Knight's, 5, Paternoster Row, London.

Just published, price 1s. or Proofs, on India paper, 2s. each, Numbers 14, 15, and 16, and Part IV. price 4s. Proofs, on India paper, 2s. 6d.

LANCASHIRE ILLUSTRATED. The

Part containing Sixteen Engravings of Views in Manchester, Bolton, and Liverpool.

Also, price 4s. Proofs, on India paper, 8s. Part II. of Ireland Illustrated, containing Sixteen Engravings.

Also, price 1s. Proofs 2s. No. III. of Devonshire and Cornwall Illustrated.
London: Fisher, Son, and Co.; and all Booksellers.

Just published by Moon, Boys, and Graves, Printers to the King, 6, Pall Mall,

THE SHOOTER'S COMPANIONS.

Engraved in Merzinto by W. Giller, after a Picture by A. Cooper, R.A. in the possession of Sir George Phillips, Bart. M.P. Size, 11½ inches by 14 high. Prints, 10s. 6d.; Proofs, 15s.; before letters, 21s.

2. The Shooting Pony. Engraved in Line by W. Radde, after A. Cooper, R.A. Size 9 inches by 11 high. Prints, 10s. 6d.; French Proofs, 15s.; before letters, 21s.

3. The Market Pony (Companion to the above). Engraved in Line by J. R. Smith, after a Picture by Woodward. Prints, 7s. 6d.; India, 10s. 6d.

4. Breaking Cover, and Death of the Fox (a Pair), beautifully engraved in Line by the late John Scott, from Pictures by Gipsin and Reineke. Size, 8½ inches by 10 high. Prints, 8s. 2s.; Proofs, 6s. 6d.; India Proofs, 7s. 7s. the Pair; being the most splendid Sporting Subjects ever produced in this Country.

In 8vo. price 12s. and in 4to. on India paper, price One Guinea, the 15th Number of

THE SPIRIT OF THE PLAYS OF SHAKESPEARE,

containing Eighteen Engravings in Outline, Illustrative of Henry the Fourth, Part I. and II.; accompanied by Quotations and Descriptions. Drawn and engraved by FRANK HOWARD.

No. XVI. will be published on the 1st of November, containing Othello and Titus Andronicus; and the whole Work will not extend beyond Twenty-five Numbers.
Printed for T. Cadell, G. J. G., and F. Rivington; Baldwin and Cradock; and of all the Booksellers. To be had also of Mr. F. Howard, 55, Soho Square, or 5, Newman Street.

BOOKS PUBLISHED THIS DAY.

In 8vo. price 7s. in boards.

A REVIEW OF THE DOCTRINE OF A VITAL PRINCIPLE, as maintained by some Writers on Physiology; with Observations on the Causes of Physical and Animal Life.

By J. C. PRICHARD, M.D. F.R.S.
London: Printed for John and Arthur Arch, Cornhill.

On the 2d of November, 1829, was published, beautifully printed in small 8vo. embossed with purple, and containing 15s. the old Masters, executed in the finest manner upon Steel, 15s.

THE IRIS; a Literary and Religious Offering.

Edited by the Rev. THOMAS DALE, M.A.
The Literary portion of the book contains articles from the pens of the Rev. T. Dale, M.A.; Bishop Heber; the Rev. E. Baines; the Hon. and Rev. Baptist Noel, M.A.; the Rev. T. B. Raffles; the Rev. F. A. Galt; James Montgomery; Thomas Roscoe; Thomas Pringle; A. A. Watts; S. C. Hall; Josiah Couder; Thomas Haynes Bayly; W. Jerdan; the Harrovian; Miss A. M. Porter; Mrs. Ogle; Miss Jewsbury; Mary Howitt; Mrs. Cockle, &c. &c.
The Book will be delivered bound in silk, and a few Copies printed on large post 8vo. with proof Impressions of the Plates, price 1l. 4s.
London: Published by Sampson Low, Lamb's Conduit Street; and Hurst, Chance, and Co. St. Paul's Churchyard.

THE CRYPT; or, Receptacle for Things Past.

An exceedingly small number of the Original Series of this Journal, complete in 2 vols. 12mo. price One Guinea, boards, now in hand, comprising, among upwards of 300 Articles of interest, W. Lander's Dewtle and Office of Kynigs, in Scottish Verse, reprinted from a unique Copy, 1555—Reprint from Rob. Chester's Love's Martyr, 1600—Correspondence of Admiral Sir G. Rooke and George Prince of Denmark—M. de Caumont's Essay on Gothic Architecture, from the French—Glossary of Terms in Gothic Architecture; with unpublished Remains of King Charles II., Earl of Oxford, Duke of Monmouth, John Waller, Edmund Waller, General Washington, William Collins, Richard Gough, Dr. Josepharton, Rev. Thomas Watson, C. J. Fox, Professor Person, Counsellor Dunning, the Princess Amelia, R. V. Sadleir, Esq. Rev. Benj. Forster, Dr. Parr, George Canning, Rev. Charles Wolfe, Thomas Moore, S. T. Coleridge, Henry Labouchere, Horace Smith, &c. &c. and contributions by many of the first Scholars and Antiquaries of the present day.
Also a few Copies of several single Numbers, to make up Sets.
Published by Baldwin and Cradock, Paternoster Row; William Pickering, Chancery Lane; and W. Wheaton, Ringwood, Hants.

The above volumes have been highly commended in the Edinburgh and Retrospective Reviews, the Literary Magazine, Britton's Antiquities of Normandy, Lander's Bibliography's Manual, and many other London and Provincial Periodicals.

Messrs. Colburn and Bentley have just published the following New Works:

STORIES OF A BRIDE.

By the Author of the "Mummy."

Post 8vo. 8s. 6d.
FOREST SCENES AND INCIDENTS in the WILDS OF NORTH AMERICA.

By GEORGE HEAD, Esq.
John Murray, Albemarle Street.
"The author's buoyancy of spirit, his perpetual activity, and never-failing readiness of wit, are everywhere in evidence, during the severity of a Canadian winter, form an interesting feature of the volume."—*New Monthly Magazine*.
"In the company of Mr. Head we have skitted on Lake Simcoe, and glided down the rapids of the St. Lawrence, with the same sense of reality and buoyancy with which we lately galloped over the Pamper with his shrewd and indefatigable brother, Captain Head."
"The work before us, a very sensible and entertaining, yet wholly unpretending production."—*United Service Journal*.

8vo. 12s.
JOURNAL of a PASSAGE from the PACIFIC to the ATLANTIC, crossing the Andes in the Northern Provinces of Peru, and descending the River Marañon, or Amazon.
By HENRY LISTER MAW, Lieut. R.N.
John Murray, Albemarle Street.

Just published, revised and corrected throughout,
THE LAW and COMMERCIAL DAILY REMEMBRANCE for 1839.

The information contained in this work has been increased since last year by nearly four times the usual quantity, of that of the most useful and valuable description, essentially necessary to be known by all persons: consisting of the principal clauses in the Sixty-three public general Acts of the last Session; alphabetical Lists of the Members of both Houses of Parliament, with their Town and Country Residences; useful Directions for each Month, on various Topics; in the whole 100 closely printed pages. In the 7s. and 4s. 6d. editions a similar space for Daily Memoranda has been allowed for Sunday as on the other days of the week, without any increase to the former year's charge.
London: Published by Edward Dutton and Son, 9, Fleet Street; and may be obtained upon application to any Bookseller or Stationer in the United Kingdom.
Price 3s. sewed; half-bound, 4s. 6d.; enlarged edition, containing half a page for each day's memoranda, 6s. 6d.; extra enlarged, containing a page for each day, 7s.; 4to. edition, containing 3 pages, price 12s.

Present State of Turkey.
The Second edition, in octavo, of
CONSTANTINOPLE in 1828.

By CHARLES MAC FARLANE, Esq.
With an Appendix, containing Remarks and Observations to the Autumn of 1829.
"We congratulate Mr. Mac Farlane on the production of his delightful and instructive work; 'Constantinople in 1828.' It is full of information of the most varied and important character, and presents a minute and faithful portrait of a nation with whom it is of so much consequence that we should be well acquainted. From the minutiae to which the work is devoted, a single page that does not amuse while it informs. His anecdotes are the most recherché imaginable, his descriptions vivid in the extreme; and whether his work is read for amusement or information, the result to the reader will, we are convinced, prove equally satisfactory."—*Morning Journal*.
Printed for Saunders and Oiley, Conduit Street.

Albemarle Street, Nov. 1839.
VOLUMES of the FAMILY LIBRARY
published up to this time.

Lately published, in 8vo. price 12s. by Longman and Co. London; and W. Whyte and Co. Edinburgh.

SERMONS on various Subjects.
By ANDREW THOMSON, D.D.

Minister of St. George's Church, Edinburgh.
"The author of the Sermons now before us is decidedly an experimental clergyman. He has the art of making his discourses intelligible to the most ignorant, and at the same time interesting to the most polished of his auditory. His abilities are principally directed to the philosophical analysis of the cardinal doctrines of Christianity. In the development of these, he manifests such lucid arrangement, such acute reasoning, such ingenious illustration, such fervid feeling, and such appropriate application of his subject to the different circumstances of his hearers, as justly entitle him to be esteemed one of the ablest divines of the Scottish church."—*Edinburgh Literary Journal*, April 4, 1839.

"To the volume before us we must assign a very high place, both on account of the views of divine truth it uniformly advocates, and the very able and enlightened manner in which it illustrates and enforces those views. Discrimination and faithful appeal, in connexion with a disingenuous, simple, energetic, and appropriate, and the distinguishing characteristics which pervade these discourses. The subjects are evidently selected with great earnestness, and exemplary theological precision. There are in this volume many brilliant and convincing passages. We wish that it may fall into the hands of those who are enemies to evangelism, and view it as a concluding argument, that it leaves no room for an opponent to escape. It literally shuns every sinner up to the faith of Christ. We particularly recommend the appendix to this volume. It contains four admirable essays. The first against some modern notions of assurance; the second in favour of the immediate abolition of colonial bondage; the third in opposition to Mr. Irving's erroneous views of the human nature of Christ; and the fourth, a defence of Christ's spiritual reign, in contradistinction to the views of those who are looking for a personal reign of Messiah in Palestine."—*Scottish Missionary*, May 1839.

"We have felt so much impressed with the remarks of Dr. Andrew Thomson, in a Discourse on Slavery, and an appendix to it, in his recent volume of sermons, that we shall transcribe a few passages, for the instruction of those readers who may feel inclined to palliate, or delude with, the enormities which they are called upon as men and Christians, to abolish. We embrace the occasion also to recommend the whole volume to the careful perusal of our readers. It is characterised throughout by great force, ability, and originality, and does great honour both to the intellect and piety of the reverend author."—*Christian Observer*, July 1839.

In 4 vols. 12mo. price 17s. 4s.
MYSTIC EVENTS; or, the Vision of the Tapestry. A Romantic Legend of the Days of Anne Boleyn.

On the 1st of November was published, elegantly bound in 811s. price 6s. 6d. a new Juvenile Annual, entitled,

THE ZOOLOGICAL KEEPSAKE for 1839.

Natural History is a subject so much and so deservedly a favourite with Young Persons, that it is impossible not to anticipate a favourable reception for this work. It will be enlivened by a light conversational manner of treating its Zoological topics, and by an abundance of Anecdotes, and a Selection of Poetical and Descriptive. The Embellishments, upwards of Forty in number, will consist of spirited Engravings, from Drawings by Cruikshank, Landseer, Baynes, &c. &c.
Printed for William Marsh and Alfred Miller, 137, Oxford Street; and Constable and Co. Edinburgh.

Abercromby's Surgical Works.
A new edition, 3 vols. 8vo. 7s. 6d. boards.

THE SURGICAL WORKS of JOHN ABERNETHY, F.R.S. &c. &c. consisting of the following Treatises, which may be had separately.

1. On the Constitutional Origin and Treatment of Local Diseases, and on Anæsthetics, &c.
2. On Diseases resembling Syphilis, and on Diseases of the Urethra, &c.
3. On Injuries of the Head, &c. 7s.
4. On Lumbar Abscesses and Tumours, &c.

Printed for Longman, Rees, Orme, Brown, and Green.

TALES of FOUR NATIONS.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane, London.

Works published by D. A. Talboys, Oxford; and sold by all Booksellers.
In 8vo. price 18s. cloth boards.

A MANUAL of ANCIENT HISTORY, considered in Relation to the Constitutions, Commerce, and Colonies of the different States of Antiquity.

By A. H. L. HEEREN.
Professor of History in the University of Göttingen.
Translated from the German.

This Manual, for which we are indebted to one of the most distinguished scholars of Germany, and which has been adopted as a text-book in most of the continental universities, comprises the history of the ancient states of Asia and Africa, of Greece and Rome, from the earliest times to the final subversion of the Roman empire in the west. It contains also a geographical outline of the great divisions of the globe, and of the separate countries treated of; and to each section of the work is appended a catalogue raisonné of the best works on the subject. The facts are concisely but clearly narrated in chronological order; the constitutions of the numerous states are described, traced to their origin, and their progressive changes pointed out and accounted for with sagacity and skill; and the whole is interspersed with such acute remarks and judicious analyses, as cannot well fail to force the attention upon those important events in ancient history which are most interesting to the politician, the historian, and the philosopher.

In 1 vol. 8vo. 10s. 6d. boards.
A Sketch of the Political History of Ancient Greece, by A. H. L. Heeren, Professor of History in the University of Göttingen, &c. translated from the German.

The historical works of Heeren have had a remarkable success in Germany. They are recommended by the eloquence of their style, the liberality of their views, and by the purity of their doctrine of their moral doctrines. As a writer he is always ingenious, generally instructive, and sometimes original and convincing.

On the 1st of November, in a pocket size,
THE LITERARY BLUEBOOK; or, Calendar of Literature and the Arts for 1839. Containing, with their Names and Addresses, eminent living Authors, Painters, Sculptors, Architects, Engravers, Musical Composers, Musical Performers, Teachers of Languages, and other Subjects connected with polite Education.
London: Printed for William Marsh and Alfred Miller, 137, Oxford Street; and Constable and Co. Edinburgh.

On the 1st of November, in 8vo.
THE ATHENAIID, or MODERN GRECIANS; a Poem. With Notes Characteristic of the Manners and Customs of the Greeks in Turkey.
By HENRY J. BRADFIELD.
Author of "Waterloo, or the British Minstrel," "Songs of the Grecian Minstrels," &c.
London: Printed for William Marsh and Alfred Miller, 137, Oxford Street.

NATIONAL PORTRAIT GALLERY OF ILLUSTRIOUS AND EMINENT PERSONAGES OF THE NINETEENTH CENTURY.

Containing Portraits and Memoirs of Horatio, Lord Viscount Nelson—Major-General Sir Charles William Doyle—John Julius Angerstein, Esq.

Imperial 8vo. 3s. 1. or with Proof Impressions of the Plates, on India Paper, before Letters, 5s. per Number.

NOTICE.—The Publishers of the "National Portrait Gallery," encouraged by the great success which has attended their undertaking, and anxious to deserve still more of the public patronage, have entered into engagements, which they confidently trust will materially contribute to the improvement of the work. The literary portion of their future numbers has been confided to William Jerdan, Esq. from whose pen, it is hoped, the memoirs will acquire an additional interest, in consequence of his general acquaintance with the subjects to be illustrated. In respect to the portraits themselves, arrangements are made for commencing with, and continuing, a series of those who happen to be distinguished by any remarkable deed, or production of literature, or important scientific discovery at the existing period; and which, being original both in art and biography, are calculated to form a novel and popular feature, in union with the high names already conspicuous in the annals of England, and consecrated to fame, by talent, by learning, by virtue, by genius, and by glory.

Whatever more can be done to render the publication worthy of increased favour, the Publishers will neither spare cost nor diligence to produce; and they rely on the appearance of their ensuing Numbers, and especially from the date of the New Year, to justify them in this announcement.

November 1, 1839.

"National Portrait Gallery." We take a great pleasure in contemplating the lineaments of distinguished individuals preserved from former times; and surely it is not less gratifying to view the features of the great warriors, statesmen, orators, poets, scholars, artists, painters, or otherwise eminent, and to listen to those unambitious biographies, which simply point out who they were, and by what they were raised to the height where they excite the interest of their fellow-men.—*Literary Gazette*, Oct. 17th.

"Fisher's Portraits." We have been favoured with a transient view of this splendid and national undertaking, the object of which is to furnish future historians with correct illustrations of the records of the present age, and faithful likenesses of the mighty actors in the important drama which has been exhibiting upon the arena of politics during the present century. When we recollect the arduous and the most wretchedly executed portraits of illustrious characters are even now seized upon, and the extravagant prices at which they are frequently bought up, for the illustration of Grainger's History of England, we cannot but congratulate the present age, as well as the future collectors of national illustrations, on being furnished with faithful representations of the distinguished characters of the present day, executed with an accuracy of delineation and beauty of execution, to which even the most costly of the Grainger Portraits cannot pretend.—*Plymouth Journal*.

London: Fisher, Son, and Co. Newgate Street; Colnaghi and Co. Pall Mall East; and Ackermann and Co. Strand.

Curtis on the Deaf and Dumb.
Lately published, price 10s. 6d.

AN ESSAY on the DEAF AND DUMB, containing the necessity of Medical Treatment in early Infancy; with Observations on Congenital Deafness, Illustrated with Cases and Plates.

By J. HARRISON CURTIS, Esq.

Surgeon-Arist to the King.

"Mr. Curtis is entitled to the best thanks of the public for having drawn attention to the fact, that many cases of deaf and dumb, hitherto considered hopeless, admit of palliation and cure. Five cases are related at the close of the work, in which children, born deaf and dumb, and in whom there existed no obvious cause of disease, acquired the power of hearing and speech. Two of these patients were seven years of age, and another was six."—*Lancet*, July 1839.

Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had, by the same Author,

A Treatise on the Physiology and Diseases of the Ear, with the most approved Modes of Treatment. 4th edit. price 7s. 6d. boards.

For testimonials of this work, see the *London Medical and Physical Journal*, *London Medical Repository*, *Medico-Chirurgical Review*, *Monthly Magazine*, *New Monthly Magazine*, &c.

On the 25th of October was published, price 2s. dedicated

to Professor Wilson.

THE JUVENILE-KEEPSAKE for 1839.

Edited by T. ROSCOE, Esq.
Embellished with numerous engravings, under the superintendence of Mr. Charles Heath. The Contents, by some of the most favourite and distinguished Writers for Youth, are enlarged to Sixteen Sheets of Letter-press, forming one of the most beautiful works of its class. In the List of Contributors are the "Maid of Newton Buzzard," a humorous Tale in Verse, by the late celebrated Mrs. J. Hunter, (communicated by Lady Campbell); "The Children's Island," by M. de Genlis. "A Tale of the Christmas Holidays." "The Ball Dress," by the Author of the "Flower Shells," "The Battle of the Marston," by Miss Mitford; also Contributions by Mr. Hoffman, Mrs. Ogle, Miss Porter, Miss Roscoe, Miss B. Taylor, L. E. L., W. Howitt, J. Montgomery, Esq. of Sheffield, John Bowring, Esq., the Author of "Lorenzo de Medici," the Editor of the "Literary Gazette," &c. &c.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

RAPHAEL; a Poem.

Among its contributors are—the Authors of "Highways and Byways," "Cambridge in the Nineteenth Century," "The O'Hara Family," "The Kuzlibash," "Tales of the Moor," "The Sorrows of Rosalie," "Tales and Confessions," "Rouge et Noir," and also J. Gals, W. M. Prad—Miss Mitford—Mrs. Hemans—Miss Arden—J. Montgomery—Barry Cornwall—Lord J. Russell—T. H. Barry—Dr. Maguire—T. H. Barry—Miss Aubrey de Vere—Hartley Coleridge—D. M. Moir—J. Bowring—Miss Jewsbury—Rev. T. Dale—W. and M. Howitt—Derwent Conway—W. S. Walker—Rev. C. Hoyle—Alaric A. Watts, &c. &c.

A limited number of Copies, in post 8vo. with Prints of the Plates on India paper, price 9s. 1. and of the Plates, separate, price 6s. 1. and of the Plates, separate, price 6s. 1.

A very few Proofs, before Letters, colombed, price 1s. 2s. Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had,

The New-Year's Gift and Juvenile Souvenir, for 1839.

Edited by Mrs. Alaric Watts.
Illustrated by numerous fine Engravings on Steel, from Original Pictures by Boschen, Singleton, Westall, Gainsborough, Shee, Hamilton, Vernet, Howard, &c. Elegantly hf.-bd. in Turkey morocco, with gilt leather price.

The Literary Department of the Volume has been supplied by Twenty of the most distinguished Writers of the day, and will be found peculiarly adapted to interest young Persons.

Just published, in small 8vo.

THE DIURNAL REMEMBRANCER;

or, Private Diary for 1839.

This publication, though adapted for general use, is more particularly useful as a diary, to record the occurrences of private life; and to those who keep a memoir of daily events, will be found eminently instructive and interesting, peculiarly so, from its convenient size, to tourists, voyagers, and travellers. To each day is given a sentence, taken from the highest and purest source, calculated to guide and assist in the due government and direction of the mind and actions. It is suggested that such observations daily recurring to the eye, must be attended with a highly beneficial influence, and tend to promote and extend the growth of the more exalted feelings. A selection of the most useful tables, and information of general utility, accompany this work.

London: Published by E. Dunn and Son, 9, Fleet Street; and may be obtained with application to any bookseller.
Price 6s. containing a page for each day's memoranda; 4s. half a page for each day.

2d edition, post 8vo. 8s. 6d.

NARRATIVE OF A JOURNEY from CALCUTTA to EUROPE, by way of EGYPT, in the Years 1827 and 1828.

By Mrs. CHARLES LUSHINGTON.

"We have no hesitation in recommending Mrs. Lushington's Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of approbation."—*Oriental Herald*.

John Murray, Albemarle Street.

Vols. V. and VI. in the pocket size, 6s. being a new edition of Vol. III. 8vo.

DEATH-BED SCENES, and PASTORAL CONVERSATIONS.

John Murray, Albemarle Street.
"Great was our admiration of the former volumes of this work. We can safely recommend our readers to pursue the scenes here described, with an assurance that they are in no respect inferior to those which have already been submitted to the public."—*British Critic*.

"The above work has recently been included in the list of publications recommended by the Society for promoting Christian Knowledge."

Just published,

A Third Volume of Death-Bed Scenes, (being the same as the above Vols. V. and VI.) in octavo, 15s.

In 9 vols. post 8vo. 15s.

WILMOT WARWICK.

By HENRY VERNON.

Contents of Vol. II.—Introductory—The Monk of Rameville—The Three Brothers—The Revolutions of a Village—The Bunting-House—Death and the Grave—The Will—An Introduction to Julia—Julia—Sternheart.

"His style is unaffected and energetic, and his lively passages highly amusing, as his serious ones are deeply moving."—*Observer*.

James Ridgway, 139, Piccadilly: and, by order, of every Bookseller in the Kingdom.

Post 8vo. 6s.

THE PRESENT CONDITION and PROSPECTS OF THE GREEK or ORIENTAL CHURCH,

with some Letters written from the Convent of the Saviour, by the Rev. GEORGE WADDINGTON, Fellow of Trinity College, Cambridge, Author of a "Visit to Greece," &c.
John Murray, Albemarle Street.

BOOKS IN THE PRESS.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

On Saturday, November 14th, will be published, price 2s. 6d. stitched in a Wrapper.

THE BRITISH ALMANAC, for 1839.

This Almanac was originally published in 1687, and the necessity for such a Publication has been confirmed by its very extensive sale,—by the partial improvement that it has produced since the first, and by the establishment of one upon a plan similar to its own. In understanding the British Almanac for 1839, it may be proper to state not only what it is, but what it is not. It is not a vehicle for the worn-out absurdities of astrological predictions, attempting to perpetuate delusions amongst the uninformed, which have long since been rejected by the more instructed part of the people of this age, and therefore dangerous. It is not an attempt to persuade those who are ignorant of the first principles of Meteorology that it is possible to prophesy the state of the Weather on any particular Day or Week, or for all places. It is not a collection of the tales of hieroglyphical pretensions to divination which abound with popular understanding two centuries ago, and which could have been perpetuated to this day by a contempt for the progress of real knowledge. Refusing thus to pamper a depraved taste by notions which, if they deceive nobody, at least leave the common sense of the people of the British Almanac, has no intention to offer to the remaining admires of superstition and rhapsody. It considers such matters quite out of place, and the more extensively injurious, when found side by side with the really valuable information which even the worst Almanac contains. It is not only to be useful; and it endeavours to establish this character by collecting a greater store of information than has hitherto been compressed into so small a compass, and sold at so low a price.—Information in which every class of Persons may find something important for daily reference.

London: Published by Charles Knight, Pall Mall East; and sold by all Booksellers.

Second edition.

On Monday next, in 1 large vol. 8vo. with Portrait and Plates, price 10s.

MORISONIANA; or, Family Adviser of

the Members of the British College of Health, comprising the entire published Works of Mr. Morison, the Hygienic, forming a complete Manual for Individuals and Families in every thing that regards their Health; with an Appendix of Reports, Cases of Cure, Criticism, and other interesting Matter.
Published by Sherwood and Co. Paternoster Row; and sold by all Booksellers.

On the 14th of November will be published,

THE KEEPSAKE for 1839.

This splendid Annual will contain a Five-Act Dramatic Drama, with Songs, by Sir Walter Scott; besides Letters from Lord Byron to several Friends.
London: Published for the Proprietor, by Hurst, Chance, and Co. St. Paul's Churchyard; and R. Jennings, Chesham.

On the 19th of November will be published,

THE BRITISH NATURALIST; or, AN

Account of the Appearance and Habits of the more remarkable Living Productions of Britain and the British Seas, with the Scenes when they are found: combining popular Language and Scientific Principles, with a becoming allusion to the Wisdom of the Creator as displayed in his wondrous Works.
Printed for Whitaker, Treacher, and Co. Ave Maria Lane.

LONDON: Published every Saturday, by W. & G. CHURCH, of the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; by J. Chapman, 10, Regent Street; by R. Marlborough, 40, Maria Lane, Leam; by J. B. Smith, Edinburgh; Smith and Son, and Robertson and Atkinson, Glasgow; and J. Cunningham, Dublin.

J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 669.

SATURDAY, NOVEMBER 14, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Exemplars of Tudor Architecture, adapted to Modern Habitations: with illustrative Details, selected from Ancient Edifices; and Observations on the Furniture of the Tudor Period. By T. F. Hunt, Architect; Author of "Half-a-dozen Hints on Picturesque Domestic Architecture," "Designs for Parsonage-Houses and Alms-Houses," "Architettura Campestre," &c. &c. 4to. pp. 200. London, 1830. Longman and Co.

The preceding efforts of Mr. Hunt have been cordially seconded by the *Literary Gazette*; for if our preconceived opinions were not precisely the same with those of the author, the slight shadows of difference which existed were speedily removed by the taste which he displayed, and the ability with which he treated his subjects. We have therefore viewed his former works, as we especially do the present volume, in the light of most praiseworthy endeavours to revive the good old English style of architecture in England,—that is to say, the congenial, the comfortable, and the picturesque style which adorned the country in the days of our forefathers, and which has since been deteriorated by so many senseless innovations.

"Plates II., XII., and XXIII., (says Mr. Hunt), are offered as specimens of the variations in English architecture, applied to manor-houses, in the reigns of Henry VII., Henry VIII., and Elizabeth; the commencement, middle, and termination of the period which this work is designed to illustrate. With all their external beauty and internal magnificence, Tudor houses were deplorably deficient in many of the comforts with which modern habitations abound; yet in this respect a decided amendment is visible in the buildings of the Elizabethan age upon those of Henry VIII.; and again particularly in the mansions of James I. and Charles I. Correspondent, indeed, with the increase of convenience was the decrease of taste; and as the plans of houses progressively improved, their architectural character declined. Nor would the most ardent admirer of the pure old English style venture to compare the dwellings of earlier days, in point of comfortable and cheerful economy, with those of the eighteenth century, when the noble art of architecture was at a very low ebb. But let it not be imagined that this superiority in the disposition of apartments was effected by the introduction of classical models, or that our own peculiar style is not susceptible of equally advantageous arrangement. On the contrary, 'the severe Greek,' designed for a widely different climate, is, to use a new-fashioned phrase, much less 'manageable;' the indispensable apertures required by our atmosphere destroy entirely its characteristic massiveness and solemnity;* whilst in the pointed

manner, the spacious windows subdivided by mullions and transoms give an airy lightness combined with an essential breadth of effect. No better evidence of these facts could be adduced than the recent adaptation of Windsor Castle to all the purposes of state and private accommodation, under the munificent auspices of our most gracious sovereign: allowed, as it justly is on all hands, that the only palace in this country worthy of its king is that which is wrought in the architecture of Old England."

This extract affords so plain and convincing an exposition of the subject, concealing no objections to the old Tudor style, but shewing how readily it could be reconciled with modern manners and house-keeping, that we need hardly add any remarks of our own. But we may observe, of the strange anomalies which have superseded it, that the eye and the understanding are generally alike revolted by their appearance and their incompatibility with our climate. In a recent pretty extensive tour, we were struck with the burlesque forms of Italian villas and cassinos, looking like miserable, half-starved things in the midst of scenery utterly unfit for them; and still more were we astonished at Greek temples, &c., like exotic plants or animals brought from sunny regions to dwindle and perish where all about them was unseemly and incongenial. It might perhaps be the foggy weather and wet summer that aggravated our usual feeling; but the truth is, that we did bestow an extra share of compassion on these pitiable examples of incorrigible bad taste. In this mood, too, we are disposed to consider our author with a more than common degree of favour: he has already done much to reintroduce sounder principles; and we trust that he will persevere till he has entirely proselytised the nobility and gentry of England.

One of his great points has been to dissociate the church from the domestic character in building; the union of which has been for at least a century and a half a prodigious source of error to the pseudo-revivers of our older architecture, both in the erection of houses, and in the fashion of furnishing them. These persons seem to have forgotten that what suited an altar was unfit for a dining parlour—that what became a pew was incongruous in a bed-chamber—and that what looked solemn in an aisle was absurd in a ball-room.

"In a former work (says our author) the misapplication of buttresses and pinnacles is noticed. It may not be out of place here to mention another very prevalent error of the present time, namely, that of putting niches with florid canopies in the fronts of private houses, where neither patron-saints nor benefactors are to be perpetuated by statues. Instances of the practice alluded to may be found of earlier periods; but since the reformation of our religion, such embellishments are inappropriate. In churches and colleges niches may be required."

And again, resuming the subject:—"No. thing can be more inconvenient—and therefore out of place—than pointed windows (ecclesiastical features) in ordinary sitting-rooms. In the first place, there can be no shutters, consequently no security, above the springing of the arch; and in the next place, the curtain draperies must of necessity be so deep as to obscure all the glass above that level, and deprive the apartment of its due share of light, unless indeed the windows be out of all proportion in size or number. Palpable as this error surely is to the meanest observer, modern builders most unaccountably persist in it; and that, too, after admonition."

These and similar matters are so palpable, that we cannot help wondering at their long practice, contrary to every rule of taste and judgment: earnestly do we advise to "reform them altogether," and to listen to the sound practical counsels of Mr. Hunt; of which the following are specimens.

"On the subject of details, it may be observed, that too little attention is paid by modern artists to the ancient manner of construction; and many characteristic features, not only essential to the general effect, but important to the security of the buildings themselves, are often overlooked. Take, for example, the mullioned windows, and the doors in brick, or unwrought stone walls; and it will be seen that the jambs in old buildings are invariably bonded into the piers, and the bond-stones left visible; but, by the builders of the present day, this necessary precaution is too frequently disregarded, and the moulded jambs left with a spruce, plain-edged margin, as if they had no connexion with the work by which they are surrounded. Another defect is the want of discharging arches over apertures crowned with free-stone, to equalise the pressure caused by superincumbent weights; for however the weaker parts may be relieved by internal lintels, the external appearance of want of strength is very objectionable, and destroys at once the identity of the edifice with the ancient style of architecture. The frets and other fanciful forms which are seen in the fronts of buildings formed of vitrified bricks, were made for the purpose of employing, in a manner the least unsightly, such as were discoloured by burning. In a clamp or kiln of bricks, a certain number must, from their situation, be more strongly acted upon by the fire than the general mass, and, consequently, become darkly tinged. With the tact so peculiar to the old artisans, this, like other seeming disadvantages, was turned to account; and, what in other hands would have been blemishes, were converted by them into embellishments. Instead of allowing the workmen to use such bricks indiscriminately, and thereby disfigure

* "Architects of the second or third order return out of Italy with their heads full of ancient temples, forgetting that these models of symmetry and grace were never intended for the assembling of multitudes, and that when once their forms and proportions are violated, decorations

are as preposterous as a birth-day suit upon the back of a clown."—*Dr. Whistler.*

* The pertinacity with which this practice is adhered to, even by men who are reputed to know better, reminds one of a tale told of an obstinate priest, who, although admonished of his mistake, would always read in the Latin service of the mass, *Memento pro Sumpsumo*; and refused to alter it, having, as he observed, "no liking to new fashions."

the walls with spots, they were selected, as being more valuable than the others, and wrought into devices, relieving the plainness of those piers or surfaces which had neither apertures nor stone dressings. * * Barge-boards, pendants, pinnacles, and brackets, being the chief decorations of houses in this style of architecture, should always be made of strong oak, and left to acquire, by age, a gray hue; and not of slight deal painted, as is now the too frequent practice—dictated sometimes by miserable economy, and at others arising from the ignorance of builders: time, instead of improving, impairs such affectations. The use of barge-boards is to conceal the barge-couples, and the under side of the laths and tiles projecting beyond the face of the wall. In many places where these purified arrises to gables have been lately introduced, they are made of sizes so monstrously disproportionate, and of such open and heterogeneous forms, as to defeat their purpose, and expose what they were intended to mask."

Among other details, Mr. Hunt also strongly recommends heraldic ornaments, (in which we heartily coincide), and their use is pointed out not only in carvings, &c. but in stained glass windows, on which subject there is an excellent essay, we believe from the pen of Mr. Williment, one of the most skillful artists in this line that our age can boast. It is highly deserving of perusal. But to return to Mr. Hunt,—to his preface, as a fair illustration of the volume. He begins thus generally and truly,—and it is curious to see that the same observations apply equally to all times and to many countries:

"'To boke some new thing' is now a task of no mean difficulty, and one as much above my ambition as it is above my powers to accomplish; nor have I aimed at more here than embodying characteristic examples of the beautiful though long-neglected architecture of my own country with the observations of such intelligent writers as have treated of the subject, and shewing that English architecture is still the most applicable for English habitations. I must repeat what has been frequently urged in my former publications, namely, that the object in view is not to exhibit specimens of hovels and cheap structures, but to combine in one edifice as many architectural features as can with propriety be blended: thus affording hints of what may be separated and used as occasion shall require. It may also be necessary to observe, that when I have recommended this particular style of architecture as an economical style, I have only wished to be understood that it is so as compared with the buildings of ancient Greece or Rome, and not with the monotonous and unadorned dwellings of our London streets, in which, unhappily, too few traces of art are visible. Would that the legislature could control the practices of modern builders, since Taste has lost her 'empire!'—but that must always be a vain hope in a commercial and free country like this, seeing, as a modern traveller has shewn, that, even in Turkey, where grievances are more summarily corrected, such attempts are fruitless: 'The regulations to be observed in building houses at Constantinople are accurately fixed, and an officer called Mimâr Aga, intendant of buildings (a district surveyor), is appointed to enforce them. The height fixed by the law is twelve pica (a pic is twenty-seven inches) for a mussulman's house, and ten for a rayah's. The motives for this limitation are, says d'Osson, to diminish the danger of fires, and to facilitate the extinction of them;

to leave a free passage for the circulation of air in the streets, and to give greater effect to the height of the public buildings. These laws are constantly eluded: and the office of Mimâr Aga is very lucrative, from the sums which he daily receives to induce him to wink at the violation of them.' We have here, also, laws to regulate our metropolitan buildings, but their provisions embrace only one object of the Turkish code, viz. security against fire. Giving effect to the principal structures by diminishing the altitude of those of less importance, seems never to have been contemplated by us; on the contrary, the restrictions imposed by the statute against projections beyond a straight line, preclude all possibility of producing a picturesque appearance in our public ways. And it is to be doubted whether, under the present division of London, the act can be very efficacious, even as a security against fire; for, without impugning the integrity of the English Mimâr Agas, it may be observed, so unequal are the allotments, that while some districts are too extensive for the superintendence of one person, others are so small and insignificant as not to afford sufficient remuneration to induce diligence; and thus are the objects of the law defeated."

Pursuing his course through antiquarian tomes, through old Poets and Dramatists, and through scientific works of ancient and modern dates, Mr. Hunt has blended his various stores of information in so agreeable a manner, that we know not whether the general reader will not be quite as much amused as every reader must be instructed by his "*boke*." At page 9 they will find that *Bricks* were introduced as building materials in the reign of Henry VII.,* though some writers mention them at more remote periods:—elsewhere, that *Tiles* were at least as early as "Richard I., when the houses in London were ordered in Fitzalwyn's mayoralty to be covered with slate or *brent tile*, instead of straw:"—"wainscoting on walls or '*seeling*,' as it was called, did not come much into fashion till Elizabeth's time:"—and that "glass was introduced very early. Holingshed says an Englishman named Benedict Biscop, who had taken upon him the habit of a monk in Italy, came here with the Abp. of Rome in the year 670, and 'brought painters, glaziers, and other such curious craftsmen, into England for the first time.' It does not, however, appear that glass was used in domestic structures until many centuries afterwards. The poets speak of berril and crystal in windows:

'And al the wyndowes and ech fenestral
Wrought were with beryll and of clere cristall.'
Lodgate's Tray.

These, it is presumed, could have been nothing more than green and white glass; but Harrison asserts, that there were windows filled with berril at Sudley Castle within his remembrance. He was so close and correct an observer, that one knows not how to doubt him; while, on the other hand, the application of a precious substance—even if it were sufficiently transparent—to such purposes is barely reconcilable with credibility, seeing that *painted glass* was general in churches and monasteries at an earlier period. But all the writers who have touched upon the subject agree that this material was exceedingly scarce down even to the reign of Elizabeth."

Such incidental notices as these scattered over a book would alone give it much interest and

* The Roman, p. 9. Previously, wood and stone were the materials of which English residences were constructed.

value; but they are here merely thrown out as elucidations of particular points, and not brought forward or dwelt upon as substantial facts of antiquarian import. The brief notice of devices, posies, &c. painted in old castles and manor-houses, is a curious piece; and so is a chapter on contract prices with workmen in those days. We find that "the average price of labour was sixpence a day. A best joiner had eightpence, and a labourer fourpence, with sixteen pence a-week per head for board. Carvers, masons, and sawyers, seem to have been of equal value. Of materials, iron was decidedly the most expensive. The custom of contracting for works, of which our artisans now so grievously complain, was then a common, and perhaps wholesome, practice: 'For which of you intending to build a tower sitteth not down first and counteth the cost, whether he have sufficient to finish it?' Discreet men, who want not the taste for architectural embellishment, too often restrict their buildings to the bare requisites of life, solely from having no security against inconvenient, perhaps ruinous, expense, if they attempt a higher style. If workmen be properly instructed, and attention paid to the choice of materials,—or, in other words, if the architect be qualified, and the 'ruler of the works' honest, there can be no reasonable objection raised against contracts formed on equitable and remunerating terms. 'Bargaines' have indeed become still more advisable since the establishment of a class, the professors of which are called 'measuring surveyors,' and whose chief purpose is ingeniously to multiply the ways of measuring and valuing builders' works. This latter system, and the incorporating of artificers, with their 'bye laws' and 'custom of trade,' have operated more than any other cause to the repression of art. Tardiness and self-estimation, whether justly or not, seem to have been long alleged against our workmen. 'If ever,' says Harrison, 'curious building did flourish in England, it is in these our yearess, wherein our workmen excell, and are in a manner comparable in skill with old Vitruvius, Leo Baptista, and Serlo. Neuerthelesse, their estimation more than their greedie and sordide countenances, joined with a lingering humour, causeth them often to be reiected, and strangers preferred to greater bargaines, who are more reasonable in their takings, and lesse wasters of time by a great deale than our owne.' But it was not all virtue on the other side; for a little before this, we learn that some 'noble builders' were not over scrupulous as to the sources whence they obtained the means of carrying on their works. 'The demolition of St. Mary's church, and a fine chapel connected with St. Paul's,' says Andrews, 'with the materials of the episcopal palaces belonging to Worcester, Lichfield, and Llandaff, formed the sacrilegious mass called Somerset House.' And Bishop Latimer had frequent occasion to urge them, from the pulpit, to pay their workmen:—'For the love of God,' said that prelate, 'let poor workmen be paid. They make great moan that they can get no money; the poor labourers, smiths, carpenters, and other crafts, cry for their wages. They be unpaid some of them three or four months, some of them half a-year.' The circumspection which was exercised in selecting artists and artisans may be one cause of the ancient buildings being superior to the modern: men were then sought who could 'grave, groupe, or carve, were sotyll in their fantasie, good devysoys, marveyulous of castinge, who could raise a wal with batyling and creete marciall, imageours in es-

tayle, and portreyours who could paynt the works with fresh hewes :—but now,

'A cunning workman fine in cloister close may sit,
And carve and paint a thousand things, and use both art
and wit;
Yet, wanting world's renowne, may 'scape unsought or
seen;
It is but Fame that outruns all, and gets the goale, I
wonne.'

It was common to depute the superintendence of buildings to churchmen, from an idea of their superior prudence and probity."

In this way does our author bring old saws and modern instances so admirably together, that while we wonder at the coincidences, we wonder more that the same evils should have remained uncared for, or at least unredressed. Except that the following letter is from Lord Shrewsbury, of the time of Edward VI., and relates to a palace at York, we could fancy that every syllable of it was more than applicable to the parliamentary debates last session about the palace of Pimlico!

"After right hartie comendacions. Where in yo^r l^{tes} of the xvith of this instant, w^{ch} I received the xxvth of the same, ye write that ye have had advertisement from the King's Ma^{ty} Privie Counsaile, that they are informed by me the King's Ma^{ty} palace at Yorke is likely to be defaced, as well thrughe taking down the lead there as otherwise; whereat ye do not a litil marvaile, that them to whome ye made a warrante only for taking downe the south isle of the church, the dorter frater, and the two old garners (being, as ye were informed, of long time not saufe, and ruynous, and the lead thereof daily pilfered away), wolde take upon them to meddell with any parte of the King's Ma^{ty} palace. I assure you there hath been such spoyle and defacings made in div^{rs} parts of his Highnes' said palace, that it wolde greve any man to see it, except his Highnes' pleash^r were that all shulde be pulled downe; and yet his Ma^{ty}, in respecte of that w^{ch} thereof might have been made, is like to have but small comoditie, as farre as I can perceive. And where I am informed that ordre was given unto you from my Lords of the Counsaile for the stay thereof, before the xliith of this instant; upon the xxiiith of the same, the chief wyndow of the King's Ma^{ty} owne chamber was defaced, w^{ch}, as it is declared unto me, was done by Humphrey Collwiche, one of yo^r surveyors. Furthermore, when, according to yo^r request in yo^r said l^{tes}, I comoned with yo^r surveyors, and demanded of them why they had so done, Laykin answered, that when he declared unto you that the taking downe of the south isle shulde be an ymparement to the King's Ma^{ty} palace, ye said unto him, that as well the King's palace as al the rest shulde be takin downe. And now, as speciall frende, I have sent you worde what is done here, w^{ch} you may use as shal appertyne; and thus I bydde you right hartely farewell. From Yorke, — of Aprill, 1551."

We cannot look about us in London at this day without fancying that the souls of some of these scheming and devastating architects and surveyors, &c. must have descended in a right line for nearly three hundred years to our day.

But we must now conclude this review. The numerous plates are extremely characteristic, and enough in themselves to recommend the style advocated by the author. Both on the building and furnishing* of his plans he shews that they may be executed, for the middle classes as well as the most opulent and high, at reasonable cost:

* The section on ancient furniture is very amusing as well as curious and valuable reading.

and, on the whole, independently of our love for the style which he has so conclusively set forth, we must confess a deep debt of pleasure and gratitude to him for the very interesting local, literary, scientific, and general information with which he has adorned that which in ordinary hands would have been a dry discussion. We wish we could build any thing, were it only for the sake of perpetuating, otherwise than on paper, our respect for his talents.

The Keepsake for 1830. Edited by F. Mansel Reynolds. London, Hurst and Co., and Jennings.

It would be vain to disguise the fact, that this Annual, like all the others, more or less, must rely for its extensive popularity on its exquisite engravings, rather than on its literary performances; though the latter are resplendent with great and celebrated names. A dry and meagre prose translation from a German play, occupying a fifth of the volume, is no attraction, though it boast the authorship of Sir Walter Scott; and the rest, sooth to say, with a very few, and no very important exceptions, is not of that description which would confer fame on the various contributors. The station and celebrity of most of them, however, will excite a curiosity to see what they have written, and this will answer the purpose of publishing almost, if not quite, as well as if they were Shakespeare's and Milton's. Yet this system must not be continued, or the Annuals had better refer themselves into portfolios of prints. In that respect they are deserving, and the *Keepsake* particularly so, of the greatest favour; and we only regret to see the literary talent and genius of our time brought into a sort of juxtaposition so injurious to them, by having their slightest, and sometimes worst, specimens associated with the finest efforts of art. So much so, indeed, that it is little to assert that two or three plates of the *Keepsake* are of far more value than the price of the whole work; and that foreign countries take an immense number of these publications for their engravings only. But it is this very circumstance which causes us to regret the inferiority of the literary portion of such works: how would it reflect honour on England, if none but productions of high merit were admitted either into the prose or the poetry of such selections! But we perhaps expected too much from the announcement of the *Keepsake*, and are therefore more disappointed than we ought to be with its performance. Among the best pieces are—an anecdote well told by Mr. Agar Ellis (of which a mutilated version found its way some months since into a contemporary journal); an Irish story, by Lord Nugent, which does not end so well as it begins; the Prophet of St. Paul's, by Lord Normanby, in which the romantic loves of Mary and Charles Brandon are told in a picturesque manner; the Nuptials of the Doge of Venice with the Adriatic, a spirited poem, by Lord Morpeth; and some agreeable verses by the Hon. C. Phipps. But we shall make our illustration from some letters of Lord Byron's, which, if not very communicative, are at any rate interesting: we copy merely paragraphs, as, names being omitted, the context is generally of little value.

Pisa, February 1822: *we guess*, addressed to Mr. Douglas Kinnaird.—"By the last post I transmitted to you a letter upon some Rochdale toll business, from which there are moneys in prospect. My agent says *two* thousand pounds, but supposing it to be only *one*, or even *one hundred*, still they be moneys; and I have lived long enough to have an exceeding respect for

the smallest current coin of any realm, or the least sum, which, although I may not want it myself, may do something for others who may need it more than I. They say that 'Knowledge is power';—I used to think so; but I now know that they meant 'money'; and when Socrates declared, 'that all he knew was, that he knew nothing,' he merely intended to declare, that he had not a drachm in the Athenian world. The *circulars* are arrived, and circulating like the vortices (or vortexes) of Descartes. Still I have a due care of the needful, and keep a look-out ahead, as my notions upon the score of moneys coincide with yours, and with all men's who have lived to see that every guinea is a philosopher's-stone, or at least his *touch-stone*. You will doubt me the less, when I pronounce my firm belief that *cash* is *virtue*. I cannot reproach myself with much expenditure: my only extra expense (and it is more than I have spent upon myself) being a loan of two hundred and fifty pounds to — [qy. Leigh Hunt?], and fifty pounds worth of furniture, which I have bought for him; and a boat which I am building for myself at Genoa, which will cost about a hundred pounds more. But to return. I am determined to have all the moneys I can, whether by my own funds, or succession, or lawsuit, or MSS., or any lawful means whatever. I will pay (though with the sincerest reluctance) my remaining creditors, and every man of law, by instalments from the award of the arbitrators. I recommend to you the notice in Mr. Hanson's letter, on the demand of moneys for the Rochdale tolls. Above all, I recommend my interests to your honourable worship. Recollect, too, that I expect some moneys for the various MSS. (no matter what); and, in short, 'Rem, *quocunque modo*, rem!'—the noble feeling of cupidity grows upon us with our years."

This is the same idea as the "good old gentlemanly vice" of "avarice" in the poem.

Same place and date.—"With regard to what I sent you a few days ago ('The Mystery'), and what I shall send you in a few days (the drama of 'Werner'), I shall publish them with another publisher, and *anonymously*, if you like. I am much surprised that you say nothing about the 'Vision,' as you seemed delighted with it, and eager to get it published. Published it *shall be*, though even upon my own account. As I said before, the profit is a secondary object—pleasant if it come, but to be borne without, if it do not. If you cannot settle with any English publisher, forward them to Galignani at Paris, and make any agreement you please. You can get my MSS. out of Murray's hands, as I shall most probably collect all those I have, and publish them at once. My object is not *immediate* popularity in my present productions, which are written on a different system from the rage of the day. But *mark what I say*; that the time will come when these will be preferred to any I have before written:—it is not from the cry or hubbub of a month that these things are to be decided upon. In the meantime I intend to be as a Calderon or Lope de Vega. As to my parting at this present moment with a thousand guineas, I can tell you, that I shall consent to nothing of the kind. I wonder if you take me for an atheist, to make me so unchristian a proposition?"

Genoa, November 1822.—"I have finished the twelfth canto of Don Juan, which I will forward when copied. With the sixth, seventh, and eighth in one volume, and the ninth, tenth, eleventh, and twelfth in another, the whole may form two volumes, of about the same size

as the two former. There are some good things in them, as perhaps may be allowed. Perhaps one volume had better be published with one publisher, and the other with another; it would be a new experiment: or one in one month, and another in the next; or both at once. What thinkest thou? Murray, long after the 'piracies,' offered me a thousand pounds (guineas) a canto for as many as I might choose to write. He has since departed from this proposal, for it was too much, and I would not take advantage of it. . . . I have been invited by the Americans on board of their squadron here, and received with the greatest kindness, and rather too much ceremony. They have asked me to sit for my picture to an American artist now in Florence. As I was preparing to depart, an American lady took a rose which I wore from me, and said that she wished to send something which I had about me to America. They shewed me, too, American editions of my poems, and all kinds of attention and good-will. I also hear that, as an author, I am in high request in Germany. All this is some compensation for the desertion of the English."

"I have been pondering over the vicissitudes of Don Juan. As for booksellers' intrigues, and booksellers' demons, they are not worth a thought:—I tell you that the two most successful things ever written by me, viz. the English Bards and Childe Harold, were refused by one half 'the trade,' and reluctantly received by the other. There are two or three ways to proceed. Firstly, To look about and see if any proposition is made by those tanners of authors, the calf-skin, morocco, and Muscovite publishers. Secondly, If none be made, we have always the option of stamping (an Italic phrase) upon the 'touch and go' account score; which is only objectionable inasmuch as it never yet succeeded—but it may; as steam has, and as balloons will. Thirdly, If so concluded, we must have securities that said publisher's account shall have its arithmetic summed up, and checked by the skilful in such affairs. Fourthly, Are the Don Juans subject to any laws?—that is, your laws, which are somewhat of the queerest; and is any compact respecting them binding to the contracting parties? Fifthly, If Mr. John Hunt publish them eventually, his son (if of age) ought to be comprised in the stipulation to render a fair account of *meum et tuum* quarterly, to persons appointed by the author. Sixthly, Some other ought to be bound—not for the assets, but merely, in case of non-fulfilment, to guarantee that the account (be it good, bad, or indifferent) is a fair and true one; for it is a difficult piece of antiquarianism to decipher the hieroglyphic of a publisher's balance, *pro*, *con*, or otherwise, or anywise. I venture to throw out these hints for your honour's convalescence; but how far they may merit attention in your sickness or your health is left to your consideration. 'And your petitioner shall ever,' &c. &c. I am not very well—I suspect worse than you are—at least I hope so. Ever since the summer, when I was fool enough to swim some four miles under a broiling sun, at Via Reggio, I have been more or less ailing. First, my skin peeled off—then it came again—then I had a fever and violent inflammation, which confined me to my bed, in a bad inn, on a worse road. I thought I was well quit for the winter at least; but, lo! within this last month I have had eruptions, and the deuce knows what besides; so that I have been compelled to call in an English physician, who has decocted and

concocted me, *secundum artem*, until I am turned inside out. I am as temperate as an anchorite; but I suspect that temperance is a more effective medicine at twenty than at thirty—and almost five.

Oh parish register! oh peerage! why Record those years that I would fain deny?

I shall not trouble you farther,—and I merely do it now as a sleeping draught for your collarbone.—Yours ever, and truly, N. B.

"P.S. I tell you that English Bards and the first and second cantos of Childe Harold were refused by half the craft, and even crafts, in London, although no demand was made. Decide for yourself from such premises—they know nothing."

Missaloughi, Feb. 1824.—"It is not true that I ever *did*, *will*, *would*, *could*, or *should* write a satire against Gifford, or a hair of his head. I always considered him as my literary father, and myself as his 'prodigal son;' and if I have allowed his 'fatted calf' to grow to an ox before he kills it on my return, it is only because I prefer beef to veal."

In his letters from this place Lord Byron shews that he had resolved to risk fortune and life in the Greek cause.

Memoirs, Correspondence, and State Papers of Thomas Jefferson, late President of the United States. Now first published from the Original MSS. Edited by Thomas Jefferson Randolph. 8vo. Vols. I. and II. London, 1829. Colburn and Bentley.

To what length this publication will probably extend, is not stated; but even in these two volumes we find much more than any review can adequately notice. Not only do they contain a multitude of new as well as forgotten details respecting the separation of America from England; but almost every letter offeils miscellaneous subjects for particularization and remark. We would therefore say, that the work is more fit for the library than for analysis; and that though it must always be looked to for information on the important topics of which it treats, it is not so likely to be read, as an American might term it, "slick right away." All we can do is to run slightly over the contents.

A portrait displays rather common-place features, with full and expressive eyes. The tradition of the Jefferson family is, that it was derived from Wales, somewhere near Snowdon, the grandfather having settled in Virginia about the beginning of the eighteenth century; and Peter, the father of Thomas, having married Jane Randolph in 1739, the said Thomas, born about 1745, was one of a family of two sons and six daughters, left with their mother (a widow) in 1757. It is not necessary to dwell upon the education of the future President, in which he seems to have been greatly indebted to Dr. William Small, a Scots professor of mathematics, and George Wythe, under whom he studied law. He went to the bar in 1767, and practised till the revolution shut up the courts of justice. In 1769 he was chosen a member of the legislature for his native county Virginia, and also continued in this station till closed by the same memorable event. In 1772 he married Mrs. Skelton, a widow of twenty-three years of age, whose considerable fortune contributed much to place him in affluent circumstances.

After these leading points of personal life, we come to the early stages of the revolutionary contest, respecting which there are a number of historical, local, and anecdotal facts, previous to the famous signature of the Declaration of

Independence in 1776, of which there is the original draught in the hand-writing of Mr. Jefferson. This and his notes on the debates in Congress upon it are highly curious and interesting. Among the arguments for delaying this great measure, the following struck us forcibly:—

"That foreign powers would either refuse to join themselves to our fortunes, or, having us so much in their power as that desperate declaration would place us, they would insist on terms proportionably more hard and prejudicial: that we had little reason to expect an alliance with those to whom alone, as yet, we had cast our eyes: that France and Spain had reason to be jealous of that rising power which would one day certainly strip them of all their American possessions!"

To this it was replied:—

"That a declaration of independence alone could render it consistent with European delicacy for European powers to treat with us, or even to receive an ambassador from us: that till this, they would not receive our vessels into their ports, nor acknowledge the adjudications of our courts of admiralty to be legitimate, in cases of capture of British vessels: that though France and Spain may be jealous of our rising power, they must think it will be much more formidable with the addition of Great Britain; and will therefore see it their interest to prevent a coalition; but should they refuse, we shall be but where we are; whereas, without trying, we shall never know whether they will aid us or not."

The future proceedings will be read with more interest in the United States than in England. We, however, make an extract or two where the matter recommends itself by its general application. On public debates and speaking, the annexed is excellent:—

"Our body (the Congress at Annapolis in 1783-4) was little numerous, but very contentious. Day after day was wasted on the most unimportant questions. A member, one of those afflicted with the morbid rage of debate, of an ardent mind, prompt imagination, and copious flow of words, who heard with impatience any logic which was not his own, sitting near me on some occasion of a trifling but wordy debate, asked me how I could sit in silence, hearing so much false reasoning, which a word would refute? I observed to him, that to refute indeed was easy, but to silence impossible; that in measures brought forward by myself, I took the labouring oar, as was incumbent on me; but that, in general, I was willing to listen; that if every sound argument or objection was used by some one or other of the numerous debaters, it was enough; if not, I thought it sufficient to suggest the omission, without going into a repetition of what had been already said by others: that this was a waste and abuse of the time and patience of the house, which could not be justified. And I believe, that if the members of deliberate bodies were to observe this course generally, they would do in a day what takes them a week; and it is really more questionable than may at first be thought, whether Buonaparte's dumb legislature, which said nothing, and did much, may not be preferable to one which talks much, and does nothing. I served with General Washington in the legislature of Virginia before the revolution, and during it with Dr. Franklin in Congress. I never heard either of them speak ten minutes at a time, nor to any but the main point which was to decide the question. They laid their shoulders to the great points, knowing that the little ones would follow of themselves.

If the present Congress errs in too much talking, how can it be otherwise in a body to which the people send one hundred and fifty lawyers, whose trade it is to question every thing, yield nothing, and talk by the hour? That one hundred and fifty lawyers should do business together, ought not to be expected."

In 1786, Jefferson being then the American minister in Paris, joined Mr. Adams the plenipotentiary in London; and we find the following account of their reception at the court of George III. :—

"On my presentation, as usual, to the king and queen, at their levees, it was impossible for any thing to be more ungracious than their notice of Mr. Adams and myself. I saw, at once, that the ulcerations of mind in that quarter left nothing to be expected on the subject of my attendance; and, on the first conference with the Marquess of Caermarthen, the minister for foreign affairs, the distance and disinclination which he betrayed in his conversation, the vagueness and evasions of his answers to us, confirmed me in the belief of their aversion to have any thing to do with us. We delivered him, however, our projet, Mr. Adams not despairing as much as I did of its effect. We afterwards, by one or more notes, requested his appointment of an interview and conference, which, without directly declining, he evaded, by pretences of other pressing occupations for the moment. After staying there seven weeks, till within a few days of the expiration of our commission, I informed the minister, by note, that my duties at Paris required my return to that place, and that I should, with pleasure, be the bearer of any commands to his ambassador there. He answered, that he had none; and wishing me a pleasant journey, I left London."

The subjoined remarks on France at this period seem also deserving of quotation :—

"The pecuniary distresses of France produced this year a measure of which there had been no example for near two centuries, and the consequences of which, good and evil, are not yet calculable. For its remote causes, we must go a little back. Celebrated writers of France and England had already sketched good principles on the subject of government; yet the American revolution seems first to have awakened the thinking part of the French nation in general from the sleep of despotism in which they were sunk. The officers, too, who had been to America, were mostly young men, less shackled by habit and prejudice, and more ready to assent to the suggestions of common sense, and feeling of common rights, than others. They came back with new ideas and impressions. The press, notwithstanding its shackles, began to disseminate them; conversation assumed new freedoms; politics became the theme of all societies, male and female; and a very extensive and zealous party was formed, which acquired the appellation of the patriotic party, who, sensible of the abusive government under which they lived, sighed for occasions of reforming it. This party comprehended all the honesty of the kingdom, sufficiently at leisure to think; the men of letters, the easy bourgeois, the young nobility, partly from reflection, partly from mode; for these sentiments became matter of mode, and, as such, united most of the young women to the party. Happily for the nation, it happened, at the same moment, that the dissipations of the queen and court, the abuses of the pension-list, and dilapidations in the administration of every branch of the finances, had exhausted the treasures and credit of the nation, inasmuch that its most necessary functions were paralysed. To re-

form these abuses would have overset the minister; to impose new taxes, by the authority of the king, was known to be impossible, from the determined opposition of the parliament to their enregistry. No resource remained, then, but to appeal to the nation."

The meeting of the Notables and the French revolution were the results; and of the first few years of these proceedings Mr. Jefferson's account possesses very considerable interest. In 1789, after the demolition of the Bastille, and Louis XVI. was forced to wear the tricoloured cockade by M. Bailly, Mr. Jefferson says :—

"The king was now become a passive machine in the hands of the National Assembly; and had he been left to himself, he would have willingly acquiesced in whatever they should devise as best for the nation. A wise constitution would have been formed, hereditary in his line, himself placed at its head, with powers so large as to enable him to do all the good of his station, and so limited as to restrain him from its abuse. This he would have faithfully administered, and more than this I do not believe he ever wished. But he had a queen of absolute sway over his weak mind and timid virtue, and of a character the reverse of his in all points. This angel, as gaudily painted in the rhapsodies of Burke, with some smartness of fancy, but no sound sense, was proud, disdainful of restraint, indignant at all obstacles to her will, eager in the pursuit of pleasure, and firm enough to hold to her desires, or perish in their wreck. Her inordinate gambling and dissipations, with those of the Count d'Artois, and others of her *clique*, had been a sensible item in the exhaustion of the treasury, which called into action the reforming hand of the nation; and her opposition to it, her inflexible perverseness, and dauntless spirit, led herself to the guillotine, drew the king on with her, and plunged the world into crimes and calamities which will for ever stain the pages of modern history. I have ever believed, that had there been no queen, there would have been no revolution. No force would have been provoked nor exercised. The king would have gone hand in hand with the wisdom of his sounder counsellors, who, guided by the increased lights of the age, wished only, with the same pace, to advance the principles of their social constitution. The deed which closed the mortal course of these sovereigns I shall neither approve nor condemn. I am not prepared to say that the first magistrate of a nation cannot commit treason against his country, or is unamenable to its punishment; nor yet that, where there is no written law, no regulated tribunal, there is not a law in our hearts, and a power in our hands, given for righteous employment in maintaining right and redressing wrong. Of those who judged the king, many thought him wilfully criminal; many that his existence would keep the nation in perpetual conflict with the horde of kings, who would war against a regeneration which might come home to themselves; and that it were better that one should die than all. I should not have voted with this portion of the legislature. I should have shut up the queen in a convent, putting harm out of her power, and placed the king in his station, investing him with limited powers, which, I verily believe, he would have honestly exercised, according to the measure of his understanding. In this way no void would have been created, courting the usurpation of a military adventurer, nor occasion given for those enormities which demoralised the nations of the world, and destroyed, and is yet to destroy, millions and millions of its inhabitants. There are

three epochs in history, signalled by the total extinction of national morality. The first was of the successors of Alexander, not omitting himself. The next, the successors of the first Caesar. The third, our own age. This was begun by the partition of Poland, followed by that of the treaty of Pilnitz; next, the conflagration of Copenhagen; then the enormities of Buonaparte, partitioning the earth at his will, and devastating it with fire and sword; now the conspiracy of kings, the successors of Buonaparte, blasphemously calling themselves the Holy Alliance, and treading in the footsteps of their incarcerated leader; not yet, indeed, usurping the government of other nations, avowedly and in detail, but controlling by their armies the forms in which they will permit them to be governed; and reserving, *in petto*, the order and extent of the usurpations further meditated."

Such are the views of Mr. Jefferson; and with them we must conclude our notice of the memoirs, reserving the correspondence and appendices for future consideration, only adding one extract more, on the return of the writer to America, in March 1790.

"At Philadelphia I called on the venerable and beloved Franklin. He was then on the bed of sickness, from which he never rose. My recent return from a country in which he had left so many friends, and the perilous convulsions to which they had been exposed, revived all his anxieties to know what part they had taken, what had been their course, and what their fate. He went over all in succession, with a rapidity and animation almost too much for his strength. When all his inquiries were satisfied, and a pause took place, I told him I had learned, with much pleasure, that, since his return to America, he had been occupied in preparing for the world the history of his own life. 'I cannot say much of that,' said he; 'but I will give you a sample of what I shall leave;' and he directed his little grandson, (William Bache), who was standing by the bedside, to hand him a paper from the table, to which he pointed. He did so, and the doctor putting it into my hands, desired me to take it and read it at my leisure. It was about a quire of folio paper, written in a large and running hand, very like his own. I looked into it slightly, then shut it, and said I would accept his permission to read it, and would carefully return it. He said, 'No, keep it.' Not certain of his meaning, I again looked into it, folded it for my pocket, and said again, I would certainly return it. 'No,' said he, 'keep it.' I put it into my pocket, and shortly after took leave of him. He died on the 17th of the ensuing month of April; and as I understood that he had bequeathed all his papers to his grandson, William Temple Franklin, I immediately wrote to Mr. Franklin, to inform him I possessed this paper, which I should consider as his property, and would deliver to his order. He came on immediately to New York, called on me for it, and I delivered it to him. As he put it into his pocket he said, carelessly, he had either the original, or another copy of it, I do not recollect which. This last expression struck my attention forcibly, and for the first time suggested to me the thought, that Dr. Franklin had meant it as a confidential deposit in my hands, and that I had done wrong in parting from it. I have not yet seen the collection he published of Dr. Franklin's works, and therefore know not if this is among them. I have been told it is not. It contained a narrative of the negotiations between Dr. Franklin and the British ministry, when he was

endeavouring to prevent the contest of arms which followed. The negotiation was brought about by the intervention of Lord Howe and his sister, who, I believe, was called Lady Howe, but I may misremember her title. Lord Howe seems to have been friendly to America, and exceedingly anxious to prevent a rupture. His intimacy with Dr. Franklin, and his position with the ministry, induced him to undertake a mediation between them; in which his sister seemed to have been associated. They carried from one to the other, backwards and forwards, the several propositions and answers which passed, and seconded with their own intercessions the importance of mutual sacrifices, to preserve the peace and connexion of the two countries. I remember that Lord North's answers were dry, unyielding, in the spirit of unconditional submission, and betrayed an absolute indifference to the occurrence of a rupture; and he said to the mediators distinctly, at last, that 'a rebellion was not to be deprecated on the part of Great Britain; that the confiscations it would produce would provide for many of their friends.' This expression was reported by the mediators to Dr. Franklin, and indicated so cool and calculated a purpose in the ministry, as to render compromise hopeless, and the negotiation was discontinued. If this is not among the papers published, we ask, what has become of it? I delivered it, with my own hands, into those of Temple Franklin. It certainly established views so atrocious in the British government, that its suppression would, to them, be worth a great price. But could the grandson of Dr. Franklin be, in such degree, an accomplice in the parricide of the memory of his immortal grandfather? The suspension, for more than twenty years, of the general publication, bequeathed and confided to him, produced for a while hard suspicions against him: and if, at last, all are not published, a part of these suspicions may remain with some."

Emmanuel: a Christian Tribute of Affection and Duty; for the Year of our Lord 1830.
Edited by the Rev. W. Shepherd. London, S. Maunders.

Less embellished, and consequently at a less price, than its compeers, this new Annual takes the field under some advantages as far as general circulation is concerned. It is entirely of a religious description: and the preface fully explains its objects, and defends its name against some apparently very captious objections.

"The work here presented (says the reverend editor) to the public is a humble tribute of Christian principles, intended to display true religion and its several attributes in the engaging aspect which belongs to this best gift of heaven. There is nothing in it repulsive to any denomination of Christian believers. It attempts not the eagle's flight, but would rather emulate the lowly and more domestic habits of the swallow and the sparrow, which haunt, in security and peace, the altars of their Maker. Its nature and design preclude all notion of rivalry in regard to the extent of its embellishments, however intrinsically good they may be deemed; whilst the literary compositions, limited as they necessarily are to one object, may not enter the lists with those who aim at an 'entire Olympiad.' The reputation and success of the established Annuals cannot therefore be affected by this appeal to the religious community. Their very titles and designs—their sacrifices to the lighter arts—their mixed and comprehensive subjects of composition, have left that class of readers unprovided

with a Christian present 'of a decidedly religious character.' Now, the very title of this Annual betokens godliness; and it is confidently expected that the subjects, both in design and spirit, however imperfectly executed, will be found in strict unison with it. Were it not so, the editor and publisher feel they would have been justly open to the animadversions which have been made on it by some pious individuals; and, though they might well rest on the high encomiums of others equally devout and influential, who hail it as one of peculiar fitness for a publication so truly Christian in design and principle, they wish in all sincerity and truth to offer some remarks in defence of their use of the word. In the first place, the work is devoted entirely to religion, and subjects connected with religion, all tending to edification, and expressly designed to shew forth His praise and glory, 'in whom we live, and move, and have our being.' In employing, therefore, a word by which the Almighty Creator has revealed to us the real nature, and character, and intimacy with us, of our Lord and Master Jesus Christ, whose name his disciples are permitted to bear, the editor is not conscious of having transgressed any law of Him who calls us brethren, and makes our bodies temples of the living God; for the Christian dispensation is one of grace, and mercy, and loveliness: and though no eye can penetrate the Holy of Holies, the Almighty Father is revealed to us in the most engaging description which can invite confidence and excite affection.

As, therefore, the design of this book is founded on principles in humble accordance with the tenor of his gospel, the editor most strongly deprecates all idea of profaneness and frivolity in his use of the word Emmanuel. He considers that he is no more open to attack for making it the title of his work, devoted as it is entirely to religion and virtue, than was Pope, or Handel, or Klopstock, for affixing to their several works of human composition the name of 'The Messiah.' If, indeed, it is impious to use the word Emmanuel to designate a religious publication, how can we absolve from the charge of profaneness, divines and legislators, and the whole body of Christian believers, who for the last eighteen centuries have used, in conversation and acts of Parliament, to record the dates of even the most common transactions, the general, but no less sacred expression, 'In the year of Our Lord?' Besides, the word Emmanuel has been employed to describe persons and things dedicated to his service. Hence, it is used not only as the Christian name of individuals, but it designates a college in Cambridge, founded by a privy counsellor and chancellor of the exchequer to Queen Elizabeth, in an age memorable for piety, and dear to the recollection of the Reformed Churches of our native land. In affixing, therefore, this name to his work, the editor humbly conceives he has not touched or handled that which is forbidden; more especially as the contents of the volume will be found in unison with the sanctity of the title."

Having been little inclined this year to occupy our pages with long selections from the Annuals, which, in truth, would have robbed them of their plums, we shall not be tempted to transgress with the present, however meritorious, volume. Suffice it to say, that the reverend editor has, as was to be anticipated, distinguished himself both in verse and prose,—that there are two or three pieces deserving of the name affixed to them, R. Montgomery—that Mr. Pennie, Miss Strickland, the Author

of *Tales of a Bride* (reviewed in our last), Miss M. A. Browne, Mr. Leeds, Mrs. Godwin, Mr. Britton, and L. E. L., are among its foremost contributors; and to extract a short poem by the last-mentioned of these writers, which refers to a picture of a pilgrim, and beautifully *exposes* the vanity of that old weak act of superstitious devotion.

"The Pilgrim.

Vain folly of another age,—
This wand'ring over earth,
To find the peace by some dark shroud
Banish'd our household hearth.
On Lebanon the dark green pines
Wave over sacred ground,
And Carmel's consecrated rose
Springs from a hallow'd mound.
Glorious the truth they testify,
And blessed is their name;
But even in such sacred spot
Are sin and wo the same.
Oh pilgrim! vain each toilsome step,
Vain ev'ry weary day;
There is no charm in soil or shrine
To wash thy guilt away.
Return, with prayer and tear return
To those who weep at home;
To dry their eyes will more avail,
Than o'er a world to roam.
There's hope for one who leaves with shame
The guilt that lured before:
Remember, He who said 'repent,'
Said also, 'sin no more.'
Return, and in thy daily round
Of duty and of love
Thou best wilt find that patient faith
Which lifts the soul above.
In every innocent prayer each child
Lips at his father's knee—
If thine has been to teach that prayer,
There will be hope for thee.
There is a small white church that stands
Beside thy father's grave,
There kneel and pour those earnest prayers
That sanctify and save.
Around thee draw thine own home ties,
And, with a chaste'n'd mind,
In meek well-doing seek that peace
No wandering will find.
In charity and penitence
Thy sin will be forgiven:—
Pilgrim, the heart is the true shrine
Whence prayers ascend to Heaven."

Two Lectures on Population, delivered before the University of Oxford, in Easter Term, 1828. By Nassau William Senior, late Fellow of Magdalen College, A.M., Professor of Political Economy. To which is added, a Correspondence between the Author and the Rev. T. R. Malthus. London, 1828. Saunders and Otley.

If there be one principle of political economy more firmly established or more important than another, it is that which has been called the *principle of population*. Scarcely a year passes in which the operation of that principle is not manifested in the sufferings of some one or more of the classes into which our labourers are divided; sufferings which have their immediate cause, indeed, in some casual revulsion of trade, but which are aggravated and prolonged by the habitual poverty existing among all the labouring classes, and which, it has been proved to satiety, is the consequence of the disproportion between the numbers to be employed and the means of employing them. The law which regulates the proportion between the numbers of labourers and the means by which they may be employed—in other words, which regulates the permanent rate of wages—is called the principle of population. How important must be the consideration of the principle which regulates the rate of wages, both to those who pay and those who receive them, is sufficiently plain. It has accordingly attracted a greater share of public attention than many other important doctrines of the science of which it forms a part, and will continue to obtrude itself

upon the consideration of all those who turn their minds to political reasoning, so long as persons shall be subject to periodical starvation in Norfolk and Suffolk, or weavers in Spitalfields.

The question being simply one of proportion, the proportion between the numbers of the people and the means of employing them, it is necessary to ascertain, in the first place, the relative rates, according to which the numbers of the people and the means of employment would increase, if no check were imposed upon the increase of either. This rate has hitherto been called the *tendency to increase*—a phrase very clear and definite, and which, we think, Mr. Senior has applied in a novel and unaccustomed manner, without duly weighing the importance of adhering to an established phraseology; or, at all events, without adducing a sufficient reason for dissenting from it in the present instance.

The means of employing labourers are, food and the implements and materials of their trade; but food is the main object of consideration. It has been shewn, Mr. Senior tells us, in a preceding lecture, and it is obvious, without present proof, "that additional labour employed in the cultivation of the land within a given district, produces generally a less proportionate return." The more labour bestowed upon the same soil, the greater is the total return, but the less is the return to every successive quantity of labour bestowed. The tendency of food to increase is therefore a constantly decreasing tendency.

Then what is the tendency to increase in the human race? This tendency, Mr. Senior describes as having been "determined by observation. It has been ascertained, that for considerable periods, and in extensive districts under temperate climates, population has doubled every twenty-five years. The power of reproduction in the human race must, under similar climates, be always and every where the same."

Here, then, we have the means of determining the question at once. The tendency of population to increase is constantly the same; that of food is constantly diminishing. It is certain, therefore, when we consider the simplicity and shortness of the premises, unusually certain, that, as the wages of labour depend upon the proportion between food and numbers, and as numbers can increase faster than food, that unless the number of labourers can be limited, the people must always be poor; and as surely as they are poor will they be miserable, vicious, and discontented. To enlighten the people upon this great law, which regulates their condition, and which so materially concerns the safety of their superiors in wealth and station, is obviously the most benevolent work of private charity, and a chief duty of public governors. This principle has been fully and clearly explained by Mr. Senior in the first of the two lectures lately published, to which the reader is referred for more complete and satisfactory information.

But whilst we must do justice to the manner in which this doctrine has been expounded in these lectures, we cannot but think that Mr. Senior has over-laboured an objection which he founds upon a supposed variance between fact and theory. It is important to consider this objection, for two reasons; first, because we deem the objection to be little more than a verbal dispute; and next, because we think it is calculated to mislead attention and confound the large class of readers who, though respectable (from their numbers), come under

the denomination of careless and unwary. According to the language in use among political economists, there is said to be a *tendency* in population to increase faster than food. Perhaps it can be shewn, that in some civilised countries population has not, in fact, increased faster than food, although no checks were applied to its progress beyond those of misery and want; perhaps it may be further shewn, that it has not even increased so fast. Mr. Senior is too acute a reasoner to be imposed upon by this statement, so far as to maintain that it disproves the principle of population. He has, in truth, given a satisfactory account of the fact in the earlier part of the second lecture, in which he has made several observations upon the tendency of wealth and civilisation to check the increase of numbers, by elevating the moral feelings of the people, and inducing them to submit to voluntary restraint rather than undergo the privations which spring from improvident marriages; a part of these lectures which is both ingenious and new. He thinks, however, that this observation should qualify the language in which Mr. Malthus and others are wont to couch the proposition respecting the tendency of numbers to increase. "How," he inquires, "can such a tendency be said to exist, when, in fact, they are seldom found to increase in a greater proportion than the means of supply, or even so fast as the means of supply?"

"What (he asks) is the picture presented by the earliest records of those nations which are now civilised? or, which is the same, what is now the state of savage nations? A state of habitual poverty and occasional famine. A scanty population, but still scantier means of subsistence. Admitting, and it must be admitted, that in almost all countries the condition of the great body of the people is poor and miserable; yet as poverty and misery were their original inheritance, what inference can we draw from the continuance of their misery as to the tendency of their numbers to increase more rapidly than their wealth? But if a single country can be found in which there is now less poverty than is universal in a savage state, it must be true, that under the circumstances in which that country has been placed, the means of subsistence have a greater tendency to increase than the population. Now this is the case in every civilised country. Even Ireland, the country most likely to afford an instance of what Mr. Mill supposes to be the natural course of things, poor and populous as she is, suffers less from want, with her eight millions of people, than when her only inhabitants were a few sept of hunters and fishers. In our early history, famines, and pestilences the consequences of famine, constantly recur. At present, though our numbers are trebled or quadrupled, they are unheard of. The United States of America afford the best ascertained instance of great and continued increase of numbers. They have afforded a field in which the powers of population have been allowed to exhaust their energy; but though exerted to their utmost, they have not equalled the progress of subsistence. Whole colonies of the first settlers perished from absolute want; their successors struggled long against hardship and privation; but every increase of their numbers seems to have been accompanied or preceded by increased means of support. If it be conceded, that there exists in the human race a natural tendency to rise from barbarism to civilisation, and that the means of subsistence are proportionally more abundant in a civilised than in a savage state,—and neither of these propositions can be denied,—it must fol-

low, that there is a natural tendency in subsistence to increase in a greater ratio than population."

Now we cannot but think that this admits of a very simple answer. When it is said, that there is a tendency in population to increase faster than the means of subsistence, that form of stating the proposition is adopted as the shortest and most convenient method of saying that, in the absence of all checks to increase, men will be multiplied faster than food. It was never meant that they could be multiplied *without* food; that food must not be first produced, in order that they may be multiplied at all; nor even that as societies advance in civilisation, food would not be increased in a greater ratio to the increase of population than in the savage state. What was meant to be conveyed by the proposition was, that the greater capability of increase was on the side of population; that a check must be imposed there, and an impulse, if possible, applied to the production of food. And that this is the *useful* mode of stating the theory, Mr. Senior himself admits; for he tells us afterwards, that "whether, in the absence of disturbing causes, it be the tendency of subsistence, or of population, to advance with greater rapidity, is a question of slight importance, if it be acknowledged that human happiness or misery depend principally on their relative advance; and that there are causes, and causes within human control, by which that advance can be regulated."

If it ever happen in any country, that population, although having a tendency (abstractedly) to increase faster than food, be found in fact to advance at a slower rate, *it may be said*, with verbal accuracy, that food in that country has a tendency to increase faster than population. So may it also be said, with verbal accuracy, that there is a tendency in matter, when set in motion, to come to a state of rest; because it does, in fact, ultimately come to a state of rest when set in motion; or that there is a tendency in it to move in curved and not in straight lines, because the planets revolve round the sun. And yet we think, that if any man should propose to adopt this phraseology, and to reject the old Newtonian proposition, that matter, when set in motion, will move on in a straight line for ever, he would be said rather to dispute about words than facts.

We have further objected to the author's changing the terms of the proposition, that it would unsettle, confuse, and mislead the minds of the careless and unwary. Upon this we shall not dilate; but we must say, in justice, that Mr. Senior offers at least a plausible reason on the other side, when he tells us, that many well-meaning persons are deterred from exerting themselves in the improvement of the condition of the people, by the unmeasured language which has been held with respect to the natural tendency of men to grow faster than corn. To remove such errors, we heartily recommend those good, desponding people to read Mr. Senior's lectures; and both them, and all those who are interested in questions of this nature, to read the instructive correspondence between Mr. Senior and Mr. Malthus, which is appended to them. We have spent too much time about the lectures themselves, to say any thing about the letters at the end of the pamphlet; nor could we say any thing which would supersede the necessity of reading them once and again.

The Alpenstock: concluded.

SINCE October 10th we have been prevented from paying our further respects to Mr. La-

trobe's pleasing volume, to which we are glad to return and extract the following remarks on the vintage :

"As I drew towards my journey's end, I found the whole country busy with the vintage. The landscape was every where checkered and enlivened by the active figures and cheerful faces of the peasants and their families; and the different operations connected with their harvest afforded me much amusement. The grapes are here crushed by large mallets or pestles, immediately after being taken from the rows and thrown into the tubs. This is a cleaner and more alluring, though perhaps less ancient and poetical mode of proceeding (and certainly less amusing) than that of *treading the wine-press*, which, to my great astonishment, I saw literally performed in open daylight, last autumn, near Basle. There, the same end was brought about in the manner here mentioned. At about the distance of every hundred yards, as I suppose, opposite each peasant's vineyard, two or three large tubs were placed, each surmounted by a smaller, the bottom of which was perforated like a strainer. Into the latter the baskets of fruit were emptied as they were brought from the rows; good, bad, and indifferent; dust, stalks, and spiders; while on them stood an old woman or little boy, perched on high, with bare legs and feet, stamping, and treading, and mashing the contents, which came oozing out below into the great tub. *N'importe*.—I am told the wine is just as well flavoured and as pure the one way as the other; and it is my interest to think so: for it ill becomes a pedestrian to feel squeamish about any thing."

"But as the day advanced, these sounds were invariably overpowered by the pigs, whose unceasing cries and screams of sorrow and perplexity puzzled me not a little, till I found out the cause. I never happened to buy a pig myself, but I think I have seen many bought and sold, and some few killed, before I quitted the north. I do not recollect, however, that in the English markets any particular kind of 'pomp and circumstance' attends the purchase of a pig. As far as I can recollect, the buyer thumps it a little to see that the animal is solid, and the seller pinches its ear or tail, to shew that it has sound lungs; then a bargain is struck, and the purchaser conveys it straightway to his home, and kills it privily or publicly, just as it suits him. But not so here. I had noticed that, some hours during the middle of the day, the air was burdened with the cries of this animal, with hardly a moment's intermission, and that these sounds proceeded from a certain *maison de péage* not far from my dwelling. To unravel this mystery, I at length directed my steps to this building, and there soon came fully to understand the whole matter. Pigs are here bought by the weight—that is part of the mystery: consequently all that are brought for sale, whether big or little, are tugged off in full vigour to the public scales, tumbled into them, and weighed before purchased. Further, all animals of this species which the pleasure of the possessor may consign to the knife, are put to death in one and the same building, on the border of the lake, by order of the magistrates. Both these operations of killing and weighing are often carried on together; and it will be understood that of the two animals, that which is only weighed screams much longer, if not much louder, than the one whose last hour is come. The din defies all description. Towards evening the boats begin to leave the port, and to stretch for the opposite shore, and little by little the town resumes its tranquillity.

Four times a year, fairs, each of several days' continuance, are held, and, as might be supposed, these bring bustle enough in their train. The centre of the market-place is then occupied by a double line of substantial booths, erected for the purpose, and let out to the different speculators, who flock in from every part of the neighbouring cantons. It appears that there is a class of tradespeople, or rather pedlars on a large scale, who have no fixed place of abode, but make the round of all the fairs, and bring their ventures to each market in turn. Amusing as a scene of this kind must be in any small town, the generality of other Swiss fairs are infinitely more striking and gay, from the prevalence of different and peculiar costumes, which are but sparingly mingled with the throng in Neuchâtel."

"In addition to the terms *curé* and *vicaire*, the former of which corresponds to our vicar, and the latter to our curate, I cannot avoid mentioning that the common people of this neighbourhood have a term to designate a still lower degree of ecclesiastical honour. It happens that the curate may be now and then assisted in his duties by a young candidate for the ministry, or *proposant*, as they are properly termed. To this class the common people have whimsically enough given the name of *l'apôtre*: and though I do not understand that any ridicule is implied by it, I must own I do not think that any increase of respect is attached to the designation; for to a question put to one of the peasants as to the rank of the preacher, it is not unusual to get for answer, *Il n'est qu'apôtre !*"

"The preceding winter (1825-6) had been signalised by the loss of three of the domestics belonging to the convent, and a traveller whom they were conducting to the hospital. As the circumstances attending this accident may illustrate the peculiar danger of the service in which these worthy monks are engaged, I shall relate them at length, as communicated to me. It was after a violent snow-storm of several days' continuance, which had kept all the inhabitants of the convent close within their walls, that a partial brightening in the weather on the 17th December emboldened them to despatch three of their domestics down the Italian side of the mountain, to escort a small party of travellers, who had been detained in the convent, and at the same time to fetch their usual supply of fresh provisions from the first Italian village, St. Remy, about a league down the pass. This party was accompanied by two of the dogs, Jupiter and a younger one. The day closed, night set in, and, to the surprise of the monks, no servants re-appeared. However, they lulled their fears, by persuading themselves that their Maroniers, not daring to re-ascend in the dusk, had staid at St. Remy; and trusted to see them return with the provisions early on the following morning. The morning came—noon arrived—the shade of evening again closed the short-lived day, and still no tidings of their servants. However, during the course of this day, two of the monks worked their way, after a whole hour's struggle in the snow, which was many feet deep, to the lower end of the lake, near which the convent is situated, and reached a point about three minutes' ordinary walk from the hospital, from whence the greater part of the downward route towards St. Remy could be distinguished. They now saw that the whole valley was covered by the wrecks of a series of avalanches—and returned, fearing the worst; but still hoped against hope that the adventurers might have reached St. Remy, and been detained there.

It was not till the third day after their departure that their suspicions were verified beyond all doubt. On that day the *calafette* from St. Remy arrived at the convent, followed by poor Jupiter. He brought word that the Maroniers had arrived safe with their companions at the village, and after some short stay had set off on their return, accompanied by a traveller who wished to pass to the Swiss side of the Alps. Nothing more was to be learnt from him, except, that, about an hour after, Jupiter returned alone, dreadfully fatigued, and made it to be understood, by his howling and anxiety, that some misfortune had befallen his companions. The cause of the disaster was now no longer a matter of doubt, and after some months was rendered certain by the discovery of the bodies. It appears, that, when about half a league on their way back, they were suddenly arrested and overwhelmed by a tremendous avalanche from the slopes of Mont Mort, which in its headlong course carried the party for above a mile down the mountain, and buried them with the younger dog deep under the snow. By some means, Jupiter kept nearer the edge, or the surface, and, when the force of the avalanche was spent, extricated himself. It was judged that he had attempted to make his way up the mountain towards the hospital; but such was the impediment offered to his struggle by the immense mass of soft snow, that he was forced to return in the bed of a torrent to St. Remy. They described him there as whining and 'weeping' the whole night."

After relating some of the *unhappineses* attendant on high mountain ascents, the tourist next tells an anecdote of a bear in the Mit-taghorn.

"I believe bears have been almost entirely driven from their former haunts in this chain. Nevertheless, every now and then, a stranger comes on a reconnoitering journey from the Vallais or Italian Alps, and, as might be expected, seldom or never returns to tell his tale. The moment he is discovered to be in the country the tocsin is sounded, and the poor fellow pays for his restlessness or curiosity with his life. Last winter, as Mr. G. informed me, one was observed to be in the vicinity of Gasteig, by the ravages committed on a flock of sheep; and of course the hue and cry was raised by the villagers. Unfortunately there happened to be no snow, and it was no easy matter to light upon his trail. After long search, however, a party of the peasants thought they had discovered his footstep in a sandy pathway, and traced them into a forest to the east of the village. In this was a deep gully, with a cavity in the rocks at one side. While beating the bushes, one of their number incautiously descended to the bottom of the ravine, to drink at the stream running down it. While he was busy, with his nose in the water, the party above saw the bear make its appearance from the rift just mentioned, and scramble down with furious haste towards the man, who was too busy to notice him. They shouted, but the rush of the water prevented his hearing them; meanwhile no time was lost by the assailant, who was not within shot, till he got too close to the man to allow the carbine to be used with safety to their companion. The peasant, having quenched his thirst, raised himself up, and there stood Bruin ready to administer that squeeze for which his species is celebrated. The poor fellow, dreadfully shocked at the idea, and giving himself up for lost, had nevertheless the good sense to recollect that he had intended to shoot the bear.

So, without further ceremony, he fired his piece, but in too great a hurry to take correct aim, for the bullet whizzed over the bear's head instead of through it. Nevertheless, Bruin seemed not to relish the singeing of his whiskers, and turned tail, when a second shot, from one of the party above, brought him down."

These miscellaneous notices are sufficient to denote the amusing variety of this work, which we again recommend.

SIGHTS OF BOOKS.

A Manual of Ancient History. By A. H. L. Heeren. Translated from the German. 8vo. pp. 476. Oxford, 1829. Talboys.

THE great and deserved popularity of this work upon the continent, where it has passed through many editions, has, at length, happily recommended it to an English translation, as it had previously been rendered into almost every other European tongue. In this Manual the indefatigable and judicious author has traced the formation of the most ancient states, from the Assyrian, Median, Babylonian, Trojan, Lydian, Phœnician, Egyptian, and Jewish nations, &c. to the end of the fifth century; and not only by his extensive and learned researches, but by his excellent mode of synchronistic tables, thrown the clearest light upon these interesting inquiries. Geography, the oldest colonial systems, chronology, and commerce, are all ably illustrated: but it would require a longer paper than we can spare to mention a tithe part of the merits of this most useful classical and historical production. We consider it to be one of the best volumes that could be put, for information, into the hands of the student, or, for reference, into those of the instructed. No good library should be without it.

The Waverley Novels, Vol. VI.—of the Antiquary, Vol. II. Edinburgh, 1829, Cadell; London, Simpkin and Marshall.

THIS continuation offers us little to notice, except that the embellishments are well executed, and that there are two interesting notes; one relating to a melancholy incident in the household of the last John, Duke of Roxburgh, and the other to the spirited mustering and long night-march of the Scottish volunteers and yeomen, upon an occasion when a mistaken alarm of invasion was fired along the Borders. We can vouch for the accuracy of this, having been bravely under arms on that desperate night.*

An Introduction to Medical Botany. By T. Castles, F.L.S. London, 1829. E. Cox; Simpkin and Marshall; Underwood; and W. Jackson.

A LITTLE 24mo. of 172 pages, which, with coloured figures, forms a very concise but a very convenient and useful introduction to a science of no small consequence. The author is well known as a writer both on botany and surgery, whose productions are well calculated for the purposes to which they are addressed.

The Quarterly Journal of Agriculture, No. VII. Edinburgh. Blackwood.

The British Farmer's Magazine, No. XIII. London. Ridgway.

WHILE Blackwood is enlightening the Northern agriculturists by his very intelligent and able quarterly journal, Mr. Ridgway is adding his monthly light for those of the South, also with

great talent. It is, nevertheless, astonishing to observe how long obvious improvements remain unadopted: let us hope that these periodicals will lead to other results.

The Etymology and Syntax of the English Language explained and illustrated. By the Rev. Alexander Crombie, LL.D. &c. 8vo. pp. 431. London. J. Taylor.

A THIRD edition of this very able and judicious work affords us an opportunity for expressing our hearty approbation of it; and our pleasure at seeing the excellent author of Natural Theology thus prospering in his most useful though not quite so important labours.

The Pomological Magazine; or Figures and Descriptions of the most important Varieties of Fruit cultivated in Great Britain. Vol. II. 8vo. pp. 97. London, 1829. Ridgway.

OF this equally beautiful and scientific publication we need only say that the second is, if any thing, superior to the first volume. The multitude of various fruits which it describes and exhibits are admirably portrayed, and coloured to nature. Messrs. Sabine and Lindley have great credit in its production.

The Law and Commercial Daily Remembrancer for 1830. By Edward Dunn, Law Stationer. London. Dunn and Son.

The Diurnal Remembrancer, or Private Diary, for 1830. The same.

OF these (the former the most ample in its almanac and miscellaneous parts, and the latter, though limited in these species of intelligence, yet very useful in its matter and form) we have specimens before us; and have to express our entire approbation of the manner in which they are prepared for the convenience of men of business and of housekeepers. Such books, even slightly attended to, are not only valuable to guide us as the days of the year roll on, but are often of great service to look back upon and refresh the memory, and sometimes, as the entries may be, productive of pleasing recollections and considerable amusement.

Memoirs of John Shipp. Second edition. 3 vols. 12mo. London, 1830. Hurst, Chance, and Co.

OF the extraordinary adventures of this unfortunate soldier we spoke kindly on the appearance of his narrative; and we expressed a hope, that whatever his imprudences and errors might have been, his courage and the strange vicissitudes he had undergone might plead so strong an apology for them, as to lead to his relief on the rough road of life. We regret to see that a pension of fifty pounds a-year from the Hon. East India Company is all he has to depend upon, after his Ophello-like story.

Laconics; or, the Best Words of the Best Authors. Third edition. 3 vols. 18mo. Sustenance and Stretch.

THERE is a world of wit and wisdom in these three little volumes; and a good index helps the indolent to find where they are applicable. We have therefore no hesitation in adding our good word to the far better than double testimony implied in the two words "third edition," in their favour. There are about four thousand apt extracts from esteemed authors.

ARTS AND SCIENCES.
ANCIENT AND MODERN EGYPT.
M. Champollion's Fourteenth Letter.

Thebes, June 18, 1829.

SINCE my return to this eldest of the royal

cities, all my days have been employed in the study of one of its finest edifices, for which I conceived a decided predilection at the first sight. The complete knowledge which I have now acquired of it justifies this predilection beyond all that I could have hoped. I allude here to a monument, the real name of which is not yet determined, and which is the source of very lively controversies: it is that which was first called the Memnonium, and afterwards the tomb of Oymandias. This last denomination was given by the Commission of Egypt. Some travellers persist in using the other, which is very inapplicable and very incorrect. As for me, I shall henceforth employ, to designate this edifice, only its Egyptian name, which is sculptured in a hundred places, and repeated in the legends of the friezes, of the architraves, and bas-reliefs, which adorn this palace. It bore the name of Rhamesseion, because Thebes was indebted for it to the munificence of Rhamesses the Great. The imagination is confounded, and we feel a very natural emotion, on visiting these mutilated galleries and these fine colonnades, when we reflect that they are the work, and were often the residence, of the most celebrated and the best of the princes that ancient Egypt reckons in its long annals; and whenever I pass through them, I pay to the memory of Sesostris that kind of pious respect which was rendered to him by all antiquity.

No part of the Rhamesseion exists in a complete state; but what has escaped the barbarism of the Persians, and the ravages of time, is sufficient to restore the whole edifice, and to give a very correct idea of it. Passing over the architectural part, which is not my province, but to which I must do justice by saying, that the Rhamesseion is, perhaps, the noblest and the purest of the great monuments at Thebes, I shall confine myself to a concise notice of the principal bas-reliefs which adorn it, and the meaning of the inscriptions that accompany them. The sculptures which cover the exterior faces of the first pylon, built of freestone, have entirely disappeared, the greater part of the walls having fallen down. Enormous blocks of white limestone still remain in their places; they are the jambs of the door, and are decorated, as well as the thickness of the two walls in which the door was, with the royal legends of Rhamesses the Great, with pictures representing the Pharaoh making offerings to the great divinities of Thebes—Amon-Ra, Amon-Generator, the goddess Mouth, the young god Chons, Ptaha, and Mandou. In some pictures the king, in his turn, receives the favours of the gods; and I here give the analysis of the principal of them, because it was there I read for the first time the true name of the whole edifice. The god Atmou (one of the forms of Phré) presents to the god Mandou the Pharaoh Rhamesses the Great, wearing a helmet, and clothed in royal robes; the latter divinity takes him by the hand, and says to him: "Come, advance towards the divine abodes, to contemplate thy father, the lord of the gods, who will grant thee a long series of days, to govern the world and to reign upon the throne of Horus." Further on, in fact, is represented the great god Amon-Ra addressing the following words to Pharaoh:—"Hear what Amon-Ra says, the king of the gods, who resides in the Rhamesseion of Thebes: my well-beloved son of my race, lord of the world, Rhamesses! my heart rejoices in contemplating thy good works; thou hast dedicated this edifice to me, I confer on thee the gift of a pure life, to pass upon the throne of Sev" (that is to say, in temporal royalty). Henceforth, then, there can

* A correspondent complains of the advertisements appended to these volumes, and says they are eye-sores to be bound up with so handsome a work.—Ed.

remain not the least doubt respecting the name to be given to this monument.

The military pictures relative to the conquests of the king cover the faces of the two walls of the pylon towards the first quarter of the palace. A considerable part of them is visible, the falling down of the higher parts of the pylon being on the opposite side. These military scenes bear the greatest analogy to those sculptured in the temple of Ypsamboul and on the pylon of Luxor, which form part of the eastern Rhamesseion or Rhamesseion of Thebes. These inscriptions are similar, and all these bas-reliefs evidently relate to the same campaign against Asiatic nations, who, from their physiognomy and their costume, cannot, I repeat it, be looked for otherwise than in that vast country situated between the Tigris and the Euphrates on one side, and the Oxus and the Indus on the other—a country which we rather vaguely call Persia. This nation, or rather the country which it inhabited, was called Chto, Cheto, Scheto, or Scto; for I have at length perceived that the name by which it is usually designated in the historical texts, and which may be pronounced Pechareneschto, Pecharanschetko, or Pecharinschetko, (on account of the absence of the medial vowels), is composed of three distinct parts:—1. of an Egyptian word, the reproachful epithet Pechar, which signifies a plague—2. of the preposition N (of), which I at first took for a radical—3. Chto, Scto, or Scheto, the real name of the country. The Egyptians therefore designated these hostile people by the denomination of the Plague of Scheto, in the same manner as Ethiopia is always called the wicked race of Kousch. This is not the place to detail the reasons which induce me firmly to believe that the people here meant are those of the north-east of Persia—the Bactrians or the Scytho-Bactrians. On the right wall is sculptured the reception of the Scytho-Bactrian ambassadors in the king's camp. They are admitted to the presence of Rhameses, who receives them with reproaches: the soldiers dispersed in the camp are reposing, or preparing their arms, and taking care of the baggage: in the front of the camp two Egyptians are administering the bastinado to two prisoners—in order, says the hieroglyphic legend, to make them say what the plague of Scheto is doing. At the bottom of the picture is the Egyptian army on its march; and at one of the extremities is an engagement between the chariots of the two nations. On the left part of the wall is represented a series of fortresses, from which Egyptians issue, leading captives. The inscriptions sculptured on the walls of each of them give their names, and inform us that Rhameses the Great took them by storm in the eighth year of his reign. Nearly the half of the right wall of the pylon is wanting; what remains are fragments of a vast bas-relief, representing a great battle, likewise against the Scheto. As I shall have occasion to describe a second, which is entirely similar, and much better preserved, I shall pass rapidly over this, merely saying, that in it is represented one of the principal Bactrian chiefs, named Schiropsiro, or Schiropasiro, wounded and lying on the bank of the river, towards which an ally, the chief of the wicked race of the country of Schirbech or Schilbesch, flying before the conqueror, directs his steps. By the side of the battle is the picture of a triumph. Rhameses the Great, standing with a battle-axe on his shoulder, seizes with his left hand the hair of a group of prisoners, over whom is written, "The chiefs of the countries

of the south and of the north led into captivity by his majesty."

The colonnades at the sides of the first court do not now exist. The vast space formerly comprehended between these galleries and the two pylons, is encumbered with the enormous fragments of the largest and most magnificent colossus that the Egyptians perhaps ever set up: it was that of Rhameses the Great. The inscriptions which decorate it do not admit a doubt upon the subject. The royal legends of that illustrious Pharaoh are to be read in large and beautiful hieroglyphics, towards the upper part of the arms, and are repeated several times on the four faces of the pedestal. This colossus, though seated, was not less than fifty-three feet high, not including the base, which is a second block, about thirty-three feet long and six high. We must admire, at the same time, the power of the people who erected this wonderful colossus, and that of the barbarians who destroyed it with so much address and care.

This fine monument was before the left wall of the second pylon, which is destroyed down to the present level of the ground. It was by digging that I convinced myself that this wall was likewise covered with sculptures representing military scenes. I found there the lower part of a picture, representing the king after a great battle receiving from the principal officers the account of the enemy killed in the action, whose hands, cut off, are piled up at his feet. Further on, there was an inscription relative also to the war against the Scheto; the little that remains of the last lines, interrupted by numerous fractures, made me deeply regret the destruction of these historical documents, which abound in proper names and geographical designations: they chiefly concern the honours which the king grants to two Scythian or Bactrian chiefs—Iroschtoasiro, great chief of the country of the Scheto, and Peschorsemausiro, who is also called a great chief: they are very probably the governors appointed by the conqueror after the submission of the country.

The sculptures of the right wall of the second pylon exist in a great part under the gallery of the second court, to the right as you enter. It is the representation of a battle fought on the bank of a river in the vicinity of a town which two branches of the river encircle, and on the walls of which is written, "The strong town of Watsch or Batsch" (the first letter is doubtful). Towards the present extremity of the picture, to the left of the spectator, is seen king Rhameses in his chariot at full gallop in the midst of a field of battle covered with the dead and the dying. He discharges arrows at the mass of the enemy, who are completely routed. Behind the chariot, on the ground which the hero has just quitted, are heaps of the enemy's dead, upon which the horses of one of the enemy's chiefs, named Torokani, fall; he is wounded with an arrow in the shoulder, and is falling in the front of his car, which is broken. Under the feet of the king's horses lie, in various positions, the bodies of Torokato, chief of the soldiers of the country of Nakbesou, and those of several other warriors of distinction. The great Bactrian chief Schiropsiro is retiring towards the bank of the river. The king's arrows have already reached Tiotouro and Simairrosi, who are flying in the plain towards the town. Other chiefs retire towards the river, into which the horses of the wounded chief Kroschatosi plunge, and drag him with them. Several, in fine, as Thotaro and Maferima, brother (ally) of the plague of Scheto (the Bactrians), have

gone to die opposite the town, on the bank of the river, which others, such as the Bactrian Sipaphiro, had been so fortunate as to cross, assisted and welcomed on the opposite bank by an immense crowd of people, who have come together to learn the result of the battle. In the midst of this crowd is a group busily engaged in helping a chief, who has just been taken out of the river, where he has been drowned. They hold him suspended by the feet, with his head downwards, and endeavour to make him eject the water which chokes him, in order to recall him to life. His long hair appears to be dripping wet; and the attention paid to him will not produce any effect, if we may judge by the countenances and motions of the bystanders. Above the group is the following sentence: "The chief of the wicked race of the country of the Schirbech, who has parted from his warriors in flying from the king towards the river."

Lastly, in the midst of the crowd that issues from the city by a bridge thrown over one of the branches of the river, we observe symptoms of an approaching change of opinion. An individual makes a speech to those who surround him; the object of his harangue is to engage his countrymen to submit to the yoke of Rhameses the Great;—in fact, over the arm of the orator we read the commencement of an inscription in the following terms:—"I celebrate the glory of the gracious God, because he has said".....the remainder is destroyed. My intention in entering upon these details was to give an idea of the historical bas-reliefs with which the great monuments of Egypt are adorned:—those immense compositions which I like to call Homeric pictures or heroic sculpture, because they are full of that sublime fire and disorder which transport us in reading the battles of the Iliad. Every group considered separately will certainly be found defective in some particulars of the perspective or proportions, when compared with the neighbouring parts; but these little defects in the details are more than atoned for by the effect of the masses; and I venture to say that the most beautiful Greek vases, on which combats were represented, are faulty (if it be a fault) in the very same particulars as these Egyptian bas-reliefs.

At the upper part of this great wall there is sculptured a long bas-relief, mutilated at the beginning and the end, representing Rhameses the Great celebrating the panegyric of the great god of Thebes, the double Horus, or Amon-generator. As I shall have occasion to describe a similar fête, which exists entire in the palace at Medinet Habou, I shall merely say that it is here that there is a series of little statues of kings, arranged in the order of their reigns. They are—1st, Menes (the first king on earth); 2d, an unknown name, anterior to the seventeenth dynasty; 3d, Amosis; 4th, Amenophis I.; 5th, Thouthmosis I.; 6th, Thouthmosis III.; 7th, Amenophis II.; 8th, Thouthmosis IV.; 9th, Amenophis III.; 10th, Horus; 11th, Rhameses I.; 12th, Ousirei; 13th, Rhameses the Great himself. This series gives only the direct line of the ancestors of the conqueror. Thus Thouthmosis II. is omitted, because Thouthmosis IV. (Meris) was son of a daughter of Thouthmosis I.

Numerous bas-reliefs, representing acts of adoration of King Rhameses to the great divinities of Thebes, cover three faces of the pylons which form the gallery before the pylon. On the fourth face of each of them is sculptured, in full relief, a colossal image of the

king, about thirty feet in height. The following are the best preserved of the four legends which still exist.

"The gracious god has erected these great buildings—he has raised them by his arm—he, the king Sun, guardian of justice, approved by Phré, the son of the Sun, the friend of Ammon, Rhameses, the well-beloved of Amon-Ra.—The gracious god ruling in his country has loaded it with his benefits, he, the god Sun, &c.—The well-beloved of Amon-Ra, the gracious god, chief, full of vigilance, the greatest of conquerors, has subdued all the countries under his dominions—he, the god Sun, &c. &c., the well-beloved of the goddess Month."

Thus these inscriptions record all that antiquity has praised in Sesostris—the great works which he caused to be executed—the good laws which he gave to his country—and the vast extent of his conquests. The pillars adorned with colossal opposite to these, and the columns which form the second court of the palace on the right side, are also remarkable for the richness of the religious pictures which adorn them. The pillars and the colonnades which form the left part of the court are entirely destroyed.

I shall not go into any detail respecting the interesting bas-reliefs which cover the left part of the back wall of the peristyle. I hasten to the hypostyle hall, of which about thirty columns still remain entire, and would charm by their elegant majesty even the eyes of those who are prejudiced against every thing that is not of Greek or Roman architecture. As for the destination of this beautiful hall, the arrangement of the columns, and the form of the capitals which adorn them, I shall quote the dedication itself of the hall, sculptured in the name of the founder on the architraves upon the left in very fine hieroglyphics:—

"The powerful Haroeris, the friend of truth, the lord of the upper region and of the lower region, the defender of Egypt, the chastiser of foreign countries, the resplendent Horus, possessor of the palms, the greatest of conquerors, the king, lord of the world (Sun, guardian of justice, approved by Phré), the son of the Sun, the lord of diadems, the well-beloved of Ammon, Rhameses, has had these buildings erected in honour of his father Ammon-Ra, king of the gods: he has caused to be erected the grand hall of assembly of good white freestone, supported by great pillars, with capitals imitating expanded flowers, flanked by smaller columns with capitals, imitating a lotus-bud; a hall which he has dedicated to the lord of the gods for the celebration of his gracious panegyrie: this is what the king has done during his life."

Thus it appears that the hypostyle halls, which give so peculiar a character to the Egyptian palaces, were really designed, as has been suspected, for the holding of great assemblies, whether political or religious,—that is to say, panegyries or general meetings. I was convinced of this before I discovered this curious dedication, because, observing the form of the hieroglyphic character expressing the idea panegyrie on the obelisks at Rome, where that character is carved of a large size, I perceived that it represented exactly a hypostyle hall, with seats placed at the foot of the columns.

It is at the entrance of the hypostyle hall of the Rhamesseion, on the right hand, that a bas-relief exists, on which is represented the queen, mother of the conqueror. Her name was Taouai: there is also a beautiful statue of this princess in the capital. I had copied the inscriptions upon it; but some fractures might

give room to doubts, which are removed by the bas-reliefs that I have before me. On the same side there is a great historical picture, which has been described or designed by all travellers who have visited Egypt. The only design that can be spoken of as correct is that which M. Calliaud has published in his *Journey to Meroe*. I have had a copy made of it on a larger scale, and have myself transcribed the inscriptions, which are interesting, though incomplete in many points. Here is also a great picture relative to war, which may, however, be divided into two principal parts. In a vast plain King Rhameses has just vanquished the Scheto, whom he has totally routed: two princes are in pursuit of the enemy: these sons of the king are named Mandouhi-Schopesh and Schat-hemkeme; they were the fourth and fifth of the children of Rhameses. Here, too, the vanquished are people of Scheto (Bactrians?). They are proceeding towards a town, placed at the right extremity of the picture, where a new scene opens. Four other sons of the conqueror, the seventh, eighth, ninth, and tenth of his children, called Meiamoun, Amenhamwa, Noubetel, and Setpanre, are stationed under the walls of the place. The besieged make a vigorous resistance; but the Egyptians have already set up ladders, and are going to scale the walls. A fracture has unfortunately destroyed the first part of the name of the besieged town: there remain now only the syllables Apouro.

[To be continued.]

MEDICO-BOTANICAL SOCIETY.

THE meetings of this Society were resumed on Tuesday evening. In the absence of Earl Stanhope, Dr. Bree was called to the chair. Amongst the donations to the Society were a collection of books to the amount of £200, presented by the King of the two Sicilies; and a splendid copy of Redouté's *Liliacées*, presented lately by his Grace the Duke of Northumberland. The Archduke John of Austria was elected into the Society. After the preliminary business, Mr. Frost read the annual oration: from it we gleaned, that six foreign sovereigns, and fourteen princes, had been entered on the list of members during the last session. Several of the English nobility had also, during the same period, been enrolled. It appeared, further, that Mr. Alton, of Kew, had set apart a portion of ground (in the Royal Garden, we understood) for a medico-botanical garden, in which the plants enumerated in British Pharmacopœias were already placed. After advertising to the spirit of co-operation which manifested itself amongst the scientific men of France, Spain, Italy, Germany, Austria, Russia, Prussia, Sweden, &c. &c., Mr. Frost stated, that Don Miguel had signified his intention of presenting to the Society a complete herbarium of the plants of Portugal; and that the University of Coimbra had just been reopened, with the botanical professor of which a friendly intercourse would be maintained: this observation was also applicable to the Royal Dublin Society, and many similar institutions. In proof of the growing interest in the study of botany, it was also stated that the Society of Apothecaries had opened their Pharmaceutical Garden at Chelsea, for the admission of all students in medical botany in London. Earl Stanhope had also intimated his intention of holding *conversations* at his house in town, to be open to the fellows of the Society, and other scientific characters. The oration con-

braced a variety of other topics; and thanks were voted for it to Mr. Frost: shortly after, the meeting separated.

GEOLOGICAL SOCIETY.

Nov. 6th, 1829.—This Society held their first meeting for the season this evening; the president, the Rev. Adam Sedgwick, M.A., in the chair.—An interesting paper "on the Tertiary Formation of Gosau," by Roderick Impey Murchison, Esq., F.R.S., Secretary, was read.

COAL-MINES OF FRANCE, &c.

THE following observations on the coal-mines of France and other countries appear in a French periodical—*Minéralogie Industrielle*.—The coal-mines in France are not so extensive as in England; but this is because the consumption is not so great; for the natural resources of France in this respect are very considerable. There are in France forty departments in which coal is found; but in many of the places the mines are only partially worked; and of some of the others it can only be said, that the mere fact is known that they contain coal. 236 mines are, however, now worked in France, from which 10,000,000 of metrical quintals of coal are annually extracted; and the value at the mines being 12,000,000 francs, the cost to the consumer is, at least, 40,000,000. The consumption was much less a few years ago. It is, nevertheless, more considerable in England, where it is estimated at 75,000,000 of metrical quintals annually. Of the 10,000,000 furnished by the mines of France, three are obtained from those of St. Etienne and Rive-de-Gier and its environs, by means of eleven steam-engines, six hydraulic machines, seventy machines worked by horses, and 1400 workmen. The greater part of the coal from these mines is of very good quality, and suitable for forges and for the manufacture of gas. Three millions of the quantity are extracted from the mines of the north of France, which employ 4,500 workmen, nine steam-engines, and sixteen machines of different sorts, with seven machines for pumping out the water. This coal is particularly used for furnaces. The other 4,000,000 are drawn from the mines of Ligny, Carmaux, Creuzot, Champagny, and Ronchamps, the product of which is increasing. The coal-mines in the mountains of the centre and the south of France would be much more productive, were it not for the difficulty of transport, and the want of a market for this article: from these causes, a considerable quantity of coal is left untouched in the departments of Aveyron, Gard, Loire, and others; and what is lost may be estimated at a twentieth of the total produce.—Belgium is rich in mines; and those of the environs of Mons, Liège, and Charleroi—to the number of 356—employ 20,000 workmen, and produce annually about 12,000,000 of metrical quintals of coal of good quality. Those in the vicinity of Mons—near Jemmapes particularly—supply a great part of the consumption of France; large quantities of this coal being sent to Paris. Some of it is particularly calculated for gas, and makes excellent coke.—Germany, taken in the mass, does not possess many coal-mines; but in some localities the produce is considerable.—In Sweden there are no mines, except in Scania.—Norway, like Russia, seems to be destitute of fossil coal, though there is said to be some in Siberia. Perhaps, however, the abundant supply of wood prevents any search from being made after it.—In Italy there are a few inconsiderable mines in the Apennines.—In Spain,

too, there are some; but the strata are not thick enough to make them of importance.—Not a single coal-mine has been found in Portugal.—Coal is very abundant in the United States of America; but the fine forests of that country will, for a long time, supersede the necessity for this combustible.

LITERARY AND LEARNED.

OXFORD, Nov. 7th.—On Wednesday the following degrees were conferred:—

Bachelor in Civil Law.—J. Gregory, Balliol College, Grand Compounder.

Masters of Arts.—Rev. P. M. Smythe, Christ Church; J. Day, Exeter College.

Bachelors of Arts.—T. Kemmis, Brasenose College; G. Taylor, Exeter College.

KING'S COLLEGE, LONDON.

It has been mentioned to us, that the Council of this institution proposes to take into union District Schools (some of which are already in progress of formation), to be conducted upon the same principles as those of the lower department of the College: and when we consider how deeply important it is to combine the cultivation of the mind with the inculcation of religious and moral truths, we cannot refrain from wishing success to a measure which appears to us to be equally well-advised and well-timed. We are sure the public will hail it as a pledge of the intrinsic, though unostentatious, activity by which the conductors of this enterprise are gradually approaching the accomplishment of those high and interesting objects to which it aspires; and we avail ourselves of the opportunity thus afforded us to go shortly over the ground of its *past* progress, in order that those who have charged their brethren with inertness and procrastination, may henceforth render them, both by their opinions and co-operation, the justice to which we think they are deservedly entitled. During the last fourteen months a sum of 128,000*l.* has been raised;—the grant of a site, worthy of the object, and well calculated to promote it, has been obtained;—numerous and intricate interests in houses adjoining that site have been dealt with and purchased, with a view to secure the convenience of a double access from the Strand;—the architect has matured and prepared his plans and internal arrangements;—a satisfactory, and, as it appears, an economical, contract has been entered into, and is rapidly executing, for the purpose of carrying those plans and arrangements into effect;—the general regulations for conducting the education of its pupils, on the principles contemplated by its founders, have been digested, prepared, and circulated;—and a charter of incorporation has endowed the governors, council, and proprietors, with extensive powers for the efficient management of the institution. We would readily add to this brief enumeration of labours achieved, but shall only express our hope, that what has been begun with zeal and judgment will be consummated with wisdom and success.

PRESENT STATE OF ATHENS.

[Extract from a letter dated *Ægina*, Oct. 12.]

AFTER returning from the Cyclades and Cape Sunium, Colonel Bory de Saint Vincent has very carefully surveyed the gulf formed by Argolis and Attica. He has successively visited the ancient volcanoes of Methana and *Ægina*; Epidaurus, Hiero, Corinth and its isthmus, with the ancient canal: Megara, Salamis, and Eleusis, have also attracted his attention; lastly, he has ventured to enter Athens, where the Turkish pasha Jussuf received him very well, and permitted him to visit every part except the citadel, where nobody is admitted,

not even a mussulman, unless he belong to the garrison. The pasha was wholly ignorant that peace was made,—to such a degree does the Turkish government leave its agents without information. There is not a house in Athens; every thing is turned topsy-turvy, and there is not a street that can be recognised. The inhabitants have all fled. The temples of Theseus and of Jupiter Olympius, a portico of Adrian, some immense columns of the Pantheon, the Lantern of Diogenes, and the Tower of the Winds, rise amidst the most confused piles of ruins. The falling of the walls in which several master-pieces were fixed, has disclosed some remains of antiquity hitherto unknown; so that the colonel was able to observe some gigantic caryatides, the legs of which end in serpents, which had never yet been seen by any traveller or antiquary. The president set out on the 8th, in his steam-boat, on a visit to the Cyclades. He is at present at Sapa, and is expected at *Ægina* this week. It is certain that he will pass the winter here, and will quit this only to go to Athens when the Turks give up the city. The Greek palicari, under the command of Vazo, occupy Eleusis: General Trezel has assembled all the tactics at Megara, where they will bivouac, for there is not so much as a shed standing on the whole isthmus.

MARCUS AURELIUS.

A TRANSLATION into French of the letters, nearly two hundred in number, of Marcus Aurelius and Fronto, discovered some years ago by M. Mai, in palimpsest manuscripts, is about to be published in Paris. *Le Globe* has given several specimens of them; from which we select the following fragment of a letter from the virtuous and benevolent emperor to his beautiful wife, whose debaucheries afterwards rendered her so infamous.

Marcus Aurelius to Faustina.

Thou shewest a pious heart, my Faustina, for thy husband and thy children. I reperused at Formianum the letter in which thou exhortest me to revenge myself on the accomplices of Avidius. As for me, I will spare his children, his son-in-law, and his wife. I will not have too rigorous a proscription, or too severe a punishment; for there is nothing which recommends a Roman emperor to the world better than clemency. It made Caesar a god; it sanctified Augustus; above all, it earned the name of Pious for thy father. Had my advice been followed in this war, Cassius would still live. Take courage, then, my Faustina, the gods protect me; my piety is dear to the gods.

FINE ARTS.

NEW PUBLICATIONS.

Scraps and Sketches. By George Cruikshank. Part the Second.

THE humour of George Cruikshank is as inexhaustible as the follies and novelties of the age; and this very whimsical and clever performance is fully equal to any of his former productions. "London going out of town" is a most laughable conception, in which building materials and tools, all animated, are driving haystacks, cattle, trees, and every rural object before them. Steam furnishes subjects for another very entertaining plate; and "Horses going to the dogs," are capably done. "The four elements," consisting of a damsel blowing the fire with bellows to make the kettle boil, is an extremely happy hit; as is its companion, "Faith, Hope, and Charity," a blind beggar and his dog. The Gin-shop is an appalling caricature, full of incident. Church and state,

a fat gentleman, a fellow in the stocks, a shop for bargains, a scene in Kensington Gardens, elbow room (fashionable sleeves), umbrella-makers landing St. Swithin ("Long to raise over us"), are all full of fun and drollery: but, indeed, these things must be seen to be fully enjoyed—no account can convey an idea of the number of their playful and characteristic touches. This little Number has several hours' amusement in it.

The Lord Mayor's Dinner, at Guildhall. G. Scharf delt. and lith. Engelmann and Co.

WE recommend our readers not to look at this print until after they have dined. It is far too tantalising for any one *impransus*. Gobbling, in all its varieties, is here admirably exhibited; while the friendly hob-and-nob occasionally adds to the ardour of the general deglutition. The tranquil statues which ornament the walls of this noble hall afford a striking contrast to the busy scene below. Neptune, especially, seated at the base of Nelson's monument, lifts up his hand, in seeming astonishment and reprobation, at the luxurious indulgences of which he is the unwilling witness. Mr. Scharf has thrown a very good effect over the whole, and has shewn much skill and humour in the diversity of character and incident which he has introduced into the details.

The Shooter's Companions. Painted by A. Cooper, R.A.; engraved by A. Giller.

A BEAUTIFUL little mezzotinto print; full of depth sweetness, and delicacy.

ORIGINAL POETRY.

VERSES

Suggested by a conversation respecting the astonishing rate at which steam carriages are expected to go, and the consequent march of refinement.

An Exquisite of the year 1929 at breakfast.

TELL John to set the kettle on,
I mean to take a drive;
I only want to go to Rome,
And shall be back by five.

Tell cook to dress those humming-birds
I shot in Mexico;
They've now been killed at least two days,
They'll be *un peu trop haut*.

I'll try that wine, too, *à la rose*,
Just brought from Ispahan:
How could those Goths of other times
Endure that vile Champagne?

The trip I took the other day,
To breakfast in the moon,
Thanks to that awkward Lord Bellaire,
Has spoiled my new balloon.

For, steering through the Milky Way,
He ran against a star,
And turning round again too soon,
Came jolt against my car.

Such fellows ought to keep below,
And never venture there;
If he's so clumsy, he should go
By no way but the Bear.

My steam is surely up by now—
Put the high pressure on;
Give me the "breath-bag" for the way,—
All right—hey—whizz—I'm gone.

M.

SKETCHES OF SOCIETY.

A TURKISH HOTEL.

THE following description of a Turkish hotel, immediately after the expulsion of the janissaries, is taken from a work of M. Fontanier, who lately gave an account of his travels in Persia, Georgia, and Turkey, to the Royal

Academy of Sciences at Paris. From M. Fontanier's statement it would seem that the Turkish innkeepers are even more inquisitive than those of America. "On my arrival at Sapanja, he says, I installed myself in a coffee-house, which is the only kind of hotel in this country. After having arranged my carpet and seated myself à la Turque, holding my pipe in one hand and the coffee in the other, I entered into conversation with the master of the house, who was not tardy in giving me a hearty welcome, and putting to me a series of questions, to which I was so accustomed that my answers were all ready. 'What do you want?—Where do you come from?—Where are you going to? Have you a *teskeri* (passport)?—Have you much money?—Are you a spy?' &c. Four or five Turkish travellers, separated from me by wooden balustrades which divided the room into several compartments, listened to these queries with the greatest indifference, and smoked on with the most imperturbable gravity. For me it was quite an affair of memory, and, above all, of patience; for if there had been twenty questions I must have answered them all. The interrogatories finished, I offered them coffee,—an infallible mean in this country of establishing harmony, and procuring the rites of hospitality. At the same time I asked them what had been going on at Constantinople. Our host put on an air of dignity, and at last, without ceasing to warm the coffee and arrange the fire, replied: 'My soul, the Sultan Mahmoud, our lord, will have no more janissaries. What will become of us if the pashas and the great are allowed to feed upon us at their ease? We must fly, and become Curdes? The taxes will be raised, and perhaps (but God preserve us from it!) they will be levied on the Mussulmans. The Sultan Mahmoud is become an infidel; but it is his dog of a son, Mehemed Ali-Pasha, who has suggested all these enormities. May God deprive him of his eyes!' Every Turk in the room vociferated this imprecation in chorus, and then relapsed into his habitual silence. As the night approached, every one began to think of his own affairs. Some of the travellers got themselves shaved, others brought in their provisions, and some arranged their carpets and their toilet for the night. As for me, I could not help admiring the good sense which was mixed up with the detached and homely phrases I had just heard. Every body regretted the janissaries, and felt that the only check upon absolute power had been overthrown, and that liberty was destroyed without bringing the advantages of civilisation. A detachment of janissaries arrived at the hotel while I was there; but I remarked that the landlord hurried out to speak to them, and assured them that he had not room enough for their accommodation." M. Fontanier, on his route towards Constantinople, met about a hundred of the janissaries, who were disarmed, and some of them had their hands tied behind them with a cord, the extremity of which was held by the *caouas*, or pasha's guard. He learnt that, after the massacre, the government arrested every one whom they could find in the capital, and, without allowing them time to arrange their affairs or to see their families, made them embark for Scutari, with orders to follow the road to Asia. Those who were bound were destined as examples of the vengeance of the grand signior, and to intimidate the rebels: these had been taken by chance from among their companions in misfortune, and were to be beheaded in succession, on reaching certain distances.

DRAMA.

ADELPHI.

ON Monday last, a new burlesque burletta, founded on the celebrated ballad, "Billy Taylor was a gay young fellow," was produced at this theatre. Mr. Buckstone is the criminal who has committed this offence against gravity, and it is any thing but a serious one. The whole of the well-known pathetic story is capitally developed, and its terrible catastrophe ingeniously softened by the re-vivification of the two seductive Mr. William Taylor. The most novel features of this dramatised ballad (which, by the way, is altogether a pleasant fling at the "Black-eyed Susan" of the neighbouring county) are the incantation-scene à la Freyschütz, and the pitched battle between the gallant Thunderbomb and the enemy's fleet, consisting of two sail of the line. In the first instance, the terror of our childhood, "old bogie!" is raised in a legal shape by the most illegal means, and induces his invoker, who, though a dabbler in the black art, is evidently no conjuror, to sign, a cognovit, which, of course, sends his affairs in due time to the devil. The ingredients of the cauldron are worthy of record:—

1. The knee-buckle of a black-leg.
2. One of the balls of a pawnbroker's sign.
3. A bad sixpence taken at the gallery-door.
4. A lady's complexion lost in the heat of a ball-room.
5. The undercrust of a baker's "dead man."
6. The conscience of a Marshalsea attorney.

The last item was too small to discover with the aid even of our very best Dollond; the other articles were highly creditable to the property man. In the naval action a shower of red-hot balls, resembling exceedingly Mr. Clout's celebrated cricket ditto, falls innocuously upon the stage from the enemy's fleet aforesaid, while one lucky shot from the Thunderbomb in return blows the fleet literally out of the water, to the great glory of the gunner, Miss Mary Wagstaff, alias Richard Carr, whose *discovery* is effected in the most delicate manner, yet without the slightest violation of historical truth. The duet between the Captain and the adventurous "lady fair and free," selected from the ballad itself, was admirably sung by Gallot and Mrs. Fitzwilliam. Reeve, of course, was the hero of the piece, and dressed, warbled, and danced the character to perfection. His imitation of T. P. Cooke's naval hornpipe was convulsive. Altogether, we confess we laughed heartily—an inconsiderate act, in which we were joined by the greater part of the audience, and which hath utterly and for ever (thank Heaven!) rendered us unworthy to be classed amongst "the judicious few," some of whom hissed at the end; dear sensible souls! We hope they will be consistent enough to avoid this temple of Momus for the future. Their absence will make room for half a dozen of the as many hundreds unable to obtain admission on Monday evening. Mr. Barnett's amusing farce, *The Bold Dragons*, goes merrily on. A new melodrama, called the *Sisters, or the Brigands of Albano*, is announced for Monday, in lieu of the stupid *Rose of Euterick*, which never had any business on this side the Border.

THE principal performers of Drury Lane have, with great liberality, lent the management 25 per cent of their salaries for ten weeks. This voluntary act does them much credit, and will reinforce the house, till Christmas, with its pantomime, comes in aid of the season.

There has been nothing in the shape of novelty at either of the Theatres-Royals this

week. Boiledieu's opera, *Les Deux Nuits*, translated by Mr. Fitz-Ball, the music arranged, &c. by Bishop, is announced for Tuesday at Covent Garden; and a new drama, of an exceedingly novel and interesting character, by Mr. Planché, is in rehearsal at Drury Lane, comprising tableaux arranged from a celebrated series of engravings,—a practice most successfully followed at Vienna.

The West London Theatre is about to be opened in considerable force by Mr. Alexander Lee and Mr. Melrose. The list of a good company, both of actors and singers, is advertised.

VARIETIES.

Silk-worms.—It is stated in a memoir published by the Royal Agricultural Society of France, that the use of the chloruret of lime, for the purpose of purifying the air in places where silk-worms are kept in large numbers, is found to be very beneficial. The mortality so common to this insect from the miasma of the atmosphere is thus prevented.

Fire Kings and Queens!—When M. Chabert is attracting so much notice, we may recall to mind Signora Josephine Girardelle, who was born at Venice in 1780, and came to London in 1816 to exhibit her astonishing power of repelling heat. Without the least symptom of pain she could pour boiling lead into her mouth, and emit it again indented with the mark of her teeth; after which she used to pass red-hot iron over various parts of her body, wash her hands in aquafortis, &c. She was much visited in London and elsewhere.

Flax.—The Rev. Hans Sloane, of Cork, whose invention of the hollow-wick candle we noticed in our *Gazette* a few weeks ago, has for some years past made several experiments towards the cultivation of *Tritoma uvaria* (a species of flax) in the south of Ireland, with the view of introducing a politically important manufacture into that country. At the close of the year 1823 Mr. Sloane submitted to the Admiralty various specimens of this flax, the fibre of which is stronger than that of the hemp or flax hitherto cultivated in Europe. The report made by the Navy Board who were called on by the Admiralty to examine into his statements was highly favourable to an extensive trial being made of the *Tritoma uvaria*, both for sail-cloth and cordage; and we believe that Mr. Sloane has since employed himself in preparing a sufficient quantity for the proposed trial. This plant, which is a native of the Cape of Good Hope, has been known in our gardens from the commencement of the last century!

Loss of Weight in Cooking Meat.—We recommend to all our economical friends the result of a thrifty housekeeper's experience in this matter, and congratulate the lovers of old English roast beef, that they may gratify their laudable predilection and save many an honest penny at one and the same meal.

	lb. oz.
4lb. of beef lost by boiling	1 0
4 .. do. roasting	1 5
4 .. do. baking	1 3
4 .. mutton boiling	0 14
4 .. do. roasting	1 6
4 .. do. baking	1 4

We will only add, that the devotees to boiled mutton and turnips are evidently first-rate economists!

Culture of the Vine.—The vine was formerly cultivated very successfully in Southern Brabant; and as much of its soil consists of a sandy and stony bottom, it is not adapted to agricultural purposes. The produce of its vineyards constituted at one time the chief

beverage of the middling and lower classes; and in this neighbourhood vineyards were in former days considered the best patrimony a family could inherit. But it was a species of industry which was by no means acceptable to our French neighbours, and was therefore laid upon the shelf during the campaign of 1636; from which time until the year 1815, when Belgium was incorporated with Holland, it was suffered to remain dormant. It is now, however, become an object of renewed attention; and our countryman, Audoor of Wese-mael, has covered a length of nearly half a league, on the road between this place and Aerschot, with a flourishing vineyard, which last year produced him 150 pipes of wine. It is defended against the northerly winds by a rustic wall, built with the stones found upon the spot, five feet in thickness and eight in height, and is provided with twelve doors. His example has induced a number of other land proprietors to establish vineyards—and with equal success. The climate and localities of many parts of the South of England must surely be equally well adapted for the cultivation of the vine.—*Louvain, Oct. 6th.*

Geography, &c.—At one of the recent sittings of the Paris Geographical Society, Mr. Yosi, secretary of the London Medico-Botanical Society, stated, that he intends to embark in December next on his voyage to America. He will first visit the Mississippi and Missouri, will then cross the Rocky Mountains, explore California, and proceed to South America, traversing Mexico. He purposes visiting the capital of Columbia, and thence directing his steps towards Rio Janeiro. He requested from the Society such information and instructions as it might choose to give in connexion with the objects of his journey, which will consist chiefly of geographical and astronomical observations.

Cultivation of Maize.—It is stated in the annual of the Horticultural Society of Paris, that the white maize of China, although it produces a smaller grain than the maize of Pennsylvania, which has been hitherto much cultivated in France, yields more abundantly, and gives a much finer flour. Some Chinese maize sown in the south of France during the present year, is stated to have turned out very well, notwithstanding the badness of the season.

Potatoes.—M. Busching, a Prussian horticulturist, having planted in April the seeds of eight varieties of potatoes, which he kept carefully watered until June, then transplanted five hundred at distances of a foot and a half from each other; in the month of August most of these plants were in fruit and flower, and the varieties extended to one hundred and thirty; they ripened at four different periods, and all produced abundantly. M. Chevallier, in a letter to the *Bulletin Universel*, referring to a proposal in that work for the growth of potatoes in houses, by planting them in tubs, relates several experiments which he had performed, and of which the result was very unsatisfactory.

Corinth Grape.—It is stated, in a letter from Marseilles, that most of the Corinth grape (currant) trees, of which twelve thousand were received in April last, are now in a thriving state in the different departments in which they were distributed; and that no doubt is entertained that the Corinth vine will produce abundantly in the south of France. We understand that it is intended to try this vine in the new colony at Swan River.

Gelatine from Bones.—It has already been stated, that the employment of gelatine made from bones has become general in the French

hospitals. We now find, by an article in the *Bulletin Universel*, that it is also getting into use in the domestic economy of the working classes. It appears that sixty persons, belonging to the Royal Medal Mint, had good soup provided for them from gelatine for one franc eighty cents, being little more than a farthing per head; and that a *ragout* of potatoes, made also with gelatine, for the same number, cost only two francs sixty cents, not quite one half-penny each. It is calculated that a workman may, by the use of gelatine instead of meat, reduce his expenditure nearly one half; and instances are mentioned in which a much larger economy than this has been effected, with an improvement in the bodily strength of the workmen, owing to the greater nutrition of this kind of food.

To preserve Apples and Pears.—Wipe the fruit dry, then take a varnished crock or wide-mouthed jar, at the bottom of which is to be a layer of fine and very dry sand; on this place a layer of fruit, and so alternately fruit and sand until the crock or jar is full. Put a very thick coat of sand on the top, and place it in a dry place. Apples or pears thus treated will keep good all the winter.—*Journal des Connaissances Usuelles.*

Security against Fire.—The Paris Academy of Sciences recommend the adoption of M. Aldini's method, (mentioned in our No. 667), and advise the addition of Davy's apparatus to the precautions recommended by him.

The Climate in Spanish Estremadura.—The following is an extract from a letter, dated Badajoz, Jan. 2: "We have for some time enjoyed here most delightful weather. All around us is luxuriant verdure. The peas and beans are in blossom, and promise an abundant crop; and the young wheats look remarkably well. The olive crop, however, has failed, owing to the worm to which this fruit is subject; and the failure will probably involve many families in great distress. The vintage has not only proved very productive, but the quality of the wine is so fine, that already some of it, which has been put into new casks, is as good-flavoured as some of the better sorts of port. Oranges and lemons are so abundant, that even here they are sold for less than a quarter of a dollar per 100; whilst at Elvas, in Portugal, which is only a few miles distance, they sell for less than 8d. English per 100. Melons are to be had in great abundance on every market-day; and the stalls are loaded with broccoli, cauliflowers, and new potatoes. For a shilling, not only all the best vegetables, but even the finest fruits of the season, may be had for the supply of a family of twelve persons during the day; and we get very good wine for less than 2d. per bottle. The bread here is delicious, and very cheap. The peasants live upon fine white bread, which would be considered a luxury even by the most wealthy persons in London; yet it is surprising, that at Elvas, which is so near, the bread is of such an inferior quality, that Spanish bread forms a principal article of sale in the Elvas market. The fault must be in the manufacture; for better wheat than is grown in some parts of the Alentejo can hardly be seen even at Talavera de la Regna, which is so famous for its bread corn. What the English, of whom there are several in Elvas and Badajoz, miss most is the good fresh butter which they enjoyed in England. Very little is made even here; whilst a few miles farther in Spain, none is to be had except Irish butter, which is sold in skins of different kinds; and there is no cheese except what comes from Holland. Generally speaking, provisions are here at about

one third of the price paid in England; and it is quite possible, with a large family, to enjoy all the comforts and luxuries of life, without society, upon something less than 300l. per annum."

LITERARY NOVELTIES.

The author of the *Subaltern* has in the press a series of tales under the title of the *Country Curate*.

A new work by the author of the *O'Hara Tales* will soon make its appearance. It is to be entitled, we believe, *Trials Past By*.

A new novel from the pen of Mr. Grattan, called the *Heiress of Bruges*, is also in the press.

Cromwells are in circulation for publishing *Woods and Wild Flowers*, by the late Mr. Alex. Balfour, author of "Campbell, or the Scottish Probationer," &c. &c. It is stated that some literary friends have undertaken the selection and arrangement of this volume, to which a Biographical Memoir will be prefixed; and that the whole free profits of the publication will go to Mr. Balfour's family.

Dr. Seymour has in the press a work on the *Diseases of the Ovary*; including *Encysted Dropsy* and *Malignant Diseases of those Organs*: to which are prefixed, *Physiological Observations on the Structure and Functions of these Parts in the Human Being and in Animals*.

A London Musical Gazette, to be published weekly, is announced to commence to-day.

An Historical and Topographical Atlas of England and Wales, exhibiting its Geographical Features during the Roman, Saxon, Danish, and Norman governments, is preparing by Thomas Allen, author of the *Histories of York, Surrey, Sussex, &c.*

The Panoramas of the Thames, from London to Richmond, exhibiting every object on both Banks of the River, is among the announcements of forthcoming novels.

Time's Telescope, or Guide to the Almanac, and Astronomer's and Naturalist's Diary, will be published at the usual time. The Astronomical portion will, we are informed, be contributed by J. T. B., the gentleman who furnishes the articles on Celestial Phenomena to the *Literary Gazette*.

In the Press.—A second edition of *Lectures on English Poetry, with Historical Tales and Miscellaneous Poems*; being the *Literary Remains of the late Henry Neele*.—A little work entitled *Conversations on Miniature Painting*, by Miss Emma E. Kendrick.

LIST OF NEW BOOKS.

Monro on the Gullet, second edition, 2 vols. 8vo. 1l. 1s. bds.—Statutes, 8vo. 10 Geo. IV. 15s. bds.—Waddington on the Greek Church, crown 8vo. 6s. bds.—*Tales of a Bristish Barrister*, 3 vols. post 8vo. 1l. 8s. 6d. bds.—*Calamy's Life and Times*, 2 vols. 8vo. 1l. 18s. bds.—*Revel's Political Economy*, 8vo. 12s. bds.—*The Christian's Book*, fcp. 4s. bds.—*Muhlenfels's Manual of German Literature*, 2 vols. fcp. 16s. bds.—*Wallich's Flammæ Asiaticæ*, No. 1. coloured, 2t. 10s. bds.—*Hooker's Flora Boreali-Americana*, No. 1. 1l. 1s.—*Oldfield's Walmelet and Candlemas*, royal 8vo. 1l. 1s. demy 4to. 8s. 2s. bds.—*Collins's Emigrant's Guide to the United States*, 12mo. 3s. 6d. bds.—*Brenan's Composition and Punctuation*, 12mo. 2s. 6d. bds.—*Game of Billiards*, 18mo. 2s. 6d. bds.—*Blais's Art of Dancing*, 8vo. 14s. bds.—*Hedgeland's General Knowledge*, 2 vols. 12mo. 9s. bds.—*Whitman's New Law Dictionary*, 8vo. 14s. bds.—*Pinnock's English Grammar*, 18mo. 4s. sheep.—*Recollections of Italy*, Imperial 4to. 1l. 11s. 6d.; India paper, 9s. 2s. cloth.
